¹⁹¹¹ <https://github.com/TheHPXProject/hpx/pull/6967>

¹⁹¹² <https://github.com/TheHPXProject/hpx/pull/6966>

- PR #6965¹⁹¹³ - executors: replace tuple-based lambda capture with C++20 pack capture
- PR #6964¹⁹¹⁴ - cmake: Remove obsolete feature test for CXX20_PERFECT_PACK_CAPTURE
- PR #6962¹⁹¹⁵ - Replace BLOCK_SIZE with different name to avoid clashes with Linux-defined macro
- PR #6959¹⁹¹⁶ - cmake: Remove obsolete feature test for CXX20_TRIVIAL_VIRTUAL_DESTRUCTOR
- PR #6958¹⁹¹⁷ - Re-add iterator traits
- PR #6956¹⁹¹⁸ - docs: add lifetime warning for `create_channel_communicator`
- PR #6955¹⁹¹⁹ - fix: correct argument order for `next_or_subrange` and `add_ready_future_idx` functions
- PR #6951¹⁹²⁰ - Add zero-validation for `with_processing_units_count`
- PR #6950¹⁹²¹ - Merge Path Algorithm
- PR #6949¹⁹²² - Bump actions/upload-artifact from 6 to 7
- PR #6947¹⁹²³ - executors: fix `uint32_t` truncation in `fork_join` static scheduling (Phase 1)
- PR #6946¹⁹²⁴ - dynamic test discovery in CI
- PR #6944¹⁹²⁵ - nit: remove linux specific header in test utils
- PR #6943¹⁹²⁶ - Fix thread safety bugs in concurrent containers and a few algorithm issues
- PR #6942¹⁹²⁷ - Add threshold validation to `limiting_executor`
- PR #6940¹⁹²⁸ - fix clang tidy errors in `hpx`
- PR #6939¹⁹²⁹ - Add zero-thread validation in `fork_join_executor` PU-mask constructor
- PR #6938¹⁹³⁰ - fix dangling reference errors in iterator tests
- PR #6937¹⁹³¹ - enable fold range tests in gh actions
- PR #6936¹⁹³² - Working on fixing recent performance regressions
- PR #6935¹⁹³³ - Experimenting with rebinding parameters objects
- PR #6934¹⁹³⁴ - Fix parallel performance of `hpx::reverse` by using index-based dispatch
- PR #6933¹⁹³⁵ - Misc fixes for documentation

- PR #6930¹⁹³⁶ - Adjusting build system to HPX conventions
- PR #6928¹⁹³⁷ - Replace scan implementation with explicit functions to avoid triggering concept checking
- PR #6927¹⁹³⁸ - Attempt to work around Github API limitations
- PR #6926¹⁹³⁹ - Disable async_cuda test as nvcc fails
- PR #6925¹⁹⁴⁰ - implement c++20 modules for core libraries
- PR #6924¹⁹⁴¹ - shared_mutex : add ignore_while_checking around upgrade_cond notify in unlock_shared()
- PR #6923¹⁹⁴² - Convert enum message_buffer_append_state to enum class
- PR #6921¹⁹⁴³ - Add workflow_dispatch for local testing and fix PR triggers
- PR #6920¹⁹⁴⁴ - Fixing various compilation regressions
- PR #6918¹⁹⁴⁵ - Bump actions/checkout from 4 to 6
- PR #6917¹⁹⁴⁶ - Bump actions/upload-artifact from 4 to 6
- PR #6916¹⁹⁴⁷ - Add pull_request triggers to GHA workflows and fixed check-formatting jobs
- PR #6915¹⁹⁴⁸ - Adding missing module dependencies to the HPX algorithm module
- PR #6914¹⁹⁴⁹ - Cleaning up recently added debug suffix configuration
- PR #6913¹⁹⁵⁰ - Add comprehensive subtraction unit tests for gid_type
- PR #6910¹⁹⁵¹ - Implement C++23 Algorithms: fold_left, fold_right.
- PR #6909¹⁹⁵² - Refactoring local_priority_queue_scheduler for better cache behavior
- PR #6907¹⁹⁵³ - reduce lock contention in local_priority_queue_scheduler via randomized victim selection
- PR #6903¹⁹⁵⁴ - Migrate HPX CI from CircleCI to GitHub Actions
- PR #6902¹⁹⁵⁵ - using standard traits present in iterator library
- PR #6900¹⁹⁵⁶ - shared_mutex: follow-up fix and add regression test
- PR #6899¹⁹⁵⁷ - Implemented forwarding_sender_query for sender adaptors
- PR #6898¹⁹⁵⁸ - Removed the incomplete line in Readme

¹⁹⁵⁸ <https://github.com/TheHPXProject/hpx/pull/6898>

- PR #6897¹⁹⁵⁹ - Implement concurrent data structures for Issue #2235
- PR #6894¹⁹⁶⁰ - Implement find_last, find_last_if, and find_last_if_not algorithms as CPOs
- PR #6893¹⁹⁶¹ - fix: decouple hpx_debug from cmake_build_type and allow custom debug postfix
- PR #6891¹⁹⁶² - Refine unordered_map unit tests and add operator[] size stability check
- PR #6890¹⁹⁶³ - Feature/termination detection timeout
- PR #6889¹⁹⁶⁴ - Fixing set_affinity_test
- PR #6886¹⁹⁶⁵ - Expose global termination detection through new API (#6163)
- PR #6885¹⁹⁶⁶ - refactor execution parameters and steady clock usage
- PR #6884¹⁹⁶⁷ - implement fold algorithms acc. to c++26
- PR #6883¹⁹⁶⁸ - Fix initialization hang when -hpx:threads exceeds -hpx:cores
- PR #6882¹⁹⁶⁹ - Adjust filewriter for collective benchmark
- PR #6880¹⁹⁷⁰ - Added SPDX License Identifier
- PR #6879¹⁹⁷¹ - Implement parallel hpx::uninitialized_relocate_* algorithms for overlapping ranges
- PR #6876¹⁹⁷² - Feature/task bench support
- PR #6875¹⁹⁷³ - implement serialization for partition_data in 1d_stencil_5
- PR #6873¹⁹⁷⁴ - Fix runtime shutdown ordering for collectives on macOS Debug - Issue #6776
- PR #6872¹⁹⁷⁵ - Added random repeating numbers in tests and fixed sentinel tests for extrema algorithms
- PR #6870¹⁹⁷⁶ - standardise hpx::generate function signature
- PR #6869¹⁹⁷⁷ - update relocation definitions to track p2786r13 standard
- PR #6866¹⁹⁷⁸ - Fix threads hanging indefinitely by acquiring the state mutex before checking for an exclusive lock
- PR #6864¹⁹⁷⁹ - [Serialization] [Feature] Add serialization for multi containers and unordered_set
- PR #6863¹⁹⁸⁰ - Fix partitioned_vector tests timeout by reducing vector dimensions #6500
- PR #6862¹⁹⁸¹ - Bump jwlawson/actions-setup-cmake from 2.0 to 2.1

- [PR #6702](#)²⁰⁹⁴ - When_all_vector update

HPX V1.11.0 (Jun 30, 2025)

This release is the last version of HPX that supports C++17. Future versions of HPX will require compilation using C++20 or above.

General changes

- Added synchronous versions of all collective operations. Added global predefined communicator objects that are accessible through new APIs: `hpx::collectives::get_world_communicator()` refers to all localities and `hpx::collectives::get_local_communicator()` refers to all threads on the calling locality. We unified the interfaces of the different communicator objects.
- Added `hpx::experimental::run_on_all` allowing to run a given function (possibly concurrently) using a given execution policy.
- Added a helper object `hpx::runtime_manager` that simplifies the initialization of HPX without needing to modify the main function of the application.
- We improved the compatibility with various accelerator frameworks (SYCL, OneAPI).
- Applied build system changes that allow building HPX without any prerequisites. This requires to pass `-DHPX_WITH_FETCH_HWLOC=On` and `-DHPX_WITH_FETCH_BOOST=On` to the [CMake](#)²⁰⁹⁵ configuration.
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- Added the `hpx::contains` and `hpx::contains_subrange` parallel algorithms.
- Adapted many of HPX' parallel algorithms to be usable with senders/receivers.

Breaking changes

- We have moved most of the APIs that were defined in the namespace `hpx::parallel::execution` to the namespace `hpx::execution::experimental`. It was not possible to add compatibility facilities that will allow to continue using the old APIs, applications will have to be changed in order to continue functioning correctly.
- The CMake configuration parameter `HPX_WITH_RUN_MAIN_EVERYWHERE` is now deprecated and will be removed in the future. Use the preprocessor macro `HPX_HAVE_RUN_MAIN_EVERYWHERE` on a target-by-target case instead.
- Removed the dysfunctional libfabric parcellport.
- Removed features that were long deprecated (starting V1.8):
 - `hpx::flush`, `hpx::endl`, `hpx::async_flush`, `hpx::async_endl` - Various enumerator types are now only available as `class enum` requiring explicit scoped use of the enumerator values
 - Various non-conforming overloads of parallel algorithms
 - `hpx::for_loop` and friends (now only available as

`hpx::experimental::for_loop)`

- `hpx::parallel::induction` is now only available as `hpx::experimental::induction`
- `hpx::parallel::reduction` and friends are now only available as `hpx::experimental::reduction`
- `hpx::assertion::source_location` is now only available as `hpx::source_location`

²⁰⁹⁴ <https://github.com/TheHPXProject/hpx/pull/6702>

²⁰⁹⁵ <https://www.cmake.org>

- `hpx::lcos::split_future` is now only available as `hpx::split_future`
- `hpx::lcos::wait` and friends have been removed altogether
- `hpx::lcos::wait_any` and friends are now only available as `hpx::wait_any`
- `hpx::lcos::wait_some` and friends are now only available as `hpx::wait_some`
- `hpx::lcos::wait_each` and friends are now only available as `hpx::wait_each`
- `hpx::lcos::wait_all` and friends are now only available as `hpx::wait_all`
- `hpx::lcos::when_all` and friends are now only available as `hpx::when_all`
- `hpx::lcos::when_any` and friends are now only available as `hpx::when_any`
- `hpx::lcos::when_each` and friends are now only available as `hpx::when_each`
- `hpx::lcos::when_some` and friends are now only available as `hpx::when_some`
- `hpx::util::optional` and related facilities are now only available as `hpx::optional`
- `hpx::util::bind` and related facilities are now only available as `hpx::bind`
- `hpx::util::function` and friends are now only available as `hpx::function`
- `hpx::traits::is_bound_action` and related facilities are now only available as `hpx::is_bound_action`
- `hpx::traits::is_bind_expression` and related facilities are now only available as `hpx::is_bind_expression`
- `hpx::traits::is_placeholder` and related facilities are now only available as `hpx::is_placeholder`
- `hpx::lcos::future` and related facilities are now only available as `hpx::future`
- `hpx::memory::intrusive_ptr` is now only available as `hpx::intrusive_ptr`
- `hpx::lcos::local::barrier` is now only available as `hpx::barrier`
- `hpx::lcos::barrier` is now only available as `hpx::distributed::barrier`
- `hpx::lcos::local::cpp20_binary_semaphore` is now only available as `hpx::detail::binary_semaphore`
- `hpx::lcos::local::condition_variable` and friends are now only available as `hpx::condition_variable`
- `hpx::lcos::local::counting_semaphore` and friends are now only available as `hpx::counting_semaphore`
- `hpx::lcos::local::cpp20_latch` and is now only available as `hpx::latch`
- `hpx::lcos::latch` and is now only available as `hpx::distributed::latch`
- `hpx::lcos::local::upgrade_lock` and friends are now only available as `hpx::upgrade_lock`
- `hpx::lcos::local::mutex` and friends are now only available as `hpx::mutex`
- `hpx::lcos::local::spinlock` and friends are now only available as `hpx::spinlock`
- `hpx::lcos::local::call_once` and friends are now only available as `hpx::call_once`
- `hpx::util::annotated_function` and is now only available as `hpx::annotated_function`
- `hpx::components::abstract_simple_component_base` and is now only available as `hpx::components::abstract_component_base`

- `hpx::naming::id_type` and is now only available as `hpx::id_type`

- PR #6508²²²⁸ - Fix typo: s/unititialized/uninitialized/
- PR #6507²²²⁹ - Update LSU Jenkins libraries to match Rostam 3.0 with RHEL9
- PR #6503²²³⁰ - Fix 2 tests on FreeBSD by initializing freebsd_environ
- PR #6499²²³¹ - Fix crash in get_executable_filename on FreeBSD
- PR #6498²²³² - Avoid rewriting defines.hpp
- PR #6497²²³³ - Contains and contains_subrange parallel algorithm implementation GSOC 2024
- PR #6496²²³⁴ - Prevent usage of CMake try_run on crosscompiling
- PR #6494²²³⁵ - Add unit test cases and fixes for the S/R versions of the parallel algorithms
- PR #6487²²³⁶ - Fixing security vulnerabilities reported by MSVC security checks
- PR #6486²²³⁷ - Create codeql.yml
- PR #6474²²³⁸ - Remove remnants of libfabric parcelport
- PR #6473²²³⁹ - Add documentation for distributed implementations of post, async, sync and dataflow
- PR #6471²²⁴⁰ - Add distance.cpp test in CMake
- PR #6468²²⁴¹ - Small vector relocation
- PR #6448²²⁴² - Standardising Benchmarks, with support for nanobench as an option for its backend
- PR #6365²²⁴³ - Release V1.10.0
- PR #6089²²⁴⁴ - Implementing p2079

2.11.2 List of older releases

HPX V1.10.0 (May 29, 2024)

General changes

- The HPX documentation has seen a major overhaul for this release. We finished documenting the public local HPX API, we have added migration guides from widely used parallelization platforms to HPX (OpenMP, TBB, and MPI).
- We have added facilities enabling optimizations for trivially-relocatable types (see P1144²²⁴⁵ for more details).

²²²⁸ <https://github.com/TheHPXProject/hpx/pull/6508>

²²²⁹ <https://github.com/TheHPXProject/hpx/pull/6507>

²²³⁰ <https://github.com/TheHPXProject/hpx/pull/6503>

²²³¹ <https://github.com/TheHPXProject/hpx/pull/6499>

²²³² <https://github.com/TheHPXProject/hpx/pull/6498>

²²³³ <https://github.com/TheHPXProject/hpx/pull/6497>

²²³⁴ <https://github.com/TheHPXProject/hpx/pull/6496>

²²³⁵ <https://github.com/TheHPXProject/hpx/pull/6494>

²²³⁶ <https://github.com/TheHPXProject/hpx/pull/6487>

²²³⁷ <https://github.com/TheHPXProject/hpx/pull/6486>

²²³⁸ <https://github.com/TheHPXProject/hpx/pull/6474>

²²³⁹ <https://github.com/TheHPXProject/hpx/pull/6473>

²²⁴⁰ <https://github.com/TheHPXProject/hpx/pull/6471>

²²⁴¹ <https://github.com/TheHPXProject/hpx/pull/6468>

²²⁴² <https://github.com/TheHPXProject/hpx/pull/6448>

²²⁴³ <https://github.com/TheHPXProject/hpx/pull/6365>

²²⁴⁴ <https://github.com/TheHPXProject/hpx/pull/6089>

²²⁴⁵ <https://wg21.link/p1144>

- We have added (and use) the `scope_xxx` helper facilities as specified by the C++ library fundamentals TS v3 (see: [N4948](#)²²⁴⁶).
- We have added configuration options that allow to build HPX without pre-installing any prerequisites. Use `HPX_WITH_FETCH_HWLOC=On` to have [Portable Hardware Locality \(HWLOC\)](#)²²⁴⁷ installed for you. Similarly, setting `HPX_WITH_FETCH_BOOST=On` during configuration time will install the necessary [Boost](#)²²⁴⁸ libraries (currently V1.84.0).
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- The collective operations APIs have seen an unification, we have fixed issues and performance problems for the collectives.
- The HPX executors have seen a streamlining and some consistency changes. We have applied many performance improvements to the executor implementations that directly positively impact the performance of our parallel algorithms.
- We have added a new parcelport allowing to use Gasnet as a communication platform.
- We have added optimizations to various parcelports improving overall communication performance. This includes - amongst other things - send immediate optimizations and receiver-side zero-copy optimizations.
- Futures will now execute the associated task eagerly and inline on any wait operation if the task has not started running yet. This feature can be enabled using the `HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=On` configuration setting (which is *Off* by default).
- We have enabled using json files to supply configuration information through the command line. This feature can be enabled with the configuration option `HPX_COMMAND_LINE_HANDLING_WITH_JSON_CONFIGURATION_FILES=On`. This functionality depends on the external [JSON library](#)²²⁴⁹, which can be built at configuration time by supplying `HPX_WITH_FETCH_JSON=On` to [CMake](#)²²⁵⁰.
- We have applied many fixes to our CUDA, ROCm, and SYCL build environments.

Breaking changes

- The [CMake](#)²²⁵¹ configuration keys `SOMELIB_ROOT` (e.g., `BOOST_ROOT`) have been renamed to `Somelib_ROOT` (e.g., `Boost_ROOT`) to avoid warnings when using newer versions of [CMake](#)²²⁵². Please update your scripts accordingly. For now, the old variable names are re-assigned to the new names and unset in the [CMake](#)²²⁵³ cache.

HPX V1.9.1 (August 4, 2023)

General changes

This point release fixes a couple of problems reported for the V1.9.0 release. Most importantly, we fixed various occasional hanging during startup and shutdown in distributed scenarios. We also added support for zero-copy serialization on the receiving side to the TCP, MPI, and LCI parcelports. Last but not least, we have added support for Visual Studio 2019 and gcc using MINGW on Windows, and also support for gcc V13 and clang V15.

HPX headers are now made consistently named the same as their standard library counterparts, e.g. `#include <thread>` now corresponds to `#include <hpx/thread.hpp>`. This significantly simplifies porting existing standards conforming codes to HPX.

A lot of work has been done to improve and optimize our network communication layers. Primary focus of this work was on the LCI parcelport, but we have also cleaned up and improved the MPI parcelport.

Additionally, we have continued working on our documentation. The main focus here was on completing the API documentation of the most important API functions. We have started adding migration guides for people interested in moving their codes away from other, commonplace parallelization frameworks like OpenMP.

HPX V1.9.0 (May 2, 2023)

General changes

- Added RISC-V 64bit support. HPX is now compatible with RISC-V architectures which have revolutionized the HPC world.
- LCI parcelport has been optimized to transfer parcels with fewer messages and use the HPX resource partitioner for its progress thread allocation. It should generally provide better performance than before. It also removes its dependency on the MPI library.
- HPX dependency on Boost was further relaxed by replacing headers from Boost.Range, Boost.Tokenizer and Boost.Lockfree.

²⁴⁸³ <https://github.com/TheHPXProject/hpx/pull/6281>

²⁴⁸⁴ <https://github.com/TheHPXProject/hpx/pull/6283>

- Improvements took place on our parallel algorithms implementation.
- Our Senders/Receivers (P2300) integration was extended:

- Coroutines were integrated with senders/receivers.

`get_completion_signatures` now works with awaitable senders. - `with_awaitable_senders` allows the passed senders to retrieve the value i.e. senders are transparently awaitable from within a coroutine. - `when_all_vector` was added.

- `sync_wait` and `sync_wait_with_variant` sender consumers were added. The user can now initiate the execution of their asynchronous pipeline by blocking the current thread that executes the `main()` function until the result is retrieved.
- The combinators for futures (a.k.a. `async_combinators`) `when_*`, `wait_*`, `wait_*_nothrow` were turned into CPOs allowing for end-user customization. For more information on the `async_combinators` refer to the documentation, https://hpx-docs.stellar-group.org/latest/html/libs/core/async_combinators/docs/index.html?highlight=combinators.
- The new datapar backend SVE allows `simd` and `par_simd` execution policies to exploit dataparallelism in the processors that have SVE vector registers like A64FX and Neoverse V1.
- The documentation for parallel algorithms, container algorithms was further improved. The Public API page was vastly enriched.
- Copy button shortcut was added at the top-right of code-blocks.
- Pragma directive that reports warnings as errors on MSVC was fixed.
- Command line argument `--hpx:loopback_network` was added to facilitate debugging with networks.
- We added an HPX-SYCL integration, allowing users to obtain HPX futures for SYCL events. This effectively enables the integration of arbitrary asynchronous SYCL operations into the HPX task graph. Bolted on top of this integration, we further added an HPX-SYCL executor for ease of use.

Breaking changes

- Stopped supporting Clang V8, the minimal version supported is now Clang V10.
- Stopped supporting gcc V8, the minimal version supported is now gcc V9.
- Stopped supporting Visual Studio 2015, the minimal version supported is now Visual Studio 2019.
- `tag_policy_tag` et.al. were re-added after HPX V1.8.1 deprecation.
- `get_chunk_size` and `processing_units_count` API is now expecting the time for one iteration as an argument.
- The list of all the namespace changes can be found here: [HPX V1.9.0 Namespace changes](#).

HPX V1.8.1 (Aug 5, 2022)

This is a bugfix release with a few minor additions and resolved problems.

General changes

This patch release adds a number of small new features and fixes a handful of problems discovered since the last release, in particular:

- A lot of work has been done to improve vectorization support for our parallel algorithms. HPX now supports using EVE - the Expressive Vector Engine as a vectorization backend.
- Added a simple average power consumption performance counter.
- Added performance counters related to the use of zero-copy chunks in the networking layer.

²⁷⁰⁸ <https://github.com/TheHPXProject/hpx/pull/5872>

²⁷⁰⁹ <https://github.com/TheHPXProject/hpx/pull/5855>

- More work was done towards full compatibility with the sender/receivers proposal P2300.
- Fixing `sync_wait` to decay the result types
- Fixed collective operations to properly avoid overalapping consecutive operations on the same communicator.
- Simplified the implementation of our execution policies and added mapping functions between those.
- Fixed performance issues with our implementation of *small_vector*.
- Serialization now works with buffers of unsigned characters.
- Fixing dangling reference in serialization of non-default constructible types
- Fixed static linking on Windows.
- Fixed support for M1/MacOS based architectures.
- Fixed support for gentoo/musl.
- Fixed `hpx::counting_semaphore_var`.
- Properly check start and end bounds for `hpx::for_loop`
- A lot of changes and fixes to the documentation (see <https://hpx-docs.stellar-group.org>).

Breaking changes

- No breaking changes have been introduced.

- PR #5895²⁷⁶⁸ - Update to V1.9.0 on master
- PR #5894²⁷⁶⁹ - Fix executor_with_thread_hooks example
- PR #5890²⁷⁷⁰ - Adding simple average power consumption performance counter
- PR #5889²⁷⁷¹ - Par unseq/unseq adding
- PR #5888²⁷⁷² - Support for data-parallelism for reduce, transform reduce, transform_binary_reduce algorithms
- PR #5887²⁷⁷³ - Fixing dangling reference in serialization of non-default constructible types
- PR #5879²⁷⁷⁴ - New performance counters related to zero-copy chunks.

HPX V1.8.0 (May 18, 2022)

With HPX parallel algorithms been fully adapted to C++20 the new release achieves full conformance with C++20 concurrency and parallelism facilities. HPX now supports all of the algorithms as specified by C++20. We have added support for vectorization to more of our algorithms. Much work has been done towards implementing P2300 (“std::execution”) and implementing the underlying senders/receivers facilities. Finally, The new release comes with a brand new documentation interface!

General changes

- The new documentation can now be found on our webpage: <https://hpx-docs.stellar-group.org>. This includes a completely new and user-friendly interface environment along with restructuring of certain components. The content in the “Quick start”, “Manual” and “Examples” was improved, while the “Build system” page was adapted to include necessary information for newcomers.
- With the vectorization support available in modern hardware architectures HPX now provides new data-parallel vector execution policies `hpx::execution::simd` and `hpx::execution::par_simd` that enable significant speed-up of our parallel algorithm implementations. The following algorithms now support SIMD execution:
 - `copy`, `copy_n`
 - `generate`
 - `adjacent_difference`, `adjacent_find`
 - `all_of`, `any_of`, `none_of`
 - `equal`, `mismatch`,
 - `inner_product`
 - `count`, `count_if`
 - `fill`, `fill_n`

²⁷⁶⁹ <https://github.com/TheHPXProject/hpx/pull/5894>

²⁷⁷⁰ <https://github.com/TheHPXProject/hpx/pull/5890>

²⁷⁷¹ <https://github.com/TheHPXProject/hpx/pull/5889>

²⁷⁷² <https://github.com/TheHPXProject/hpx/pull/5888>

²⁷⁷³ <https://github.com/TheHPXProject/hpx/pull/5887>

²⁷⁷⁴ <https://github.com/TheHPXProject/hpx/pull/5879>

- `find`, `find_end`, `find_first_of`, `find_if`, `find_if_not`
 - `for_each`, `for_each_n`
 - `generate`, `generate_n`.
- Based on top of P2300 the HPX parallel algorithms now support the pipeline syntax towards an effort to unify their usage along with senders/receivers. The HPX parallel algorithms can now bind with senders/receivers using the pipeline operator.
- Several changes took place on the executors provided by HPX:
- The executors now support the `num_cores` options in order for the user to be able to specify the desired number of cores to be used in the corresponding execution.
- The `scheduler` executor was implemented on top of senders/receivers and can be used with all HPX facilities that schedule new work, such as parallel algorithms, `hpx::async`, `hpx::dataflow`, etc.
- The performance of `fork_join_executor` was improved.
- The following algorithms have been added/adapted to be C++20 conformant:
 - `min_element`
 - `max_element`
 - `minmax_element`
 - `starts_with`
 - `ends_with`
 - `swap_ranges`
 - `unique`
 - `unique_copy`
 - `rotate`
 - `rotate_copy`
 - `sort`
 - `shift_left`
 - `shift_right`
 - `stable_sort`
 - `partition`
 - `partition_copy`
 - `stable_partition`
 - `adjacent_difference`
 - `nth_element`
 - `partial_sort`
 - `partial_sort_copy`.
- `HPX_FORWARD`/`HPX_MOVE` macros were introduced that replaced the `std::move` and `std::forward` facilities that in the library code.
- Hangs on distributed barrier were fixed.
- The performance of `scan_partitioner` was improved.

- Support was added for `thread_priority` to the `parallel_execution_policy`
- Regarding senders/receivers and the P2300 proposal various actions took place. `stop_token` was adapted to the recent proposal version (`in_place_stop_token` was introduced). Also hint, annotation, priority and stacksize properties were added to the scheduler executor. Stop support was added to `when_all`. Support for completion signatures was added. The following schedulers and algorithms were added:
 - `get_completion_scheduler`
 - `any_sender` and `unique_any_sender`
 - split sender
 - `transform_mpi` sender
 - transfer sender
 - `let_error`, `let_stopped`
 - `get_env` and related environment queries
 - `schedule`, `set_value`, `set_error`, `set_done`, `start` and `connect` are now proper customization points as defined in P2300.
- Several namespaces were altered towards conformance with C++20. Compatibility layers have been added and the old versions will be removed in next releases. The namespace changes are the following:
 - `hpx::parallel::induction/reduction` were moved into namespace `hpx::experimental`
 - `for_loop` and friends were moved into namespace `hpx::experimental`.
 - `hpx::util::optional` and friends were moved into namespace `hpx`.
 - `hpx::lcos::barrier` has been moved into the `hpx::distributed` namespace and `hpx::lcos::local::cpp20_barrier` has been renamed to `barrier` and moved into the `hpx` namespace.
 - `hpx::lcos::latch` has been moved into the `hpx::distributed` namespace and `lcos::local::latch` has been moved into the `hpx` namespace. The `count_down_and_wait()` functionality of `latch` has been renamed to `arrive_and_wait()`.
 - `hpx::util::unique_function_nonsr` has been renamed to `hpx::move_only_function`.
 - `hpx::util::unique_function` has been renamed to `hpx::distributed::move_only_function`.
 - `hpx::util::function` has been renamed to `hpx::distributed::function`.
 - `hpx::util::function_nonsr` has been renamed to `hpx::function`.
 - `hpx::util::function_ref` have been moved to namespace `hpx`.
 - `hpx::lcos::split_future` changed namespace and is now used as `hpx::split_future`.
 - `hpx::lcos::local::counting_semaphore` has been deprecated and `hpx::lcos::local::cpp20_counting_semaphore` has been renamed to `hpx::counting_semaphore`.
 - `hpx::lcos::local::cpp20_binary_semaphore` has been renamed to `hpx::binary_semaphore`.
 - `hpx::lcos::local::sliding_semaphore` has been renamed to `hpx::sliding_semaphore` and
 - `hpx::lcos::local::sliding_semaphore_var` has been renamed to `hpx::sliding_semaphore_var`.
 - `hpx::lcos::local::spinlock` has been renamed to `hpx::spinlock`.
 - `hpx::lcos::local::mutex` has been renamed to `hpx::mutex`.

