- [PR #6943](#)¹⁸⁷⁴ - Fix thread safety bugs in concurrent containers and a few algorithm issues
- [PR #6942](#)¹⁸⁷⁵ - Add threshold validation to `limiting_executor`
- [PR #6940](#)¹⁸⁷⁶ - fix clang tidy errors in hpx
- [PR #6939](#)¹⁸⁷⁷ - Add zero-thread validation in `fork_join_executor` PU-mask constructor
- [PR #6938](#)¹⁸⁷⁸ - fix dangling reference errors in iterator tests
- [PR #6937](#)¹⁸⁷⁹ - enable fold range tests in gh actions
- [PR #6936](#)¹⁸⁸⁰ - Working on fixing recent performance regressions
- [PR #6935](#)¹⁸⁸¹ - Experimenting with rebinding parameters objects
- [PR #6934](#)¹⁸⁸² - Fix parallel performance of `hpx::reverse` by using index-based dispatch
- [PR #6933](#)¹⁸⁸³ - Misc fixes for documentation
- [PR #6930](#)¹⁸⁸⁴ - Adjusting build system to HPX conventions
- [PR #6928](#)¹⁸⁸⁵ - Replace scan implementation with explicit functions to avoid triggering concept checking
- [PR #6927](#)¹⁸⁸⁶ - Attempt to work around Github API limitations
- [PR #6926](#)¹⁸⁸⁷ - Disable `async_cuda` test as `nvcc` fails
- [PR #6925](#)¹⁸⁸⁸ - implement c++20 modules for core libraries
- [PR #6924](#)¹⁸⁸⁹ - `shared_mutex` : add `ignore_while_checking` around `upgrade_cond_notify` in `unlock_shared()`
- [PR #6923](#)¹⁸⁹⁰ - Convert enum `message_buffer_append_state` to enum class
- [PR #6921](#)¹⁸⁹¹ - Add `workflow_dispatch` for local testing and fix PR triggers
- [PR #6920](#)¹⁸⁹² - Fixing various compilation regressions
- [PR #6918](#)¹⁸⁹³ - Bump actions/checkout from 4 to 6
- [PR #6917](#)¹⁸⁹⁴ - Bump actions/upload-artifact from 4 to 6
- [PR #6916](#)¹⁸⁹⁵ - Add `pull_request` triggers to GHA workflows and fixed check-formatting jobs
- [PR #6915](#)¹⁸⁹⁶ - Adding missing module dependencies to the HPX algorithm module

- PR #6914¹⁸⁹⁷ - Cleaning up recently added debug suffix configuration
- PR #6913¹⁸⁹⁸ - Add comprehensive subtraction unit tests for gid_type
- PR #6910¹⁸⁹⁹ - Implement C++23 Algorithms: fold_left, fold_right.
- PR #6909¹⁹⁰⁰ - Refactoring local_priority_queue_scheduler for better cache behavior
- PR #6907¹⁹⁰¹ - reduce lock contention in local_priority_queue_scheduler via randomized victim selection
- PR #6903¹⁹⁰² - Migrate HPX CI from CircleCI to GitHub Actions
- PR #6902¹⁹⁰³ - using standard traits present in iterator library
- PR #6900¹⁹⁰⁴ - shared_mutex: follow-up fix and add regression test
- PR #6899¹⁹⁰⁵ - Implemented forwarding_sender_query for sender adaptors
- PR #6898¹⁹⁰⁶ - Removed the incomplete line in Readme
- PR #6897¹⁹⁰⁷ - Implement concurrent data structures for Issue #2235
- PR #6894¹⁹⁰⁸ - Implement find_last, find_last_if, and find_last_if_not algorithms as CPOs
- PR #6893¹⁹⁰⁹ - fix: decouple hpx_debug from cmake_build_type and allow custom debug postfix
- PR #6891¹⁹¹⁰ - Refine unordered_map unit tests and add operator[] size stability check
- PR #6890¹⁹¹¹ - Feature/termination detection timeout
- PR #6889¹⁹¹² - Fixing set_affinity_test
- PR #6886¹⁹¹³ - Expose global termination detection through new API (#6163)
- PR #6885¹⁹¹⁴ - refactor execution parameters and steady clock usage
- PR #6884¹⁹¹⁵ - implement fold algorithms acc. to c++26
- PR #6883¹⁹¹⁶ - Fix initialization hang when -hpx:threads exceeds -hpx:cores
- PR #6882¹⁹¹⁷ - Adjust filewriter for collective benchmark
- PR #6880¹⁹¹⁸ - Added SPDX License Identifier
- PR #6879¹⁹¹⁹ - Implement parallel hpx::uninitialized_relocate_* algorithms for overlapping ranges

- [PR #6702](#)²⁰⁴² - When_all_vector update

HPX V1.11.0 (Jun 30, 2025)

This release is the last version of HPX that supports C++17. Future versions of HPX will require compilation using C++20 or above.

General changes

- Added synchronous versions of all collective operations. Added global predefined communicator objects that are accessible through new APIs: `hpx::collectives::get_world_communicator()` refers to all localities and `hpx::collectives::get_local_communicator()` refers to all threads on the calling locality. We unified the interfaces of the different communicator objects.
- Added `hpx::experimental::run_on_all` allowing to run a given function (possibly concurrently) using a given execution policy.
- Added a helper object `hpx::runtime_manager` that simplifies the initialization of HPX without needing to modify the main function of the application.
- We improved the compatibility with various accelerator frameworks (SYCL, OneAPI).
- Applied build system changes that allow building HPX without any prerequisites. This requires to pass `-DHPX_WITH_FETCH_HWLOC=On` and `-DHPX_WITH_FETCH_BOOST=On` to the [CMake](#)²⁰⁴³ configuration.
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- Added the `hpx::contains` and `hpx::contains_subrange` parallel algorithms.
- Adapted many of HPX' parallel algorithms to be usable with senders/receivers.

Breaking changes

- We have moved most of the APIs that were defined in the namespace `hpx::parallel::execution` to the namespace `hpx::execution::experimental`. It was not possible to add compatibility facilities that will allow to continue using the old APIs, applications will have to be changed in order to continue functioning correctly.
- The CMake configuration parameter `HPX_WITH_RUN_MAIN_EVERYWHERE` is now deprecated and will be removed in the future. Use the preprocessor macro `HPX_HAVE_RUN_MAIN_EVERYWHERE` on a target-by-target case instead.
- Removed the dysfunctional libfabric parcelport.
- Removed features that were long deprecated (starting V1.8): - `hpx::flush`, `hpx::endl`, `hpx::async_flush`, `hpx::async_endl` - Various enumerator types are now only available as `class enum` requiring explicit scoped use of the enumerator values - Various non-conforming overloads of parallel algorithms - `hpx::for_loop` and friends (now only available as

`hpx::experimental::for_loop`)

- `hpx::parallel::induction` is now only available as `hpx::experimental::induction`
- `hpx::parallel::reduction` and friends are now only available as `hpx::experimental::reduction`
- `hpx::assertion::source_location` is now only available as `hpx::source_location`
- `hpx::lcos::split_future` is now only available as `hpx::split_future`
- `hpx::lcos::wait` and friends have been removed altogether
- `hpx::lcos::wait_any` and friends are now only available as `hpx::wait_any`
- `hpx::lcos::wait_some` and friends are now only available as `hpx::wait_some`
- `hpx::lcos::wait_each` and friends are now only available as `hpx::wait_each`
- `hpx::lcos::wait_all` and friends are now only available as `hpx::wait_all`
- `hpx::lcos::when_all` and friends are now only available as `hpx::when_all`
- `hpx::lcos::when_any` and friends are now only available as `hpx::when_any`
- `hpx::lcos::when_each` and friends are now only available as `hpx::when_each`
- `hpx::lcos::when_some` and friends are now only available as `hpx::when_some`
- `hpx::util::optional` and related facilities are now only available as `hpx::optional`
- `hpx::util::bind` and related facilities are now only available as `hpx::bind`
- `hpx::util::function` and friends are now only available as `hpx::function`
- `hpx::traits::is_bound_action` and related facilities are now only available as `hpx::is_bound_action`
- `hpx::traits::is_bind_expression` and related facilities are now only available as `hpx::is_bind_expression`
- `hpx::traits::is_placeholder` and related facilities are now only available as `hpx::is_placeholder`
- `hpx::lcos::future` and related facilities are now only available as `hpx::future`
- `hpx::memory::intrusive_ptr` is now only available as `hpx::intrusive_ptr`
- `hpx::lcos::local::barrier` is now only available as `hpx::barrier`
- `hpx::lcos::barrier` is now only available as `hpx::distributed::barrier`

- `hpx::lcos::local::cpp20_binary_semaphore` is now only available as `hpx::detail::binary_semaphore`
- `hpx::lcos::local::condition_variable` and friends are now only available as `hpx::condition_variable`
- `hpx::lcos::local::counting_semaphore` and friends are now only available as `hpx::counting_semaphore`
- `hpx::lcos::local::cpp20_latch` and is now only available as `hpx::latch`
- `hpx::lcos::latch` and is now only available as `hpx::distributed::latch`
- `hpx::lcos::local::upgrade_lock` and friends are now only available as `hpx::upgrade_lock`
- `hpx::lcos::local::mutex` and friends are now only available as `hpx::mutex`
- `hpx::lcos::local::spinlock` and friends are now only available as `hpx::spinlock`
- `hpx::lcos::local::call_once` and friends are now only available as `hpx::call_once`
- `hpx::util::annotated_function` and is now only available as `hpx::annotated_function`
- `hpx::components::abstract_simple_component_base` and is now only available as `hpx::components::abstract_component_base`
- `hpx::naming::id_type` and is now only available as `hpx::id_type`

2.11.2 List of older releases

HPX V1.10.0 (May 29, 2024)