- `hpx::lcos::local::timed_mutex` has been renamed to `hpx::timed_mutex`.
- `hpx::lcos::local::no_mutex` has been renamed to `hpx::no_mutex`.
- `hpx::lcos::local::recursive_mutex` has been renamed to `hpx::recursive_mutex`.
- `hpx::lcos::local::shared_mutex` has been renamed to `hpx::shared_mutex`.
- `hpx::lcos::local::upgrade_lock` has been renamed to `hpx::upgrade_lock`.
- `hpx::lcos::local::upgrade_to_unique_lock` has been renamed to `hpx::upgrade_to_unique_lock`.
- `hpx::lcos::local::condition_variable` has been renamed to `hpx::condition_variable`.
`hpx::lcos::local::condition_variable_var` has been renamed to `hpx::condition_variable_var`.
- `hpx::lcos::local::once_flag` has been renamed to `hpx::once_flag`, and `hpx::lcos::local::call_once` has been renamed to `hpx::call_once`.
- The new LCI (Lightweight Communication Interface) `parcelpport` was added that supports irregular and asynchronous applications like graph analysis, sparse linear algebra, modern parallel architectures etc. Major features include:
 - Support for advanced communication primitives like two sided send/rcv and one sided remote put.
 - Better multi-threaded performance.
 - Explicit user control of communication resource.
 - Flexible signaling mechanisms (synchronizer, completion queue, active message handler).
- The following CMake flags were added, mostly to support using HPX as a backend for SHAD (<https://github.com/pnnl/SHAD>). Please note that these options enable questionable functionalities, partially they even enable undefined behavior. Please only use any of them if you know what you're doing:
 - `HPX_SERIALIZATION_WITH_ALLOW_RAW_POINTER_SERIALIZATION`
 - `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`
 - `HPX_SERIALIZATION_WITH_ALLOW_CONST_TUPLE_MEMBERS`

Breaking changes

- Minimum required C++ standard library is C++17.
- Support for GCC 7 and Clang 8.0.0 and below has been removed.
- CUDA version required updated to 11.4.
- CMake version required updated to 3.18.
- The default version of Asio used was updated to 1.20.0.
- The default version of APEX used was updated to 2.5.1.
- APEX version was updated to 2.5.1.
- `tagged_pair` and `tagged_tuple` were removed.
- `tag_dispatch` was renamed to `tag_invoke`.
- `hpx.max_backgroud_threads` was renamed to `hpx.parcel.max_background_threads`.
- The following CMake flags were removed after being deprecated for at least two releases:

- HPX_SCHEDULER_MAX_TERMINATED_THREADS
- HPX_WITH_GOOGLE_PERFTOOLS
- HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY
- HPX_HAVE_{COROUTINE,PLUGIN}_GCC_HIDDEN_VISIBILITY
- HPX_TOP_LEVEL
- HPX_WITH_COMPUTE_CUDA
- HPX_WITH_ASYNC_CUDA
- `annotate_function` was renamed to `scoped_annotation`.
- `execution::transform` was renamed to `execution::then`.
- `execution::detach` was renamed to `execution::start_detached`.
- `execution::on_sender` was renamed to `execution::schedule_on`.
- `execution::just_on` was renamed to `execution::just_transfer`.
- `execution::set_done` was renamed to `execution::set_stopped`.

- PR #5848²⁸⁶² - Fedora related fixes
- PR #5847²⁸⁶³ - Fix API, troubleshooting & people
- PR #5844²⁸⁶⁴ - Attempting to fix timeouts of segmented iterator tests
- PR #5842²⁸⁶⁵ - change the default value of HPX_WITH_LCI_TAG to v1.7
- PR #5841²⁸⁶⁶ - Move the split_future facilities into the namespace hpx
- PR #5840²⁸⁶⁷ - wait_xxx_nothrow functions return whether one of the futures is exceptional
- PR #5839²⁸⁶⁸ - Moving a list of synchronization primitives into namespace hpx
- PR #5837²⁸⁶⁹ - Moving latch types to hpx and hpx::distributed namespaces
- PR #5835²⁸⁷⁰ - Add missing compatibility layer for id_type::management_type values
- PR #5834²⁸⁷¹ - API docs changes
- PR #5831²⁸⁷² - Further improvement actions to rotate
- PR #5830²⁸⁷³ - Exposing zero-copy serialization threshold through configuration option
- PR #5829²⁸⁷⁴ - Attempting to fix failing barrier test
- PR #5827²⁸⁷⁵ - Add back explicit template parameter to *ignore_while_checking* to compile with nvcc
- PR #5826²⁸⁷⁶ - Reduce number of allocations while calling async_bulk_execute
- PR #5825²⁸⁷⁷ - Steal from neighboring NUMA domain only
- PR #5823²⁸⁷⁸ - Remove obsolete directories and adjust build system

³⁰¹⁶ <https://github.com/TheHPXProject/hpx/pull/5636>

- PR #5635³⁰¹⁷ - Update container image tag in GitHub actions HIP configuration
- PR #5633³⁰¹⁸ - Moving packaged_task to module futures
- PR #5632³⁰¹⁹ - Tell Asio to use std::aligned_new only if available
- PR #5631³⁰²⁰ - Adding tag parameter to channel communicator get/set
- PR #5630³⁰²¹ - Add partial_sort_copy and adapt partial sort to c++ 20
- PR #5629³⁰²² - Set HPX_WITH_FETCH_ASIO to OFF as available in the docker image
- PR #5628³⁰²³ - Add Clang 13 CI configuration
- PR #5627³⁰²⁴ - Replace alternative keyword
- PR #5626³⁰²⁵ - docs: add support for BibTeX references in Sphinx docs
- PR #5624³⁰²⁶ - Fix pkgconfig replacements involving CMAKE_INSTALL_PREFIX
- PR #5623³⁰²⁷ - build: remove unused import from conf.py.in
- PR #5622³⁰²⁸ - Remove HPX_WITH_VCPKG CMake option
- PR #5621³⁰²⁹ - Replacing boost::container::small_vector
- PR #5620³⁰³⁰ - Update Asio tag from 1.18.2 to 1.20.0
- PR #5619³⁰³¹ - Fix block_os_threads_1036 test
- PR #5618³⁰³² - Make sure condition variables are notified under a lock in the thread_pool_scheduler test
- PR #5617³⁰³³ - Use advance_and_get_distance where required
- PR #5616³⁰³⁴ - Remove separately building segmented algorithms on CircleCI
- PR #5613³⁰³⁵ - Fix Vc datapar adjacent_difference
- PR #5609³⁰³⁶ - docs: add anchor links to performance counter tables
- PR #5608³⁰³⁷ - Fix header test error by adding missing numeric
- PR #5607³⁰³⁸ - Fix simd adj diff
- PR #5605³⁰³⁹ - Fix usage of HPX_INVOKE macro

HPX V1.7.1 (Aug 12, 2021)

This is a bugfix release with a few minor fixes.

General changes

- Added a CMake option to assume that all types are bitwise serializable by default: `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`. The default value `OFF` corresponds to the old behaviour.
- Added a version check for Asio. The minimum Asio version supported by *HPX* is 1.12.0.
- Fixed a bug affecting usage of actions, where the internals of *HPX* relied on function addresses being unique. This was fixed by relying on variable addresses being unique instead.
- Made `hpx::util::bind` more strict in checking the validity of placeholders.
- Small performance improvement to spinlocks.
- Adapted the following parallel algorithms to C++20: `inclusive_scan`, `exclusive_scan`, `transform_inclusive_scan`, `transform_exclusive_scan`.

Breaking changes

- The experimental `hpx::execution::simdpair` execution policy (introduced in 1.7.0) was renamed to `hpx::execution::par_simd` for consistency with the other parallel policies.

HPX V1.7.0 (Jul 14, 2021)

This release is again focused on C++20 conformance of algorithms. Additionally, many new experimental sender-based algorithms have been added based on the latest proposals.

³¹⁷⁷ <https://github.com/TheHPXProject/hpx/pull/5436>

General changes

- The following algorithms have been adapted to be C++20 conformant:
 - `remove`,
 - `remove_if`,
 - `remove_copy`,
 - `remove_copy_if`,
 - `replace`,
 - `replace_if`,
 - `reverse`, and
 - `lexicographical_compare`.
- When the compiler and standard library support the standard execution policies `std::execution::seq`, `std::execution::par`, and `std::execution::par_unseq` they can now be used in all *HPX* parallel algorithms with equivalent behaviour to the non-task policies `hpx::execution::seq`, `hpx::execution::par`, and `hpx::execution::par_unseq`.
- Vc support has been fixed, after being broken in 1.6.0. In addition, *HPX* now experimentally supports GCC's SIMD implementation, when available. The implementation can be used through the `hpx::execution::simd` and `hpx::execution::simdpair` execution policies.
- The customization points `sync_execute`, `async_execute`, `then_execute`, `post`, `bulk_sync_execute`, `bulk_async_execute`, and `bulk_then_execute` are now implemented using `tag_dispatch` (previously `tag_invoke`). Executors can still be implemented by providing the aforementioned functions as member functions of an executor.
- New functionality, enhancements, and fixes based on P0443r14 (executors proposal) and P1897 (sender-based algorithms) have been added to the `hpx::execution::experimental` namespace. These can be accessed through the `hpx/execution.hpp` and `hpx/local/execution.hpp` headers. In particular, the following sender-based algorithms have been added:
 - `detach`,
 - `ensure_started`,
 - `just`,
 - `just_on`,
 - `let_error`,
 - `let_value`,
 - `on`,
 - `transform`, and
 - `when_all`.

Additionally, futures now implement the sender concept. `make_future` can be used to turn a sender into a future. All functionality is experimental and can change without notice.

- All `hpx::init` and `hpx::start` overloads now take `std::functions` instead of `hpx::util::function_nonsr`. No changes should be required in user code to accommodate this change.

- `hpx::util::unwrapping` and other related unwrapping functionality has been moved up into the `hpx` namespace. Names in `hpx::util` are still usable with a deprecation warning. This functionality can now be accessed through the `hpx/unwrap.hpp` and `hpx/local/unwrap.hpp` headers.
- The default tag for APEX has been update from 2.3.1 to 2.4.0. In particular, this fixes a bug which could lead to hangs in distributed runs.
- The dependency on Boost.Asio has been replaced with the standalone Asio available at <https://github.com/chriskohlhoff/asio>. By default, a system-installed Asio will be used. `ASIO_ROOT` can be given as a hint to tell CMake where to find Asio. Alternatively, Asio can be fetched automatically using CMake's `fetchcontent` by setting `HPX_WITH_FETCH_ASIO=ON`. In general, dependencies on Boost have again been reduced.
- Modularization of the library has continued. In this release almost all functionality has been moved into modules. These changes do not generally affect user code. Warnings are still issued for headers that have moved.
- `hipBLAS` is now optional when compiling with `hipcc`. A warning instead of an error will be printed if `hipBLAS` is not found during configuration.
- Previously `HPX_COMPUTE_HOST_CODE` was defined in host code only if HPX was configured with CUDA or HIP. In this release `HPX_COMPUTE_HOST_CODE` is always defined in host code.
- An experimental `HPX_WITH_PRECOMPILED_HEADERS` CMake option has been added to use precompiled headers when building *HPX*. This option should not be used on Windows.
- Numerous bug fixes.

Breaking changes

- The minimum required CMake version is now 3.17.
- The minimum required Boost version is now 1.71.0.
- The customization mechanism used to implement and extend sender functionality and algorithms has been renamed from `tag_invoke` to `tag_dispatch`. All customization of sender functionality should be done by overloading `tag_dispatch`.
- The following compatibility options have been removed, along with their compatibility implementations:
 - `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`
 - `HPX_WITH_ACTION_BASE_COMPATIBILITY`
 - `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`
 - `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`
 - `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`
 - `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`
 - `HPX_WITH_REGISTER_THREAD_OVERLOADS_COMPATIBILITY`
 - `HPX_WITH_THREAD_AWARE_TIMER_COMPATIBILITY`
 - `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY`
 - `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`
- The `HPX_WITH_THREAD_SCHEDULERS` CMake option has been removed. All schedulers are now enabled when possible.
- `HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY` has been turned off by default.

- PR #5315³²⁹¹ - Add explicit keyword to fixture constructor
- PR #5314³²⁹² - Fix a race condition in async mpi affecting limiting executor
- PR #5312³²⁹³ - Use local runtime and local headers in local-only modules and tests
- PR #5311³²⁹⁴ - Add GCC 11 builder to jenkins
- PR #5310³²⁹⁵ - Adding `hpx::execution::experimental::task_group`
- PR #5309³²⁹⁶ - Seperate datapar
- PR #5308³²⁹⁷ - Seperate segmented algorithms for `find`, `find_if`, `find_if_not`
- PR #5307³²⁹⁸ - Seperate segmented algorithms for `fill` and `generate`
- PR #5304³²⁹⁹ - Fix compilation of sender CPOs with `nvcc`
- PR #5300³³⁰⁰ - Remove `PRIVATE` flag that was propagated into the `LANGUAGES`
- PR #5298³³⁰¹ - Seperate datapar
- PR #5297³³⁰² - Specify exact `cmake` and `ninja` versions when loading them in jenkins jobs
- PR #5295³³⁰³ - Update `clang-newest` configuration to use `clang 12` and `Boost 1.76.0`
- PR #5293³³⁰⁴ - Fix `Clang 11 cuda_future` test bug
- PR #5292³³⁰⁵ - Add `async_rw_mutex` based on senders
- PR #5291³³⁰⁶ - “Fix” termination detection
- PR #5290³³⁰⁷ - Fixed source file line statements in examples documentation
- PR #5289³³⁰⁸ - Allow splitting of futures holding `std::tuple`
- PR #5288³³⁰⁹ - Move algorithms to `tag_fallback_invoke`
- PR #5287³³¹⁰ - Move algorithms to `tag_fallback_invoke`
- PR #5285³³¹¹ - Fix `clang-format` failure on master
- PR #5284³³¹² - Replacing `util::function_nonser` on `std::function` in `hpx_init`

HPX V1.6.0 (Feb 17, 2021)

General changes

This release continues the focus on C++20 conformance with multiple new algorithms adapted to be C++20 conformant and becoming customization point objects (CPOs). We have also added experimental support for HIP, allowing previous CUDA features to now be compiled with `hipcc` and run on AMD GPUs.

- The following algorithms have been adapted to be C++20 conformant: `adjacent_find`, `includes`, `inplace_merge`, `is_heap`, `is_heap_until`, `is_partitioned`, `is_sorted`, `is_sorted_until`, `merge`, `set_difference`, `set_intersection`, `set_symmetric_difference`, `set_union`.
- Experimental HIP support can be enabled by compiling *HPX* with `hipcc`. All CUDA functionality in *HPX* can now be used with HIP. The HIP functionality is for the time being exposed through the same API as the CUDA functionality, i.e. no changes are required in user code. The CUDA, and now HIP, functionality is in the `hpx::cuda` namespace.
- We have added `partial_sort` based on Francisco Tapia's implementation.
- `hpx::init` and `hpx::start` gained new overloads taking an `hpx::init_params` struct in 1.5.0. All overloads not taking an `hpx::init_params` are now deprecated.
- We have added an experimental `fork_join_executor`. This executor can be used for OpenMP-style fork-join parallelism, where the latency of a parallel region is important for performance.
- The `parallel_executor` now uses a hierarchical spawning scheme for bulk execution, which improves data locality and performance.
- `hpx::dataflow` can now be used with executors that inject additional parameters into the call of the user-provided function.
- We have added experimental support for properties as proposed in P2220³⁴²⁴. Currently the only supported property is the scheduling hint on `parallel_executor`.
- `hpx::util::annotated_function` can now be passed a dynamically generated `std::string`.
- In moving functionality to new namespaces, old names have been deprecated. A deprecation warning will be issued if you are using deprecated functionality, with instructions on how to correct or ignore the warning.
- We have removed all support for C and Fortran from our build system.
- We have further reduced the use of Boost types within *HPX* (`boost::system::error_code` and `boost::detail::spinlock`).
- We have enabled more warnings in our CI builds (unused variables and unused typedefs).

Breaking changes

- `hpxMP` support has been completely removed.
- The `verbs` `parcelpoint` has been removed.
- The following compatibility options have been disabled by default: `HPX_WITH_ACTION_BASE_COMPATIBILITY`, `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`, `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`, `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`, `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`, `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`, `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`, `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY`, `HPX_THREAD_AWARE_TIMER_COMPATIBILITY`, `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`. Unless noted here, the above functionalities do not come

³⁴²⁴ <https://wg21.link/p2220>

with replacements. Unscoped enumerations have been replaced by scoped enumerations. Previously deprecated unscoped enumerations are disabled by `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`. Newly deprecated unscoped enumerations have been given deprecation warnings and replaced by scoped enumerations. `hpx::promise` has been replaced with `hpx::distributed::promise`. `hpx::program_options` is a drop-in replacement for `boost::program_options`. `hpx::execution::parallel_executor` now has constructors which take a thread pool, covering the use case of `hpx::threads::executors::pool_executor`. A pool can be supplied with `hpx::resource::get_thread_pool`.

Closed issues

- [Issue #5148³⁴²⁵](#) - `runtime_support.hpp` does not work with newer clang
- [Issue #5147³⁴²⁶](#) - Wrong results with parallel reduce
- [Issue #5129³⁴²⁷](#) - Missing specialization for `std::hash<hpx::thread::id>`
- [Issue #5126³⁴²⁸](#) - Use `std::string` for task annotations
- [Issue #5115³⁴²⁹](#) - Don't expect `hwloc` to always report Cores
- [Issue #5113³⁴³⁰](#) - Handle threadmanager exceptions during startup

HPX V1.5.1 (Sep 30, 2020)

General changes

This is a patch release. It contains the following changes:

- Remove restriction on suspending runtime with multiple localities, users are now responsible for synchronizing work between localities before suspending.
- Fixes several compilation problems and warnings.
- Adds notes in the documentation explaining how to cite HPX.

Closed issues

- [Issue #4971³⁵⁹⁹](#) - Parallel sort fails to compile with C++20
- [Issue #4950³⁶⁰⁰](#) - Build with `HPX_WITH_PARCELPORT_ACTION_COUNTERS_ON` fails
- [Issue #4940³⁶⁰¹](#) - Codespell report for “HPX” (on fossies.org)
- [Issue #4937³⁶⁰²](#) - Allow suspension of runtime for multiple localities

Closed pull requests

HPX V1.5.0 (Sep 02, 2020)

General changes

The main focus of this release is on APIs and C++20 conformance. We have added many new C++20 features and adapted multiple algorithms to be fully C++20 conformant. As part of the modularization we have begun specifying the public API of HPX in terms of headers and functionality, and aligning it more closely to the C++ standard. All non-distributed modules are now in place, along with an experimental option to completely disable distributed features in HPX. We have also added experimental asynchronous MPI and CUDA executors. Lastly this release introduces CMake targets for depending projects, performance improvements, and many bug fixes.

- We have added the C++20 features `hpx::jthread` and `hpx::stop_token`. `hpx::condition_variable_any` now exposes new functions supporting `hpx::stop_token`.
- We have added `hpx::stable_sort` based on Francisco Tapia's implementation.
- We have adapted existing synchronization primitives to be fully conformant C++20: `hpx::barrier`, `hpx::latch`, `hpx::counting_semaphore`, and `hpx::binary_semaphore`.
- We have started using customization point objects (CPOs) to make the corresponding algorithms fully conformant to C++20 as well as to make algorithm extension easier for the user. `all_of/any_of/none_of`, `copy`, `count`, `destroy`, `equal`, `fill`, `find`, `for_each`, `generate`, `mismatch`, `move`, `reduce`, `transform_reduce` are using those CPOs (all in namespace `hpx`). We also have adapted their corresponding `hpx::ranges` versions to be conforming to C++20 in this release.
- We have adapted support for `co_await` to C++20, in addition to `hpx::future` it now also supports `hpx::shared_future`. We have also added allocator support for futures returned by `co_return`. It is no longer in the `experimental` namespace.
- We added serialization support for `std::variant` and `std::tuple`.
- `result_of` and `is_callable` are now deprecated and replaced by `invoke_result` and `is_invocable` to conform to C++20.
- We continued with the modularization, making it easier for us to add the new experimental `HPX_WITH_DISTRIBUTED_RUNTIME` CMake option (see below) . A significant amount of headers have been deprecated. We adapted the namespaces and headers we could to be closer to the standard ones (*Public API*). Depending code should still compile, however warnings are now generated instructing to change the include statements accordingly.
- It is now possible to have a basic CUDA support including a helper function to get a future from a CUDA stream and target handling. They are available under the `hpx::cuda::experimental` namespace and they can be enabled with the `-DHPX_WITH_ASYNC_CUDA=ON` CMake option.
- We added a new `hpx::mpi::experimental` namespace for getting futures from an asynchronous MPI call and a new minimal MPI executor `hpx::mpi::experimental::executor`. These can be enabled with the `-DHPX_WITH_ASYNC_MPI=On` CMake option.
- A polymorphic executor has been implemented to reduce compile times as a function accepting executors can potentially be instantiated only once instead of multiple times with different executors. It accepts the function signature as a template argument. It needs to be constructed from any other executor. Please note, that the function signatures that can be scheduled using `then_execute`, `bulk_sync_execute`, `bulk_async_execute` and `bulk_then_execute` are slightly different (See the comment in [PR #4514](#)³⁶¹³ for more details).
- The underlying executor of `block_executor` has been updated to a newer one.
- We have added a parameter to `auto_chunk_size` to control the amount of iterations to measure.

³⁶¹³ <https://github.com/TheHPXProject/hpx/pull/4514>

- All executor parameter hooks can now be exposed through the executor itself. This will allow to deprecate the `.with()` functionality on execution policies in the future. This is also a first step towards simplifying our executor APIs in preparation for the upcoming C++23 executors (senders/receivers).
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`. Please note this is a breaking change without backwards-compatibility option. We have converted all of those APIs to be based on customization point objects. Two new executors have been added to enable easy integration of the existing resiliency features with other facilities (like the parallel algorithms): `replay_executor` and `replicate_executor`.
- We have added performance counters type information (aggregating, monotonically increasing, average count, average timer, etc.).
- HPX threads are now re-scheduled on the same worker thread they were suspended on to avoid cache misses from moving from one thread to the other. This behavior doesn't prevent the thread from being stolen, however.
- We have added a new configuration option `hpx.exception_verbosity` to allow to control the level of verbosity of the exceptions (3 levels available).
- `broadcast_to`, `broadcast_from`, `scatter_to` and `scatter_from` have been added to the collectives, modernization of `gather_here` and `gather_there` with futures taken by rvalue references. See the breaking change on `all_to_all` in the next section. None of the collectives need supporting macros anymore (e.g. specifying the data types used for a collective operation using `HPX_REGISTER_ALLGATHER` and similar is not needed anymore).
- New API functions have been added: a) to get the number of cores which are idle (`hpx::get_idle_core_count`) and b) returning a bitmask representing the currently idle cores (`hpx::get_idle_core_mask`).
- We have added an experimental option to only enable the local runtime, you can disable the distributed runtime with `HPX_WITH_DISTRIBUTED_RUNTIME=OFF`. You can also enable the local runtime by using the `--hpx:local` runtime option.
- We fixed task annotations for actions.
- The alias `hpx::promise` to `hpx::lcos::promise` is now deprecated. You can use `hpx::lcos::promise` directly instead. `hpx::promise` will refer to the local-only promise in the future.
- We have added a `prepare_checkpoint` API function that calculates the amount of necessary buffer space for a particular set of arguments checkpointed.
- We have added `hpx::upgrade_lock` and `hpx::upgrade_to_unique_lock`, which make `hpx::shared_mutex` (and similar) usable in more flexible ways.
- We have changed the CMake targets exposed to the user, it now includes `HPX:hpx`, `HPX:wrap_main` (int main as the first *HPX* thread of the application, see [Starting the HPX runtime](#)), `HPX:plugin`, `HPX:component`. The CMake variables `HPX_INCLUDE_DIRS` and `HPX_LIBRARIES` are deprecated and will be removed in a future release, you should now link directly to the `HPX:hpx` CMake target.
- A new example is demonstrating how to create and use a wrapping executor (`quickstart/executor_with_thread_hooks.cpp`)
- A new example is demonstrating how to disable thread stealing during the execution of parallel algorithms (`quickstart/disable_thread_stealing_executor.cpp`)
- We now require for our CMake build system configuration files to be formatted using `cmake-format`.
- We have removed more dependencies on various Boost libraries.
- We have added an experimental option enabling unity builds of HPX using the `-DHPX_WITH_UNITY_BUILD=On` CMake option.
- Many bug fixes.

Breaking changes

- *HPX* now requires a C++14 capable compiler. We have set the *HPX* C++ standard automatically to C++14 and if it needs to be set explicitly, it should be specified through the `CMAKE_CXX_STANDARD` setting as mandated by CMake. The `HPX_WITH_CXX*` variables are now deprecated and will be removed in the future.
- Building and using *HPX* is now supported only when using CMake V3.13 or later, Boost V1.64 or newer, and when compiling with clang V5, gcc V7, or VS2019, or later. Other compilers might still work but have not been tested thoroughly.
- We have added a `hpx::init_params` struct to pass parameters for *HPX* initialization e.g. the resource partitioner callback to initialize thread pools (*Using the resource partitioner*).
- The `all_to_all` algorithm is renamed to `all_gather`, and the new `all_to_all` algorithm is not compatible with the old one.
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`.

Closed issues

³⁶⁹⁵ <https://github.com/TheHPXProject/hpx/issues/4323>

- Issue #4318³⁶⁹⁶ - ASIO breaks with C++2a concepts
- Issue #4317³⁶⁹⁷ - Application runs even if `-hpx:help` is specified
- Issue #4063³⁶⁹⁸ - Document `hpxcxx` compiler wrapper
- Issue #3983³⁶⁹⁹ - Implement the C++20 Synchronization Library
- Issue #3696³⁷⁰⁰ - C++11 `constexpr` support is now required
- Issue #3623³⁷⁰¹ - Modular HPX branch and an alternative project layout
- Issue #2836³⁷⁰² - The worst-case time complexity of `parallel::sort` seems to be $O(N^2)$.

Closed pull requests

- PR #4936³⁷⁰³ - Minor documentation fixes part 2
- PR #4935³⁷⁰⁴ - Add copyright and license to joss paper file
- PR #4934³⁷⁰⁵ - Adding Semicolon in Documentation
- PR #4932³⁷⁰⁶ - Fixing compiler warnings
- PR #4931³⁷⁰⁷ - Small documentation formatting fixes
- PR #4930³⁷⁰⁸ - Documentation Distributed HPX applications `localvv` with `local_vv`
- PR #4929³⁷⁰⁹ - Add final version of the JOSS paper
- PR #4928³⁷¹⁰ - Add `HPX_NODISCARD` to `enable_user_polling` structs
- PR #4926³⁷¹¹ - Rename `distributed_executors` module to `executors_distributed`
- PR #4925³⁷¹² - Making `transform_reduce` conforming to C++20
- PR #4923³⁷¹³ - Don't acquire lock if not needed
- PR #4921³⁷¹⁴ - Update the release notes for the release candidate 3
- PR #4920³⁷¹⁵ - Disable `libcds` release
- PR #4919³⁷¹⁶ - Make `cuda` event pool dynamic instead of fixed size
- PR #4917³⁷¹⁷ - Move `chrono` functionality to `hpx::chrono` namespace

- PR #4916³⁷¹⁸ - HPX_HAVE_DEPRECATED_WARNINGS needs to be set even when disabled
- PR #4915³⁷¹⁹ - Moving more action related files to actions modules
- PR #4914³⁷²⁰ - Add alias targets with namespaces used for exporting
- PR #4912³⁷²¹ - Aggregate initialize CPOs
- PR #4910³⁷²² - Explicitly specify hwloc root on Jenkins CSCS builds
- PR #4908³⁷²³ - Fix algorithms documentation
- PR #4907³⁷²⁴ - Remove HPX::hpx_no_wrap_main target
- PR #4906³⁷²⁵ - Fixing unused variable warning
- PR #4905³⁷²⁶ - Adding specializations for simple for_loops
- PR #4904³⁷²⁷ - Update boost to 1.74.0 for the newest jenkins configs
- PR #4903³⁷²⁸ - Hide GITHUB_TOKEN environment variables from environment variable output
- PR #4902³⁷²⁹ - Cancel previous pull requests builds before starting a new one with Jenkins
- PR #4901³⁷³⁰ - Update public API list with updated algorithms
- PR #4899³⁷³¹ - Suggested changes for HPX V1.5 release notes
- PR #4898³⁷³² - Minor tweak to hpx::equal implementation
- PR #4896³⁷³³ - Making generate() and generate_n conforming to C++20
- PR #4895³⁷³⁴ - Update apex tag
- PR #4894³⁷³⁵ - Fix exception handling for tasks
- PR #4893³⁷³⁶ - Remove last use of std::result_of, removed in C++20
- PR #4892³⁷³⁷ - Adding replay_executor and replicate_executor
- PR #4889³⁷³⁸ - Restore old behaviour of not requiring linking to hpx_wrap when HPX_WITH_DYNAMIC_HPX_MAIN=OFF
- PR #4887³⁷³⁹ - Making sure remotely thrown (non-hpx) exceptions are properly marshaled back to invocation site

- PR #4885³⁷⁴⁰ - Adapting `hpx::find` and `friends` to C++20
- PR #4884³⁷⁴¹ - Adapting `mismatch` to C++20
- PR #4883³⁷⁴² - Adapting `hpx::equal` to be conforming to C++20
- PR #4882³⁷⁴³ - Fixing exception handling for `hpx::copy` and adding missing tests
- PR #4881³⁷⁴⁴ - Adds different runtime exception when registering thread with the HPX runtime
- PR #4876³⁷⁴⁵ - Adding example demonstrating how to disable thread stealing during the execution of parallel algorithms
- PR #4874³⁷⁴⁶ - Adding non-policy tests to `all_of`, `any_of`, and `none_of`
- PR #4873³⁷⁴⁷ - Set CUDA compute capability on rostam Jenkins builds
- PR #4872³⁷⁴⁸ - Force partitioned vector scan tests to run serially
- PR #4870³⁷⁴⁹ - Making move conforming with C++20
- PR #4869³⁷⁵⁰ - Making `destroy` and `destroy_n` conforming to C++20
- PR #4868³⁷⁵¹ - Fix miscellaneous header problems
- PR #4867³⁷⁵² - Add CPOs for `for_each`
- PR #4865³⁷⁵³ - Adapting `count` and `count_if` to be conforming to C++20
- PR #4864³⁷⁵⁴ - Release notes 1.5.0
- PR #4863³⁷⁵⁵ - adding `libcds-hpx` tag to prepare for `hpx1.5` release
- PR #4862³⁷⁵⁶ - Adding version specific deprecation options
- PR #4861³⁷⁵⁷ - Limiting executor improvements
- PR #4860³⁷⁵⁸ - Making `fill` and `fill_n` compatible with C++20
- PR #4859³⁷⁵⁹ - Adapting `all_of`, `any_of`, and `none_of` to C++20
- PR #4857³⁷⁶⁰ - Improve `libCDS` integration
- PR #4856³⁷⁶¹ - Correct typos in the documentation of the `hpx` performance counters
- PR #4854³⁷⁶² - Removing obsolete code

- PR #4853³⁷⁶³ - Adding test that derives component from two other components
- PR #4852³⁷⁶⁴ - Fix mpi_ring test in distributed mode by ensuring all ranks run hpx_main
- PR #4851³⁷⁶⁵ - Converting resiliency APIs to tag_invoke based CPOs
- PR #4849³⁷⁶⁶ - Enable use of future_overhead test when DISTRIBUTED_RUNTIME is OFF
- PR #4847³⁷⁶⁷ - Fixing 'error prone' constructs as reported by Codacy
- PR #4846³⁷⁶⁸ - Disable Boost.Asio concepts support
- PR #4845³⁷⁶⁹ - Fix PAPI counters
- PR #4843³⁷⁷⁰ - Remove dependency on various Boost headers
- PR #4841³⁷⁷¹ - Rearrange public API headers
- PR #4840³⁷⁷² - Fixing TSS problems during thread termination
- PR #4839³⁷⁷³ - Fix async_cuda build problems when distributed runtime is disabled
- PR #4837³⁷⁷⁴ - Restore compatibility for old (now deprecated) copy algorithms
- PR #4836³⁷⁷⁵ - Adding CPOs for hpx::reduce
- PR #4835³⁷⁷⁶ - Remove *using util::result_of* from namespace hpx
- PR #4834³⁷⁷⁷ - Fixing the calculation of the number of idle cores and the corresponding idle masks
- PR #4833³⁷⁷⁸ - Allow thread function destructors to yield
- PR #4832³⁷⁷⁹ - Fixing assertion in split_gids and memory leaks in 1d_stencil_7
- PR #4831³⁷⁸⁰ - Making sure MPI_CXX_COMPILE_FLAGS is interpreted as a sequence of options
- PR #4830³⁷⁸¹ - Update documentation on using HPX::wrap_main
- PR #4827³⁷⁸² - Update clang-newest configuration to use clang 10
- PR #4826³⁷⁸³ - Add Jenkins configuration for rostam
- PR #4825³⁷⁸⁴ - Move all CUDA functionality to hpx::cuda::experimental namespace
- PR #4824³⁷⁸⁵ - Add support for building master/release branches to Jenkins configuration

³⁷⁸⁵ <https://github.com/TheHPXProject/hpx/pull/4824>

- PR #4821³⁷⁸⁶ - Implement customization point for `hpx::copy` and `hpx::ranges::copy`
- PR #4819³⁷⁸⁷ - Allow finding Boost components before finding HPX
- PR #4817³⁷⁸⁸ - Adding range version of stable sort
- PR #4815³⁷⁸⁹ - Fix a wrong `#ifdef` for IO/TIMER pools causing build errors
- PR #4814³⁷⁹⁰ - Replace `hpx::function_nonsr` with `std::function` in error module
- PR #4809³⁷⁹¹ - Foreach adapt
- PR #4808³⁷⁹² - Make internal algorithms functions const
- PR #4807³⁷⁹³ - Add Jenkins configuration for running on Piz Daint
- PR #4806³⁷⁹⁴ - Update documentation links to new domain name
- PR #4805³⁷⁹⁵ - Applying changes that resolve time complexity issues in sort
- PR #4803³⁷⁹⁶ - Adding implementation of `stable_sort`
- PR #4802³⁷⁹⁷ - Fix datapar header paths
- PR #4801³⁷⁹⁸ - Replace `boost::shared_array<T>` with `std::shared_ptr<T[]>` if supported
- PR #4799³⁷⁹⁹ - Fixing `#include` paths in compatibility headers
- PR #4798³⁸⁰⁰ - Include the main module header (fixes partially #4488)
- PR #4797³⁸⁰¹ - Change cmake targets
- PR #4794³⁸⁰² - Removing 128bit integer emulation
- PR #4793³⁸⁰³ - Make sure global variable is handled properly
- PR #4792³⁸⁰⁴ - Replace `enable_if` with **HPX_CONCEPT_REQUIRES_** and add `is_sentinel_for` constraint
- PR #4790³⁸⁰⁵ - Move deprecation warnings from base template to template specializations for `result_of` etc. structs
- PR #4789³⁸⁰⁶ - Fix hangs during assertion handling and distributed runtime construction
- PR #4788³⁸⁰⁷ - Fixing inclusive transform scan algorithm to properly handle initial value
- PR #4785³⁸⁰⁸ - Fixing barrier test

- PR #4784³⁸⁰⁹ - Fixing deleter argument bindings in `serialize_buffer`
- PR #4783³⁸¹⁰ - Add coveralls badge
- PR #4782³⁸¹¹ - Make header tests parallel again
- PR #4780³⁸¹² - Remove outdated comment about `hpx::stop` in documentation
- PR #4776³⁸¹³ - debug print improvements
- PR #4775³⁸¹⁴ - Checkpoint cleanup
- PR #4771³⁸¹⁵ - Fix compilation with `HPX_WITH_NETWORKING=OFF`
- PR #4767³⁸¹⁶ - Remove all force linking leftovers
- PR #4765³⁸¹⁷ - Fix 1d stencil index calculation
- PR #4764³⁸¹⁸ - Force some tests to run serially
- PR #4762³⁸¹⁹ - Update pointees in compatibility headers
- PR #4761³⁸²⁰ - Fix running and building of execution module tests on CircleCI
- PR #4760³⁸²¹ - Storing `hpx_options` in global property to speed up summary report
- PR #4759³⁸²² - Reduce memory requirements for our main shared state
- PR #4757³⁸²³ - Fix `mimalloc` linking on Windows
- PR #4756³⁸²⁴ - Fix compilation issues
- PR #4753³⁸²⁵ - Re-adding API functions that were lost during merges
- PR #4751³⁸²⁶ - Revert “Create coverage reports and upload them to codecov.io”
- PR #4750³⁸²⁷ - Fixing possible race condition during termination detection
- PR #4749³⁸²⁸ - Deprecate `result_of` and friends
- PR #4748³⁸²⁹ - Create coverage reports and upload them to codecov.io
- PR #4747³⁸³⁰ - Changing `#include` for MPI `parcelport`
- PR #4745³⁸³¹ - Add `is_sentinel_for` trait implementation and test

- PR #4743³⁸³² - Fix init_globally example after runtime mode changes
- PR #4742³⁸³³ - Update SUPPORT.md
- PR #4741³⁸³⁴ - Fixing a warning generated for unity builds with msvc
- PR #4740³⁸³⁵ - Rename local_lcos and basic_execution modules
- PR #4739³⁸³⁶ - Undeprecate a couple of hpx/modulename.hpp headers
- PR #4738³⁸³⁷ - Conditionally test schedulers in thread_stacksize_current test
- PR #4734³⁸³⁸ - Fixing a bunch of codacy warnings
- PR #4733³⁸³⁹ - Add experimental unity build option to CMake configuration
- PR #4730³⁸⁴⁰ - Fixing compilation problems with unordered map
- PR #4729³⁸⁴¹ - Fix APEX build
- PR #4727³⁸⁴² - Fix missing runtime includes for distributed runtime
- PR #4726³⁸⁴³ - Add more API headers
- PR #4725³⁸⁴⁴ - Add more compatibility headers for deprecated module headers
- PR #4724³⁸⁴⁵ - Fix 4723
- PR #4721³⁸⁴⁶ - Attempt to fixing migration tests
- PR #4717³⁸⁴⁷ - Make the compatibility headers macro conditional
- PR #4716³⁸⁴⁸ - Add hpx/runtime.hpp and hpx/distributed/runtime.hpp API headers
- PR #4714³⁸⁴⁹ - Add hpx/future.hpp header
- PR #4713³⁸⁵⁰ - Remove hpx/runtime/threads_fwd.hpp and hpx/util_fwd.hpp
- PR #4711³⁸⁵¹ - Make module deprecation warnings overridable
- PR #4710³⁸⁵² - Add compatibility headers and other fixes after module header renaming
- PR #4708³⁸⁵³ - Add termination handler for parallel algorithms
- PR #4707³⁸⁵⁴ - Use hpx::function_nonser instead of std::function internally

- PR #4706³⁸⁵⁵ - Move header file to module
- PR #4705³⁸⁵⁶ - Fix incorrect behaviour of cmake-format check
- PR #4704³⁸⁵⁷ - Fix resource tests
- PR #4701³⁸⁵⁸ - Fix missing includes for future::then specializations
- PR #4700³⁸⁵⁹ - Removing obsolete memory component
- PR #4699³⁸⁶⁰ - Add short descriptions to modules missing documentation
- PR #4696³⁸⁶¹ - Rename generated modules headers
- PR #4693³⁸⁶² - Overhauling thread_mapper for public consumption
- PR #4688³⁸⁶³ - Fix thread stack size handling
- PR #4687³⁸⁶⁴ - Adding all_gather and fixing all_to_all
- PR #4684³⁸⁶⁵ - Miscellaneous compilation fixes
- PR #4683³⁸⁶⁶ - Fix HPX_WITH_DYNAMIC_HP_X_MAIN=OFF
- PR #4682³⁸⁶⁷ - Fix compilation of pack_traversal_rebind_container.hpp
- PR #4681³⁸⁶⁸ - Add missing hpx/execution.hpp includes for future::then
- PR #4678³⁸⁶⁹ - Typeless communicator
- PR #4677³⁸⁷⁰ - Forcing registry option to be accepted without checks.
- PR #4676³⁸⁷¹ - Adding scatter_to/scatter_from collective operations
- PR #4673³⁸⁷² - Fix PAPI counters compilation
- PR #4671³⁸⁷³ - Deprecate hpx::promise alias to hpx::lcos::promise
- PR #4670³⁸⁷⁴ - Explicitly instantiate get_exception
- PR #4667³⁸⁷⁵ - Add stopValue in Sentinel struct instead of Iterator
- PR #4666³⁸⁷⁶ - Add release build on Windows to GitHub actions
- PR #4664³⁸⁷⁷ - Creating itt_notify module.

HPX V1.4.1 (Feb 12, 2020)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation issues on Windows, macOS, FreeBSD, and with gcc 10
- Install missing pdb files on Windows
- Allow running tests using an installed version of *HPX*
- Skip MPI finalization if HPX has not initialized MPI
- Give a hard error when attempting to use IO counters on Windows

Closed issues

- [Issue #4320](#)⁴¹¹² - HPX 1.4.0 does not compile with gcc 10

HPX V1.4.0 (January 15, 2020)

General changes

- We have added the collectives `all_to_all` and `all_reduce`.
- We have added APIs for resiliency, which allows replication and replay for failed tasks. See the [documentation](#) for more details.
- Components can now be checkpointed.
- Performance improvements to schedulers and coroutines. A significant change is the addition of stackless coroutines. These are to be used for tasks that do not need to be suspended and can reduce overheads noticeably in applications with short tasks. A stackless coroutine can be created with the new stack size `thread_stacksize_nostack`.
- We have added an implementation of `unique_any`, which is a non-copyable version of `any`.
- The `shared_priority_queue_scheduler` has been improved. It now has lower overheads than the default scheduler in many situations. Unlike the default scheduler it fully supports NUMA scheduling hints. Enable it with the command line option `--hpx:queuing=shared-priority`. This scheduler should still be considered experimental, but its use is encouraged in real applications to help us make it production ready.
- We have added the performance counters `background-receive-duration` and `background-receive-overhead` for inspecting the time and overhead spent on receiving parcels in the background.
- Compilation time has been further improved when `HPX_WITH_NETWORKING=OFF`.
- We no longer require compiled Boost dependencies in certain configurations. This requires at least Boost 1.70, compiling on x86 with GCC 9, clang (libc++) 9, or VS2019 in C++17 mode. The dependency on `Boost.Filesystem` can explicitly be turned on with `HPX_FILESYSTEM_WITH_BOOST_FILESYSTEM_COMPATIBILITY=ON` (it is off by default if the standard library supports `std::filesystem`). `Boost.ProgramOptions` has been copied into the HPX repository. We have a compatibility layer for users who must explicitly use `Boost.ProgramOptions` instead of the `ProgramOptions` provided by HPX. To remove the dependency `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY` must be explicitly set to `OFF`. This option will be removed in a future release. We have also removed several other header-only dependencies on Boost.
- It is now possible to use the process affinity mask set by tools like `numactl` and various batch environments with the command line option `--hpx:use-process-mask`. Enabling this option implies `--hpx:ignore-batch-env`.
- It is now possible to create standalone thread pools without starting the runtime. See the `standalone_thread_pool_executor.cpp` test in the `execution` module for an example.

⁴¹²² <https://github.com/TheHPXProject/hpx/pull/4337>

⁴¹²³ <https://github.com/TheHPXProject/hpx/pull/4335>

⁴¹²⁴ <https://github.com/TheHPXProject/hpx/pull/4315>

⁴¹²⁵ <https://github.com/TheHPXProject/hpx/pull/4310>

- Tasks annotated with `hpx::util::annotated_function` now have their correct name when using APEX to generate OTF2 files.
- Cloning of APEX was defective in previous releases (it required manual intervention to check out the correct tag or branch). This has been fixed.
- The option `HPX_WITH_MORE_THAN_64_THREADS` is now ignored and will be removed in a future release. The value is instead derived directly from `HPX_WITH_MAX_CPU_COUNT` option.
- We have deprecated compiling in C++11 mode. The next release will require a C++14 capable compiler.
- We have deprecated support for the Vc library. This option will be replaced with SIMD support from the standard library in a future release.
- We have significantly refactored our CMake setup. This is intended to be a non-breaking change and will allow for using HPX through CMake targets in the future.
- We have continued modularizing the HPX library. In the process we have rearranged many header files into module-specific directories. All moved headers have compatibility headers which forward from the old location to the new location, together with a deprecation warning. The compatibility headers will eventually be removed.
- We now enforce formatting with `clang-format` on the majority of our source files.
- We have added SPDX license tags to all files.
- Many bugfixes.

Breaking changes

- The `HPX_WITH_THREAD_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_UNWRAPPED_COMPATIBILITY` option and the associated compatibility layer has been removed.

- Issue #4215⁴¹³⁴ - HPX 1.4.0rc1 does not link on s390x
- Issue #4204⁴¹³⁵ - Trouble compiling HPX with Intel compiler
- Issue #4199⁴¹³⁶ - Refactor APEX to eliminate circular dependency
- Issue #4187⁴¹³⁷ - HPX can't build on OSX
- Issue #4185⁴¹³⁸ - Simple debug output for development
- Issue #4182⁴¹³⁹ - @HPX_CONF_PREFIX@ is the empty string
- Issue #4169⁴¹⁴⁰ - HPX won't build with APEX
- Issue #4163⁴¹⁴¹ - Add back HPX_LIBRARIES and HPX_INCLUDE_DIRS
- Issue #4161⁴¹⁴² - It should be possible to call find_package(HPX) multiple times
- Issue #4155⁴¹⁴³ - get_self_id() for stackless threads returns invalid_thread_id
- Issue #4151⁴¹⁴⁴ - build error with MPI code
- Issue #4150⁴¹⁴⁵ - hpx won't build on POWER9 with clang 8
- Issue #4148⁴¹⁴⁶ - cacheline_data delivers poor performance with C++17 compared to C++14
- Issue #4144⁴¹⁴⁷ - target general in HPX_LIBRARIES does not exist
- Issue #4134⁴¹⁴⁸ - CMake Error when -DHPX_WITH_HPXMP=ON
- Issue #4132⁴¹⁴⁹ - parallel fill leaves elements unfilled
- Issue #4123⁴¹⁵⁰ - PAPI performance counters are inaccessible
- Issue #4118⁴¹⁵¹ - static_chunk_size is not obeyed in scan algorithms
- Issue #4115⁴¹⁵² - dependency chaining error with APEX
- Issue #4107⁴¹⁵³ - Initializing runtime without entry point function and command line arguments
- Issue #4105⁴¹⁵⁴ - Bug in hpx:bind=numa-balanced
- Issue #4101⁴¹⁵⁵ - Bound tasks
- Issue #4100⁴¹⁵⁶ - Add SPDX identifier to all files

- Issue #4085⁴¹⁵⁷ - `hpx_topology` library should depend on `hwloc`
- Issue #4067⁴¹⁵⁸ - HPX fails to build on macOS
- Issue #4056⁴¹⁵⁹ - Building without thread manager idle backoff fails
- Issue #4052⁴¹⁶⁰ - Enforce `clang-format` style for modules
- Issue #4032⁴¹⁶¹ - Simple hello world fails to launch correctly
- Issue #4030⁴¹⁶² - Allow threads to skip context switching
- Issue #4029⁴¹⁶³ - Add support for `mimalloc`
- Issue #4005⁴¹⁶⁴ - Can't link HPX when APEX enabled
- Issue #4002⁴¹⁶⁵ - Missing header for algorithm module
- Issue #3989⁴¹⁶⁶ - conversion from `long` to `unsigned int` requires a narrowing conversion on MSVC
- Issue #3958⁴¹⁶⁷ - `/statistics/average@` perf counter can't be created
- Issue #3953⁴¹⁶⁸ - CMake errors from `HPX_AddPseudoDependencies`
- Issue #3941⁴¹⁶⁹ - CMake error for APEX install target
- Issue #3940⁴¹⁷⁰ - Convert pseudo-doxygen function documentation into actual doxygen documentation
- Issue #3935⁴¹⁷¹ - HPX compiler match too strict?
- Issue #3929⁴¹⁷² - Buildbot failures on latest HPX stable
- Issue #3912⁴¹⁷³ - I recommend publishing a version that does not depend on the boost library
- Issue #3890⁴¹⁷⁴ - `hpx.ini` not working
- Issue #3883⁴¹⁷⁵ - cuda compilation fails because of `-faligned-new`
- Issue #3879⁴¹⁷⁶ - HPX fails to configure with `-DHPX_WITH_TESTS=OFF`
- Issue #3871⁴¹⁷⁷ - `dataflow` does not support void allocators
- Issue #3867⁴¹⁷⁸ - Latest HTML docs placed in wrong directory on GitHub pages
- Issue #3866⁴¹⁷⁹ - Make sure all tests use `HPX_TEST*` macros and not `HPX_ASSERT`

- PR #4167⁴²⁷¹ - Add a condition to setup the external libraries
- PR #4166⁴²⁷² - Add an `INTERNAL_FLAGS` option to link to `hpx_internal_flags`
- PR #4165⁴²⁷³ - Forward `HPX_*` cmake cache variables to external projects
- PR #4164⁴²⁷⁴ - Affinity and batch environment modules
- PR #4162⁴²⁷⁵ - Handle quick `exit`
- PR #4160⁴²⁷⁶ - Using `target_link_libraries` for cmake versions ≥ 3.12
- PR #4159⁴²⁷⁷ - Make sure `HPX_WITH_NATIVE_TLS` is forwarded to dependent projects
- PR #4158⁴²⁷⁸ - Adding allocator imported target as a dependency of allocator module
- PR #4157⁴²⁷⁹ - Add `hpx_memory` as a dependency of parcelport plugins
- PR #4156⁴²⁸⁰ - Stackless coroutines now can refer to themselves (through `get_self()` and friends)
- PR #4154⁴²⁸¹ - Added CMake policy CMP0060 for HPX applications.
- PR #4153⁴²⁸² - add header `iomanip` to tests and tool
- PR #4152⁴²⁸³ - Casting MPI tag value
- PR #4149⁴²⁸⁴ - Add back private `m_desc` member variable in `program_options` module
- PR #4147⁴²⁸⁵ - Resource partitioner and threadmanager modules
- PR #4146⁴²⁸⁶ - Google Season of Docs updates to documentation; creating hpx projects
- PR #4145⁴²⁸⁷ - Adding basic support for stackless threads
- PR #4143⁴²⁸⁸ - Exclude `test_client_1950` from all target
- PR #4142⁴²⁸⁹ - Add a new `thread_pool_executor`
- PR #4140⁴²⁹⁰ - Google Season of Docs updates to documentation; why hpx
- PR #4139⁴²⁹¹ - Remove runtime includes from coroutines module
- PR #4138⁴²⁹² - Forking `boost::intrusive_ptr` and adding it as `hpx::intrusive_ptr`
- PR #4137⁴²⁹³ - Fixing TSS destruction

- PR #4136⁴²⁹⁴ - HPX.Compute modules
- PR #4133⁴²⁹⁵ - Fix `block_executor`
- PR #4131⁴²⁹⁶ - Applying fixes based on reports from PVS Studio
- PR #4130⁴²⁹⁷ - Adding missing header to build system
- PR #4129⁴²⁹⁸ - Fixing compilation if `HPX_WITH_DATAPAR_VC` is enabled
- PR #4128⁴²⁹⁹ - Renaming `moveonly_any` to `unique_any`
- PR #4126⁴³⁰⁰ - Attempt to fix `basic_any` constructor for gcc 7
- PR #4125⁴³⁰¹ - Changing `extra_archive_data` implementation
- PR #4124⁴³⁰² - Don't link to `Boost.System` unless required
- PR #4122⁴³⁰³ - Add kernel launch helper utility (+saxpy demo) and merge in octotiger changes
- PR #4121⁴³⁰⁴ - Fixing migration test if networking is disabled.
- PR #4120⁴³⁰⁵ - Google Season of Docs updates to documentation; hpx build system v1
- PR #4119⁴³⁰⁶ - Making sure `chunk_size` and `max_chunk` are actually applied to parallel algorithms if specified
- PR #4117⁴³⁰⁷ - Make CircleCI formatting check store diff
- PR #4116⁴³⁰⁸ - Fix automatically setting C++ standard
- PR #4114⁴³⁰⁹ - Module serialization
- PR #4113⁴³¹⁰ - Module datastructures
- PR #4111⁴³¹¹ - Fixing performance regression introduced earlier
- PR #4110⁴³¹² - Adding missing SPDX tags
- PR #4109⁴³¹³ - Overload for start without entry point/argv.
- PR #4108⁴³¹⁴ - Making sure C++ standard is properly detected and propagated
- PR #4106⁴³¹⁵ - use `std::round` for guaranteed rounding without errors
- PR #4104⁴³¹⁶ - Extend `scheduler_mode` with new `work_stealing` and task assignment modes

- PR #3159⁴⁴⁹² - Support Checkpointing Components

HPX V1.3.0 (May 23, 2019)

General changes

- Performance improvements: the schedulers have significantly reduced overheads from removing false sharing and the parallel executor has been updated to create fewer futures.
- HPX now defaults to not turning on networking when running on one locality. This means that you can run multiple instances on the same system without adding command line options.
- Multiple issues reported by Clang sanitizers have been fixed.
- We have added (back) single-page HTML documentation and PDF documentation.
- We have started modularizing the HPX library. This is useful both for developers and users. In the long term users will be able to consume only parts of the HPX libraries if they do not require all the functionality that HPX currently provides.
- We have added an implementation of `function_ref`.