General changes

- The HPX documentation has seen a major overhaul for this release. We finished documenting the public local HPX API, we have added migration guides from widely used parallelization platforms to HPX (OpenMP, TBB, and MPI).
- We have added facilities enabling optimizations for trivially-relocatable types (see [P1144](#)²¹⁹³ for more details).
- We have added (and use) the `scope_xxx` helper facilities as specified by the C++ library fundamentals TS v3 (see: [N4948](#)²¹⁹⁴).
- We have added configuration options that allow to build HPX without pre-installing any prerequisites. Use `HPX_WITH_FETCH_HWLOC=On` to have [Portable Hardware Locality \(HWLOC\)](#)²¹⁹⁵ installed for you. Similarly, setting `HPX_WITH_FETCH_BOOST=On` during configuration time will install the necessary [Boost](#)²¹⁹⁶ libraries (currently V1.84.0).
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- The collective operations APIs have seen an unification, we have fixed issues and performance problems for the collectives.
- The HPX executors have seen a streamlining and some consistency changes. We have applied many performance improvements to the executor implementations that directly positively impact the performance of our parallel algorithms.
- We have added a new parcelport allowing to use Gasnet as a communication platform.
- We have added optimizations to various parcelports improving overall communication performance. This includes - amongst other things - send immediate optimizations and receiver-side zero-copy optimizations.
- Futures will now execute the associated task eagerly and inline on any wait operation if the task has not started running yet. This feature can be enabled using the `HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=On` configuration setting (which is *Off* by default).
- We have enabled using json files to supply configuration information through the command line. This feature can be enabled with the configuration option `HPX_COMMAND_LINE_HANDLING_WITH_JSON_CONFIGURATION_FILES=On`. This functionality depends on the external [JSON library](#)²¹⁹⁷, which can be built at configuration time by supplying `HPX_WITH_FETCH_JSON=On` to [CMake](#)²¹⁹⁸.
- We have applied many fixes to our CUDA, ROCm, and SYCL build environments.

²¹⁹³ <https://wg21.link/p1144>

²¹⁹⁴ <http://wg21.link/n4948>

²¹⁹⁵ <https://www.open-mpi.org/projects/hwloc/>

²¹⁹⁶ <https://www.boost.org/>

²¹⁹⁷ <https://github.com/nlohmann/json>

²¹⁹⁸ <https://www.cmake.org>

Breaking changes

- The `CMake`²¹⁹⁹ configuration keys `SOMELIB_ROOT` (e.g., `BOOST_ROOT`) have been renamed to `Somelib_ROOT` (e.g., `Boost_ROOT`) to avoid warnings when using newer versions of `CMake`²²⁰⁰. Please update your scripts accordingly. For now, the old variable names are re-assigned to the new names and unset in the `CMake`²²⁰¹ cache.

HPX V1.9.1 (August 4, 2023)

General changes

This point release fixes a couple of problems reported for the V1.9.0 release. Most importantly, we fixed various occasional hanging during startup and shutdown in distributed scenarios. We also added support for zero-copy serialization on the receiving side to the TCP, MPI, and LCI parcelports. Last but not least, we have added support for Visual Studio 2019 and gcc using MINGW on Windows, and also support for gcc V13 and clang V15.

HPX headers are now made consistently named the same as their standard library counterparts, e.g. `#include <thread>` now corresponds to `#include <hpx/thread.hpp>`. This significantly simplifies porting existing standards conforming codes to HPX.

A lot of work has been done to improve and optimize our network communication layers. Primary focus of this work was on the LCI parcelport, but we have also cleaned up and improved the MPI parcelport.

Additionally, we have continued working on our documentation. The main focus here was on completing the API documentation of the most important API functions. We have started adding migration guides for people interested in moving their codes away from other, commonplace parallelization frameworks like OpenMP.

HPX V1.9.0 (May 2, 2023)

General changes

- Added RISC-V 64bit support. HPX is now compatible with RISC-V architectures which have revolutionized the HPC world.
 - LCI parcelport has been optimized to transfer parcels with fewer messages and use the HPX resource partitioner for its progress thread allocation. It should generally provide better performance than before. It also removes its dependency on the MPI library.
 - HPX dependency on Boost was further relaxed by replacing headers from `Boost.Range`, `Boost.Tokenizer` and `Boost.Lockfree`.
 - Improvements took place on our parallel algorithms implementation.
 - Our Senders/Receivers (P2300) integration was extended:
 - Coroutines were integrated with senders/receivers.
- `get_completion_signatures` now works with awaitable senders. - `with_awaitable_senders` allows the passed senders to retrieve the value i.e. senders are transparently awaitable from within a coroutine. - `when_all_vector` was added.
- `sync_wait` and `sync_wait_with_variant` sender consumers were added. The user can now initiate the execution of their asynchronous pipeline by blocking the current thread that executes the `main()` function until the result is retrieved.
 - The combinators for futures (a.k.a. `async_combinators`) `when_*`, `wait_*`, `wait_*_nothrow` were turned into CPOs allowing for end-user customization. For more information on the `async_combinators` refer to the documentation, https://hpx-docs.stellar-group.org/latest/html/libs/core/async_combinators/docs/index.html?highlight=combinators.
 - The new datapar backend SVE allows `simd` and `par_simd` execution policies to exploit dataparallelism in the processors that have SVE vector registers like A64FX and Neoverse V1.
 - The documentation for parallel algorithms, container algorithms was further improved. The Public API page was vastly enriched.
 - Copy button shortkey was added at the top-right of code-blocks.
 - Pragma directive that reports warnings as errors on MSVC was fixed.
 - Command line argument `--hpx:loopback_network` was added to facilitate debugging with networks.
 - We added an HPX-SYCL integration, allowing users to obtain HPX futures for SYCL events. This effectively enables the integration of arbitrary asynchronous SYCL operations into the HPX task graph. Bolted on top of this integration, we further added an HPX-SYCL executor for ease of use.

²⁴³⁰ <https://github.com/TheHPXProject/hpx/pull/6279>

²⁴³¹ <https://github.com/TheHPXProject/hpx/pull/6281>

²⁴³² <https://github.com/TheHPXProject/hpx/pull/6283>

Breaking changes

- Stopped supporting Clang V8, the minimal version supported is now Clang V10.
- Stopped supporting gcc V8, the minimal version supported is now gcc V9.
- Stopped supporting Visual Studio 2015, the minimal version supported is now Visual Studio 2019.
- `tag_policy_tag` et.al. were re-added after HPX V1.8.1 deprecation.
- `get_chunk_size` and `processing_units_count` API is now expecting the time for one iteration as an argument.
- The list of all the namespace changes can be found here: [HPX V1.9.0 Namespace changes](#).

HPX V1.8.1 (Aug 5, 2022)

This is a bugfix release with a few minor additions and resolved problems.

General changes

This patch release adds a number of small new features and fixes a handful of problems discovered since the last release, in particular:

- A lot of work has been done to improve vectorization support for our parallel algorithms. HPX now supports using EVE - the Expressive Vector Engine as a vectorization backend.
- Added a simple average power consumption performance counter.
- Added performance counters related to the use of zero-copy chunks in the networking layer.
- More work was done towards full compatibility with the sender/receivers proposal P2300.
- Fixing `sync_wait` to decay the result types
- Fixed collective operations to properly avoid overalapping consecutive operations on the same communicator.
- Simplified the implementation of our execution policies and added mapping functions between those.
- Fixed performance issues with our implementation of *small_vector*.
- Serialization now works with buffers of unsigned characters.
- Fixing dangling reference in serialization of non-default constructible types
- Fixed static linking on Windows.
- Fixed support for M1/MacOS based architectures.
- Fixed support for gentoo/musl.
- Fixed `hpx::counting_semaphore_var`.
- Properly check start and end bounds for `hpx::for_loop`
- A lot of changes and fixes to the documentation (see <https://hpx-docs.stellar-group.org>).

- PR #5879²⁷²² - New performance counters related to zero-copy chunks.

HPX V1.8.0 (May 18, 2022)

With HPX parallel algorithms been fully adapted to C++20 the new release achieves full conformance with C++20 concurrency and parallelism facilities. HPX now supports all of the algorithms as specified by C++20. We have added support for vectorization to more of our algorithms. Much work has been done towards implementing P2300 (“std::execution”) and implementing the underlying senders/receivers facilities. Finally, The new release comes with a brand new documentation interface!

General changes

- The new documentation can now be found on our webpage: <https://hpx-docs.stellar-group.org>. This includes a completely new and user-friendly interface environment along with restructuring of certain components. The content in the “Quick start”, “Manual” and “Examples” was improved, while the “Build system” page was adapted to include necessary information for newcomers.
- With the vectorization support available in modern hardware architectures HPX now provides new data-parallel vector execution policies `hpx::execution::simd` and `hpx::execution::par_simd` that enable significant speed-up of our parallel algorithm implementations. The following algorithms now support SIMD execution:
 - `copy`, `copy_n`
 - `generate`
 - `adjacent_difference`, `adjacent_find`
 - `all_of`, `any_of`, `none_of`
 - `equal`, `mismatch`,
 - `inner_product`
 - `count`, `count_if`
 - `fill`, `fill_n`
 - `find`, `find_end`, `find_first_of`, `find_if`, `find_if_not`
 - `for_each`, `for_each_n`
 - `generate`, `generate_n`.
- Based on top of P2300 the HPX parallel algorithms now support the pipeline syntax towards an effort to unify their usage along with senders/receivers. The HPX parallel algorithms can now bind with senders/receivers using the pipeline operator.
- Several changes took place on the executors provided by HPX:
- The executors now support the `num_cores` options in order for the user to be able to specify the desired number of cores to be used in the corresponding execution.
- The `scheduler` executor was implemented on top of senders/receivers and can be used with all HPX facilities that schedule new work, such as parallel algorithms, `hpx::async`, `hpx::dataflow`, etc.
- The performance of `fork_join_executor` was improved.
- The following algorithms have been added/adapted to be C++20 conformant:
 - `min_element`

²⁷²² <https://github.com/TheHPXProject/hpx/pull/5879>

- `max_element`
 - `minmax_element`
 - `starts_with`
 - `ends_with`
 - `swap_ranges`
 - `unique`
 - `unique_copy`
 - `rotate`
 - `rotate_copy`
 - `sort`
 - `shift_left`
 - `shift_right`
 - `stable_sort`
 - `partition`
 - `partition_copy`
 - `stable_partition`
 - `adjacent_difference`
 - `nth_element`
 - `partial_sort`
 - `partial_sort_copy`.
- HPX_FORWARD/HPX_MOVE macros were introduced that replaced the `std::move` and `std::forward` facilities that in the library code.
 - Hangs on distributed barrier were fixed.
 - The performance of `scan_partitioner` was improved.
 - Support was added for `thread_priority` to the `parallel_execution_policy`
 - Regarding senders/receivers and the P2300 proposal various actions took place. `stop_token` was adapted to the recent proposal version (`in_place_stop_token` was introduced). Also hint, annotation, priority and stacksize properties were added to the scheduler executor. Stop support was added to `when_all`. Support for completion signatures was added. The following schedulers and algorithms were added:
 - `get_completion_scheduler`
 - `any_sender` and `unique_any_sender`
 - `split` sender
 - `transform_mpi` sender
 - `transfer` sender
 - `let_error`, `let_stopped`
 - `get_env` and related environment queries
 - `schedule`, `set_value`, `set_error`, `set_done`, `start` and `connect` are now proper customization points as defined in P2300.