⁴⁴⁷⁸ <https://github.com/TheHPXProject/hpx/pull/3875>

⁴⁴⁷⁹ <https://github.com/TheHPXProject/hpx/pull/3874>

⁴⁴⁸⁰ <https://github.com/TheHPXProject/hpx/pull/3873>

⁴⁴⁸¹ <https://github.com/TheHPXProject/hpx/pull/3872>

⁴⁴⁸² <https://github.com/TheHPXProject/hpx/pull/3870>

⁴⁴⁸³ <https://github.com/TheHPXProject/hpx/pull/3869>

⁴⁴⁸⁴ <https://github.com/TheHPXProject/hpx/pull/3868>

⁴⁴⁸⁵ <https://github.com/TheHPXProject/hpx/pull/3845>

⁴⁴⁸⁶ <https://github.com/TheHPXProject/hpx/pull/3839>

⁴⁴⁸⁷ <https://github.com/TheHPXProject/hpx/pull/3832>

⁴⁴⁸⁸ <https://github.com/TheHPXProject/hpx/pull/3799>

⁴⁴⁸⁹ <https://github.com/TheHPXProject/hpx/pull/3701>

⁴⁴⁹⁰ <https://github.com/TheHPXProject/hpx/pull/3496>

⁴⁴⁹¹ <https://github.com/TheHPXProject/hpx/pull/3192>

⁴⁴⁹² <https://github.com/TheHPXProject/hpx/pull/3159>

- The barrier and latch classes have gained a few additional member functions.

Breaking changes

- Executable and library targets are now created without the `_exe` and `_lib` suffix respectively. For example, the target `1d_stencil_1_exe` is now simply called `1d_stencil_1`.
- We have removed the following deprecated functionality: `queue`, `scoped_unlock`, and support for input iterators in algorithms.
- We have turned off the compatibility layer for `unwrapped` by default. The functionality will be removed in the next release. The option can still be turned on using the [CMake](#)⁴⁴⁹³ option `HPX_WITH_UNWRAPPED_SUPPORT`. Likewise, `inclusive_scan` compatibility overloads have been turned off by default. They can still be turned on with `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY`.
- The minimum compiler and dependency versions have been updated. We now support GCC from version 5 onwards, Clang from version 4 onwards, and Boost from version 1.61.0 onwards.
- The headers for preprocessor macros have moved as a result of the functionality being moved to a separate module. The old headers are deprecated and will be removed in a future version of HPX. You can turn off the warnings by setting `HPX_PREPROCESSOR_WITH_DEPRECATION_WARNINGS=OFF` or turn off the compatibility headers completely with `HPX_PREPROCESSOR_WITH_COMPATIBILITY_HEADERS=OFF`.

- PR #3627⁴⁷¹¹ - Implement `util::function_ref`
- PR #3626⁴⁷¹² - Fix `cancelable_action_client` example
- PR #3625⁴⁷¹³ - Added automatic serialization for simple structs (see #3034)
- PR #3624⁴⁷¹⁴ - Updating the default order of priority for `thread_description`
- PR #3621⁴⁷¹⁵ - Update copyright year and other small formatting fixes
- PR #3620⁴⁷¹⁶ - Adding support for gitlab runner
- PR #3619⁴⁷¹⁷ - Store debug logs and core dumps on CircleCI
- PR #3618⁴⁷¹⁸ - Various optimizations
- PR #3617⁴⁷¹⁹ - Fix link to the gpg key (#2)
- PR #3615⁴⁷²⁰ - Fix unused variable warnings with networking off
- PR #3614⁴⁷²¹ - Restructuring counter data in scheduler to reduce false sharing
- PR #3613⁴⁷²² - Adding support for gitlab runners
- PR #3610⁴⁷²³ - Don't wait for `stop_condition` in main thread
- PR #3608⁴⁷²⁴ - Add inline keyword to `invalid_thread_id` definition for `nvcc`
- PR #3607⁴⁷²⁵ - Adding configuration key that allows one to explicitly add a directory to the component search path
- PR #3606⁴⁷²⁶ - Add `nvcc` to exclude `constexpress` since is it not supported by `nvcc`
- PR #3605⁴⁷²⁷ - Add `inline` to definition of checkpoint stream operators to fix link error
- PR #3604⁴⁷²⁸ - Use `format` for string formatting
- PR #3603⁴⁷²⁹ - Improve the error message for using to less `MAX_CPU_COUNT`
- PR #3602⁴⁷³⁰ - Improve the error message for to small values of `MAX_CPU_COUNT`
- PR #3600⁴⁷³¹ - Parallel executor aggregated
- PR #3599⁴⁷³² - Making sure networking is disabled for default one-locality-runs
- PR #3596⁴⁷³³ - Store thread exit functions in `forward_list` instead of `deque` to avoid allocations

HPX V1.2.1 (Feb 19, 2019)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation on ARM, s390x and 32-bit architectures.
- Fix a critical bug in the `future` implementation.
- Fix several problems in the CMake configuration which affects external projects.
- Add support for Boost 1.69.0.

Closed issues

HPX V1.2.0 (Nov 12, 2018)

General changes

Here are some of the main highlights and changes for this release:

- Thanks to the work of our Google Summer of Code student, Nikunj Gupta, we now have a new implementation of `hpx_main.hpp` on supported platforms (Linux, BSD and MacOS). This is intended to be a less fragile drop-in replacement for the old implementation relying on preprocessor macros. The new implementation does not require changes if you are using the [CMake⁴⁷⁸⁷](#) or `pkg-config`. The old behaviour can be restored by setting `HPX_WITH_DYNAMIC_HPX_MAIN=OFF` during [CMake⁴⁷⁸⁸](#) configuration. The implementation on Windows is unchanged.

⁴⁷⁸⁶ <https://github.com/TheHPXProject/hpx/pull/3551>

⁴⁷⁸⁷ <https://www.cmake.org>

⁴⁷⁸⁸ <https://www.cmake.org>

- We have added functionality to allow passing scheduling hints to our schedulers. These will allow us to create executors that for example target a specific NUMA domain or allow for *HPX* threads to be pinned to a particular worker thread.
- We have significantly improved the performance of our futures implementation by making the shared state atomic.
- We have replaced Boostbook by Sphinx for our documentation. This means the documentation is easier to navigate with built-in search and table of contents. We have also added a quick start section and restructured the documentation to be easier to follow for new users.
- We have added a new option to the `--hpx:threads` command line option. It is now possible to use `cores` to tell *HPX* to only use one worker thread per core, unlike the existing option `all` which uses one worker thread per processing unit (processing unit can be a hyperthread if hyperthreads are available). The default value of `--hpx:threads` has also been changed to `cores` as this leads to better performance in most cases.
- All command line options can now be passed alongside configuration options when initializing *HPX*. This means that some options that were previously only available on the command line can now be set as configuration options.
- HPXMP is a portable, scalable, and flexible application programming interface using the OpenMP specification that supports multi-platform shared memory multiprocessing programming in C and C++. HPXMP can be enabled within *HPX* by setting `DHPX_WITH_HPXM=ON` during [CMake⁴⁷⁸⁹](#) configuration.
- Two new performance counters were added for measuring the time spent doing background work. `/threads/time/background-work-duration` returns the time spent doing background on a given thread or locality, while `/threads/time/background-overhead` returns the fraction of time spent doing background work with respect to the overall time spent running the scheduler. The new performance counters are disabled by default and can be turned on by setting `HPX_WITH_BACKGROUND_THREAD_COUNTERS=ON` during [CMake⁴⁷⁹⁰](#) configuration.
- The idling behaviour of *HPX* has been tweaked to allow for faster idling. This is useful in interactive applications where the *HPX* worker threads may not have work all the time. This behaviour can be tweaked and turned off as before with `HPX_WITH_THREAD_MANAGER_IDLE_BACKOFF=OFF` during [CMake⁴⁷⁹¹](#) configuration.
- It is now possible to register callback functions for *HPX* worker thread events. Callbacks can be registered for starting and stopping worker threads, and for when errors occur.

Breaking changes

- The implementation of `hpx_main.hpp` has changed. If you are using custom Makefiles you will need to make changes. Please see the documentation on [using Makefiles](#) for more details.
- The default value of `--hpx:threads` has changed from `all` to `cores`. The new option `cores` only starts one worker thread per core.
- We have dropped support for Boost 1.56 and 1.57. The minimal version of Boost we now test is 1.58.
- Our `boost::format`-based formatting implementation has been revised and replaced with a custom implementation. This changes the formatting syntax and requires changes if you are relying on `hpx::util::format` or `hpx::util::format_to`. The pull request for this change contains more information: [PR #3266⁴⁷⁹²](#).
- The following deprecated options have now been completely removed:
`HPX_WITH_ASYNC_FUNCTION_COMPATIBILITY`, `HPX_WITH_LOCAL_DATAFLOW`,
`HPX_WITH_GENERIC_EXECUTION_POLICY`, `HPX_WITH_BOOST_CHRONO_COMPATIBILITY`,
`HPX_WITH_EXECUTOR_COMPATIBILITY`, `HPX_WITH_EXECUTION_POLICY_COMPATIBILITY`, and
`HPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY`.

- PR #3406⁴⁹²⁹ - Adding thread local allocator and use it for future shared states
- PR #3405⁴⁹³⁰ - Adding DHPX_HAVE_THREAD_LOCAL_STORAGE=ON to builds
- PR #3404⁴⁹³¹ - fixing multiple definition of main() in linux
- PR #3402⁴⁹³² - Allow debug option to be enabled only for Linux systems with dynamic main on
- PR #3401⁴⁹³³ - Fix cuda_future_helper.h when compiling with C++11
- PR #3400⁴⁹³⁴ - Fix floating point exception scheduler_base idle backoff
- PR #3398⁴⁹³⁵ - Atomic future state
- PR #3397⁴⁹³⁶ - Fixing code for older gcc versions
- PR #3396⁴⁹³⁷ - Allowing to register thread event functions (start/stop/error)
- PR #3394⁴⁹³⁸ - Fix small mistake in primary_namespace_server.cpp
- PR #3393⁴⁹³⁹ - Explicitly instantiate configured schedulers
- PR #3392⁴⁹⁴⁰ - Add performance counters background overhead and background work duration
- PR #3391⁴⁹⁴¹ - Adapt integration of HPXMP to latest build system changes
- PR #3390⁴⁹⁴² - Make AGAS measurements optional
- PR #3389⁴⁹⁴³ - Fix deadlock during shutdown
- PR #3388⁴⁹⁴⁴ - Add several functionalities allowing to optimize synchronous action invocation
- PR #3387⁴⁹⁴⁵ - Add cmake option to opt out of fail-compile tests
- PR #3386⁴⁹⁴⁶ - Adding support for boost::container::small_vector to dataflow
- PR #3385⁴⁹⁴⁷ - Adds Debug option for hpx initializing from main
- PR #3384⁴⁹⁴⁸ - This hopefully fixes two tests that occasionally fail
- PR #3383⁴⁹⁴⁹ - Making sure thread local storage is enable for hpxMP
- PR #3382⁴⁹⁵⁰ - Fix usage of HPX_CAPTURE together with default value capture [=]
- PR #3381⁴⁹⁵¹ - Replace undefined instantiations of uniform_int_distribution

- PR #3314⁴⁹⁹⁸ - Remove some unused parameter warnings
- PR #3313⁴⁹⁹⁹ - Fix pu-step and pu-offset command line options
- PR #3312⁵⁰⁰⁰ - Add conversion of inspect reports to JUnit XML
- PR #3311⁵⁰⁰¹ - Fix escaping of closing braces in format specification syntax
- PR #3310⁵⁰⁰² - Don't overwrite user settings with defaults in registration database
- PR #3309⁵⁰⁰³ - Fixing potential stack overflow for dataflow
- PR #3308⁵⁰⁰⁴ - This updates the .clang-format configuration file to utilize newer features
- PR #3306⁵⁰⁰⁵ - Marking migratable objects in their gid to allow not handling migration in AGAS
- PR #3305⁵⁰⁰⁶ - Add proper exception handling to run_as_hpx_thread
- PR #3303⁵⁰⁰⁷ - Changed std::rand to a better inbuilt PRNG Generator
- PR #3302⁵⁰⁰⁸ - All non-migratable (simple) components now encode their lva and component type in their gid
- PR #3301⁵⁰⁰⁹ - Add nullptr_t overloads to resource partitioner
- PR #3298⁵⁰¹⁰ - Apex task wrapper memory bug
- PR #3295⁵⁰¹¹ - Fix mistakes after merge of CircleCI config
- PR #3294⁵⁰¹² - Fix partitioned vector include in partitioned_vector_find tests
- PR #3293⁵⁰¹³ - Adding emplace support to promise and make_ready_future
- PR #3292⁵⁰¹⁴ - Add new cuda kernel synchronization with hpx::future demo
- PR #3291⁵⁰¹⁵ - Fixes #3290
- PR #3289⁵⁰¹⁶ - Fixing Docker image creation
- PR #3288⁵⁰¹⁷ - Avoid allocating shared state for wait_all
- PR #3287⁵⁰¹⁸ - Fixing /scheduler/utilization/instantaneous performance counter
- PR #3286⁵⁰¹⁹ - dataflow() and future::then() use sync policy where possible
- PR #3284⁵⁰²⁰ - Background thread can use relaxed atomics to manipulate thread state

HPX V1.1.0 (Mar 24, 2018)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- We have changed the way *HPX* manages the processing units on a node. We do not longer implicitly bind all available cores to a single thread pool. The user has now full control over what processing units are bound to what thread pool, each with a separate scheduler. It is now also possible to create your own scheduler implementation and control what processing units this scheduler should use. We added the `hpx::resource::partitioner` that manages all available processing units and assigns resources to the used thread pools. Thread pools can be now be suspended/resumed independently. This functionality helps in running *HPX* concurrently to code that is directly relying on [OpenMP](#)⁵⁰⁴⁹ and/or [MPI](#)⁵⁰⁵⁰.
- We have continued to implement various parallel algorithms. *HPX* now almost completely implements all of the parallel algorithms as specified by the [C++17 Standard](#)⁵⁰⁵¹. We have also continued to implement these algorithms for the distributed use case (for segmented data structures, such as `hpx::partitioned_vector`).
- Added a compatibility layer for `std::thread`, `std::mutex`, and `std::condition_variable` allowing for the code to use those facilities where available and to fall back to the corresponding Boost facilities otherwise. The [CMake](#)⁵⁰⁵² configuration option `-DHPX_WITH_THREAD_COMPATIBILITY=On` can be used to force using the Boost equivalents.
- The parameter sequence for the `hpx::parallel::transform_inclusive_scan` overload taking one iterator range has changed (again) to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to [CMake](#)⁵⁰⁵³.
- The parameter sequence for the `hpx::parallel::inclusive_scan` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY=On` to CMake.
- Added a helper facility `hpx::local_new` which is equivalent to `hpx::new_` except that it creates components locally only. As a consequence, the used component constructor may accept non-serializable argument types and/or non-const references or pointers.
- Removed the (broken) component type `hpx::lcos::queue<T>`. The old type is still available at configure time by passing `-DHPX_WITH_QUEUE_COMPATIBILITY=On` to CMake.

⁵⁰⁵¹ <http://www.open-std.org/jtc1/sc22/wg21>

⁵⁰⁵² <https://www.cmake.org>

⁵⁰⁵³ <https://www.cmake.org>

- The parallel algorithms adopted for C++17 restrict the iterator categories usable with those to at least forward iterators. Our implementation of the parallel algorithms was supporting input iterators (and output iterators) as well by simply falling back to sequential execution. We have now made our implementations conforming by requiring at least forward iterators. In order to enable the old behavior use the compatibility option `-DHPX_WITH_ALGORITHM_INPUT_ITERATOR_SUPPORT=On` on the `CMake`⁵⁰⁵⁴ command line.
- We have added the functionalities allowing for LCOs being implemented using (simple) components. Before LCOs had to always be implemented using managed components.
- User defined components don't have to be default-constructible anymore. Return types from actions don't have to be default-constructible anymore either. Our serialization layer now in general supports non-default-constructible types.
- We have added a new launch policy `hpx::launch::lazy` that allows one to defer the decision on what launch policy to use to the point of execution. This policy is initialized with a function (object) that – when invoked – is expected to produce the desired launch policy.

Breaking changes

- We have dropped support for the gcc compiler version V4.8. The minimal gcc version we now test on is gcc V4.9. The minimally required version of `CMake`⁵⁰⁵⁵ is now V3.3.2.
- We have dropped support for the Visual Studio 2013 compiler version. The minimal Visual Studio version we now test on is Visual Studio 2015.5.
- We have dropped support for the Boost V1.51-V1.54. The minimal version of Boost we now test is Boost V1.55.
- We have dropped support for the `hpx::util::unwrapped` API. `hpx::util::unwrapped` will stay functional to some degree, until it finally gets removed in a later version of HPX. The functional usage of `hpx::util::unwrapped` should be changed to the new `hpx::util::unwrapping` function whereas the immediate usage should be replaced to `hpx::util::unwrap`.
- The performance counter names referring to properties as exposed by the threading subsystem have changes as those now additionally have to specify the thread-pool. See the corresponding documentation for more details.
- The overloads of `hpx::async` that invoke an action do not perform implicit unwrapping of the returned future anymore in case the invoked function does return a future in the first place. In this case `hpx::async` now returns a `hpx::future<future<T>>` making its behavior conforming to its local counterpart.
- We have replaced the use of `boost::exception_ptr` in our APIs with the equivalent `std::exception_ptr`. Please change your codes accordingly. No compatibility settings are provided.
- We have removed the compatibility settings for `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` as their life-cycle has reached its end.
- We have removed the experimental thread schedulers `hierarchy_scheduler`, `periodic_priority_scheduler` and `throttling_scheduler` in an effort to clean up and consolidate our thread schedulers.

⁵⁴⁴⁴ <https://github.com/TheHPXProject/hpx/issues/2795>

- PR #2794⁵⁴⁴⁵ - Fixing test for partitioned_vector iteration
- PR #2792⁵⁴⁴⁶ - Implemented segmented find and its variations for partitioned vector
- PR #2791⁵⁴⁴⁷ - Circumvent scary warning about placement new
- PR #2790⁵⁴⁴⁸ - Fix OSX build
- PR #2789⁵⁴⁴⁹ - Resource partitioner
- PR #2788⁵⁴⁵⁰ - Adapt parallel::is_heap and parallel::is_heap_until to Ranges TS
- PR #2787⁵⁴⁵¹ - Unwrap hotfixes
- PR #2786⁵⁴⁵² - Update CMake Minimum Version to 3.3.2 (refs #2565)
- Issue #2785⁵⁴⁵³ - Issues with masks and cpuset
- PR #2784⁵⁴⁵⁴ - Error with reduce and transform reduce fixed
- PR #2783⁵⁴⁵⁵ - StackOverflow integration with libsigsegv
- PR #2782⁵⁴⁵⁶ - Replace boost::atomic with std::atomic (where possible)
- PR #2781⁵⁴⁵⁷ - Check for and optionally use [[deprecated]] attribute
- PR #2780⁵⁴⁵⁸ - Adding empty (but non-trivial) destructor to circumvent warnings
- PR #2779⁵⁴⁵⁹ - Exception info tweaks
- PR #2778⁵⁴⁶⁰ - Implement parallel::partition
- PR #2777⁵⁴⁶¹ - Improve error handling in gather_here/gather_there
- PR #2776⁵⁴⁶² - Fix a bug in compiler version check
- PR #2775⁵⁴⁶³ - Fix compilation when HPX_WITH_LOGGING is OFF
- PR #2774⁵⁴⁶⁴ - Removing dependency on Boost.Date_Time
- PR #2773⁵⁴⁶⁵ - Add sync_images() method to spmd_block class
- PR #2772⁵⁴⁶⁶ - Adding documentation for PAPI counters
- PR #2771⁵⁴⁶⁷ - Removing boost preprocessor dependency

- PR #2770⁵⁴⁶⁸ - Adding test, fixing deadlock in config registry
- PR #2769⁵⁴⁶⁹ - Remove some other warnings and errors detected by clang 5.0
- Issue #2768⁵⁴⁷⁰ - Is there iterator tag for HPX?
- PR #2767⁵⁴⁷¹ - Improvements to continuation annotation
- PR #2765⁵⁴⁷² - gcc split stack support for HPX threads #620
- PR #2764⁵⁴⁷³ - Fix some uses of begin/end, remove unnecessary includes
- PR #2763⁵⁴⁷⁴ - Bump minimal Boost version to 1.55.0
- PR #2762⁵⁴⁷⁵ - hpx::partitioned_vector serializer
- PR #2761⁵⁴⁷⁶ - Adding configuration summary to cmake output and `-hpx:info`
- PR #2760⁵⁴⁷⁷ - Removing `1d_hydro` example as it is broken
- PR #2758⁵⁴⁷⁸ - Remove various warnings detected by clang 5.0
- Issue #2757⁵⁴⁷⁹ - In case of a “raw thread” is needed per core for implementing parallel algorithm, what is good practice in HPX?
- PR #2756⁵⁴⁸⁰ - Allowing for LCOs to be simple components
- PR #2755⁵⁴⁸¹ - Removing `make_index_pack_unrolled`
- PR #2754⁵⁴⁸² - Implement `parallel::unique_copy`
- PR #2753⁵⁴⁸³ - Fixing detection of `[[fallthrough]]` attribute
- PR #2752⁵⁴⁸⁴ - New thread priority names
- PR #2751⁵⁴⁸⁵ - Replace `boost::exception` with proposed `exception_info`
- PR #2750⁵⁴⁸⁶ - Replace `boost::iterator_range`
- PR #2749⁵⁴⁸⁷ - Fixing `hdf5` examples
- Issue #2748⁵⁴⁸⁸ - HPX fails to build with enabled `hdf5` examples
- Issue #2747⁵⁴⁸⁹ - Inherited task priorities break certain DAG optimizations
- Issue #2746⁵⁴⁹⁰ - HPX segfaulting with `valgrind`

HPX V1.0.0 (Apr 24, 2017)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- Added the facility `hpx::split_future` which allows one to convert a `future<tuple<Ts...>>` into a `tuple<future<Ts>...>`. This functionality is not available when compiling *HPX* with VS2012.
- Added a new type of performance counter which allows one to return a list of values for each invocation. We also added a first counter of this type which collects a histogram of the times between parcels being created.
- Added new LCOs: `hpx::lcos::channel` and `hpx::lcos::local::channel` which are very similar to the well known channel constructs used in the Go language.
- Added new performance counters reporting the amount of data handled by the networking layer on a action-by-action basis (please see [PR #2289](#)⁵⁶⁶⁵ for more details).
- Added a new facility `hpx::lcos::barrier`, replacing the equally named older one. The new facility has a slightly changed API and is much more efficient. Most notable, the new facility exposes a (global) function `hpx::lcos::barrier::synchronize()` which represents a global barrier across all localities.

⁵⁶⁶⁵ <https://github.com/TheHPXProject/hpx/pull/2289>

- We have started to add support for vectorization to our parallel algorithm implementations. This support depends on using an external library, currently either Vc Library or `boost_simd`. Please see [Issue #2333](#)⁵⁶⁶⁶ for a list of currently supported algorithms. This is an experimental feature and its implementation and/or API might change in the future. Please see this [blog-post](#)⁵⁶⁶⁷ for more information.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overload can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17. The old `inner_product` names can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- Added versions of `hpx::get_ptr` taking client side representations for component instances as their parameter (instead of a global id).
- Added the helper utility `hpx::performance_counters::performance_counter_set` helping to encapsulate a set of performance counters to be managed concurrently.
- All execution policies and related classes have been renamed to be consistent with the naming changes applied for C++17. All policies now live in the namespace `hpx::parallel::execution`. The old names can be still enabled at configure time by specifying `-DHPX_WITH_EXECUTION_POLICY_COMPATIBILITY=On` to CMake.
- The thread scheduling subsystem has undergone a major refactoring which results in significant performance improvements. We have also improved the performance of creating `hpx::future` and of various facilities handling those.
- We have consolidated all of the code in `HPX.Compute` related to the integration of CUDA. `hpx::partitioned_vector` has been enabled to be usable with `hpx::compute::vector` which allows one to place the partitions on one or more GPU devices.
- Added new performance counters exposing various internals of the thread scheduling subsystem, such as the current idle- and busy-loop counters and instantaneous scheduler utilization.
- Extended and improved the use of the ITTNotify hooks allowing to collect performance counter data and function annotation information from within the Intel Amplifier tool.

Breaking changes

- We have dropped support for the gcc compiler versions V4.6 and 4.7. The minimal gcc version we now test on is gcc V4.8.
- We have removed (default) support for `boost::chrono` in interfaces, uses of it have been replaced with `std::chrono`. This facility can be still enabled at configure time by specifying `-DHPX_WITH_BOOST_CHRONO_COMPATIBILITY=On` to CMake.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17.

⁵⁶⁶⁶ <https://github.com/TheHPXProject/hpx/issues/2333>

⁵⁶⁶⁷ <http://stellar-group.org/2016/09/vectorized-cpp-parallel-algorithms-with-hpx/>

- the build options `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` are now disabled by default. Please change your code still depending on the deprecated interfaces.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2596](#)⁵⁶⁶⁸ - Adding apex data
- [PR #2595](#)⁵⁶⁶⁹ - Remove obsolete file
- [Issue #2594](#)⁵⁶⁷⁰ - FindOpenCL.cmake mismatch with the official cmake module
- [PR #2592](#)⁵⁶⁷¹ - First attempt to introduce `spmd_block` in `hpx`
- [Issue #2591](#)⁵⁶⁷² - Feature request: continuation (then) which does not require the callable object to take a future<R> as parameter
- [PR #2588](#)⁵⁶⁷³ - Daint fixes
- [PR #2587](#)⁵⁶⁷⁴ - Fixing `transfer_(continuation)_action::schedule`
- [PR #2585](#)⁵⁶⁷⁵ - Work around MSVC having an ICE when compiling with `-Ob2`
- [PR #2583](#)⁵⁶⁷⁶ - changing 7zip command to 7za in `roll_release.sh`
- [PR #2582](#)⁵⁶⁷⁷ - First attempt to introduce `spmd_block` in `hpx`
- [PR #2581](#)⁵⁶⁷⁸ - Enable annotated function for parallel algorithms
- [PR #2580](#)⁵⁶⁷⁹ - First attempt to introduce `spmd_block` in `hpx`
- [PR #2579](#)⁵⁶⁸⁰ - Make thread NICE level setting an option
- [PR #2578](#)⁵⁶⁸¹ - Implementing `enqueue` instead of busy wait when no sender is available
- [PR #2577](#)⁵⁶⁸² - Retrieve `-std=c++11` consistent `nvcc` flag
- [PR #2576](#)⁵⁶⁸³ - Add missing dependencies of cuda based tests

- [Issue #2517⁵⁷³³](#) - Race condition during Parcel Coalescing Handler creation
- [Issue #2516⁵⁷³⁴](#) - HPX locks up when using at least 256 localities
- [Issue #2515⁵⁷³⁵](#) - error: Install cannot find “/lib/hpx/libparcel_coalescing.so.0.9.99” but I can see that file
- [PR #2514⁵⁷³⁶](#) - Making sure that all continuations of a shared_future are invoked in order
- [PR #2513⁵⁷³⁷](#) - Fixing locks held during suspension
- [PR #2512⁵⁷³⁸](#) - MPI Parcelport improvements and fixes related to the background work changes
- [PR #2511⁵⁷³⁹](#) - Fixing bit-wise (zero-copy) serialization
- [Issue #2509⁵⁷⁴⁰](#) - Linking errors in hwloc_topology
- [PR #2508⁵⁷⁴¹](#) - Added documentation for debugging with core files
- [PR #2506⁵⁷⁴²](#) - Fixing background work invocations
- [PR #2505⁵⁷⁴³](#) - Fix tuple serialization
- [Issue #2504⁵⁷⁴⁴](#) - Ensure continuations are called in the order they have been attached
- [PR #2503⁵⁷⁴⁵](#) - Adding serialization support for Vc v2 (datapar)
- [PR #2502⁵⁷⁴⁶](#) - Resolve various, minor compiler warnings
- [PR #2501⁵⁷⁴⁷](#) - Some other fixes around cuda examples
- [Issue #2500⁵⁷⁴⁸](#) - nvcc / cuda clang issue due to a missing -DHPX_WITH_CUDA flag
- [PR #2499⁵⁷⁴⁹](#) - Adding support for std::array to wait_all and friends
- [PR #2498⁵⁷⁵⁰](#) - Execute background work as HPX thread
- [PR #2497⁵⁷⁵¹](#) - Fixing configuration options for spinlock-deadlock detection
- [PR #2496⁵⁷⁵²](#) - Accounting for different compilers in CrayKNL toolchain file
- [PR #2494⁵⁷⁵³](#) - Adding component base class which ties a component instance to a given executor
- [PR #2493⁵⁷⁵⁴](#) - Enable controlling amount of pending threads which must be available to allow thread stealing
- [PR #2492⁵⁷⁵⁵](#) - Adding new command line option -hpx:print-counter-reset

HPX V0.9.99 (Jul 15, 2016)

General changes

As the version number of this release hints, we consider this release to be a preview for the upcoming *HPX* V1.0. All of the functionalities we set out to implement for V1.0 are in place; all of the features we wanted to have exposed are ready. We are very happy with the stability and performance of *HPX* and we would like to present this release to the community in order for us to gather broad feedback before releasing V1.0. We still expect for some minor details to change, but on the whole this release represents what we would like to have in a V1.0.