- Several namespaces were altered towards conformance with C++20. Compatibility layers have been added and the old versions will be removed in next releases. The namespace changes are the following:
 - `hpx::parallel::induction/reduction` were moved into namespace `hpx::experimental`
 - `for_loop` and friends were moved into namespace `hpx::experimental`.
 - `hpx::util::optional` and friends were moved into namespace `hpx`.
 - `hpx::lcos::barrier` has been moved into the `hpx::distributed` namespace and `hpx::lcos::local::cpp20_barrier` has been renamed to `barrier` and moved into the `hpx` namespace.
 - `hpx::lcos::latch` has been moved into the `hpx::distributed` namespace and `lcos::local::latch` has been moved into the `hpx` namespace. The `count_down_and_wait()` functionality of `latch` has been renamed to `arrive_and_wait()`.
 - `hpx::util::unique_function_nonsr` has been renamed to `hpx::move_only_function`.
 - `hpx::util::unique_function` has been renamed to `hpx::distributed::move_only_function`.
 - `hpx::util::function` has been renamed to `hpx::distributed::function`.
 - `hpx::util::function_nonsr` has been renamed to `hpx::function`.
 - `hpx::util::function_ref` have been moved to namespace `hpx`.
 - `hpx::lcos::split_future` changed namespace and is now used as `hpx::split_future`.
 - `hpx::lcos::local::counting_semaphore` has been deprecated and `hpx::lcos::local::cpp20_counting_semaphore` has been renamed to `hpx::counting_semaphore`.
 - `hpx::lcos::local::cpp20_binary_semaphore` has been renamed to `hpx::binary_semaphore`.
 - `hpx::lcos::local::sliding_semaphore` has been renamed to `hpx::sliding_semaphore` and
 - `hpx::lcos::local::sliding_semaphore_var` has been renamed to `hpx::sliding_semaphore_var`.
 - `hpx::lcos::local::spinlock` has been renamed to `hpx::spinlock`.
 - `hpx::lcos::local::mutex` has been renamed to `hpx::mutex`.
 - `hpx::lcos::local::timed_mutex` has been renamed to `hpx::timed_mutex`.
 - `hpx::lcos::local::no_mutex` has been renamed to `hpx::no_mutex`.
 - `hpx::lcos::local::recursive_mutex` has been renamed to `hpx::recursive_mutex`.
 - `hpx::lcos::local::shared_mutex` has been renamed to `hpx::shared_mutex`.
 - `hpx::lcos::local::upgrade_lock` has been renamed to `hpx::upgrade_lock`.
 - `hpx::lcos::local::upgrade_to_unique_lock` has been renamed to `hpx::upgrade_to_unique_lock`.
 - `hpx::lcos::local::condition_variable` has been renamed to `hpx::condition_variable`. `hpx::lcos::local::condition_variable_var` has been renamed to `hpx::condition_variable_var`.
 - `hpx::lcos::local::once_flag` has been renamed to `hpx::once_flag`, and `hpx::lcos::local::call_once` has been renamed to `hpx::call_once`.
- The new LCI (Lightweight Communication Interface) `parcelport` was added that supports irregular and asynchronous applications like graph analysis, sparse linear algebra, modern parallel architectures etc. Major features include:

- Support for advanced communication primitives like two sided send/recv and one sided remote put.
- Better multi-threaded performance.
- Explicit user control of communication resource.
- Flexible signaling mechanisms (synchronizer, completion queue, active message handler).
- The following CMake flags were added, mostly to support using HPX as a backend for SHAD (<https://github.com/pnnl/SHAD>). Please note that these options enable questionable functionalities, partially they even enable undefined behavior. Please only use any of them if you know what you're doing:
 - HPX_SERIALIZATION_WITH_ALLOW_RAW_POINTER_SERIALIZATION
 - HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE
 - HPX_SERIALIZATION_WITH_ALLOW_CONST_TUPLE_MEMBERS

Breaking changes

- Minimum required C++ standard library is C++17.
- Support for GCC 7 and Clang 8.0.0 and below has been removed.
- CUDA version required updated to 11.4.
- CMake version required updated to 3.18.
- The default version of Asio used was updated to 1.20.0.
- The default version of APEX used was updated to 2.5.1.
- APEX version was updated to 2.5.1.
- `tagged_pair` and `tagged_tuple` were removed.
- `tag_dispatch` was renamed to `tag_invoke`.
- `hpx.max_backgroud_threads` was renamed to `hpx.parcel.max_background_threads`.
- The following CMake flags were removed after being deprecated for at least two releases:
 - HPX_SCHEDULER_MAX_TERMINATED_THREADS
 - HPX_WITH_GOOGLE_PERFTOOLS
 - HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY
 - HPX_HAVE_{COROUTINE,PLUGIN}_GCC_HIDDEN_VISIBILITY
 - HPX_TOP_LEVEL
 - HPX_WITH_COMPUTE_CUDA
 - HPX_WITH_ASYNC_CUDA
- `annotate_function` was renamed to `scoped_annotation`.
- `execution::transform` was renamed to `execution::then`.
- `execution::detach` was renamed to `execution::start_detached`.
- `execution::on_sender` was renamed to `execution::schedule_on`.
- `execution::just_on` was renamed to `execution::just_transfer`.
- `execution::set_done` was renamed to `execution::set_stopped`.

Closed issues

- PR #5813²⁸³⁶ - The CUDA problem is not fixed in V11.5 yet...
- PR #5811²⁸³⁷ - Make sure reduction value is properly moved, when possible
- PR #5810²⁸³⁸ - Improve error reporting during device initialization in HIP environments
- PR #5809²⁸³⁹ - Converting scheduler enums into enum class
- PR #5808²⁸⁴⁰ - Deprecate `hpx::flush` and friends
- PR #5807²⁸⁴¹ - Use C++20 `std::source_location`, if available
- PR #5806²⁸⁴² - Moving `promise` and `packaged_task` to new namespaces
- PR #5805²⁸⁴³ - Attempting to fix a test failure when using the LCI `parcelpor`
- PR #5803²⁸⁴⁴ - Attempt to fix CUDA related OctoTiger problems
- PR #5800²⁸⁴⁵ - Add option to restrict MPI background work to subset of cores
- PR #5798²⁸⁴⁶ - Adding MPI as a dependency to APEX
- PR #5797²⁸⁴⁷ - Extend Sphinx role to support arbitrary text to display on a link
- PR #5796²⁸⁴⁸ - Disable CUDA tests that cause NVCC to silently fail without error messages
- PR #5795²⁸⁴⁹ - Avoid writing path and directories into `HPXCacheVariables.cmake`
- PR #5793²⁸⁵⁰ - Remove features that are deprecated since V1.6
- PR #5792²⁸⁵¹ - Making sure `num_cores` is properly handled by `parallel_executor`
- PR #5791²⁸⁵² - Moving `bind`, `bind_front`, `bind_back` to namespace `hpx`
- PR #5790²⁸⁵³ - Moving serializable function/`move_only_function` into namespace `hpx::distributed`
- PR #5787²⁸⁵⁴ - Remove unneeded (and commented) tests
- PR #5786²⁸⁵⁵ - Attempting to fix hangs in distributed barrier
- PR #5785²⁸⁵⁶ - add `cmake` code to detect arm64 on macOS
- PR #5783²⁸⁵⁷ - Moving `function` and `function_ref` into namespace `hpx`
- PR #5781²⁸⁵⁸ - Updating used version of Visual Studio

²⁸⁵⁸ <https://github.com/TheHPXProject/hpx/pull/5781>

- PR #5780²⁸⁵⁹ - Update Piz Daint Jenkins configurations from gcc/clang 7 to 8
- PR #5778²⁸⁶⁰ - Updated for_loop.hpp
- PR #5777²⁸⁶¹ - Update reference for foreach benchmark
- PR #5775²⁸⁶² - Move optional into namespace hpx
- PR #5773²⁸⁶³ - Moving barrier to consolidated namespaces
- PR #5772²⁸⁶⁴ - Adding missing docs for ranges::find_if and find_if_not algorithms
- PR #5771²⁸⁶⁵ - Moving for_loop into namespace hpx::experimental
- PR #5770²⁸⁶⁶ - Fixing HIP issues
- PR #5769²⁸⁶⁷ - Slight improvement of small_vector performance
- PR #5766²⁸⁶⁸ - Fixing a integral conversion warning
- PR #5765²⁸⁶⁹ - Adding a sphinx role allowing to link to a file directly in github
- PR #5763²⁸⁷⁰ - add num_cores facility
- PR #5762²⁸⁷¹ - Fix Public API main page
- PR #5761²⁸⁷² - Add missing inline to mpi_exception.hpp error_message function
- PR #5760²⁸⁷³ - Update cdash build url
- PR #5759²⁸⁷⁴ - Switch to use generic roslam SLURM partitions
- PR #5758²⁸⁷⁵ - Adding support for P2300 completion signatures
- PR #5757²⁸⁷⁶ - Fix missing links in Public API
- PR #5756²⁸⁷⁷ - Add stop support to when_all
- PR #5755²⁸⁷⁸ - Support for data-parallelism for mismatch algorithm
- PR #5754²⁸⁷⁹ - Support for data-parallelism for equal algorithm
- PR #5751²⁸⁸⁰ - Propagate MPI dependencies to command line handling
- PR #5750²⁸⁸¹ - Make sure required MPI initialization flags are properly applied and supported