Overall, since the last release we have had almost 1600 commits while closing almost 400 tickets. These numbers reflect the incredible development activity we have seen over the last couple of months. We would like to express a big ‘Thank you!’ to all contributors and those who helped to make this release happen.

The most notable addition in terms of new functionality available with this release is the full implementation of object migration (i.e. the ability to transparently move *HPX* components to a different compute node). Additionally, this release of *HPX* cleans up many minor issues and some API inconsistencies.

Here are some of the main highlights and changes for this release (in no particular order):

- We have fixed a couple of issues in AGAS and the parcel layer which have caused hangs, segmentation faults at exit, and a slowdown of applications over time. Fixing those has significantly increased the overall stability and performance of distributed runs.
- We have started to add parallel algorithm overloads based on the C++ Extensions for Ranges ([N4560](#)⁵⁹⁹¹) proposal. This also includes the addition of projections to the existing algorithms. Please see [Issue #1668](#)⁵⁹⁹² for a list of algorithms which have been adapted to [N4560](#)⁵⁹⁹³.
- We have implemented index-based parallel for-loops based on a corresponding standardization proposal ([P0075R1](#)⁵⁹⁹⁴). Please see [Issue #2016](#)⁵⁹⁹⁵ for a list of available algorithms.
- We have added implementations for more parallel algorithms as proposed for the upcoming C++ 17 Standard. See [Issue #1141](#)⁵⁹⁹⁶ for an overview of which algorithms are available by now.
- We have started to implement a new prototypical functionality with *HPX.Compute* which uniformly exposes some of the higher level APIs to heterogeneous architectures (currently CUDA). This functionality is an early preview and should not be considered stable. It may change considerably in the future.
- We have pervasively added (optional) executor arguments to all API functions which schedule new work. Executors are now used throughout the code base as the main means of executing tasks.

⁵⁹⁹¹ <http://wg21.link/n4560>

⁵⁹⁹² <https://github.com/TheHPXProject/hpx/issues/1668>

⁵⁹⁹³ <http://wg21.link/n4560>

⁵⁹⁹⁴ <http://wg21.link/p0075r1>

⁵⁹⁹⁵ <https://github.com/TheHPXProject/hpx/issues/2016>

⁵⁹⁹⁶ <https://github.com/TheHPXProject/hpx/issues/1141>

- Added `hpx::make_future<R>(future<T> &&)` allowing to convert a future of any type `T` into a future of any other type `R`, either based on default conversion rules of the embedded types or using a given explicit conversion function.
- We finally finished the implementation of transparent migration of components to another locality. It is now possible to trigger a migration operation without ‘stopping the world’ for the object to migrate. *HPX* will make sure that no work is being performed on an object before it is migrated and that all subsequently scheduled work for the migrated object will be transparently forwarded to the new locality. Please note that the global id of the migrated object does not change, thus the application will not have to be changed in any way to support this new functionality. Please note that this feature is currently considered experimental. See [Issue #559](#)⁵⁹⁹⁷ and [PR #1966](#)⁵⁹⁹⁸ for more details.
- The `hpx::dataflow` facility is now usable with actions. Similarly to `hpx::async`, actions can be specified as an explicit template argument (`hpx::dataflow<Action>(target, ...)`) or as the first argument (`hpx::dataflow(Action(), target, ...)`). We have also enabled the use of distribution policies as the target for dataflow invocations. Please see [Issue #1265](#)⁵⁹⁹⁹ and [PR #1912](#)⁶⁰⁰⁰ for more information.
- Adding overloads of `gather_here` and `gather_there` to accept the plain values of the data to gather (in addition to the existing overloads expecting futures).
- We have cleaned up and refactored large parts of the code base. This helped reducing compile and link times of *HPX* itself and also of applications depending on it. We have further decreased the dependency of *HPX* on the Boost libraries by replacing part of those with facilities available from the standard libraries.
- Wherever possible we have removed dependencies of our API on Boost by replacing those with the equivalent facility from the C++11 standard library.
- We have added new performance counters for parcel coalescing, file-IO, the AGAS cache, and overall scheduler time. Resetting performance counters has been overhauled and fixed.
- We have introduced a generic client type `hpx::components::client<>` and added support for using it with `hpx::async`. This removes the necessity to implement specific client types for every component type without losing type safety. This deemphasizes the need for using the low level `hpx::id_type` for referencing (possibly remote) component instances. The plan is to deprecate the direct use of `hpx::id_type` in user code in the future.
- We have added a special iterator which supports automatic prefetching of one or more arrays for speeding up loop-like code (see `hpx::parallel::util::make_prefetcher_context()`).
- We have extended the interfaces exposed from executors (as proposed by [N4406](#)⁶⁰⁰¹) to accept an arbitrary number of arguments.

Breaking changes

- In order to move the dataflow facility to namespace `hpx` we added a definition of `hpx::dataflow` which might create ambiguities in existing codes. The previous definition of this facility (`hpx::lcos::local::dataflow`) has been deprecated and is available only if the constant `-DHPX_WITH_LOCAL_DATAFLOW_COMPATIBILITY=On` to `CMake`⁶⁰⁰² is defined at configuration time. Please explicitly qualify all uses of the dataflow facility if you enable this compatibility setting and encounter ambiguities.
- The adaptation of the C++ Extensions for Ranges ([N4560](#)⁶⁰⁰³) proposal imposes some breaking changes related

⁵⁹⁹⁷ <https://github.com/TheHPXProject/hpx/issues/559>

⁵⁹⁹⁸ <https://github.com/TheHPXProject/hpx/pull/1966>

⁵⁹⁹⁹ <https://github.com/TheHPXProject/hpx/issues/1265>

⁶⁰⁰⁰ <https://github.com/TheHPXProject/hpx/pull/1912>

⁶⁰⁰¹ <http://wg21.link/n4406>

⁶⁰⁰² <https://www.cmake.org>

⁶⁰⁰³ <http://wg21.link/n4560>

to the return types of some of the parallel algorithms. Please see [Issue #1668](#)⁶⁰⁰⁴ for a list of algorithms which have already been adapted.

- The facility `hpx::lcos::make_future_void()` has been replaced by `hpx::make_future<void>()`.
- We have removed support for Intel V13 and gcc 4.4.x.
- We have removed (default) support for the generic `hpx::parallel::execution_policy` because it was removed from the Parallelism TS (`__cpp11_n4104__`) while it was being added to the upcoming C++17 Standard. This facility can be still enabled at configure time by specifying `-DHPX_WITH_GENERIC_EXECUTION_POLICY=On` to CMake.
- Uses of `boost::shared_ptr` and related facilities have been replaced with `std::shared_ptr` and friends. Uses of `boost::unique_lock`, `boost::lock_guard` etc. have also been replaced by the equivalent (and equally named) tools available from the C++11 standard library.
- Facilities that used to expect an explicit `boost::unique_lock` now take an `std::unique_lock`. Additionally, `condition_variable` no longer aliases `condition_variable_any`; its interface now only works with `std::unique_lock<local::mutex>`.
- Uses of `boost::function`, `boost::bind`, `boost::tuple` have been replaced by the corresponding facilities in *HPX* (`hpx::util::function`, `hpx::util::bind`, and `hpx::util::tuple`, respectively).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2250](#)⁶⁰⁰⁵ - change default chunker of parallel executor to static one
- [PR #2247](#)⁶⁰⁰⁶ - HPX on ppc64le
- [PR #2244](#)⁶⁰⁰⁷ - Fixing MSVC problems
- [PR #2238](#)⁶⁰⁰⁸ - Fixing small typos
- [PR #2237](#)⁶⁰⁰⁹ - Fixing small typos
- [PR #2234](#)⁶⁰¹⁰ - Fix broken add test macro when extra args are passed in
- [PR #2231](#)⁶⁰¹¹ - Fixing possible race during future awaiting in serialization
- [PR #2230](#)⁶⁰¹² - Fix stream nvcc
- [PR #2229](#)⁶⁰¹³ - Fixed `run_as_hpx_thread`
- [PR #2228](#)⁶⁰¹⁴ - On `prefetching_test` branch : adding `prefetching_iterator` and related tests used for prefetching containers within lambda functions
- [PR #2227](#)⁶⁰¹⁵ - Support for HPXCL's `opencl::event`
- [PR #2226](#)⁶⁰¹⁶ - Preparing for release of V0.9.99

⁶⁰⁰⁴ <https://github.com/TheHPXProject/hpx/issues/1668>

⁶⁰⁰⁵ <https://github.com/TheHPXProject/hpx/pull/2250>

⁶⁰⁰⁶ <https://github.com/TheHPXProject/hpx/pull/2247>

⁶⁰⁰⁷ <https://github.com/TheHPXProject/hpx/pull/2244>

⁶⁰⁰⁸ <https://github.com/TheHPXProject/hpx/pull/2238>

⁶⁰⁰⁹ <https://github.com/TheHPXProject/hpx/pull/2237>

⁶⁰¹⁰ <https://github.com/TheHPXProject/hpx/pull/2234>

⁶⁰¹¹ <https://github.com/TheHPXProject/hpx/pull/2231>

⁶⁰¹² <https://github.com/TheHPXProject/hpx/pull/2230>

⁶⁰¹³ <https://github.com/TheHPXProject/hpx/pull/2229>

⁶⁰¹⁴ <https://github.com/TheHPXProject/hpx/pull/2228>

⁶⁰¹⁵ <https://github.com/TheHPXProject/hpx/pull/2227>

⁶⁰¹⁶ <https://github.com/TheHPXProject/hpx/pull/2226>

- PR #2225⁶⁰¹⁷ - fix issue when compiling components with hpxcxx
- PR #2224⁶⁰¹⁸ - Compute alloc fix
- PR #2223⁶⁰¹⁹ - Simplify promise
- PR #2222⁶⁰²⁰ - Replace last uses of boost::function by util::function_nonsr
- PR #2221⁶⁰²¹ - Fix config tests
- PR #2220⁶⁰²² - Fixing gcc 4.6 compilation issues
- PR #2219⁶⁰²³ - nullptr support for [unique_] function
- PR #2218⁶⁰²⁴ - Introducing clang tidy
- PR #2216⁶⁰²⁵ - Replace NULL with nullptr
- Issue #2214⁶⁰²⁶ - Let inspect flag use of NULL, suggest nullptr instead
- PR #2213⁶⁰²⁷ - Require support for nullptr
- PR #2212⁶⁰²⁸ - Properly find jemalloc through pkg-config
- PR #2211⁶⁰²⁹ - Disable a couple of warnings reported by Intel on Windows
- PR #2210⁶⁰³⁰ - Fixed host::block_allocator::bulk_construct
- PR #2209⁶⁰³¹ - Started to clean up new sort algorithms, made things compile for sort_by_key
- PR #2208⁶⁰³² - A couple of fixes that were exposed by a new sort algorithm
- PR #2207⁶⁰³³ - Adding missing includes in /hpx/include/serialization.hpp
- PR #2206⁶⁰³⁴ - Call package_action::get_future before package_action::apply
- PR #2205⁶⁰³⁵ - The indirect_packaged_task::operator() needs to be run on a HPX thread
- PR #2204⁶⁰³⁶ - Variadic executor parameters
- PR #2203⁶⁰³⁷ - Delay-initialize members of partitioned iterator
- PR #2202⁶⁰³⁸ - Added segmented fill for hpx::vector
- Issue #2201⁶⁰³⁹ - Null Thread id encountered on partitioned_vector

⁶⁰³⁹ <https://github.com/TheHPXProject/hpx/issues/2201>

- PR #2200⁶⁰⁴⁰ - Fix hangs
- PR #2199⁶⁰⁴¹ - Deprecating hpx/traits.hpp
- PR #2198⁶⁰⁴² - Making explicit inclusion of external libraries into build
- PR #2197⁶⁰⁴³ - Fix typo in QT CMakeLists
- PR #2196⁶⁰⁴⁴ - Fixing a gcc warning about attributes being ignored
- PR #2194⁶⁰⁴⁵ - Fixing partitioned_vector_spmf_foreach example
- Issue #2193⁶⁰⁴⁶ - partitioned_vector_spmf_foreach seg faults
- PR #2192⁶⁰⁴⁷ - Support Boost.Thread v4
- PR #2191⁶⁰⁴⁸ - HPX.Compute prototype
- PR #2190⁶⁰⁴⁹ - Spawning operation on new thread if remaining stack space becomes too small
- PR #2189⁶⁰⁵⁰ - Adding callback taking index and future to when_each
- PR #2188⁶⁰⁵¹ - Adding new example demonstrating receive_buffer
- PR #2187⁶⁰⁵² - Mask 128-bit ints if CUDA is being used
- PR #2186⁶⁰⁵³ - Make startup & shutdown functions unique_function
- PR #2185⁶⁰⁵⁴ - Fixing logging output not to cause hang on shutdown
- PR #2184⁶⁰⁵⁵ - Allowing component clients as action return types
- Issue #2183⁶⁰⁵⁶ - Enabling logging output causes hang on shutdown
- Issue #2182⁶⁰⁵⁷ - 1d_stencil seg fault
- Issue #2181⁶⁰⁵⁸ - Setting small stack size does not change default
- PR #2180⁶⁰⁵⁹ - Changing default bind mode to balanced
- PR #2179⁶⁰⁶⁰ - adding prefetching_iterator and related tests used for prefetching containers within lambda functions
- PR #2177⁶⁰⁶¹ - Fixing 2176
- Issue #2176⁶⁰⁶² - Launch process test fails on OSX

⁶⁰⁶² <https://github.com/TheHPXProject/hpx/issues/2176>

- PR #2175⁶⁰⁶³ - Fix unbalanced config/warnings includes, add some new ones
- PR #2174⁶⁰⁶⁴ - Fix test categorization : regression not unit
- Issue #2172⁶⁰⁶⁵ - Different performance results
- Issue #2171⁶⁰⁶⁶ - “negative entry in reference count table” running octotiger on 32 nodes on queenbee
- Issue #2170⁶⁰⁶⁷ - Error while compiling on Mac + boost 1.60
- PR #2168⁶⁰⁶⁸ - Fixing problems with is_bitwise_serializable
- Issue #2167⁶⁰⁶⁹ - startup & shutdown function should accept unique_function
- Issue #2166⁶⁰⁷⁰ - Simple receive_buffer example
- PR #2165⁶⁰⁷¹ - Fix wait all
- PR #2164⁶⁰⁷² - Fix wait all
- PR #2163⁶⁰⁷³ - Fix some typos in config tests
- PR #2162⁶⁰⁷⁴ - Improve #includes
- PR #2160⁶⁰⁷⁵ - Add inspect check for missing #include <list>
- PR #2159⁶⁰⁷⁶ - Add missing finalize call to stop test hanging
- PR #2158⁶⁰⁷⁷ - Algo fixes
- PR #2157⁶⁰⁷⁸ - Stack check
- Issue #2156⁶⁰⁷⁹ - OSX reports stack space incorrectly (generic context coroutines)
- Issue #2155⁶⁰⁸⁰ - Race condition suspected in runtime
- PR #2154⁶⁰⁸¹ - Replace boost::detail::atomic_count with the new util::atomic_count
- PR #2153⁶⁰⁸² - Fix stack overflow on OSX
- PR #2152⁶⁰⁸³ - Define is_bitwise_serializable as is_trivially_copyable when available
- PR #2151⁶⁰⁸⁴ - Adding missing <cstring> for std::mem* functions
- Issue #2150⁶⁰⁸⁵ - Unable to use component clients as action return types

⁶⁰⁸⁴ <https://github.com/TheHPXProject/hpx/pull/2151>

⁶⁰⁸⁵ <https://github.com/TheHPXProject/hpx/issues/2150>

- PR #2149⁶⁰⁸⁶ - `std::memmove` copies bytes, use `bytes*sizeof(type)` when copying larger types
- PR #2146⁶⁰⁸⁷ - Adding customization point for parallel copy/move
- PR #2145⁶⁰⁸⁸ - Applying changes to address warnings issued by latest version of PVS Studio
- Issue #2148⁶⁰⁸⁹ - `hpx::parallel::copy` is broken after trivially copyable changes
- PR #2144⁶⁰⁹⁰ - Some minor tweaks to compute prototype
- PR #2143⁶⁰⁹¹ - Added Boost version support information over OSX platform
- PR #2142⁶⁰⁹² - Fixing memory leak in example
- PR #2141⁶⁰⁹³ - Add missing specializations in execution policies
- PR #2139⁶⁰⁹⁴ - This PR fixes a few problems reported by Clang's Undefined Behavior sanitizer
- PR #2138⁶⁰⁹⁵ - Revert "Adding fedora docs"
- PR #2136⁶⁰⁹⁶ - Removed double semicolon
- PR #2135⁶⁰⁹⁷ - Add deprecated `#include` check for `hpx_fwd.hpp`
- PR #2134⁶⁰⁹⁸ - Resolved memory leak in `stencil_8`
- PR #2133⁶⁰⁹⁹ - Replace uses of boost pointer containers
- PR #2132⁶¹⁰⁰ - Removing unused typedef
- PR #2131⁶¹⁰¹ - Add several include checks for std facilities
- PR #2130⁶¹⁰² - Fixing parcel compression, adding test
- PR #2129⁶¹⁰³ - Fix invalid attribute warnings
- Issue #2128⁶¹⁰⁴ - `hpx::init` seems to segfault
- PR #2127⁶¹⁰⁵ - Making `executor_traits` N-nary
- PR #2126⁶¹⁰⁶ - GCC 4.6 fails to deduce the correct type in lambda
- PR #2125⁶¹⁰⁷ - Making parcel coalescing test actually test something
- Issue #2124⁶¹⁰⁸ - Make a testcase for parcel compression

⁶⁰⁸⁶ <https://github.com/TheHPXProject/hpx/pull/2149>

⁶⁰⁸⁷ <https://github.com/TheHPXProject/hpx/pull/2146>

⁶¹⁰⁰ <https://github.com/TheHPXProject/hpx/pull/2132>

⁶¹⁰¹ <https://github.com/TheHPXProject/hpx/pull/2131>

⁶¹⁰² <https://github.com/TheHPXProject/hpx/pull/2130>

⁶¹⁰³ <https://github.com/TheHPXProject/hpx/pull/2129>

⁶¹⁰⁴ <https://github.com/TheHPXProject/hpx/issues/2128>

⁶¹⁰⁵ <https://github.com/TheHPXProject/hpx/pull/2127>

⁶¹⁰⁶ <https://github.com/TheHPXProject/hpx/pull/2126>

⁶¹⁰⁷ <https://github.com/TheHPXProject/hpx/pull/2125>

⁶¹⁰⁸ <https://github.com/TheHPXProject/hpx/issues/2124>

- Issue #2123⁶¹⁰⁹ - hpx/hpx/runtime/applier_fwd.hpp - Multiple defined types
- Issue #2122⁶¹¹⁰ - Exception in primary_namespace::resolve_free_list
- Issue #2121⁶¹¹¹ - Possible memory leak in 1d_stencil_8
- PR #2120⁶¹¹² - Fixing 2119
- Issue #2119⁶¹¹³ - reduce_by_key compilation problems
- Issue #2118⁶¹¹⁴ - Premature unwrapping of boost::ref'ed arguments
- PR #2117⁶¹¹⁵ - Added missing initializer on last constructor for thread_description
- PR #2116⁶¹¹⁶ - Use a lightweight bind implementation when no placeholders are given
- PR #2115⁶¹¹⁷ - Replace boost::shared_ptr with std::shared_ptr
- PR #2114⁶¹¹⁸ - Adding hook functions for executor_parameter_traits supporting timers
- Issue #2113⁶¹¹⁹ - Compilation error with gcc version 4.9.3 (MacPorts gcc49 4.9.3_0)
- PR #2112⁶¹²⁰ - Replace uses of safe_bool with explicit operator bool
- Issue #2111⁶¹²¹ - Compilation error on QT example
- Issue #2110⁶¹²² - Compilation error when passing non-future argument to unwrapped continuation in dataflow
- Issue #2109⁶¹²³ - Warning while compiling hpx
- Issue #2109⁶¹²⁴ - Stack trace of last bug causing issues with octotiger
- Issue #2108⁶¹²⁵ - Stack trace of last bug causing issues with octotiger
- PR #2107⁶¹²⁶ - Making sure that a missing parcel_coalescing module does not cause startup exceptions
- PR #2106⁶¹²⁷ - Stop using hpx_fwd.hpp
- Issue #2105⁶¹²⁸ - coalescing plugin handler is not optional any more
- Issue #2104⁶¹²⁹ - Make executor_traits N-nary
- Issue #2103⁶¹³⁰ - Build error with octotiger and hpx commit e657426d
- PR #2102⁶¹³¹ - Combining thread data storage

⁶¹³⁰ <https://github.com/TheHPXProject/hpx/issues/2103>

⁶¹³¹ <https://github.com/TheHPXProject/hpx/pull/2102>

- [PR #2101](#)⁶¹³² - Added repartition version of 1d stencil that uses any performance counter
- [PR #2100](#)⁶¹³³ - Drop obsolete TR1 result_of protocol
- [PR #2099](#)⁶¹³⁴ - Replace uses of boost::bind with util::bind
- [PR #2098](#)⁶¹³⁵ - Deprecated inspect checks
- [PR #2097](#)⁶¹³⁶ - Reduce by key, extends #1141
- [PR #2096](#)⁶¹³⁷ - Moving local cache from external to hpx/util
- [PR #2095](#)⁶¹³⁸ - Bump minimum required Boost to 1.50.0
- [PR #2094](#)⁶¹³⁹ - Add include checks for several Boost utilities
- [Issue #2093](#)⁶¹⁴⁰ - `./.../local_cache.hpp(89): error #303: explicit type is missing ("int" assumed)`
- [PR #2091](#)⁶¹⁴¹ - Fix for Raspberry pi build
- [PR #2090](#)⁶¹⁴² - Fix storage size for util::function<>
- [PR #2089](#)⁶¹⁴³ - Fix #2088
- [Issue #2088](#)⁶¹⁴⁴ - More verbose output from cmake configuration
- [PR #2087](#)⁶¹⁴⁵ - Making sure init_globally always executes hpx_main
- [Issue #2086](#)⁶¹⁴⁶ - Race condition with recent HPX
- [PR #2085](#)⁶¹⁴⁷ - Adding #include checker
- [PR #2084](#)⁶¹⁴⁸ - Replace boost lock types with standard library ones
- [PR #2083](#)⁶¹⁴⁹ - Simplify packaged task
- [PR #2082](#)⁶¹⁵⁰ - Updating APEX version for testing
- [PR #2081](#)⁶¹⁵¹ - Cleanup exception headers
- [PR #2080](#)⁶¹⁵² - Make call_once variadic
- [Issue #2079](#)⁶¹⁵³ - With GNU C++, line 85 of hpx/config/version.hpp causes link failure when linking application
- [Issue #2078](#)⁶¹⁵⁴ - Simple test fails with `_GLIBCXX_DEBUG` defined

- PR #2077⁶¹⁵⁵ - Instantiate board in nqueen client
- PR #2076⁶¹⁵⁶ - Moving coalescing registration to TUs
- PR #2075⁶¹⁵⁷ - Fixed some documentation typos
- PR #2074⁶¹⁵⁸ - Adding flush-mode to message handler flush
- PR #2073⁶¹⁵⁹ - Fixing performance regression introduced lately
- PR #2072⁶¹⁶⁰ - Refactor local::condition_variable
- PR #2071⁶¹⁶¹ - Timer based on boost::asio::deadline_timer
- PR #2070⁶¹⁶² - Refactor tuple based functionality
- PR #2069⁶¹⁶³ - Fixed typos
- Issue #2068⁶¹⁶⁴ - Seg fault with octotiger
- PR #2067⁶¹⁶⁵ - Algorithm cleanup
- PR #2066⁶¹⁶⁶ - Split credit fixes
- PR #2065⁶¹⁶⁷ - Rename HPX_MOVABLE_BUT_NOT_COPYABLE to HPX_MOVABLE_ONLY
- PR #2064⁶¹⁶⁸ - Fixed some typos in docs
- PR #2063⁶¹⁶⁹ - Adding example demonstrating template components
- Issue #2062⁶¹⁷⁰ - Support component templates
- PR #2061⁶¹⁷¹ - Replace some uses of lexical_cast<string> with C++11 std::to_string
- PR #2060⁶¹⁷² - Replace uses of boost::noncopyable with HPX_NON_COPYABLE
- PR #2059⁶¹⁷³ - Adding missing for_loop algorithms
- PR #2058⁶¹⁷⁴ - Move several definitions to more appropriate headers
- PR #2057⁶¹⁷⁵ - Simplify assert_owns_lock and ignore_while_checking
- PR #2056⁶¹⁷⁶ - Replacing std::result_of with util::result_of
- PR #2055⁶¹⁷⁷ - Fix process launching/connecting back

HPX V0.9.11 (Nov 11, 2015)

Our main focus for this release was the design and development of a coherent set of higher-level APIs exposing various types of parallelism to the application programmer. We introduced the concepts of an `executor`, which can be used to customize the `where` and `when` of execution of tasks in the context of parallelizing codes. We extended all APIs related to managing parallel tasks to support executors which gives the user the choice of either using one of the predefined executor types or to provide its own, possibly application specific, executor. We paid very close attention to align all of these changes with the existing C++ Standards documents or with the ongoing proposals for standardization.

This release is the first after our change to a new development policy. We switched all development to be strictly performed on branches only, all direct commits to our main branch (`master`) are prohibited. Any change has to go through a peer review before it will be merged to `master`. As a result the overall stability of our code base has significantly increased, the development process itself has been simplified. This change manifests itself in a large number of pull-requests which have been merged (please see below for a full list of closed issues and pull-requests). All in all for this release, we closed almost 100 issues and merged over 290 pull-requests. There have been over 1600 commits to the master branch since the last release.

General changes

- We are moving into the direction of unifying managed and simple components. As such, the classes `hpx::components::component` and `hpx::components::component_base` have been added which currently just forward to the currently existing simple component facilities. The examples have been converted to only use those two classes.
- Added integration with the [CircleCI](https://circleci.com/gh/TheHPXProject/hpx)⁶³⁹⁹ hosted continuous integration service. This gives us constant and immediate feedback on the health of our master branch.
- The compiler configuration subsystem in the build system has been reimplemented. Instead of using Boost.Config we now use our own lightweight set of cmake scripts to determine the available language and library features supported by the used compiler.
- The API for creating instances of components has been consolidated. All component instances should be created using the `hpx::new_` only. It allows one to instantiate both, single component instances and multiple component instances. The placement of the created components can be controlled by special distribution policies. Please see the corresponding documentation outlining the use of `hpx::new_`.
- Introduced four new distribution policies which can be used with many API functions which traditionally expected to be used with a locality id. The new distribution policies are:
 - `hpx::components::default_distribution_policy` which tries to place multiple component instances as evenly as possible.
 - `hpx::components::colocating_distribution_policy` which will refer to the locality where a given component instance is currently placed.
 - `hpx::components::binpacking_distribution_policy` which will place multiple component instances as evenly as possible based on any performance counter.
 - `hpx::components::target_distribution_policy` which allows one to represent a given locality in the context of a distribution policy.
- The new distribution policies can now be also used with `hpx::async`. This change also deprecates `hpx::async_colocated(id, ...)` which now is replaced by a distribution policy: `hpx::async(hpx::colocated(id), ...)`.
- The `hpx::vector` and `hpx::unordered_map` data structures can now be used with the new distribution policies as well.
- The parallel facility `hpx::parallel::task_region` has been renamed to `hpx::parallel::task_block` based on the changes in the corresponding standardization proposal [N4411](http://wg21.link/n4411)⁶⁴⁰⁰.
- Added extensions to the parallel facility `hpx::parallel::task_block` allowing to combine a `task_block` with an execution policy. This implies a minor breaking change as the `hpx::parallel::task_block` is now a template.
- Added new LCOs: `hpx::lcos::latch` and `hpx::lcos::local::latch` which semantically conform to the proposed `std::latch` (see [N4399](http://wg21.link/n4399)⁶⁴⁰¹).
- Added performance counters exposing data related to data transferred by input/output (filesystem) operations (thanks to Maciej Brodowicz).
- Added performance counters allowing to track the number of action invocations (local and remote invocations).
- Added new command line options `-hpx:print-counter-at` and `-hpx:reset-counters`.

⁶³⁹⁹ <https://circleci.com/gh/TheHPXProject/hpx>

⁶⁴⁰⁰ <http://wg21.link/n4411>

⁶⁴⁰¹ <http://wg21.link/n4399>

- The `hpx::vector` component has been renamed to `hpx::partitioned_vector` to make it explicit that the underlying memory is not contiguous.
- Introduced a completely new and uniform higher-level parallelism API which is based on executors. All existing parallelism APIs have been adapted to this. We have added a large number of different executor types, such as a numa-aware executor, a this-thread executor, etc.
- Added support for the MingW toolchain on Windows (thanks to Eric Lemanissier).
- HPX now includes support for APEX, (Autonomic Performance Environment for eXascale). APEX is an instrumentation and software adaptation library that provides an interface to TAU profiling / tracing as well as runtime adaptation of HPX applications through policy definitions. For more information and documentation, please see <https://github.com/UO-OACISS/xpress-apex>. To enable APEX at configuration time, specify `-DHPX_WITH_APEX=On`. To also include support for TAU profiling, specify `-DHPX_WITH_TAU=On` and specify the `-DTAU_ROOT`, `-DTAU_ARCH` and `-DTAU_OPTIONS` cmake parameters.
- We have implemented many more of the *Using parallel algorithms*. Please see [Issue #1141](#)⁶⁴⁰² for the list of all available parallel algorithms (thanks to Daniel Bourgeois and John Biddiscombe for contributing their work).

Breaking changes

- We are moving into the direction of unifying managed and simple components. In order to stop exposing the old facilities, all examples have been converted to use the new classes. The breaking change in this release is that performance counters are now a `hpx::components::component_base` instead of `hpx::components::managed_component_base`.
- We removed the support for stackless threads. It turned out that there was no performance benefit when using stackless threads. As such, we decided to clean up our codebase. This feature was not documented.
- The CMake project name has changed from 'hpx' to 'HPX' for consistency and compatibility with naming conventions and other CMake projects. Generated config files go into `<prefix>/lib/cmake/HPX` and not `<prefix>/lib/cmake/hpx`.
- The macro `HPX_REGISTER_MINIMAL_COMPONENT_FACTORY` has been deprecated. Please use `HPX_REGISTER_COMPONENT` instead. The old macro will be removed in the next release.
- The obsolete `distributing_factory` and `binpacking_factory` components have been removed. The corresponding functionality is now provided by the `hpx::new_` API function in conjunction with the `hpx::default_layout` and `hpx::binpacking` distribution policies (`hpx::components::default_distribution_policy` and `hpx::components::binpacking_distribution_policy`).
- The API function `hpx::new_colocated` has been deprecated. Please use the consolidated API `hpx::new_` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The API function `hpx::async_colocated` has been deprecated. Please use the consolidated API `hpx::async` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The obsolete `remote_object` component has been removed.

⁶⁴⁰² <https://github.com/TheHPXProject/hpx/issues/1141>

- Replaced the use of Boost.Serialization with our own solution. While the new version is mostly compatible with Boost.Serialization, this change requires some minor code modifications in user code. For more information, please see the corresponding [announcement](#)⁶⁴⁰³ on the hpx-users@stellar.cct.lsu.edu mailing list.
- The names used by cmake to influence various configuration options have been unified. The new naming scheme relies on all configuration constants to start with `HPX_WITH_...`, while the preprocessor constant which is used at build time starts with `HPX_HAVE_...`. For instance, the former cmake command line `-DHPX_MALLOC=...` now has to be specified as `-DHPX_WITH_MALLOC=...` and will cause the preprocessor constant `HPX_HAVE_MALLOC` to be defined. The actual name of the constant (i.e. `MALLOC`) has not changed. Please see the corresponding documentation for more details (*CMake options*).
- The `get_gid()` functions exposed by the component base classes `hpx::components::server::simple_component_base`, `hpx::components::server::managed_component_base`, and `hpx::components::server::fixed_component_base` have been replaced by two new functions: `get_unmanaged_id()` and `get_id()`. To enable the old function name for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.
- All functions which were named `get_gid()` but were returning `hpx::id_type` have been renamed to `get_id()`. To enable the old function names for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #1855](#)⁶⁴⁰⁴ - Completely removing external/endian

- [PR #1663⁶⁵⁷⁹](#) - Improve use of locks
- [Issue #1662⁶⁵⁸⁰](#) - Possible exception source in coalescing_message_handler
- [PR #1661⁶⁵⁸¹](#) - Added support for 128bit number serialization
- [PR #1660⁶⁵⁸²](#) - Serialization 128bits
- [PR #1659⁶⁵⁸³](#) - Implemented inner_product and adjacent_diff algos
- [PR #1658⁶⁵⁸⁴](#) - Add serialization for std::set (as there is for std::vector and std::map)
- [PR #1657⁶⁵⁸⁵](#) - Use of shared_ptr in io_service_pool changed to unique_ptr
- [Issue #1656⁶⁵⁸⁶](#) - 1d_stencil codes all have wrong factor
- [PR #1654⁶⁵⁸⁷](#) - When using runtime_mode_connect, find the correct localhost public ip address
- [PR #1653⁶⁵⁸⁸](#) - Fixing 1617
- [PR #1652⁶⁵⁸⁹](#) - Remove traits::action_may_require_id_splitting
- [PR #1651⁶⁵⁹⁰](#) - Fixed performance counters related to AGAS cache timings
- [PR #1650⁶⁵⁹¹](#) - Remove leftovers of traits::type_size
- [PR #1649⁶⁵⁹²](#) - Shorten target names on Windows to shorten used path names
- [PR #1648⁶⁵⁹³](#) - Fixing problems introduced by merging #1623 for older compilers
- [PR #1647⁶⁵⁹⁴](#) - Simplify running automatic builds on Windows
- [Issue #1646⁶⁵⁹⁵](#) - Cache insert and update performance counters are broken
- [Issue #1644⁶⁵⁹⁶](#) - Remove leftovers of traits::type_size
- [Issue #1643⁶⁵⁹⁷](#) - Remove traits::action_may_require_id_splitting
- [PR #1642⁶⁵⁹⁸](#) - Adds spell checker to the inspect tool for qbk and doxygen comments
- [PR #1640⁶⁵⁹⁹](#) - First step towards fixing 688

- [Issue #524](#)⁶⁸⁰⁷ - Extend scheduler to support threads which can't be stolen

HPX V0.9.10 (Mar 24, 2015)

General changes

This is the 12th official release of *HPX*. It coincides with the 7th anniversary of the first commit to our source code repository. Since then, we have seen over 12300 commits amounting to more than 220000 lines of C++ code.

The major focus of this release was to improve the reliability of large scale runs. We believe to have achieved this goal as we now can reliably run *HPX* applications on up to ~24k cores. We have also shown that *HPX* can be used with success for symmetric runs (applications using both, host cores and Intel Xeon/Phi coprocessors). This is a huge step forward in terms of the usability of *HPX*. The main focus of this work involved isolating the causes of the segmentation faults at start up and shut down. Many of these issues were discovered to be the result of the suspension of threads which hold locks.

A very important improvement introduced with this release is the refactoring of the code representing our parcel-port implementation. Parcel-ports can now be implemented by 3rd parties as independent plugins which are dynamically loaded at runtime (static linking of parcel-ports is also supported). This refactoring also includes a massive improvement of the performance of our existing parcel-ports. We were able to significantly reduce the networking latencies and to improve the available networking bandwidth. Please note that in this release we disabled the `ibverbs` and `ipc` parcel ports as those have not been ported to the new plugin system yet (see [Issue #839](#)⁶⁸⁰⁸).

Another corner stone of this release is our work towards a complete implementation of `__cpp11_n4104__` (Working Draft, Technical Specification for C++ Extensions for Parallelism). This document defines a set of parallel algorithms to be added to the C++ standard library. We now have implemented about 75% of all specified parallel algorithms (see [[link hpx.manual.parallel.parallel_algorithms](#) Parallel Algorithms] for more details). We also implemented some extensions to `__cpp11_n4104__` allowing to invoke all of the algorithms asynchronously.

This release adds a first implementation of `hpx::vector` which is a distributed data structure closely aligned to the functionality of `std::vector`. The difference is that `hpx::vector` stores the data in partitions where the partitions can be distributed over different localities. We started to work on allowing to use the parallel algorithms with `hpx::vector`. At this point we have implemented only a few of the parallel algorithms to support distributed data structures (like `hpx::vector`) for testing purposes (see [Issue #1338](#)⁶⁸⁰⁹ for a documentation of our progress).

Breaking changes

With this release we put a lot of effort into changing the code base to be more compatible to C++11. These changes have caused the following issues for backward compatibility:

- Move to Variadics- All of the API now uses variadic templates. However, this change required to modify the argument sequence for some of the exiting API functions ([hpx::async_continue](#), `hpx::apply_continue`, [hpx::when_each](#), [hpx::wait_each](#), synchronous invocation of actions).
- Changes to Macros- We also removed the macros `HPX_STD_FUNCTION` and `HPX_STD_TUPLE`. This shouldn't affect any user code as we replaced `HPX_STD_FUNCTION` with `hpx::util::function_nonser` which was the default expansion used for this macro. All *HPX* API functions which expect a `hpx::util::function_nonser` (or a `hpx::util::unique_function_nonser`) can now be transparently called with a compatible `std::function` instead. Similarly, `HPX_STD_TUPLE` was replaced by its default expansion as well: `hpx::util::tuple`.

⁶⁸⁰⁷ <https://github.com/TheHPXProject/hpx/issues/524>

⁶⁸⁰⁸ <https://github.com/TheHPXProject/hpx/issues/839>

⁶⁸⁰⁹ <https://github.com/TheHPXProject/hpx/issues/1338>

- Changes to `hpx::unique_future`- `hpx::unique_future`, which was deprecated in the previous release for `hpx::future` is now completely removed from HPX. This completes the transition to a completely standards conforming implementation of `hpx::future`.
- Changes to Supported Compilers. Finally, in order to utilize more C++11 semantics, we have officially dropped support for GCC 4.4 and MSVC 2012. Please see our [Prerequisites](#) page for more details.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1402](#)⁶⁸¹⁰ - Internal shared_future serialization copies
- [Issue #1399](#)⁶⁸¹¹ - Build takes unusually long time...
- [Issue #1398](#)⁶⁸¹² - Tests using the scan partitioner are broken on at least gcc 4.7 and intel compiler
- [Issue #1397](#)⁶⁸¹³ - Completely remove `hpx::unique_future`
- [Issue #1396](#)⁶⁸¹⁴ - Parallel scan algorithms with different initial values
- [Issue #1395](#)⁶⁸¹⁵ - Race Condition - 1d_stencil_8 - SuperMIC
- [Issue #1394](#)⁶⁸¹⁶ - “suspending thread while at least one lock is being held” - 1d_stencil_8 - SuperMIC
- [Issue #1393](#)⁶⁸¹⁷ - SEGFault in 1d_stencil_8 on SuperMIC
- [Issue #1392](#)⁶⁸¹⁸ - Fixing #1168
- [Issue #1391](#)⁶⁸¹⁹ - Parallel Algorithms for scan partitioner for small number of elements
- [Issue #1387](#)⁶⁸²⁰ - Failure with more than 4 localities
- [Issue #1386](#)⁶⁸²¹ - Dispatching unhandled exceptions to outer user code
- [Issue #1385](#)⁶⁸²² - Adding Copy algorithms, fixing `parallel::copy_if`
- [Issue #1384](#)⁶⁸²³ - Fixing 1325
- [Issue #1383](#)⁶⁸²⁴ - Fixed #504: Refactor Dataflow LCO to work with futures, this removes the dataflow component as it is obsolete
- [Issue #1382](#)⁶⁸²⁵ - `is_sorted`, `is_sorted_until` and `is_partitioned` algorithms
- [Issue #1381](#)⁶⁸²⁶ - fix for CMake versions prior to 3.1
- [Issue #1380](#)⁶⁸²⁷ - resolved warning in CMake 3.1 and newer

HPX V0.9.9 (Oct 31, 2014, codename Spooky)

General changes

We have had over 1500 commits since the last release and we have closed over 200 tickets (bugs, feature requests, pull requests, etc.). These are by far the largest numbers of commits and resolved issues for any of the *HPX* releases so far. We are especially happy about the large number of people who contributed for the first time to *HPX*.

- We completed the transition from the older (non-conforming) implementation of `hpx::future` to the new and fully conforming version by removing the old code and by renaming the type `hpx::unique_future` to `hpx::future`. In order to maintain backwards compatibility with existing code which uses the type `hpx::unique_future` we support the configuration variable `HPX_UNIQUE_FUTURE_ALIAS`. If this variable is set to `ON` while running `cmake` it will additionally define a template alias for this type.
- We rewrote and significantly changed our build system. Please have a look at the new (now generated) documentation here: [Building HPX](#). Please revisit your build scripts to adapt to the changes. The most notable changes are:
 - `HPX_NO_INSTALL` is no longer necessary.
 - For external builds, you need to set `HPX_DIR` instead of `HPX_ROOT` as described here: [Using HPX with CMake-based projects](#).
 - IDEs that support multiple configurations (Visual Studio and XCode) can now be used as intended. that means no build dir.
 - Building HPX statically (without dynamic libraries) is now supported (`-DHPX_STATIC_LINKING=On`).
 - Please note that many variables used to configure the build process have been renamed to unify the naming conventions (see the section [CMake options](#) for more information).
 - This also fixes a long list of issues, for more information see [Issue #1204](#)⁶⁹²³.
- We started to implement various proposals to the C++ Standardization committee related to parallelism and concurrency, most notably [N4409](#)⁶⁹²⁴ (Working Draft, Technical Specification for C++ Extensions for Parallelism), [N4411](#)⁶⁹²⁵ (Task Region Rev. 3), and [N4313](#)⁶⁹²⁶ (Working Draft, Technical Specification for C++ Extensions for Concurrency).
- We completely remodeled our automatic build system to run builds and unit tests on various systems and compilers. This allows us to find most bugs right as they were introduced and helps to maintain a high level of quality and compatibility. The newest build logs can be found at [HPX Buildbot Website](#)⁶⁹²⁷.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- Issue #1296⁶⁹²⁸ - Rename make_error_future to make_exceptional_future, adjust to N4123
- Issue #1295⁶⁹²⁹ - building issue
- Issue #1293⁶⁹³⁰ - Transpose example
- Issue #1292⁶⁹³¹ - Wrong abs() function used in example
- Issue #1291⁶⁹³² - non-synchronized shift operators have been removed
- Issue #1290⁶⁹³³ - RDTSCP is defined as true for Xeon Phi build
- Issue #1289⁶⁹³⁴ - Fixing 1288
- Issue #1288⁶⁹³⁵ - Add new performance counters
- Issue #1287⁶⁹³⁶ - Hierarchy scheduler broken performance counters
- Issue #1286⁶⁹³⁷ - Algorithm cleanup
- Issue #1285⁶⁹³⁸ - Broken Links in Documentation
- Issue #1284⁶⁹³⁹ - Uninitialized copy
- Issue #1283⁶⁹⁴⁰ - missing boost::scoped_ptr includes
- Issue #1282⁶⁹⁴¹ - Update documentation of build options for schedulers
- Issue #1281⁶⁹⁴² - reset idle rate counter
- Issue #1280⁶⁹⁴³ - Bug when executing on Intel MIC
- Issue #1279⁶⁹⁴⁴ - Add improved when_all/wait_all
- Issue #1278⁶⁹⁴⁵ - Implement improved when_all/wait_all
- Issue #1277⁶⁹⁴⁶ - feature request: get access to argc argv and variables_map
- Issue #1276⁶⁹⁴⁷ - Remove merging map
- Issue #1274⁶⁹⁴⁸ - Weird (wrong) string code in papi.cpp

⁶⁹⁴⁸ <https://github.com/TheHPXProject/hpx/issues/1274>

- Issue #1273⁶⁹⁴⁹ - Sequential task execution policy
- Issue #1272⁶⁹⁵⁰ - Avoid CMake name clash for Boost.Thread library
- Issue #1271⁶⁹⁵¹ - Updates on HPX Test Units
- Issue #1270⁶⁹⁵² - `hpx/util/safe_lexical_cast.hpp` is added
- Issue #1269⁶⁹⁵³ - Added default value for “LIB” cmake variable
- Issue #1268⁶⁹⁵⁴ - Memory Counters not working
- Issue #1266⁶⁹⁵⁵ - FindHPX.cmake is not installed
- Issue #1263⁶⁹⁵⁶ - `apply_remote` test takes too long
- Issue #1262⁶⁹⁵⁷ - Chrono cleanup
- Issue #1261⁶⁹⁵⁸ - Need make install for papi counters and this builds all the examples
- Issue #1260⁶⁹⁵⁹ - Documentation of Stencil example claims
- Issue #1259⁶⁹⁶⁰ - Avoid double-linking Boost on Windows
- Issue #1257⁶⁹⁶¹ - Adding additional parameter to `create_thread`
- Issue #1256⁶⁹⁶² - added buildbot changes to release notes
- Issue #1255⁶⁹⁶³ - Cannot build MiniGhost
- Issue #1253⁶⁹⁶⁴ - `hpx::thread` defects
- Issue #1252⁶⁹⁶⁵ - `HPX_PREFIX` is too fragile
- Issue #1250⁶⁹⁶⁶ - `switch_to_fiber_emulation` does not work properly
- Issue #1249⁶⁹⁶⁷ - Documentation is generated under Release folder
- Issue #1248⁶⁹⁶⁸ - Fix usage of `hpx_generic_coroutine_context` and get tests passing on powerpc
- Issue #1247⁶⁹⁶⁹ - Dynamic linking error
- Issue #1246⁶⁹⁷⁰ - Make `cpuid.cpp` C++11 compliant
- Issue #1245⁶⁹⁷¹ - HPX fails on startup (setting thread affinity mask)

- Issue #1192⁷⁰¹⁸ - HPX(out_of_memory) on including <hpx/hpx.hpp>
- Issue #1191⁷⁰¹⁹ - Fixing #1189
- Issue #1190⁷⁰²⁰ - Chrono cleanup
- Issue #1189⁷⁰²¹ - Deadlock .. somewhere? (probably serialization)
- Issue #1188⁷⁰²² - Removed future::get_status()
- Issue #1186⁷⁰²³ - Fixed FindOpenCL to find current AMD APP SDK
- Issue #1184⁷⁰²⁴ - Tweaking future unwrapping
- Issue #1183⁷⁰²⁵ - Extended parallel::reduce
- Issue #1182⁷⁰²⁶ - future::unwrap hangs for launch::deferred
- Issue #1181⁷⁰²⁷ - Adding all_of, any_of, and none_of and corresponding documentation
- Issue #1180⁷⁰²⁸ - hpx::cout defect
- Issue #1179⁷⁰²⁹ - hpx::async does not work for member function pointers when called on types with self-defined unary operator*
- Issue #1178⁷⁰³⁰ - Implemented variadic hpx::util::zip_iterator
- Issue #1177⁷⁰³¹ - MPI parcelport defect
- Issue #1176⁷⁰³² - HPX_DEFINE_COMPONENT_CONST_ACTION_TPL does not have a 2-argument version
- Issue #1175⁷⁰³³ - Create util::zip_iterator working with util::tuple<>
- Issue #1174⁷⁰³⁴ - Error Building HPX on linux, root_certificate_authority.cpp
- Issue #1173⁷⁰³⁵ - hpx::cout output lost
- Issue #1172⁷⁰³⁶ - HPX build error with Clang 3.4.2
- Issue #1171⁷⁰³⁷ - CMAKE_INSTALL_PREFIX ignored
- Issue #1170⁷⁰³⁸ - Close hpx_benchmarks repository on Github
- Issue #1169⁷⁰³⁹ - Buildbot emails have syntax error in url
- Issue #1167⁷⁰⁴⁰ - Merge partial implementation of standards proposal N3960

HPX V0.9.8 (Mar 24, 2014)

We have had over 800 commits since the last release and we have closed over 65 tickets (bugs, feature requests, etc.).

With the changes below, *HPX* is once again leading the charge of a whole new era of computation. By intrinsically breaking down and synchronizing the work to be done, *HPX* insures that application developers will no longer have to fret about where a segment of code executes. That allows coders to focus their time and energy to understanding the data dependencies of their algorithms and thereby the core obstacles to an efficient code. Here are some of the advantages of using *HPX*:

- *HPX* is solidly rooted in a sophisticated theoretical execution model – ParalleX
- *HPX* exposes an API fully conforming to the C++11 and the draft C++14 standards, extended and applied to distributed computing. Everything programmers know about the concurrency primitives of the standard C++ library is still valid in the context of *HPX*.
- It provides a competitive, high performance implementation of modern, future-proof ideas which gives an smooth migration path from today's mainstream techniques
- There is no need for the programmer to worry about lower level parallelization paradigms like threads or message passing; no need to understand pthreads, MPI, OpenMP, or Windows threads, etc.
- There is no need to think about different types of parallelism such as tasks, pipelines, or fork-join, task or data parallelism.
- The same source of your program compiles and runs on Linux, BlueGene/Q, Mac OS X, Windows, and Android.
- The same code runs on shared memory multi-core systems and supercomputers, on handheld devices and Intel® Xeon Phi™ accelerators, or a heterogeneous mix of those.

General changes

- A major API breaking change for this release was introduced by implementing `hpx::future` and `hpx::shared_future` fully in conformance with the C++11 Standard⁷¹⁵². While `hpx::shared_future` is new and will not create any compatibility problems, we revised the interface and implementation of the existing `hpx::future`. For more details please see the [mailing list archive](#)⁷¹⁵³. To avoid any incompatibilities for existing code we named the type which implements the `std::future` interface as `hpx::unique_future`. For the next release this will be renamed to `hpx::future`, making it full conforming to C++11 Standard⁷¹⁵⁴.
- A large part of the code base of *HPX* has been refactored and partially re-implemented. The main changes were related to
 - The threading subsystem: these changes significantly reduce the amount of overheads caused by the schedulers, improve the modularity of the code base, and extend the variety of available scheduling algorithms.
 - The parcel subsystem: these changes improve the performance of the *HPX* networking layer, modularize the structure of the parcellports, and simplify the creation of new parcellports for other underlying networking libraries.
 - The API subsystem: these changes improved the conformance of the API to C++11 Standard, extend and unify the available API functionality, and decrease the overheads created by various elements of the API.
 - The robustness of the component loading subsystem has been improved significantly, allowing to more portably and more reliably register the components needed by an application as startup. This additionally speeds up general application initialization.

⁷¹⁵² <http://www.open-std.org/jtc1/sc22/wg21>

⁷¹⁵³ <http://mail.cct.lsu.edu/pipermail/hpx-users/2014-January/000141.html>

⁷¹⁵⁴ <http://www.open-std.org/jtc1/sc22/wg21>

- We added new API functionality like `hpx::migrate` and `hpx::copy_component` which are the basic building blocks necessary for implementing higher level abstractions for system-wide load balancing, runtime-adaptive resource management, and object-oriented checkpointing and state-management.
- We removed the use of C++11 move emulation (using `Boost.Move`), replacing it with C++11 rvalue references. This is the first step towards using more and more native C++11 facilities which we plan to introduce in the future.
- We improved the reference counting scheme used by *HPX* which helps managing distributed objects and memory. This improves the overall stability of *HPX* and further simplifies writing real world applications.
- The minimal Boost version required to use *HPX* is now V1.49.0.
- This release coincides with the first release of HPXPI (V0.1.0), the first implementation of the [XPI specification](#)⁷¹⁵⁵.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1086](#)⁷¹⁵⁶ - Expose internal `boost::shared_array` to allow user management of array lifetime
- [Issue #1083](#)⁷¹⁵⁷ - Make shell examples copyable in docs
- [Issue #1080](#)⁷¹⁵⁸ - `/threads{locality#*/total}/count/cumulative` broken
- [Issue #1079](#)⁷¹⁵⁹ - Build problems on OS X
- [Issue #1078](#)⁷¹⁶⁰ - Improve robustness of component loading
- [Issue #1077](#)⁷¹⁶¹ - Fix a missing enum definition for ‘take’ mode
- [Issue #1076](#)⁷¹⁶² - Merge Jb master
- [Issue #1075](#)⁷¹⁶³ - Unknown CMake command “`add_hpx_pseudo_target`”
- [Issue #1074](#)⁷¹⁶⁴ - Implement `apply_continue_callback` and `apply_colocated_callback`
- [Issue #1073](#)⁷¹⁶⁵ - The new `apply_colocated` and `async_colocated` functions lead to automatic registered functions
- [Issue #1071](#)⁷¹⁶⁶ - Remove `deferred_packaged_task`
- [Issue #1069](#)⁷¹⁶⁷ - `serialize_buffer` with allocator fails at destruction
- [Issue #1068](#)⁷¹⁶⁸ - Coroutine include and forward declarations missing
- [Issue #1067](#)⁷¹⁶⁹ - Add allocator support to `util::serialize_buffer`

HPX V0.9.7 (Nov 13, 2013)

We have had over 1000 commits since the last release and we have closed over 180 tickets (bugs, feature requests, etc.).