- PR #5684²⁹²⁸ - Move lock registration to separate module and remove global lock registration
- PR #5683²⁹²⁹ - Make `hpx::wait_all` etc. throw exceptions when waited futures hold exceptions and deprecate `hpx::lcos::wait_all[_n]` in favor of `hpx::wait_all[_n]`
- PR #5682²⁹³⁰ - Fix macOS test exceptions
- PR #5681²⁹³¹ - docs: add links to hpx recepies
- PR #5680²⁹³² - Embed base execution policies to datapar execution policies
- PR #5679²⁹³³ - Fix *fork_join_executor* with dynamic schedule
- PR #5678²⁹³⁴ - Fix compilation of service executors with nvcc
- PR #5677²⁹³⁵ - Remove `compute_cuda` module
- PR #5676²⁹³⁶ - Don't require up-to-date approvals for bors
- PR #5675²⁹³⁷ - Add default template type parameters for algorithms
- PR #5674²⁹³⁸ - Allow using *any_sender* in global variables
- PR #5671²⁹³⁹ - Making sure `task_group` can be reused
- PR #5670²⁹⁴⁰ - Relax constraints on *execution::when_all*
- PR #5669²⁹⁴¹ - Use `HPX_WITH_CXX_STANDARD` for controlling C++ version
- PR #5667²⁹⁴² - Attempt to fix compilation issues with Boost V1.76
- PR #5664²⁹⁴³ - Change logging errors to warnings in schedulers
- PR #5663²⁹⁴⁴ - Use dynamic bitsets by default for CPU masks
- PR #5662²⁹⁴⁵ - Disambiguate namespace for MSVC
- PR #5660²⁹⁴⁶ - Replacing remaining `std::forward` and `std::move` with `HPX_FORWARD` and `HPX_MOVE`
- PR #5659²⁹⁴⁷ - Modernize `hpx::future` and related facilities
- PR #5658²⁹⁴⁸ - Replace `HPX_INLINE_CONSTEXPR_VARIABLE` with `inline constexpr`
- PR #5657²⁹⁴⁹ - Remove `tagged`, `tagged_pair` and `tagged_tuple`, remove tuple/pair specializations
- PR #5656²⁹⁵⁰ - Rename `on_execution::schedule_from`, rename `just_on` to `just_transfer`, and add `transfer`

HPX V1.7.1 (Aug 12, 2021)

This is a bugfix release with a few minor fixes.

General changes

- Added a CMake option to assume that all types are bitwise serializable by default: `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`. The default value `OFF` corresponds to the old behaviour.
- Added a version check for Asio. The minimum Asio version supported by *HPX* is 1.12.0.
- Fixed a bug affecting usage of actions, where the internals of *HPX* relied on function addresses being unique. This was fixed by relying on variable addresses being unique instead.
- Made `hpx::util::bind` more strict in checking the validity of placeholders.
- Small performance improvement to spinlocks.
- Adapted the following parallel algorithms to C++20: `inclusive_scan`, `exclusive_scan`, `transform_inclusive_scan`, `transform_exclusive_scan`.

Breaking changes

- The experimental `hpx::execution::simdpair` execution policy (introduced in 1.7.0) was renamed to `hpx::execution::par_simd` for consistency with the other parallel policies.

Closed issues

- [Issue #5494](#)³¹¹² - Rename *simdpair* execution policy to *par_simd*
- [Issue #5488](#)³¹¹³ - `hpx::util::bind` doesn't bounds-check placeholders
- [Issue #5486](#)³¹¹⁴ - Possible V1.7.1 release

HPX V1.7.0 (Jul 14, 2021)

This release is again focused on C++20 conformance of algorithms. Additionally, many new experimental sender-based algorithms have been added based on the latest proposals.

General changes

- The following algorithms have been adapted to be C++20 conformant:
 - `remove`,
 - `remove_if`,
 - `remove_copy`,
 - `remove_copy_if`,
 - `replace`,
 - `replace_if`,
 - `reverse`, and
 - `lexicographical_compare`.
- When the compiler and standard library support the standard execution policies `std::execution::seq`, `std::execution::par`, and `std::execution::par_unseq` they can now be used in all *HPX* parallel algorithms with equivalent behaviour to the non-task policies `hpx::execution::seq`, `hpx::execution::par`, and `hpx::execution::par_unseq`.
- Vc support has been fixed, after being broken in 1.6.0. In addition, *HPX* now experimentally supports GCC's SIMD implementation, when available. The implementation can be used through the `hpx::execution::simd` and `hpx::execution::simdp` execution policies.
- The customization points `sync_execute`, `async_execute`, `then_execute`, `post`, `bulk_sync_execute`, `bulk_async_execute`, and `bulk_then_execute` are now implemented using `tag_dispatch` (previously `tag_invoke`). Executors can still be implemented by providing the aforementioned functions as member functions of an executor.
- New functionality, enhancements, and fixes based on P0443r14 (executors proposal) and P1897 (sender-based algorithms) have been added to the `hpx::execution::experimental` namespace. These can be accessed through the `hpx/execution.hpp` and `hpx/local/execution.hpp` headers. In particular, the following sender-based algorithms have been added:
 - `detach`,

³¹²¹ <https://github.com/TheHPXProject/hpx/pull/5445>

³¹²² <https://github.com/TheHPXProject/hpx/pull/5444>

³¹²³ <https://github.com/TheHPXProject/hpx/pull/5440>

³¹²⁴ <https://github.com/TheHPXProject/hpx/pull/5439>

³¹²⁵ <https://github.com/TheHPXProject/hpx/pull/5436>

- `ensure_started`,
- `just`,
- `just_on`,
- `let_error`,
- `let_value`,
- `on`,
- `transform`, and
- `when_all`.

Additionally, futures now implement the sender concept. `make_future` can be used to turn a sender into a future. All functionality is experimental and can change without notice.

- All `hpx::init` and `hpx::start` overloads now take `std::functions` instead of `hpx::util::function_nonser`. No changes should be required in user code to accommodate this change.
- `hpx::util::unwrapping` and other related unwrapping functionality has been moved up into the `hpx` namespace. Names in `hpx::util` are still usable with a deprecation warning. This functionality can now be accessed through the `hpx/unwrap.hpp` and `hpx/local/unwrap.hpp` headers.
- The default tag for APEX has been update from 2.3.1 to 2.4.0. In particular, this fixes a bug which could lead to hangs in distributed runs.
- The dependency on Boost.Asio has been replaced with the standalone Asio available at <https://github.com/chriskohlhoff/asio>. By default, a system-installed Asio will be used. `ASIO_ROOT` can be given as a hint to tell CMake where to find Asio. Alternatively, Asio can be fetched automatically using CMake's `fetchcontent` by setting `HPX_WITH_FETCH_ASIO=ON`. In general, dependencies on Boost have again been reduced.
- Modularization of the library has continued. In this release almost all functionality has been moved into modules. These changes do not generally affect user code. Warnings are still issued for headers that have moved.
- `hipBLAS` is now optional when compiling with `hipcc`. A warning instead of an error will be printed if `hipBLAS` is not found during configuration.
- Previously `HPX_COMPUTE_HOST_CODE` was defined in host code only if HPX was configured with CUDA or HIP. In this release `HPX_COMPUTE_HOST_CODE` is always defined in host code.
- An experimental `HPX_WITH_PRECOMPILED_HEADERS` CMake option has been added to use precompiled headers when building *HPX*. This option should not be used on Windows.
- Numerous bug fixes.

Breaking changes

- The minimum required CMake version is now 3.17.
- The minimum required Boost version is now 1.71.0.
- The customization mechanism used to implement and extend sender functionality and algorithms has been re-named from `tag_invoke` to `tag_dispatch`. All customization of sender functionality should be done by overloading `tag_dispatch`.
- The following compatibility options have been removed, along with their compatibility implementations:
 - `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`
 - `HPX_WITH_ACTION_BASE_COMPATIBILITY`
 - `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`
 - `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`
 - `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`

HPX_WITH_REGISTER_THREAD_COMPATIBILITY - HPX_WITH_REGISTER_THREAD_OVERLOADS_COMPATIBILITY
 - HPX_WITH_THREAD_AWARE_TIMER_COMPATIBILITY - HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY -
 HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY

- The HPX_WITH_THREAD_SCHEDULERS CMake option has been removed. All schedulers are now enabled when possible.
- HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY has been turned off by default.

- [PR #5044](#)³³⁷¹ - Add performance test in jenkins and reports

HPX V1.6.0 (Feb 17, 2021)

General changes

This release continues the focus on C++20 conformance with multiple new algorithms adapted to be C++20 conformant and becoming customization point objects (CPOs). We have also added experimental support for HIP, allowing previous CUDA features to now be compiled with `hipcc` and run on AMD GPUs.