General changes

- Ported HPX to BlueGene/Q
- Improved HPX support for Xeon/Phi accelerators
- Reimplemented `hpx::bind`, `hpx::tuple`, and `hpx::function` for better performance and better compliance with the C++11 Standard. Added `hpx::mem_fn`.
- Reworked `hpx::when_all` and `hpx::when_any` for better compliance with the ongoing C++ standardization effort, added heterogeneous version for those functions. Added `hpx::when_any_swapped`.
- Added `hpx::copy` as a precursor for a migrate functionality
- Added `hpx::get_ptr` allowing to directly access the memory underlying a given component
- Added the `hpx::lcos::broadcast`, `hpx::lcos::reduce`, and `hpx::lcos::fold` collective operations

⁷²²⁷ <https://github.com/TheHPXProject/hpx/issues/636>

⁷²²⁸ <https://github.com/TheHPXProject/hpx/issues/197>

⁷²²⁹ <https://github.com/TheHPXProject/hpx/issues/175>

- Added `hpx::get_locality_name` allowing to retrieve the name of any of the localities for the application.
- Added support for more flexible thread affinity control from the HPX command line, such as new modes for `--hpx:bind` (balanced, scattered, compact), improved default settings when running multiple localities on the same node.
- Added experimental executors for simpler thread pooling and scheduling. This API may change in the future as it will stay aligned with the ongoing C++ standardization efforts.
- Massively improved the performance of the HPX serialization code. Added partial support for zero copy serialization of array and bitwise-copyable types.
- General performance improvements of the code related to threads and futures.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1005⁷²³⁰](#) - Allow one to disable array optimizations and zero copy optimizations for each parcelport

⁷²⁹⁰ <https://github.com/TheHPXProject/hpx/issues/930>

- Issue #929⁷²⁹¹ - Generating index in docs broken
- Issue #928⁷²⁹² - Optimize `hpx::util::static_` for C++11 compilers supporting magic statics
- Issue #924⁷²⁹³ - Make `kill_process_tree` (in `process.py`) more robust on Mac OSX
- Issue #923⁷²⁹⁴ - Correct BLAS and RNPL cmake tests
- Issue #922⁷²⁹⁵ - Cannot link against BLAS
- Issue #921⁷²⁹⁶ - Implement `hpx::mem_fn`
- Issue #920⁷²⁹⁷ - Output locality with `--hpx:print-bind`
- Issue #919⁷²⁹⁸ - Correct grammar; simplify boolean expressions
- Issue #918⁷²⁹⁹ - Link to `hello_world.cpp` is broken
- Issue #917⁷³⁰⁰ - adapt cmake file to new boostbook version
- Issue #916⁷³⁰¹ - fix problem building documentation with `xsltproc` $\geq 1.1.27$
- Issue #915⁷³⁰² - Add another TBBMalloc library search path
- Issue #914⁷³⁰³ - Build problem with Intel compiler on Stampede (TACC)
- Issue #913⁷³⁰⁴ - fix error messages in fibonacci examples
- Issue #911⁷³⁰⁵ - Update OS X build instructions
- Issue #910⁷³⁰⁶ - Want like to specify `MPI_ROOT` instead of compiler wrapper script
- Issue #909⁷³⁰⁷ - Warning about `void*` arithmetic
- Issue #908⁷³⁰⁸ - Buildbot for MIC is broken
- Issue #906⁷³⁰⁹ - Can't use `--hpx:bind=balanced` with multiple MPI processes
- Issue #905⁷³¹⁰ - `--hpx:bind` documentation should describe full grammar
- Issue #904⁷³¹¹ - Add `hpx::lcos::fold` and `hpx::lcos::inverse_fold` collective operation
- Issue #903⁷³¹² - Add `hpx::when_any_swapped()`
- Issue #902⁷³¹³ - Add `hpx::lcos::reduce` collective operation

HPX V0.9.6 (Jul 30, 2013)

We have had over 1200 commits since the last release and we have closed roughly 140 tickets (bugs, feature requests, etc.).

General changes

The major new features in this release are:

- We further consolidated the API exposed by *HPX*. We aligned our APIs as much as possible with the existing C++11 Standard⁷⁴¹⁶ and related proposals to the C++ standardization committee (such as [N3632](#)⁷⁴¹⁷ and [N3857](#)⁷⁴¹⁸).
- We implemented a first version of a distributed AGAS service which essentially eliminates all explicit AGAS network traffic.
- We created a native ibverbs parcelport allowing to take advantage of the superior latency and bandwidth characteristics of Infiniband networks.
- We successfully ported *HPX* to the Xeon Phi platform.
- Support for the SLURM scheduling system was implemented.
- Major efforts have been dedicated to improving the performance counter framework, numerous new counters were implemented and new APIs were added.
- We added a modular parcel compression system allowing to improve bandwidth utilization (by reducing the overall size of the transferred data).

⁷⁴¹⁷ <http://wg21.link/n3632>

⁷⁴¹⁸ <http://wg21.link/n3857>

- We added a modular parcel coalescing system allowing to combine several parcels into larger messages. This reduces latencies introduced by the communication layer.
- Added an experimental executors API allowing to use different scheduling policies for different parts of the code. This API has been modelled after the Standards proposal [N3562](#)⁷⁴¹⁹. This API is bound to change in the future, though.
- Added minimal security support for localities which is enforced on the parcelport level. This support is preliminary and experimental and might change in the future.
- We created a parcelport using low level MPI functions. This is in support of legacy applications which are to be gradually ported and to support platforms where MPI is the only available portable networking layer.
- We added a preliminary and experimental implementation of a tuple-space object which exposes an interface similar to such systems described in the literature (see for instance [The Linda Coordination Language](#)⁷⁴²⁰).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is again a very long list of newly implemented features and fixed issues.

- [Issue #806](#)⁷⁴²¹ - make (all) in examples folder does nothing
- [Issue #805](#)⁷⁴²² - Adding the introduction and fixing DOCBOOK dependencies for Windows use
- [Issue #804](#)⁷⁴²³ - Add stackless (non-suspendable) thread type
- [Issue #803](#)⁷⁴²⁴ - Create proper serialization support functions for util::tuple
- [Issue #800](#)⁷⁴²⁵ - Add possibility to disable array optimizations during serialization
- [Issue #798](#)⁷⁴²⁶ - HPX_LIMIT does not work for local dataflow
- [Issue #797](#)⁷⁴²⁷ - Create a parcelport which uses MPI
- [Issue #796](#)⁷⁴²⁸ - Problem with Large Numbers of Threads
- [Issue #793](#)⁷⁴²⁹ - Changing dataflow test case to hang consistently
- [Issue #792](#)⁷⁴³⁰ - CMake Error
- [Issue #791](#)⁷⁴³¹ - Problems with local::dataflow
- [Issue #790](#)⁷⁴³² - wait_for() doesn't compile
- [Issue #789](#)⁷⁴³³ - HPX with Intel compiler segfaults
- [Issue #788](#)⁷⁴³⁴ - Intel compiler support

HPX V0.9.5 (Jan 16, 2013)

We have had over 1000 commits since the last release and we have closed roughly 150 tickets (bugs, feature requests, etc.).

General changes

This release is continuing along the lines of code and API consolidation, and overall usability improvements. We dedicated much attention to performance and we were able to significantly improve the threading and networking subsystems.

We successfully ported *HPX* to the Android platform. *HPX* applications now not only can run on mobile devices, but we support heterogeneous applications running across architecture boundaries. At the Supercomputing Conference 2012 we demonstrated connecting Android tablets to simulations running on a Linux cluster. The Android tablet was used to query performance counters from the Linux simulation and to steer its parameters.

We successfully ported *HPX* to Mac OSX (using the Clang compiler). Thanks to Pyry Jähkola for contributing the corresponding patches. Please see the section `macos_installation` for more details.

We made a special effort to make HPX usable in highly concurrent use cases. Many of the HPX API functions which possibly take longer than 100 microseconds to execute now can be invoked asynchronously. We added uniform support for composing futures which simplifies to write asynchronous code. HPX actions (function objects encapsulating possibly concurrent remote function invocations) are now well integrated with all other API facilities such like `hpx::bind`.

⁷⁵⁵⁹ <https://github.com/TheHPXProject/hpx/issues/177>

⁷⁵⁶⁰ <https://github.com/TheHPXProject/hpx/issues/43>

All of the API has been aligned as much as possible with established paradigms. HPX now mirrors many of the facilities as defined in the C++11 Standard, such as `hpx::thread`, `hpx::function`, `hpx::future`, etc.

A lot of work has been put into improving the documentation. Many of the API functions are documented now, concepts are explained in detail, and examples are better described than before. The new documentation index enables finding information with lesser effort.

This is the first release of HPX we perform after the move to [Github](https://github.com/TheHPXProject/hpx/)⁷⁵⁶¹. This step has enabled a wider participation from the community and further encourages us in our decision to release HPX as a true open source library (HPX is licensed under the very liberal [Boost Software License](https://www.boost.org/LICENSE_1_0.txt)⁷⁵⁶²).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is by far the longest list of newly implemented features and fixed issues for any of HPX' releases so far.

- [Issue #666](https://github.com/TheHPXProject/hpx/issues/666)⁷⁵⁶³ - Segfault on calling `hpx::finalize` twice
- [Issue #665](https://github.com/TheHPXProject/hpx/issues/665)⁷⁵⁶⁴ - Adding declaration `num_of_cores`
- [Issue #662](https://github.com/TheHPXProject/hpx/issues/662)⁷⁵⁶⁵ - `pkgconfig` is building wrong
- [Issue #660](https://github.com/TheHPXProject/hpx/issues/660)⁷⁵⁶⁶ - Need `uninterrupt` function
- [Issue #659](https://github.com/TheHPXProject/hpx/issues/659)⁷⁵⁶⁷ - Move our logging library into a different namespace
- [Issue #658](https://github.com/TheHPXProject/hpx/issues/658)⁷⁵⁶⁸ - Dynamic performance counter types are broken
- [Issue #657](https://github.com/TheHPXProject/hpx/issues/657)⁷⁵⁶⁹ - HPX v0.9.5 (RC1) `hello_world` example segfaulting
- [Issue #656](https://github.com/TheHPXProject/hpx/issues/656)⁷⁵⁷⁰ - Define the affinity of `parcel-pool`, `io-pool`, and `timer-pool` threads
- [Issue #654](https://github.com/TheHPXProject/hpx/issues/654)⁷⁵⁷¹ - Integrate the Boost `auto_index` tool with documentation
- [Issue #653](https://github.com/TheHPXProject/hpx/issues/653)⁷⁵⁷² - Make HPX build on OS X + Clang + `libc++`
- [Issue #651](https://github.com/TheHPXProject/hpx/issues/651)⁷⁵⁷³ - Add fine-grained control for thread pinning
- [Issue #650](https://github.com/TheHPXProject/hpx/issues/650)⁷⁵⁷⁴ - Command line no error message when using `-hpx:(anything)`
- [Issue #645](https://github.com/TheHPXProject/hpx/issues/645)⁷⁵⁷⁵ - Command line aliases don't work in `[teletype]`@file`[c++]`
- [Issue #644](https://github.com/TheHPXProject/hpx/issues/644)⁷⁵⁷⁶ - Terminated threads are not always properly cleaned up
- [Issue #640](https://github.com/TheHPXProject/hpx/issues/640)⁷⁵⁷⁷ - `future_data<T>::set_on_completed_` used without locks
- [Issue #638](https://github.com/TheHPXProject/hpx/issues/638)⁷⁵⁷⁸ - `hpx` build with intel compilers fails on linux

⁷⁵⁷⁷ <https://github.com/TheHPXProject/hpx/issues/640>

⁷⁵⁷⁸ <https://github.com/TheHPXProject/hpx/issues/638>

- Issue #637⁷⁵⁷⁹ - `--copy-dt-needed-entries` breaks with gold
- Issue #635⁷⁵⁸⁰ - Boost V1.53 will add `Boost.Lockfree` and `Boost.Atomic`
- Issue #633⁷⁵⁸¹ - Re-add examples to final 0.9.5 release
- Issue #632⁷⁵⁸² - Example `thread_aware_timer` is broken
- Issue #631⁷⁵⁸³ - FFT application throws error in `parcellayer`
- Issue #630⁷⁵⁸⁴ - Event synchronization example is broken
- Issue #629⁷⁵⁸⁵ - Waiting on futures hangs
- Issue #628⁷⁵⁸⁶ - Add an `HPX_ALWAYS_ASSERT` macro
- Issue #625⁷⁵⁸⁷ - Port coroutines context switch benchmark
- Issue #621⁷⁵⁸⁸ - New INI section for stack sizes
- Issue #618⁷⁵⁸⁹ - `pkg_config` support does not work with a HPX debug build
- Issue #617⁷⁵⁹⁰ - `hpx/external/logging/boost/logging/detail/cache_before_init.hpp:139:67: error: 'get_thread_id' was not declared in this scope`
- Issue #616⁷⁵⁹¹ - Change `wait_xxx` not to use locking
- Issue #615⁷⁵⁹² - Revert visibility 'fix' (fb0b6b8245dad1127b0c25ebafd9386b3945cca9)
- Issue #614⁷⁵⁹³ - Fix Dataflow linker error
- Issue #613⁷⁵⁹⁴ - `find_here` should throw an exception on failure
- Issue #612⁷⁵⁹⁵ - Thread phase doesn't show up in debug mode
- Issue #611⁷⁵⁹⁶ - Make stack guard pages configurable at runtime (initialization time)
- Issue #610⁷⁵⁹⁷ - Co-Locate Components
- Issue #609⁷⁵⁹⁸ - `future_overhead`
- Issue #608⁷⁵⁹⁹ - `--hpx:list-counter-infos` problem
- Issue #607⁷⁶⁰⁰ - Update `Boost.Context` based backend for coroutines
- Issue #606⁷⁶⁰¹ - `1d_wave_equation` is not working

⁷⁶⁰⁰ <https://github.com/TheHPXProject/hpx/issues/607>

⁷⁶⁰¹ <https://github.com/TheHPXProject/hpx/issues/606>

- [Issue #605](#)⁷⁶⁰² - Any C++ function that has serializable arguments and a serializable return type should be remotable
- [Issue #604](#)⁷⁶⁰³ - Connecting localities isn't working anymore
- [Issue #603](#)⁷⁶⁰⁴ - Do not verify any ini entries read from a file
- [Issue #602](#)⁷⁶⁰⁵ - Rename argument_size to type_size/ added implementation to get parcel size
- [Issue #599](#)⁷⁶⁰⁶ - Enable locality specific command line options
- [Issue #598](#)⁷⁶⁰⁷ - Need an API that accesses the performance counter reporting the system uptime
- [Issue #597](#)⁷⁶⁰⁸ - compiling on ranger
- [Issue #595](#)⁷⁶⁰⁹ - I need a place to store data in a thread self pointer
- [Issue #594](#)⁷⁶¹⁰ - 32/64 interoperability
- [Issue #593](#)⁷⁶¹¹ - Warn if logging is disabled at compile time but requested at runtime
- [Issue #592](#)⁷⁶¹² - Add optional argument value to --hpx:list-counters and --hpx:list-counter-infos
- [Issue #591](#)⁷⁶¹³ - Allow for wildcards in performance counter names specified with --hpx:print-counter
- [Issue #590](#)⁷⁶¹⁴ - Local promise semantic differences
- [Issue #589](#)⁷⁶¹⁵ - Create API to query performance counter names
- [Issue #587](#)⁷⁶¹⁶ - Add get_num_localities and get_num_threads to AGAS API
- [Issue #586](#)⁷⁶¹⁷ - Adjust local AGAS cache size based on number of localities
- [Issue #585](#)⁷⁶¹⁸ - Error while using counters in HPX
- [Issue #584](#)⁷⁶¹⁹ - counting argument size of actions, initial pass.
- [Issue #581](#)⁷⁶²⁰ - Remove RemoteResult template parameter for future<>
- [Issue #580](#)⁷⁶²¹ - Add possibility to hook into actions
- [Issue #578](#)⁷⁶²² - Use angle brackets in HPX error dumps
- [Issue #576](#)⁷⁶²³ - Exception incorrectly thrown when --help is used
- [Issue #575](#)⁷⁶²⁴ - HPX(bad_component_type) with gcc 4.7.2 and boost 1.51

⁷⁶²³ <https://github.com/TheHPXProject/hpx/issues/576>

⁷⁶²⁴ <https://github.com/TheHPXProject/hpx/issues/575>

- Issue #574⁷⁶²⁵ - `--hpx:connect` command line parameter not working correctly
- Issue #571⁷⁶²⁶ - `hpx::wait()` (callback version) should pass the future to the callback function
- Issue #570⁷⁶²⁷ - `hpx::wait` should operate on `boost::arrays` and `std::lists`
- Issue #569⁷⁶²⁸ - Add a logging sink for Android
- Issue #568⁷⁶²⁹ - 2-argument version of `HPX_DEFINE_COMPONENT_ACTION`
- Issue #567⁷⁶³⁰ - Connecting to a running HPX application works only once
- Issue #565⁷⁶³¹ - HPX doesn't shutdown properly
- Issue #564⁷⁶³² - Partial preprocessing of new component creation interface
- Issue #563⁷⁶³³ - Add `hpx::start/hpx::stop` to avoid blocking main thread
- Issue #562⁷⁶³⁴ - All command line arguments swallowed by `hpx`
- Issue #561⁷⁶³⁵ - `Boost.Tuple` is not move aware
- Issue #558⁷⁶³⁶ - `boost::shared_ptr<>` style semantics/syntax for client classes
- Issue #556⁷⁶³⁷ - Creation of partially preprocessed headers should be enabled for Boost newer than V1.50
- Issue #555⁷⁶³⁸ - `BOOST_FORCEINLINE` does not name a type
- Issue #554⁷⁶³⁹ - Possible race condition in `thread get_id()`
- Issue #552⁷⁶⁴⁰ - Move enable `client_base`
- Issue #550⁷⁶⁴¹ - Add stack size category 'huge'
- Issue #549⁷⁶⁴² - ShenEOS run seg-faults on single or distributed runs
- Issue #545⁷⁶⁴³ - `AUTOGLOB` broken for `add_hpx_component`
- Issue #542⁷⁶⁴⁴ - `FindHPX_HDF5` still searches multiple times
- Issue #541⁷⁶⁴⁵ - Quotes around application name in `hpx::init`
- Issue #539⁷⁶⁴⁶ - Race condition occurring with new lightweight threads
- Issue #535⁷⁶⁴⁷ - `hpx_run_tests.py` exits with no error code when tests are missing

⁷⁶⁴⁶ <https://github.com/TheHPXProject/hpx/issues/539>

⁷⁶⁴⁷ <https://github.com/TheHPXProject/hpx/issues/535>

- [Issue #530](#)⁷⁶⁴⁸ - Thread description(<unknown>) in logs
- [Issue #523](#)⁷⁶⁴⁹ - Make thread objects more lightweight
- [Issue #521](#)⁷⁶⁵⁰ - `hpx::error_code` is not usable for lightweight error handling
- [Issue #520](#)⁷⁶⁵¹ - Add full user environment to HPX logs
- [Issue #519](#)⁷⁶⁵² - Build succeeds, running fails
- [Issue #517](#)⁷⁶⁵³ - Add a guard page to linux coroutine stacks
- [Issue #516](#)⁷⁶⁵⁴ - `hpx::thread::detach` suspends while holding locks, leads to hang in debug
- [Issue #514](#)⁷⁶⁵⁵ - Preprocessed headers for `<hpx/apply.hpp>` don't compile
- [Issue #513](#)⁷⁶⁵⁶ - Buildbot configuration problem
- [Issue #512](#)⁷⁶⁵⁷ - Implement action based stack size customization
- [Issue #511](#)⁷⁶⁵⁸ - Move action priority into a separate type trait
- [Issue #510](#)⁷⁶⁵⁹ - trunk broken
- [Issue #507](#)⁷⁶⁶⁰ - no matching function for call to `boost::scoped_ptr<hpx::threads::topology>::scoped_ptr(hpx::thre`
- [Issue #505](#)⁷⁶⁶¹ - `undefined_symbol` regression test currently failing
- [Issue #502](#)⁷⁶⁶² - Adding OpenCL and OCLM support to HPX for Windows and Linux
- [Issue #501](#)⁷⁶⁶³ - `find_package(HPX)` sets cmake output variables
- [Issue #500](#)⁷⁶⁶⁴ - `wait_any/wait_all` are badly named
- [Issue #499](#)⁷⁶⁶⁵ - Add support for disabling pbs support in pbs runs
- [Issue #498](#)⁷⁶⁶⁶ - Error during no-cache runs
- [Issue #496](#)⁷⁶⁶⁷ - Add partial preprocessing support to cmake
- [Issue #495](#)⁷⁶⁶⁸ - Support HPX modules exporting startup/shutdown functions only
- [Issue #494](#)⁷⁶⁶⁹ - Allow modules to specify when to run startup/shutdown functions
- [Issue #493](#)⁷⁶⁷⁰ - Avoid constructing a string in `make_success_code`

HPX V0.9.0 (Jul 5, 2012)

We have had roughly 800 commits since the last release and we have closed approximately 80 tickets (bugs, feature requests, etc.).

General changes

- Significant improvements made to the usability of *HPX* in large-scale, distributed environments.
- Renamed `hpx::lcos::packaged_task` to `hpx::lcos::packaged_action` to reflect the semantic differences to a `packaged_task` as defined by the [C++11 Standard](#)⁷⁷¹⁹.
- *HPX* now exposes `hpx::thread` which is compliant to the C++11 `std::thread` type except that it (purely locally) represents an *HPX* thread. This new type does not expose any of the remote capabilities of the underlying *HPX*-thread implementation.
- The type `hpx::lcos::future` is now compliant to the C++11 `std::future<>` type. This type can be used to synchronize both, local and remote operations. In both cases the control flow will ‘return’ to the future in order to trigger any continuation.
- The types `hpx::lcos::local::promise` and `hpx::lcos::local::packaged_task` are now compliant to the C++11 `std::promise<>` and `std::packaged_task<>` types. These can be used to create a future representing local work only. Use the types `hpx::lcos::promise` and `hpx::lcos::packaged_action` to wrap any (possibly remote) action into a future.
- `hpx::thread` and `hpx::lcos::future` are now cancelable.
- Added support for sequential and logic composition of `hpx::lcos::futures`. The member function `hpx::lcos::future::when` permits futures to be sequentially composed. The helper functions `hpx::wait_all`, `hpx::wait_any`, and `hpx::wait_n` can be used to wait for more than one future at a time.
- *HPX* now exposes `hpx::apply` and `hpx::async` as the preferred way of creating (or invoking) any deferred work. These functions are usable with various types of functions, function objects, and actions and provide a uniform way to spawn deferred tasks.
- *HPX* now utilizes `hpx::util::bind` to (partially) bind local functions and function objects, and also actions. Remote bound actions can have placeholders as well.
- *HPX* continuations are now fully polymorphic. The class `hpx::actions::forwarding_continuation` is an example of how the user can write its own types of continuations. It can be used to execute any function as an continuation of a particular action.
- Reworked the action invocation API to be fully conformant to normal functions. Actions can now be invoked using `hpx::apply`, `hpx::async`, or using the `operator()` implemented on actions. Actions themselves can now be cheaply instantiated as they do not have any members anymore.
- Reworked the lazy action invocation API. Actions can now be directly bound using `hpx::util::bind` by passing an action instance as the first argument.
- A minimal *HPX* program now looks like this:

⁷⁷¹⁷ <https://github.com/TheHPXProject/hpx/issues/48>

⁷⁷¹⁸ <https://github.com/TheHPXProject/hpx/issues/21>

⁷⁷¹⁹ <http://www.open-std.org/jtc1/sc22/wg21>

```
#include <hpx/hpx_init.hpp>

int hpx_main()
{
    return hpx::finalize();
}

int main()
{
    return hpx::init();
}
```

This removes the immediate dependency on the `Boost.Program_options`⁷⁷²⁰ library.

Note

This minimal version of an *HPX* program does not support any of the default command line arguments (such as `-help`, or command line options related to PBS). It is suggested to always pass `argc` and `argv` to *HPX* as shown in the example below.

- In order to support those, but still not to depend on `Boost.Program_options`⁷⁷²¹, the minimal program can be written as:

```
#include <hpx/hpx_init.hpp>

// The arguments for hpx_main can be left off, which very similar to the
// behavior of ``main()`` as defined by C++.
int hpx_main(int argc, char* argv[])
{
    return hpx::finalize();
}

int main(int argc, char* argv[])
{
    return hpx::init(argc, argv);
}
```

- Added performance counters exposing the number of component instances which are alive on a given locality.
- Added performance counters exposing then number of messages sent and received, the number of parcels sent and received, the number of bytes sent and received, the overall time required to send and receive data, and the overall time required to serialize and deserialize the data.
- Added a new component: `hpx::components::binpacking_factory` which is equivalent to the existing `hpx::components::distributing_factory` component, except that it equalizes the overall population of the components to create. It exposes two factory methods, one based on the number of existing instances of the component type to create, and one based on an arbitrary performance counter which will be queried for all relevant localities.
- Added API functions allowing to access elements of the diagnostic information embedded in the given exception: `hpx::get_locality_id`, `hpx::get_host_name`, `hpx::get_process_id`, `hpx::get_function_name`,

⁷⁷²⁰ https://www.boost.org/doc/html/program_options.html

⁷⁷²¹ https://www.boost.org/doc/html/program_options.html

`hpx::get_file_name`, `hpx::get_line_number`, `hpx::get_os_thread`, `hpx::get_thread_id`, and `hpx::get_thread_description`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #71⁷⁷²²](#) - GIDs that are not serialized via `handle_gid<>` should raise an exception
- [Issue #105⁷⁷²³](#) - Allow for `hpx::util::functions` to be registered in the AGAS symbolic namespace
- [Issue #107⁷⁷²⁴](#) - Nasty threadmanger race condition (reproducible in `sheneos_test`)
- [Issue #108⁷⁷²⁵](#) - Add millisecond resolution to *HPX* logs on Linux
- [Issue #110⁷⁷²⁶](#) - Shutdown hang in distributed with release build
- [Issue #116⁷⁷²⁷](#) - Don't use TSS for the applier and runtime pointers
- [Issue #162⁷⁷²⁸](#) - Move local synchronous execution shortcut from `hpx::function` to the applier
- [Issue #172⁷⁷²⁹](#) - Cache sources in CMake and check if they change manually
- [Issue #178⁷⁷³⁰](#) - Add an INI option to turn off ranged-based AGAS caching
- [Issue #187⁷⁷³¹](#) - Support for disabling performance counter deployment
- [Issue #202⁷⁷³²](#) - Support for sending performance counter data to a specific file
- [Issue #218⁷⁷³³](#) - `boost.coroutines` allows different stack sizes, but stack pool is unaware of this
- [Issue #231⁷⁷³⁴](#) - Implement movable `boost::bind`
- [Issue #232⁷⁷³⁵](#) - Implement movable `boost::function`
- [Issue #236⁷⁷³⁶](#) - Allow binding `hpx::util::function` to actions
- [Issue #239⁷⁷³⁷](#) - Replace `hpx::function` with `hpx::util::function`
- [Issue #240⁷⁷³⁸](#) - Can't specify `RemoteResult` with `lcos::async`
- [Issue #242⁷⁷³⁹](#) - `REGISTER_TEMPLATE` support for plain actions
- [Issue #243⁷⁷⁴⁰](#) - `handle_gid<>` support for `hpx::util::function`
- [Issue #245⁷⁷⁴¹](#) - `*_c_cache` code throws an exception if the queried GID is not in the local cache

HPX V0.8.1 (Apr 21, 2012)

This is a point release including important bug fixes for *HPX V0.8.0 (Mar 23, 2012)*.

General changes

- *HPX* does not need to be installed anymore to be functional.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this point release:

- [Issue #295](https://github.com/TheHPXProject/hpx/issues/295)⁷⁷⁸⁴ - Don't require install path to be known at compile time.
- [Issue #371](https://github.com/TheHPXProject/hpx/issues/371)⁷⁷⁸⁵ - Add hpx iostreams to standard build.
- [Issue #384](https://github.com/TheHPXProject/hpx/issues/384)⁷⁷⁸⁶ - Fix compilation with GCC 4.7.
- [Issue #390](https://github.com/TheHPXProject/hpx/issues/390)⁷⁷⁸⁷ - Remove keep_factory_alive startup call from ShenEOS; add shutdown call to H5close.
- [Issue #393](https://github.com/TheHPXProject/hpx/issues/393)⁷⁷⁸⁸ - Thread affinity control is broken.

Bug fixes (commits)

Here is a list of the important commits included in this point release:

- r7642 - External: Fix backtrace memory violation.
- **r7775 - Components: Fix symbol visibility bug with component startup providers.** This prevents one components providers from overriding another components.
- r7778 - Components: Fix startup/shutdown provider shadowing issues.

HPX V0.8.0 (Mar 23, 2012)

We have had roughly 1000 commits since the last release and we have closed approximately 70 tickets (bugs, feature requests, etc.).