- The following algorithms have been adapted to be C++20 conformant: `adjacent_find`, `includes`, `inplace_merge`, `is_heap`, `is_heap_until`, `is_partitioned`, `is_sorted`, `is_sorted_until`, `merge`, `set_difference`, `set_intersection`, `set_symmetric_difference`, `set_union`.
- Experimental HIP support can be enabled by compiling *HPX* with `hipcc`. All CUDA functionality in *HPX* can now be used with HIP. The HIP functionality is for the time being exposed through the same API as the CUDA functionality, i.e. no changes are required in user code. The CUDA, and now HIP, functionality is in the `hpx::cuda` namespace.
- We have added `partial_sort` based on Francisco Tapia's implementation.
- `hpx::init` and `hpx::start` gained new overloads taking an `hpx::init_params` struct in 1.5.0. All overloads not taking an `hpx::init_params` are now deprecated.
- We have added an experimental `fork_join_executor`. This executor can be used for OpenMP-style fork-join parallelism, where the latency of a parallel region is important for performance.
- The `parallel_executor` now uses a hierarchical spawning scheme for bulk execution, which improves data locality and performance.
- `hpx::dataflow` can now be used with executors that inject additional parameters into the call of the user-provided function.
- We have added experimental support for properties as proposed in [P2220](#)³³⁷². Currently the only supported property is the scheduling hint on `parallel_executor`.
- `hpx::util::annotated_function` can now be passed a dynamically generated `std::string`.
- In moving functionality to new namespaces, old names have been deprecated. A deprecation warning will be issued if you are using deprecated functionality, with instructions on how to correct or ignore the warning.
- We have removed all support for C and Fortran from our build system.
- We have further reduced the use of Boost types within *HPX* (`boost::system::error_code` and `boost::detail::spinlock`).
- We have enabled more warnings in our CI builds (unused variables and unused typedefs).

³³⁷¹ <https://github.com/TheHPXProject/hpx/pull/5044>

³³⁷² <https://wg21.link/p2220>

Breaking changes

- hpxMP support has been completely removed.
- The verbs parcelport has been removed.
- The following compatibility options have been disabled by default: HPX_WITH_ACTION_BASE_COMPATIBILITY, HPX_WITH_REGISTER_THREAD_COMPATIBILITY, HPX_WITH_PROMISE_ALIAS_COMPATIBILITY, HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY, HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY, HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY, HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY, HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY, HPX_THREAD_AWARE_TIMER_COMPATIBILITY, HPX_WITH_POOL_EXECUTOR_COMPATIBILITY. Unless noted here, the above functionalities do not come with replacements. Unscoped enumerations have been replaced by scoped enumerations. Previously deprecated unscoped enumerations are disabled by HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY. Newly deprecated unscoped enumerations have been given deprecation warnings and replaced by scoped enumerations. `hpx::promise` has been replaced with `hpx::distributed::promise`. `hpx::program_options` is a drop-in replacement for `boost::program_options`. `hpx::execution::parallel_executor` now has constructors which take a thread pool, covering the use case of `hpx::threads::executors::pool_executor`. A pool can be supplied with `hpx::resource::get_thread_pool`.

- [Issue #5049](#)³³⁸⁶ - Change back the hipcc jenkins config to the fury partition on rostam
- [Issue #5038](#)³³⁸⁷ - Not all examples link in the latest HPX master
- [Issue #5035](#)³³⁸⁸ - Build with HPX_WITH_EXAMPLES fails
- [Issue #5019](#)³³⁸⁹ - Broken help string for hpx
- [Issue #5016](#)³³⁹⁰ - `hpx::parallel::fill` fails compiling
- [Issue #5014](#)³³⁹¹ - Rename all `.cc` to `.cpp` and `.hh` to `.hpp`
- [Issue #4988](#)³³⁹² - MPI is not finalized if running with only one locality
- [Issue #4978](#)³³⁹³ - Change feature test macros to expand to zero/one
- [Issue #4949](#)³³⁹⁴ - Crash when not enabling TCP parcellport
- [Issue #4933](#)³³⁹⁵ - Improve test coverage for unused variable warnings etc.
- [Issue #4878](#)³³⁹⁶ - HPX mpi async might call `MPI_FINALIZE` before app calls it
- [Issue #4127](#)³³⁹⁷ - Local runtime entry-points

Closed pull requests

- PR #5140³⁴⁰⁸ - Scheduler mode
- PR #5139³⁴⁰⁹ - Fix path problem in pre-commit hook, add summary commit line
- PR #5138³⁴¹⁰ - Add program options variable map to resource partitioner init
- PR #5137³⁴¹¹ - Remove the use of `boost::throw_exception`
- PR #5136³⁴¹² - Make sure codespell checks run on CircleCI
- PR #5132³⁴¹³ - Fixing spelling errors
- PR #5131³⁴¹⁴ - Mark `counting_iterator` member functions as `HPX_HOST_DEVICE`
- PR #5130³⁴¹⁵ - Adding specialization for `std::hash<hpx::thread::id>`
- PR #5128³⁴¹⁶ - Fixing environment handling for FreeBSD
- PR #5127³⁴¹⁷ - Fix typo in fibonacci documentation
- PR #5123³⁴¹⁸ - Reduce vector sizes in partial sort benchmarks when running in debug mode
- PR #5122³⁴¹⁹ - Making sure exceptions during runtime initialization are correctly reported
- PR #5121³⁴²⁰ - Working around hwloc limitation on certain platforms
- PR #5120³⁴²¹ - Fixing compatibility warnings in `hpx::transform` implementation
- PR #5119³⁴²² - Use `sequential_find` and friends from separate detail header
- PR #5116³⁴²³ - Fix compilation with timer pool off
- PR #5114³⁴²⁴ - Fix 5112 - make sure libatomic is used when needed
- PR #5109³⁴²⁵ - Remove default runtime mode argument from init overload, again
- PR #5108³⁴²⁶ - Refactor `iter_sent.hpp` to make structs lowercase
- PR #5107³⁴²⁷ - Relax `dataflow` internals
- PR #5106³⁴²⁸ - Change initialization of property CPOs to satisfy older nvcc versions
- PR #5104³⁴²⁹ - Fix regeneration of two files that trigger unnecessary rebuilds
- PR #5103³⁴³⁰ - Remove default runtime mode argument from start/init overloads

- PR #5102³⁴³¹ - Untie deprecated thread enums from the CMake option
- PR #5101³⁴³² - Update APEX tag for 1.6.0
- PR #5100³⁴³³ - Bump minimum required Boost version to 1.66 and update CI configurations
- PR #5098³⁴³⁴ - Minor fixes to public API listing
- PR #5097³⁴³⁵ - Remove hpxMP support
- PR #5096³⁴³⁶ - Remove fractals examples
- PR #5095³⁴³⁷ - Use all AMD nodes again on rostam
- PR #5094³⁴³⁸ - Attempt to remove macOS workaround for GH actions environment
- PR #5093³⁴³⁹ - Remove verbs parcelport
- PR #5091³⁴⁴⁰ - Avoid moving from lvalues
- PR #5090³⁴⁴¹ - Adopt C++20 `std::endian`
- PR #5085³⁴⁴² - Update daint CI to use Boost 1.75.0
- PR #5084³⁴⁴³ - Disable compatibility options for 1.6.0 release
- PR #5083³⁴⁴⁴ - Remove duplicated call to the `limiting_executor` in `future_overhead` test
- PR #5079³⁴⁴⁵ - Add checks to make sure that MPI/CUDA polling is enabled/not disabled too early
- PR #5078³⁴⁴⁶ - Add install lib directory to list of component search paths
- PR #5076³⁴⁴⁷ - Fix a typo in the jenkins `clang-newest` cmake config
- PR #5074³⁴⁴⁸ - Fixing warnings generated by MSVC
- PR #5073³⁴⁴⁹ - Allow using noncopyable types with unwrapping
- PR #5072³⁴⁵⁰ - Fix `is_convertible` args in `result_types`
- PR #5071³⁴⁵¹ - Fix unused parameters
- PR #5070³⁴⁵² - Fix unused variables warnings in `hipcc`
- PR #5069³⁴⁵³ - Add support for sentinels to `adjacent_find`

- PR #5068³⁴⁵⁴ - Fix string split function
- PR #5066³⁴⁵⁵ - Adapt search to C++20 and Range TS
- PR #5065³⁴⁵⁶ - Fix `hpx::range::adjacent_find` doxygen function signatures
- PR #5064³⁴⁵⁷ - Refactor runtime configuration, command line handling, and resource partitioner
- PR #5063³⁴⁵⁸ - Limit the device code guards to the distributed parts of the `future_overhead` bench
- PR #5061³⁴⁵⁹ - Remove hipcc guards in examples and tests
- PR #5060³⁴⁶⁰ - Fix deprecation warnings generated by msvc
- PR #5059³⁴⁶¹ - Add warning about suspending/resuming the runtime in multi-locality scenarios
- PR #5057³⁴⁶² - Fix unused variable warnings
- PR #5056³⁴⁶³ - Fix `hpx::util::get`
- PR #5055³⁴⁶⁴ - Remove hipcc guards
- PR #5054³⁴⁶⁵ - Fix typo
- PR #5051³⁴⁶⁶ - Adapt transform to C++20
- PR #5050³⁴⁶⁷ - Replace old init overloads in tests and examples
- PR #5048³⁴⁶⁸ - Limit jenkins hipcc to the reno node
- PR #5047³⁴⁶⁹ - Limit cuda jenkins run to nodes with exclusively Nvidia GPUs
- PR #5046³⁴⁷⁰ - Convert thread and future enums to class enums
- PR #5043³⁴⁷¹ - Improve `hpxrun.py` for Phylanx
- PR #5042³⁴⁷² - Add missing header to partial sort test
- PR #5041³⁴⁷³ - Adding Francisco Tapia's implementation of `partial_sort`
- PR #5040³⁴⁷⁴ - Remove generated headers left behind from a previous configuration
- PR #5039³⁴⁷⁵ - Fix GCC 10 release builds
- PR #5037³⁴⁷⁶ - Add `is_invocable` typedefs to top-level `hpx` namespace and public API list

- PR #5006³⁵⁰⁰ - Adapt `is_partitioned` to C++20
- PR #5005³⁵⁰¹ - Making sure `reduce_by_key` compiles again
- PR #5004³⁵⁰² - Fixing template specializations that make extra archive data types unique across module boundaries
- PR #5003³⁵⁰³ - Relax `dataflow` argument constraints
- PR #5001³⁵⁰⁴ - Add `<random>` inspect check
- PR #4999³⁵⁰⁵ - Attempt to fix MacOS Github action error
- PR #4997³⁵⁰⁶ - Fix unused variable and typedef warnings
- PR #4996³⁵⁰⁷ - Adapt `adjacent_find` to C++20
- PR #4995³⁵⁰⁸ - Test all schedulers in `cross_pool_injection` test except `shared_priority_queue_scheduler`
- PR #4993³⁵⁰⁹ - Fix deprecation warnings
- PR #4991³⁵¹⁰ - Avoid unnecessarily including entire modules
- PR #4990³⁵¹¹ - Fixing some warnings from HPX complaining about use of obsolete types
- PR #4989³⁵¹² - add a `*destroy*` trait for `ParcelPort` plugins
- PR #4986³⁵¹³ - Remove serialization to functional module dependency
- PR #4985³⁵¹⁴ - Compatibility header generation
- PR #4980³⁵¹⁵ - Add ranges overloads to `for_loop` (and variants)
- PR #4979³⁵¹⁶ - Actually enable unity builds on Jenkins
- PR #4977³⁵¹⁷ - Cleaning up `debug::print` functionalities
- PR #4976³⁵¹⁸ - Remove indirection layer in `at_index_impl`
- PR #4975³⁵¹⁹ - Remove indirection layer in `at_index_impl`
- PR #4973³⁵²⁰ - Avoid warnings/errors for older gcc complaining about multi-line comments
- PR #4970³⁵²¹ - Making set algorithms conform to C++20

³⁵²¹ <https://github.com/TheHPXProject/hpx/pull/4970>

- PR #4969³⁵²² - Moving `is_execution_policy` and friends into namespace `hpx`
- PR #4968³⁵²³ - Enable deprecation warnings for 1.6.0 and move any functionality to `hpx` namespace
- PR #4967³⁵²⁴ - Define deprecation macros conditionally
- PR #4966³⁵²⁵ - Add `clang-format` and `cmake-format` version prints
- PR #4965³⁵²⁶ - Making `is_heap` and `is_heap_until` conforming to C++20
- PR #4964³⁵²⁷ - Adding parallel `make_heap`
- PR #4962³⁵²⁸ - Fix external timer function pointer exports
- PR #4960³⁵²⁹ - Fixing folder names for module tests and examples
- PR #4959³⁵³⁰ - Adding communications set
- PR #4958³⁵³¹ - Deprecate tuple and timing functionality in `hpx::util`
- PR #4957³⁵³² - Fixing unity build option for `parcelpoints`
- PR #4953³⁵³³ - Fixing MSVC problems after recent restructurings
- PR #4952³⁵³⁴ - Make `parallel_executor` use `thread_pool_executor` spawning mechanism
- PR #4948³⁵³⁵ - Clean up old artifacts better and more aggressively on Jenkins
- PR #4947³⁵³⁶ - Add HIP support for AMD GPUs
- PR #4945³⁵³⁷ - Enable `HPX_WITH_UNITY_BUILD` option on one of the Jenkins configurations
- PR #4943³⁵³⁸ - Move public `hpx::parallel::execution` functionality to `hpx::execution`
- PR #4938³⁵³⁹ - Post release cleanup
- PR #4858³⁵⁴⁰ - Extending resilience APIs to support distributed invocations
- PR #4744³⁵⁴¹ - Fork-join executor
- PR #4665³⁵⁴² - Implementing sender, receiver, and `operation_state` concepts in terms of P0443r13
- PR #4649³⁵⁴³ - Split `libhpx` into multiple libraries
- PR #4642³⁵⁴⁴ - Implementing `operation_state` concept in terms of P0443r13

HPX V1.5.1 (Sep 30, 2020)

General changes

This is a patch release. It contains the following changes:

- Remove restriction on suspending runtime with multiple localities, users are now responsible for synchronizing work between localities before suspending.
- Fixes several compilation problems and warnings.
- Adds notes in the documentation explaining how to cite HPX.

Closed issues

- [Issue #4971](#)³⁵⁴⁷ - Parallel sort fails to compile with C++20

- [PR #4939](#)³⁵⁶⁰ - Small changes

HPX V1.5.0 (Sep 02, 2020)

General changes

The main focus of this release is on APIs and C++20 conformance. We have added many new C++20 features and adapted multiple algorithms to be fully C++20 conformant. As part of the modularization we have begun specifying the public API of *HPX* in terms of headers and functionality, and aligning it more closely to the C++ standard. All non-distributed modules are now in place, along with an experimental option to completely disable distributed features in *HPX*. We have also added experimental asynchronous MPI and CUDA executors. Lastly this release introduces CMake targets for depending projects, performance improvements, and many bug fixes.

- We have added the C++20 features `hpx::jthread` and `hpx::stop_token`. `hpx::condition_variable_any` now exposes new functions supporting `hpx::stop_token`.
- We have added `hpx::stable_sort` based on Francisco Tapia's implementation.
- We have adapted existing synchronization primitives to be fully conformant C++20: `hpx::barrier`, `hpx::latch`, `hpx::counting_semaphore`, and `hpx::binary_semaphore`.
- We have started using customization point objects (CPOs) to make the corresponding algorithms fully conformant to C++20 as well as to make algorithm extension easier for the user. `all_of/any_of/none_of`, `copy`, `count`, `destroy`, `equal`, `fill`, `find`, `for_each`, `generate`, `mismatch`, `move`, `reduce`, `transform_reduce` are using those CPOs (all in namespace `hpx`). We also have adapted their corresponding `hpx::ranges` versions to be conforming to C++20 in this release.
- We have adapted support for `co_await` to C++20, in addition to `hpx::future` it now also supports `hpx::shared_future`. We have also added allocator support for futures returned by `co_return`. It is no longer in the `experimental` namespace.
- We added serialization support for `std::variant` and `std::tuple`.
- `result_of` and `is_callable` are now deprecated and replaced by `invoke_result` and `is_invocable` to conform to C++20.
- We continued with the modularization, making it easier for us to add the new experimental `HPX_WITH_DISTRIBUTED_RUNTIME` CMake option (see below) . A significant amount of headers have been deprecated. We adapted the namespaces and headers we could to be closer to the standard ones (*Public API*). Depending code should still compile, however warnings are now generated instructing to change the include statements accordingly.
- It is now possible to have a basic CUDA support including a helper function to get a future from a CUDA stream and target handling. They are available under the `hpx::cuda::experimental` namespace and they can be enabled with the `-DHPX_WITH_ASYNC_CUDA=ON` CMake option.
- We added a new `hpx::mpi::experimental` namespace for getting futures from an asynchronous MPI call and a new minimal MPI executor `hpx::mpi::experimental::executor`. These can be enabled with the `-DHPX_WITH_ASYNC_MPI=On` CMake option.
- A polymorphic executor has been implemented to reduce compile times as a function accepting executors can potentially be instantiated only once instead of multiple times with different executors. It accepts the function signature as a template argument. It needs to be constructed from any other executor. Please note, that the function signatures that can be scheduled using `then_execute`, `bulk_sync_execute`, `bulk_async_execute` and `bulk_then_execute` are slightly different (See the comment in [PR #4514](#)³⁵⁶¹ for more details).
- The underlying executor of `block_executor` has been updated to a newer one.

³⁵⁶⁰ <https://github.com/TheHPXProject/hpx/pull/4939>

³⁵⁶¹ <https://github.com/TheHPXProject/hpx/pull/4514>

- We have added a parameter to `auto_chunk_size` to control the amount of iterations to measure.
- All executor parameter hooks can now be exposed through the executor itself. This will allow to deprecate the `.with()` functionality on execution policies in the future. This is also a first step towards simplifying our executor APIs in preparation for the upcoming C++23 executors (senders/receivers).
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`. Please note this is a breaking change without backwards-compatibility option. We have converted all of those APIs to be based on customization point objects. Two new executors have been added to enable easy integration of the existing resiliency features with other facilities (like the parallel algorithms): `replay_executor` and `replicate_executor`.
- We have added performance counters type information (aggregating, monotonically increasing, average count, average timer, etc.).
- HPX threads are now re-scheduled on the same worker thread they were suspended on to avoid cache misses from moving from one thread to the other. This behavior doesn't prevent the thread from being stolen, however.
- We have added a new configuration option `hpx.exception_verbosity` to allow to control the level of verbosity of the exceptions (3 levels available).
- `broadcast_to`, `broadcast_from`, `scatter_to` and `scatter_from` have been added to the collectives, modernization of `gather_here` and `gather_there` with futures taken by rvalue references. See the breaking change on `all_to_all` in the next section. None of the collectives need supporting macros anymore (e.g. specifying the data types used for a collective operation using `HPX_REGISTER_ALLGATHER` and similar is not needed anymore).
- New API functions have been added: a) to get the number of cores which are idle (`hpx::get_idle_core_count`) and b) returning a bitmask representing the currently idle cores (`hpx::get_idle_core_mask`).
- We have added an experimental option to only enable the local runtime, you can disable the distributed runtime with `HPX_WITH_DISTRIBUTED_RUNTIME=OFF`. You can also enable the local runtime by using the `--hpx:local` runtime option.
- We fixed task annotations for actions.
- The alias `hpx::promise` to `hpx::lcos::promise` is now deprecated. You can use `hpx::lcos::promise` directly instead. `hpx::promise` will refer to the local-only promise in the future.
- We have added a `prepare_checkpoint` API function that calculates the amount of necessary buffer space for a particular set of arguments checkpointed.
- We have added `hpx::upgrade_lock` and `hpx::upgrade_to_unique_lock`, which make `hpx::shared_mutex` (and similar) usable in more flexible ways.
- We have changed the CMake targets exposed to the user, it now includes `HPX::hpx`, `HPX::wrap_main` (int main as the first HPX thread of the application, see [Starting the HPX runtime](#)), `HPX::plugin`, `HPX::component`. The CMake variables `HPX_INCLUDE_DIRS` and `HPX_LIBRARIES` are deprecated and will be removed in a future release, you should now link directly to the `HPX::hpx` CMake target.
- A new example is demonstrating how to create and use a wrapping executor (`quickstart/executor_with_thread_hooks.cpp`)
- A new example is demonstrating how to disable thread stealing during the execution of parallel algorithms (`quickstart/disable_thread_stealing_executor.cpp`)
- We now require for our CMake build system configuration files to be formatted using `cmake-format`.
- We have removed more dependencies on various Boost libraries.
- We have added an experimental option enabling unity builds of HPX using the `-DHPX_WITH_UNITY_BUILD=On` CMake option.