General changes

- Improved PBS support, allowing for arbitrary naming schemes of node-hostnames.
- Finished verification of the reference counting framework.
- Implemented decrement merging logic to optimize the distributed reference counting system.
- Restructured the LCO framework. Renamed `hpx::lcos::eager_future<>` and `hpx::lcos::lazy_future<>` into `hpx::lcos::packaged_task` and `hpx::lcos::deferred_packaged_task`. Split `hpx::lcos::promise` into `hpx::lcos::packaged_task` and `hpx::lcos::future`. Added 'local' futures (in namespace `hpx::lcos::local`).

⁷⁷⁸⁴ <https://github.com/TheHPXProject/hpx/issues/295>

⁷⁷⁸⁵ <https://github.com/TheHPXProject/hpx/issues/371>

⁷⁷⁸⁶ <https://github.com/TheHPXProject/hpx/issues/384>

⁷⁷⁸⁷ <https://github.com/TheHPXProject/hpx/issues/390>

⁷⁷⁸⁸ <https://github.com/TheHPXProject/hpx/issues/393>

- Improved the general performance of local and remote action invocations. This (under certain circumstances) drastically reduces the number of copies created for each of the parameters and return values.
- Reworked the performance counter framework. Performance counters are now created only when needed, which reduces the overall resource requirements. The new framework allows for much more flexible creation and management of performance counters. The new sine example application demonstrates some of the capabilities of the new infrastructure.
- Added a buildbot-based continuous build system which gives instant, automated feedback on each commit to SVN.
- Added more automated tests to verify proper functioning of *HPX*.
- Started to create documentation for *HPX* and its API.
- Added documentation toolchain to the build system.
- Added dataflow LCO.
- Changed default *HPX* command line options to have `hpx:` prefix. For instance, the former option `--threads` is now `--hpx:threads`. This has been done to make ambiguities with possible application specific command line options as unlikely as possible. See the section *HPX Command Line Options* for a full list of available options.
- Added the possibility to define command line aliases. The former short (one-letter) command line options have been predefined as aliases for backwards compatibility. See the section *HPX Command Line Options* for a detailed description of command line option aliasing.
- Network connections are now cached based on the connected host. The number of simultaneous connections to a particular host is now limited. Parcels are buffered and bundled if all connections are in use.
- Added more refined thread affinity control. This is based on the external library Portable Hardware Locality (HWLOC).
- Improved support for Windows builds with CMake.
- Added support for components to register their own command line options.
- Added the possibility to register custom startup/shutdown functions for any component. These functions are guaranteed to be executed by an *HPX* thread.
- Added two new experimental thread schedulers: `hierarchy_scheduler` and `periodic_priority_scheduler`. These can be activated by using the command line options `--hpx:queuing=hierarchy` or `--hpx:queuing=periodic`.

Example applications

- [Graph500 performance benchmark](http://www.graph500.org/)⁷⁷⁸⁹ (thanks to Matthew Anderson for contributing this application).
- [GTC \(Gyrokinetic Toroidal Code\)](http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/)⁷⁷⁹⁰: a skeleton for particle in cell type codes.
- Random Memory Access: an example demonstrating random memory accesses in a large array
- [ShenEOS example](http://stellarcollapse.org/equationofstate)⁷⁷⁹¹, demonstrating partitioning of large read-only data structures and exposing an interpolation API.
- Sine performance counter demo.
- Accumulator examples demonstrating how to write and use *HPX* components.

⁷⁷⁸⁹ <http://www.graph500.org/>

⁷⁷⁹⁰ <http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/>

⁷⁷⁹¹ <http://stellarcollapse.org/equationofstate>

- Quickstart examples (like `hello_world`, `fibonacci`, `quicksort`, `factorial`, etc.) demonstrating simple *HPX* concepts which introduce some of the concepts in *HPX*.
- Load balancing and work stealing demos.

API changes

- Moved all local LCOs into a separate namespace `hpx::lcos::local` (for instance, `hpx::lcos::local_mutex` is now `hpx::lcos::local::mutex`).
- Replaced `hpx::actions::function` with `hpx::util::function`. Cleaned up related code.
- Removed `hpx::traits::handle_gid` and moved handling of global reference counts into the corresponding serialization code.
- Changed terminology: `prefix` is now called `locality_id`, renamed the corresponding API functions (such as `hpx::get_prefix`, which is now called `hpx::get_locality_id`).
- Adding `hpx::find_remote_localities`, and `hpx::get_num_localities`.
- Changed performance counter naming scheme to make it more bash friendly. The new performance counter naming scheme is now

`/object{parentname#parentindex/instance#index}/counter#parameters`

- Added `hpx::get_worker_thread_num` replacing `hpx::threadmanager_base::get_thread_num`.
- Renamed `hpx::get_num_os_threads` to `hpx::get_os_threads_count`.
- Added `hpx::threads::get_thread_count`.
- Restructured the Futures sub-system, renaming types in accordance with the terminology used by the C++11 ISO standard.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #31⁷⁷⁹²](#) - Specialize `handle_gid<>` for examples and tests
- [Issue #72⁷⁷⁹³](#) - Fix AGAS reference counting
- [Issue #104⁷⁷⁹⁴](#) - heartbeat throws an exception when decrefing the performance counter it's watching
- [Issue #111⁷⁷⁹⁵](#) - throttle causes an exception on the target application
- [Issue #142⁷⁷⁹⁶](#) - One failed component loading causes an unrelated component to fail
- [Issue #165⁷⁷⁹⁷](#) - Remote exception propagation bug in AGAS reference counting test
- [Issue #186⁷⁷⁹⁸](#) - Test credit exhaustion/splitting (e.g. `prepare_gid` and `symbol NS`)
- [Issue #188⁷⁷⁹⁹](#) - Implement remaining AGAS reference counting test cases

⁷⁸³⁹ <https://github.com/TheHPXProject/hpx/issues/361>

⁷⁸⁴⁰ <https://github.com/TheHPXProject/hpx/issues/364>

General changes

- Completely removed code related to deprecated AGAS V1, started to work on AGAS V2.1.
- Started to clean up and streamline the exposed APIs (see ‘API changes’ below for more details).
- Revamped and unified performance counter framework, added a lot of new performance counter instances for monitoring of a diverse set of internal *HPX* parameters (queue lengths, access statistics, etc.).
- Improved general error handling and logging support.
- Fixed several race conditions, improved overall stability, decreased memory footprint, improved overall performance (major optimizations include native TLS support and ranged-based AGAS caching).
- Added support for running *HPX* applications with PBS.
- Many updates to the build system, added support for gcc 4.5.x and 4.6.x, added C++11 support.
- Many updates to default command line options.
- Added many tests, set up buildbot for continuous integration testing.
- Better shutdown handling of distributed applications.

Example applications

- quickstart/factorial and quickstart/fibonacci, future-recursive parallel algorithms.
- quickstart/hello_world, distributed hello world example.
- quickstart/rma, simple remote memory access example
- quickstart/quicksort, parallel quicksort implementation.
- gtc, gyrokinetic torodial code.
- bfs, breadth-first-search, example code for a graph application.
- sheneos, partitioning of large data sets.
- accumulator, simple component example.
- balancing/os_thread_num, balancing/px_thread_phase, examples demonstrating load balancing and work stealing.

API changes

- Added `hpx::find_all_localities`.
- Added `hpx::terminate` for non-graceful termination of applications.
- Added `hpx::lcos::async` functions for simpler asynchronous programming.
- Added new AGAS interface for handling of symbolic namespace (`hpx::agas::*`).
- Renamed `hpx::components::wait` to `hpx::lcos::wait`.
- Renamed `hpx::lcos::future_value` to `hpx::lcos::promise`.
- Renamed `hpx::lcos::recursive_mutex` to `hpx::lcos::local_recursive_mutex`, `hpx::lcos::mutex` to `hpx::lcos::local_mutex`
- Removed support for Boost versions older than V1.38, recommended Boost version is now V1.47 and newer.

- Removed `hpx::process` (this will be replaced by a real process implementation in the future).
- Removed non-functional LCO code (`hpx::lcos::dataflow`, `hpx::lcos::thunk`, `hpx::lcos::dataflow_variable`).
- Removed deprecated `hpx::naming::full_address`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #28](#)⁷⁸⁴¹ - Integrate Windows/Linux CMake code for *HPX* core
- [Issue #32](#)⁷⁸⁴² - `hpx::cout()` should be `hpx::cout`
- [Issue #33](#)⁷⁸⁴³ - AGAS V2 legacy client does not properly handle `error_code`
- [Issue #60](#)⁷⁸⁴⁴ - AGAS: allow for `registerid` to optionally take ownership of the `gid`
- [Issue #62](#)⁷⁸⁴⁵ - `adaptive1d` compilation failure in Fusion
- [Issue #64](#)⁷⁸⁴⁶ - Parcel subsystem doesn't resolve domain names
- [Issue #83](#)⁷⁸⁴⁷ - No error handling if no console is available
- [Issue #84](#)⁷⁸⁴⁸ - No error handling if a hosted locality is treated as the bootstrap server
- [Issue #90](#)⁷⁸⁴⁹ - Add general commandline option `-N`
- [Issue #91](#)⁷⁸⁵⁰ - Add possibility to read command line arguments from file
- [Issue #92](#)⁷⁸⁵¹ - Always log exceptions/errors to the log file
- [Issue #93](#)⁷⁸⁵² - Log the command line/program name
- [Issue #95](#)⁷⁸⁵³ - Support for distributed launches
- [Issue #97](#)⁷⁸⁵⁴ - Attempt to create a bad component type in AMR examples
- [Issue #100](#)⁷⁸⁵⁵ - `factorial` and `factorial_get` examples trigger AGAS component type assertions
- [Issue #101](#)⁷⁸⁵⁶ - Segfault when `hpx::process::here()` is called in `fibonacci2`
- [Issue #102](#)⁷⁸⁵⁷ - `unknown_component_address` in `int_object_semaphore_client`
- [Issue #114](#)⁷⁸⁵⁸ - `marduk` raises assertion with default parameters

- Issue #115⁷⁸⁵⁹ - Logging messages for SMP runs (on the console) shouldn't be buffered
- Issue #119⁷⁸⁶⁰ - marduk linking strategy breaks other applications
- Issue #121⁷⁸⁶¹ - pbsdsh problem
- Issue #123⁷⁸⁶² - marduk, dataflow and adaptive1d fail to build
- Issue #124⁷⁸⁶³ - Lower default preprocessing arity
- Issue #125⁷⁸⁶⁴ - Move hpx::detail::diagnostic_information out of the detail namespace
- Issue #126⁷⁸⁶⁵ - Test definitions for AGAS reference counting
- Issue #128⁷⁸⁶⁶ - Add averaging performance counter
- Issue #129⁷⁸⁶⁷ - Error with endian.hpp while building adaptive1d
- Issue #130⁷⁸⁶⁸ - Bad initialization of performance counters
- Issue #131⁷⁸⁶⁹ - Add global startup/shutdown functions to component modules
- Issue #132⁷⁸⁷⁰ - Avoid using auto_ptr
- Issue #133⁷⁸⁷¹ - On Windows hpx.dll doesn't get installed
- Issue #134⁷⁸⁷² - HPX_LIBRARY does not reflect real library name (on Windows)
- Issue #135⁷⁸⁷³ - Add detection of unique_ptr to build system
- Issue #137⁷⁸⁷⁴ - Add command line option allowing to repeatedly evaluate performance counters
- Issue #139⁷⁸⁷⁵ - Logging is broken
- Issue #140⁷⁸⁷⁶ - CMake problem on windows
- Issue #141⁷⁸⁷⁷ - Move all non-component libraries into \$PREFIX/lib/hpx
- Issue #143⁷⁸⁷⁸ - adaptive1d throws an exception with the default command line options
- Issue #146⁷⁸⁷⁹ - Early exception handling is broken
- Issue #147⁷⁸⁸⁰ - Sheneos doesn't link on Linux
- Issue #149⁷⁸⁸¹ - sheneos_test hangs

2.11.3 Namespace changes

HPX V1.9.0 Namespace changes

The latest release includes amongst others changes in the namespaces so that *HPX* facilities correspond to the C++ Standard Library. The old namespaces are deprecated. Below is a comprehensive list of the namespace changes.

Table 2.194: Namespace changes in V1.9.0

Old namespace	New namespace
<code>hpx::util::mem_fn</code>	<code>hpx::mem_fn</code>
<code>hpx::util::invoke</code>	<code>hpx::invoke</code>
<code>hpx::util::invoke_r</code>	<code>hpx::invoke_r</code>
<code>hpx::util::invoke_fused</code>	<code>hpx::invoke_fused</code>
<code>hpx::util::invoke_fused_r</code>	<code>hpx::invoke_fused_r</code>
<code>hpx::util::unlock_guard</code>	<code>hpx::unlock_guard</code>
<code>hpx::parallel::v1::reduce_by_key</code>	<code>hpx::experimental::reduce_by_key</code>
<code>hpx::parallel::v1::sort_by_key</code>	<code>hpx::experimental::sort_by_key</code>
<code>hpx::parallel::task_canceled_exception</code>	<code>hpx::experimental::task_canceled_exception</code>
<code>hpx::parallel::task_block</code>	<code>hpx::experimental::task_block</code>
<code>hpx::parallel::define_task_block</code>	<code>hpx::experimental::define_task_block</code>
<code>hpx::parallel::define_task_block_restore_thread</code>	<code>hpx::experimental::define_task_block_restore_thread</code>
<code>hpx::execution::experimental::task_group</code>	<code>hpx::experimental::task_group</code>

2.13 *HPX* users

A list of institutions and projects using *HPX* can be found on the [HPX Users](#)⁷⁹¹⁹ page.

2.14 About *HPX*

2.14.1 History

The development of High Performance ParalleX (*HPX*) began in 2007. At that time, Hartmut Kaiser became interested in the work done by the ParalleX group at the [Center for Computation and Technology \(CCT\)](#)⁷⁹²⁰, a multi-disciplinary research institute at [Louisiana State University \(LSU\)](#)⁷⁹²¹. The ParalleX group was working to develop a new and experimental execution model for future high performance computing architectures. This model was christened ParalleX. The first implementations of ParalleX were crude, and many of those designs had to be discarded entirely. However, over time the team learned quite a bit about how to design a parallel, distributed runtime system which implements the concepts of ParalleX.

From the very beginning, this endeavour has been a group effort. In addition to a handful of interested researchers, there have always been graduate and undergraduate students participating in the discussions, design, and implementation of *HPX*. In 2011 we decided to formalize our collective research efforts by creating the [STE||AR](#)⁷⁹²² group (Systems Technology, Emergent Parallelism, and Algorithm Research). Over time, the team grew to include researchers around the country and the world. In 2014, the [STE||AR](#)⁷⁹²³ Group was reorganized to become the international community it is today. This consortium of researchers aims to develop stable, sustainable, and scalable tools which will enable application developers to exploit the parallelism latent in the machines of today and tomorrow. Our goal of the *HPX* project is to create a high quality, freely available, open source implementation of ParalleX concepts for conventional and future systems by building a modular and standards conforming runtime system for SMP and distributed application environments. The API exposed by *HPX* is conformant to the interfaces defined by the C++ ISO Standard and adheres to the programming guidelines used by the [Boost](#)⁷⁹²⁴ collection of C++ libraries. We steer the development of *HPX* with real world applications and aim to provide a smooth migration path for domain scientists.

To learn more about [STE||AR](#)⁷⁹²⁵ and ParalleX, see [People](#) and [Why HPX?](#).

2.14.2 People

The [STE||AR](https://stellar-group.org)⁷⁹²⁶ Group (pronounced as stellar) stands for “Systems Technology, Emergent Parallelism, and Algorithm Research”. We are an international group of faculty, researchers, and students working at various institutions around the world. The goal of the [STE||AR](https://stellar-group.org)⁷⁹²⁷ Group is to promote the development of scalable parallel applications by providing a community for ideas, a framework for collaboration, and a platform for communicating these concepts to the broader community.

Our work is focused on building technologies for scalable parallel applications. *HPX*, our general purpose C++ runtime system for parallel and distributed applications, is no exception. We use *HPX* for a broad range of scientific applications, helping scientists and developers to write code which scales better and shows better performance compared to more conventional programming models such as MPI.

HPX is based on *ParalleX* which is a new (and still experimental) parallel execution model aiming to overcome the limitations imposed by the current hardware and the techniques we use to write applications today. Our group focuses on two types of applications - those requiring excellent strong scaling, allowing for a dramatic reduction of execution time for fixed workloads and those needing highest level of sustained performance through massive parallelism. These applications are presently unable (through conventional practices) to effectively exploit a relatively small number of cores in a multi-core system. By extension, these application will not be able to exploit high-end exascale computing systems which are likely to employ hundreds of millions of such cores by the end of this decade.

Critical bottlenecks to the effective use of new generation high performance computing (HPC) systems include:

- *Starvation*: due to lack of usable application parallelism and means of managing it,
- *Overhead*: reduction to permit strong scalability, improve efficiency, and enable dynamic resource management,
- *Latency*: from remote access across system or to local memories,
- *Contention*: due to multicore chip I/O pins, memory banks, and system interconnects.

The *ParalleX* model has been devised to address these challenges by enabling a new computing dynamic through the application of message-driven computation in a global address space context with lightweight synchronization. The work on *HPX* is centered around implementing the concepts as defined by the *ParalleX* model. *HPX* is currently targeted at conventional machines, such as classical Linux based Beowulf clusters and SMP nodes.

We fully understand that the success of *HPX* (and *ParalleX*) is very much the result of the work of many people. To see a list of who is contributing see our tables below.

Acknowledgements

Thanks also to the following people who contributed directly or indirectly to the project through discussions, pull requests, documentation patches, etc.

- Panos Syskakis for benchmarking and optimizing our parallel algorithms.
- Shreyas Atre, for contributing fixes to our implementation of senders/receivers and extending our coroutines integration with senders/receivers.
- Alexander Neumann, for contributing fixes to the cmake build system.
- Dimitra Karatza, for her work on refactoring the documentation and providing a new user-friendly environment during and after Google Season of Docs 2021.
- Srinivas Yadav, for his work on SIMD support in algorithms before and during Google Summer of Code 2021.
- Akhil Nair, for his work on adapting algorithms to C++20 before and during Google Summer of Code 2021.
- Alexander Toktarev, for updating the parallel algorithm customization points to use `tag_fallback_invoke` for the default implementations.
- Brice Goglin, for reporting and helping fix issues related to the integration of hwloc in *HPX*.
- Giannis Gonidelis, for his work on the ranges adaptation during the Google Summer of Code 2020.
- Auriane Reverdell ([Swiss National Supercomputing Centre](https://www.cct.lsu.edu)⁷⁹⁵⁷), for her tireless work on refactoring our CMake setup and modularizing *HPX*.
- Christopher Hinz, for his work on refactoring our CMake setup.
- Weile Wei, for fixing *HPX* builds with CUDA on Summit.
- Severin Strobl, for fixing our CMake setup related to linking and adding new entry points to the *HPX* runtime.
- Rebecca Stobaugh, for her major documentation review and contributions during and after the 2019 Google Season of Documentation.
- Jan Melech, for adding automatic serialization of simple structs.
- Austin McCartney, for adding concept emulation of the Ranges TS bidirectional and random access iterator concepts.
- Marco Diers, reporting and fixing issues related PMIx.
- Maximilian Bremer, for reporting multiple issues and extending the component migration tests.
- Piotr Mikolajczyk, for his improvements and fixes to the set and count algorithms.
- Grant Rostig, for reporting several deficiencies on our web pages.
- Jakub Golinowski, for implementing an *HPX* backend for OpenCV and in the process improving documentation and reporting issues.

⁷⁹⁵⁷ <https://www.cscs.ch>

- Mikael Simberg ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹⁵⁸), for his tireless help cleaning up and maintaining *HPX*.
- Tianyi Zhang, for his work on HPXMP.
- Shahrzad Shirzad, for her contributions related to Phylanx.
- Christopher Ogle, for his contributions to the parallel algorithms.
- Surya Priy, for his work with statistic performance counters.
- Anushi Maheshwari, for her work on random number generation.
- Bruno Pitrus, for his work with parallel algorithms.
- Nikunj Gupta, for rewriting the implementation of `hpx_main.hpp` and for his fixes for tests.
- Christopher Taylor, for his interest in *HPX* and the fixes he provided. Chris also contributed support for RISC-V architectures.
- Shoshana Jakobovits, for her work on the resource partitioner.
- Denis Blank, who re-wrote our unwrapped function to accept plain values arbitrary containers, and properly deal with nested futures.
- Ajai V. George, who implemented several of the parallel algorithms.
- Taeguk Kwon, who worked on implementing parallel algorithms as well as adapting the parallel algorithms to the Ranges TS.
- Zach Byerly ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁵⁹), who in his work developing applications on top of *HPX* opened tickets and contributed to the *HPX* examples.
- Daniel Estermann, for his work porting *HPX* to the Raspberry Pi.
- Alireza Kheirkhahan ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁶⁰), who built and administered our local cluster as well as his work in distributed IO.
- Abhimanyu Rawat, who worked on stack overflow detection.
- David Pfander, who improved signal handling in *HPX*, provided his optimization expertise, and worked on incorporating the Vc vectorization into *HPX*.
- Denis Demidov, who contributed his insights with VexCL.
- Khalid Hasanov, who contributed changes which allowed to run *HPX* on 64Bit power-pc architectures.
- Zahra Khatami ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁶¹), who contributed the prefetching iterators and the persistent auto chunking executor parameters implementation.
- Marcin Copik, who worked on implementing GPU support for C++AMP and HCC. He also worked on implementing a HCC backend for *HPX.Compute*.
- Minh-Khanh Do, who contributed the implementation of several segmented algorithms.
- Bibek Wagle ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁶²), who worked on fixing and analyzing the performance of the *parcel* coalescing plugin in *HPX*.
- Lukas Troska, who reported several problems and contributed various test cases allowing to reproduce the corresponding issues.

⁷⁹⁵⁸ <https://www.cscs.ch>

⁷⁹⁵⁹ <https://www.lsu.edu>

⁷⁹⁶⁰ <https://www.lsu.edu>

⁷⁹⁶¹ <https://www.lsu.edu>

⁷⁹⁶² <https://www.lsu.edu>

- Andreas Schaefer, who worked on integrating his library ([LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁹⁶³) with *HPX*. He reported various problems and submitted several patches to fix issues allowing for a better integration with [LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁹⁶⁴.
- Satyaki Upadhyay, who contributed several examples to *HPX*.
- Brandon Cordes, who contributed several improvements to the inspect tool.
- Harris Brakmic, who contributed an extensive build system description for building *HPX* with Visual Studio.
- Parsa Amini ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁶⁵), who refactored and simplified the implementation of *AGAS* in *HPX* and who works on its implementation and optimization.
- Luis Martinez de Bartolome who implemented a build system extension for *HPX* integrating it with the [Conan](https://www.conan.io/)⁷⁹⁶⁶ C/C++ package manager.
- Vinay C Amatya ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁶⁷), who contributed to the documentation and provided some of the *HPX* examples.
- Kevin Huck and Nick Chaimov ([University of Oregon](https://uoregon.edu)⁷⁹⁶⁸), who contributed the integration of APEX (Autonomic Performance Environment for eXascale) with *HPX*.
- Francisco Jose Tapia, who helped with implementing the parallel sort algorithm for *HPX*.
- Patrick Diehl, who worked on implementing CUDA support for our companion library targeting GPGPUs ([HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹⁶⁹).
- Eric Lemanissier contributed fixes to allow compilation using the MingW toolchain.
- Nidhi Makhijani who helped cleaning up some enum consistencies in *HPX* and contributed to the resource manager used in the thread scheduling subsystem. She also worked on *HPX* in the context of the Google Summer of Code 2015.
- Larry Xiao, Devang Bacharwar, Marcin Copik, and Konstantin Kronfeldner who worked on *HPX* in the context of the Google Summer of Code program 2015.
- Daniel Bourgeois ([Center for Computation and Technology \(CCT\)](https://www.cct.lsu.edu)⁷⁹⁷⁰) who contributed to *HPX* the implementation of several parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁹⁷¹).
- Anuj Sharma and Christopher Bross ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁹⁷²), who worked on *HPX* in the context of the [Google Summer of Code](https://developers.google.com/open-source/soc/)⁷⁹⁷³ program 2014.
- Martin Stumpf ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁹⁷⁴), who rebuilt our contiguous testing infrastructure (see the [HPX Buildbot Website](http://roostam.cct.lsu.edu/)⁷⁹⁷⁵). Martin is also working on [HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹⁷⁶ (mainly all work related to [OpenCL](https://www.khronos.org/ocl/)⁷⁹⁷⁷) and implementing an *HPX* backend for [POCL](https://portablecl.org/)⁷⁹⁷⁸, a portable computing language solution based on [OpenCL](https://www.khronos.org/ocl/)⁷⁹⁷⁹.

⁷⁹⁷⁸ <https://portablecl.org/>

⁷⁹⁷⁹ <https://www.khronos.org/ocl/>

- Grant Mercer ([University of Nevada, Las Vegas](https://www.unlv.edu)⁷⁹⁸⁰), who helped creating many of the parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁹⁸¹).
- Damond Howard ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁸²), who works on [HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹⁸³ (mainly all work related to [CUDA](https://www.nvidia.com/object/cuda_home_new.html)⁷⁹⁸⁴).
- Christoph Junghans (Los Alamos National Lab), who helped making our buildsystem more portable.
- Antoine Tran Tan (Laboratoire de Recherche en Informatique, Paris), who worked on integrating *HPX* as a backend for [NT2](https://www.numscale.com/nt2/)⁷⁹⁸⁵. He also contributed an implementation of an API similar to Fortran co-arrays on top of *HPX*.
- John Biddiscombe ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹⁸⁶), who helped with the BlueGene/Q port of *HPX*, implemented the parallel sort algorithm, and made several other contributions.
- Erik Schnetter (Perimeter Institute for Theoretical Physics), who greatly helped to make *HPX* more robust by submitting a large amount of problem reports, feature requests, and made several direct contributions.
- Mathias Gaunard (Metascale), who contributed several patches to reduce compile time warnings generated while compiling *HPX*.
- Andreas Buhr, who helped with improving our documentation, especially by suggesting some fixes for inconsistencies.
- Patricia Grubel ([New Mexico State University](https://www.nmsu.edu)⁷⁹⁸⁷), who contributed the description of the different *HPX* thread scheduler policies and is working on the performance analysis of our thread scheduling subsystem.
- Lars Viklund, whose wit, passion for testing, and love of odd architectures has been an amazing contribution to our team. He has also contributed platform specific patches for FreeBSD and MSVC12.
- Agustin Berge, who contributed patches fixing some very nasty hidden template meta-programming issues. He rewrote large parts of the API elements ensuring strict conformance with the C++ ISO Standard.
- Anton Bikineev for contributing changes to make using `boost::lexical_cast` safer, he also contributed a thread safety fix to the `iostreams` module. He also contributed a complete rewrite of the serialization infrastructure replacing `Boost.Serialization` inside *HPX*.
- Pyry Jähkölä, who contributed the Mac OS build system and build documentation on how to build *HPX* using Clang and `libc++`.
- Mario Mulansky, who created an *HPX* backend for his `Boost.Odeint` library, and who submitted several test cases allowing us to reproduce and fix problems in *HPX*.
- Rekha Raj, who contributed changes to the description of the Windows build instructions.
- Jeremy Kemp how worked on an *HPX* OpenMP backend and added regression tests.
- Alex Nagelberg for his work on implementing a C wrapper API for *HPX*.
- Chen Guo, helvihartmann, Nicholas Pezolano, and John West who added and improved examples in *HPX*.
- Joseph Kleinhenz, Markus Elfring, Kirill Kropivnyansky, Alexander Neundorff, Bryant Lam, and Alex Hirsch who improved our CMake.
- Tapasweni Pathak, Praveen Velliengiri, Jean-Loup Tastet, Michael Levine, Aalekh Nigam, HadrienG2, Prayag Verma, Islada, Alex Myczko, and Avyav Kumar who improved the documentation.