- Many bug fixes.

Breaking changes

- *HPX* now requires a C++14 capable compiler. We have set the *HPX* C++ standard automatically to C++14 and if it needs to be set explicitly, it should be specified through the `CMAKE_CXX_STANDARD` setting as mandated by CMake. The `HPX_WITH_CXX*` variables are now deprecated and will be removed in the future.
- Building and using *HPX* is now supported only when using CMake V3.13 or later, Boost V1.64 or newer, and when compiling with clang V5, gcc V7, or VS2019, or later. Other compilers might still work but have not been tested thoroughly.
- We have added a `hpx::init_params` struct to pass parameters for *HPX* initialization e.g. the resource partitioner callback to initialize thread pools (*Using the resource partitioner*).
- The `all_to_all` algorithm is renamed to `all_gather`, and the new `all_to_all` algorithm is not compatible with the old one.
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`.

- PR #4917³⁶⁶⁵ - Move chrono functionality to hpx::chrono namespace
- PR #4916³⁶⁶⁶ - HPX_HAVE_DEPRECATED_WARNINGS needs to be set even when disabled
- PR #4915³⁶⁶⁷ - Moving more action related files to actions modules
- PR #4914³⁶⁶⁸ - Add alias targets with namespaces used for exporting
- PR #4912³⁶⁶⁹ - Aggregate initialize CPOs
- PR #4910³⁶⁷⁰ - Explicitly specify hwloc root on Jenkins CSCS builds
- PR #4908³⁶⁷¹ - Fix algorithms documentation
- PR #4907³⁶⁷² - Remove HPX::hpx_no_wrap_main target
- PR #4906³⁶⁷³ - Fixing unused variable warning
- PR #4905³⁶⁷⁴ - Adding specializations for simple for_loops
- PR #4904³⁶⁷⁵ - Update boost to 1.74.0 for the newest jenkins configs
- PR #4903³⁶⁷⁶ - Hide GITHUB_TOKEN environment variables from environment variable output
- PR #4902³⁶⁷⁷ - Cancel previous pull requests builds before starting a new one with Jenkins
- PR #4901³⁶⁷⁸ - Update public API list with updated algorithms
- PR #4899³⁶⁷⁹ - Suggested changes for HPX V1.5 release notes
- PR #4898³⁶⁸⁰ - Minor tweak to hpx::equal implementation
- PR #4896³⁶⁸¹ - Making generate() and generate_n conforming to C++20
- PR #4895³⁶⁸² - Update apex tag
- PR #4894³⁶⁸³ - Fix exception handling for tasks
- PR #4893³⁶⁸⁴ - Remove last use of std::result_of, removed in C++20
- PR #4892³⁶⁸⁵ - Adding replay_executor and replicate_executor
- PR #4889³⁶⁸⁶ - Restore old behaviour of not requiring linking to hpx_wrap when HPX_WITH_DYNAMIC_HPX_MAIN=OFF
- PR #4887³⁶⁸⁷ - Making sure remotely thrown (non-hpx) exceptions are properly marshaled back to invocation

- PR #4854³⁷¹⁰ - Removing obsolete code
- PR #4853³⁷¹¹ - Adding test that derives component from two other components
- PR #4852³⁷¹² - Fix mpi_ring test in distributed mode by ensuring all ranks run hpx_main
- PR #4851³⁷¹³ - Converting resiliency APIs to tag_invoke based CPOs
- PR #4849³⁷¹⁴ - Enable use of future_overhead test when DISTRIBUTED_RUNTIME is OFF
- PR #4847³⁷¹⁵ - Fixing 'error prone' constructs as reported by Codacy
- PR #4846³⁷¹⁶ - Disable Boost.Asio concepts support
- PR #4845³⁷¹⁷ - Fix PAPI counters
- PR #4843³⁷¹⁸ - Remove dependency on various Boost headers
- PR #4841³⁷¹⁹ - Rearrange public API headers
- PR #4840³⁷²⁰ - Fixing TSS problems during thread termination
- PR #4839³⁷²¹ - Fix async_cuda build problems when distributed runtime is disabled
- PR #4837³⁷²² - Restore compatibility for old (now deprecated) copy algorithms
- PR #4836³⁷²³ - Adding CPOs for hpx::reduce
- PR #4835³⁷²⁴ - Remove *using util::result_of* from namespace hpx
- PR #4834³⁷²⁵ - Fixing the calculation of the number of idle cores and the corresponding idle masks
- PR #4833³⁷²⁶ - Allow thread function destructors to yield
- PR #4832³⁷²⁷ - Fixing assertion in split_gids and memory leaks in 1d_stencil_7
- PR #4831³⁷²⁸ - Making sure MPI_CXX_COMPILE_FLAGS is interpreted as a sequence of options
- PR #4830³⁷²⁹ - Update documentation on using HPX::wrap_main
- PR #4827³⁷³⁰ - Update clang-newest configuration to use clang 10
- PR #4826³⁷³¹ - Add Jenkins configuration for rostam
- PR #4825³⁷³² - Move all CUDA functionality to hpx::cuda::experimental namespace

- PR #4824³⁷³³ - Add support for building master/release branches to Jenkins configuration
- PR #4821³⁷³⁴ - Implement customization point for `hpx::copy` and `hpx::ranges::copy`
- PR #4819³⁷³⁵ - Allow finding Boost components before finding HPX
- PR #4817³⁷³⁶ - Adding range version of stable sort
- PR #4815³⁷³⁷ - Fix a wrong `#ifdef` for IO/TIMER pools causing build errors
- PR #4814³⁷³⁸ - Replace `hpx::function_nonsr` with `std::function` in error module
- PR #4809³⁷³⁹ - Foreach adapt
- PR #4808³⁷⁴⁰ - Make internal algorithms functions const
- PR #4807³⁷⁴¹ - Add Jenkins configuration for running on Piz Daint
- PR #4806³⁷⁴² - Update documentation links to new domain name
- PR #4805³⁷⁴³ - Applying changes that resolve time complexity issues in sort
- PR #4803³⁷⁴⁴ - Adding implementation of `stable_sort`
- PR #4802³⁷⁴⁵ - Fix datapar header paths
- PR #4801³⁷⁴⁶ - Replace `boost::shared_array<T>` with `std::shared_ptr<T[]>` if supported
- PR #4799³⁷⁴⁷ - Fixing `#include` paths in compatibility headers
- PR #4798³⁷⁴⁸ - Include the main module header (fixes partially #4488)
- PR #4797³⁷⁴⁹ - Change cmake targets
- PR #4794³⁷⁵⁰ - Removing 128bit integer emulation
- PR #4793³⁷⁵¹ - Make sure global variable is handled properly
- PR #4792³⁷⁵² - Replace `enable_if` with **HPX_CONCEPT_REQUIRES_** and add `is_sentinel_for` constraint
- PR #4790³⁷⁵³ - Move deprecation warnings from base template to template specializations for `result_of` etc. structs
- PR #4789³⁷⁵⁴ - Fix hangs during assertion handling and distributed runtime construction
- PR #4788³⁷⁵⁵ - Fixing inclusive transform scan algorithm to properly handle initial value

- PR #4707³⁸⁰² - Use `hpx::function_nonsr` instead of `std::function` internally
- PR #4706³⁸⁰³ - Move header file to module
- PR #4705³⁸⁰⁴ - Fix incorrect behaviour of `cmake-format` check
- PR #4704³⁸⁰⁵ - Fix resource tests
- PR #4701³⁸⁰⁶ - Fix missing includes for `future::then` specializations
- PR #4700³⁸⁰⁷ - Removing obsolete memory component
- PR #4699³⁸⁰⁸ - Add short descriptions to modules missing documentation
- PR #4696³⁸⁰⁹ - Rename generated modules headers
- PR #4693³⁸¹⁰ - Overhauling `thread_mapper` for public consumption
- PR #4688³⁸¹¹ - Fix thread stack size handling
- PR #4687³⁸¹² - Adding `all_gather` and fixing `all_to_all`
- PR #4684³⁸¹³ - Miscellaneous compilation fixes
- PR #4683³⁸¹⁴ - Fix `HPX_WITH_DYNAMIC_HP_X_MAIN=OFF`
- PR #4682³⁸¹⁵ - Fix compilation of `pack_traversal_rebind_container.hpp`
- PR #4681³⁸¹⁶ - Add missing `hpx/execution.hpp` includes for `future::then`
- PR #4678³⁸¹⁷ - Typeless communicator
- PR #4677³⁸¹⁸ - Forcing registry option to be accepted without checks.
- PR #4676³⁸¹⁹ - Adding `scatter_to/scatter_from` collective operations
- PR #4673³⁸²⁰ - Fix PAPI counters compilation
- PR #4671³⁸²¹ - Deprecate `hpx::promise` alias to `hpx::lcos::promise`
- PR #4670³⁸²² - Explicitly instantiate `get_exception`
- PR #4667³⁸²³ - Add `stopValue` in *Sentinel* struct instead of *Iterator*
- PR #4666³⁸²⁴ - Add release build on Windows to GitHub actions

HPX V1.4.1 (Feb 12, 2020)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation issues on Windows, macOS, FreeBSD, and with gcc 10
- Install missing pdb files on Windows
- Allow running tests using an installed version of *HPX*
- Skip MPI finalization if HPX has not initialized MPI
- Give a hard error when attempting to use IO counters on Windows

Closed issues

HPX V1.4.0 (January 15, 2020)

General changes

- We have added the collectives `all_to_all` and `all_reduce`.
- We have added APIs for resiliency, which allows replication and replay for failed tasks. See the [documentation](#) for more details.
- Components can now be checkpointed.
- Performance improvements to schedulers and coroutines. A significant change is the addition of stackless coroutines. These are to be used for tasks that do not need to be suspended and can reduce overheads noticeably in applications with short tasks. A stackless coroutine can be created with the new `stack_size` `thread_stacksize_nostack`.
- We have added an implementation of `unique_any`, which is a non-copyable version of `any`.
- The `shared_priority_queue_scheduler` has been improved. It now has lower overheads than the default scheduler in many situations. Unlike the default scheduler it fully supports NUMA scheduling hints. Enable it with the command line option `--hpx:queuing=shared-priority`. This scheduler should still be considered experimental, but its use is encouraged in real applications to help us make it production ready.
- We have added the performance counters `background-receive-duration` and `background-receive-overhead` for inspecting the time and overhead spent on receiving parcels in the background.
- Compilation time has been further improved when `HPX_WITH_NETWORKING=OFF`.
- We no longer require compiled Boost dependencies in certain configurations. This requires at least Boost 1.70, compiling on x86 with GCC 9, clang (libc++) 9, or VS2019 in C++17 mode. The dependency on `Boost.Filesystem` can explicitly be turned on with `HPX_FILESYSTEM_WITH_BOOST_FILESYSTEM_COMPATIBILITY=ON` (it is off by default if the standard library supports `std::filesystem`). `Boost.ProgramOptions` has been copied into the HPX repository. We have a compatibility layer for users who must explicitly use

⁴⁰⁶⁶ <https://github.com/TheHPXProject/hpx/pull/4376>

⁴⁰⁶⁷ <https://github.com/TheHPXProject/hpx/pull/4357>

⁴⁰⁷³ <https://github.com/TheHPXProject/hpx/pull/4310>

Boost.ProgramOptions instead of the ProgramOptions provided by HPX. To remove the dependency HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY must be explicitly set to OFF. This option will be removed in a future release. We have also removed several other header-only dependencies on Boost.

- It is now possible to use the process affinity mask set by tools like `numactl` and various batch environments with the command line option `--hpx:use-process-mask`. Enabling this option implies `--hpx:ignore-batch-env`.
- It is now possible to create standalone thread pools without starting the runtime. See the `standalone_thread_pool_executor.cpp` test in the `execution` module for an example.
- Tasks annotated with `hpx::util::annotated_function` now have their correct name when using APEX to generate OTF2 files.
- Cloning of APEX was defective in previous releases (it required manual intervention to check out the correct tag or branch). This has been fixed.
- The option `HPX_WITH_MORE_THAN_64_THREADS` is now ignored and will be removed in a future release. The value is instead derived directly from `HPX_WITH_MAX_CPU_COUNT` option.
- We have deprecated compiling in C++11 mode. The next release will require a C++14 capable compiler.
- We have deprecated support for the Vc library. This option will be replaced with SIMD support from the standard library in a future release.
- We have significantly refactored our CMake setup. This is intended to be a non-breaking change and will allow for using HPX through CMake targets in the future.
- We have continued modularizing the HPX library. In the process we have rearranged many header files into module-specific directories. All moved headers have compatibility headers which forward from the old location to the new location, together with a deprecation warning. The compatibility headers will eventually be removed.
- We now enforce formatting with `clang-format` on the majority of our source files.
- We have added SPDX license tags to all files.
- Many bugfixes.

Breaking changes

- The `HPX_WITH_THREAD_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_UNWRAPPED_COMPATIBILITY` option and the associated compatibility layer has been removed.

- PR #4109⁴²⁶¹ - Overload for start without entry point/argv.
- PR #4108⁴²⁶² - Making sure C++ standard is properly detected and propagated
- PR #4106⁴²⁶³ - use `std::round` for guaranteed rounding without errors
- PR #4104⁴²⁶⁴ - Extend `scheduler_mode` with new `work_stealing` and task assignment modes
- PR #4103⁴²⁶⁵ - Add this to lambda capture list
- PR #4102⁴²⁶⁶ - Add spdx license and check
- PR #4099⁴²⁶⁷ - Module coroutines
- PR #4098⁴²⁶⁸ - Fix append module path in module CMakeLists template
- PR #4097⁴²⁶⁹ - Function tests
- PR #4096⁴²⁷⁰ - Removing return of `thread_result_type` from functions not needing them
- PR #4095⁴²⁷¹ - Stop-gap measure until cmake overhaul is in place
- PR #4094⁴²⁷² - Deprecate `HPX_WITH_MORE_THAN_64_THREADS`
- PR #4093⁴²⁷³ - Fix initialization of `global_num_tasks` in `parallel_executor`
- PR #4092⁴²⁷⁴ - Add support for mi-malloc
- PR #4090⁴²⁷⁵ - Execution context
- PR #4089⁴²⁷⁶ - Make counters in coroutines optional
- PR #4087⁴²⁷⁷ - Making `hpx::util::any` compatible with C++17
- PR #4084⁴²⁷⁸ - Making sure destination array for `std::transform` is properly resized
- PR #4083⁴²⁷⁹ - Adapting `thread_queue_mc` to behave even if no 128bit atomics are available
- PR #4082⁴²⁸⁰ - Fix compilation on GCC 5
- PR #4081⁴²⁸¹ - Adding option allowing to force using Boost.FileSystem
- PR #4080⁴²⁸² - Updating module dependencies
- PR #4079⁴²⁸³ - Add missing tests for `iterator_support` module

HPX V1.3.0 (May 23, 2019)

General changes

- Performance improvements: the schedulers have significantly reduced overheads from removing false sharing and the parallel executor has been updated to create fewer futures.
- HPX now defaults to not turning on networking when running on one locality. This means that you can run multiple instances on the same system without adding command line options.
- Multiple issues reported by Clang sanitizers have been fixed.
- We have added (back) single-page HTML documentation and PDF documentation.
- We have started modularizing the HPX library. This is useful both for developers and users. In the long term users will be able to consume only parts of the HPX libraries if they do not require all the functionality that HPX currently provides.
- We have added an implementation of `function_ref`.
- The `barrier` and `latch` classes have gained a few additional member functions.

Breaking changes

- Executable and library targets are now created without the `_exe` and `_lib` suffix respectively. For example, the target `1d_stencil_1_exe` is now simply called `1d_stencil_1`.
- We have removed the following deprecated functionality: `queue`, `scoped_unlock`, and support for input iterators in algorithms.
- We have turned off the compatibility layer for `unwrapped` by default. The functionality will be removed in the next release. The option can still be turned on using the [CMake](https://www.cmake.org)⁴⁴⁴¹ option `HPX_WITH_UNWRAPPED_SUPPORT`. Likewise, `inclusive_scan` compatibility overloads have been turned off by default. They can still be turned on with `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY`.
- The minimum compiler and dependency versions have been updated. We now support GCC from version 5 onwards, Clang from version 4 onwards, and Boost from version 1.61.0 onwards.
- The headers for preprocessor macros have moved as a result of the functionality being moved to a separate module. The old headers are deprecated and will be removed in a future version of HPX. You can turn off the warnings by setting `HPX_PREPROCESSOR_WITH_DEPRECATION_WARNINGS=OFF` or turn off the compatibility headers completely with `HPX_PREPROCESSOR_WITH_COMPATIBILITY_HEADERS=OFF`.

⁴⁵³⁶ <https://github.com/TheHPXProject/hpx/pull/3813>

- PR #3812⁴⁵³⁷ - Windows requires to handle symlinks to directories differently from those linking files
- PR #3811⁴⁵³⁸ - Clean up PP module and library skeleton
- PR #3806⁴⁵³⁹ - Moving include path configuration to before APEX
- PR #3804⁴⁵⁴⁰ - Fix latch
- PR #3803⁴⁵⁴¹ - Update hpxcxx to look at lib64 and use python3
- PR #3802⁴⁵⁴² - Numa binding allocator
- PR #3801⁴⁵⁴³ - Remove duplicated includes
- PR #3800⁴⁵⁴⁴ - Attempt to fix Posix context switching after lazy init changes
- PR #3798⁴⁵⁴⁵ - count and count_if accepts different iterator types
- PR #3797⁴⁵⁴⁶ - Adding a couple of `override` keywords to overloaded virtual functions
- PR #3796⁴⁵⁴⁷ - Re-enable testing all schedulers in `shutdown_suspended_test`
- PR #3795⁴⁵⁴⁸ - Change `std::terminate` to `std::abort` in SIGSEGV handler
- PR #3794⁴⁵⁴⁹ - Fixing #3792
- PR #3793⁴⁵⁵⁰ - Extending `migrate_polymorphic_component` unit test
- PR #3791⁴⁵⁵¹ - Change `throw()` to `noexcept`
- PR #3790⁴⁵⁵² - Remove deprecated options for 1.3.0 release
- PR #3789⁴⁵⁵³ - Remove Boost filesystem compatibility header
- PR #3788⁴⁵⁵⁴ - Disabled even more spots that should not execute if networking is disabled
- PR #3787⁴⁵⁵⁵ - Bump minimal boost supported version to 1.61.0
- PR #3786⁴⁵⁵⁶ - Bump minimum required versions for 1.3.0 release
- PR #3785⁴⁵⁵⁷ - Explicitly set number of jobs for all ninja invocations on CircleCI
- PR #3784⁴⁵⁵⁸ - Fix leak and address sanitizer problems
- PR #3783⁴⁵⁵⁹ - Disabled even more spots that should not execute is networking is disabled

⁴⁵⁵⁹ <https://github.com/TheHPXProject/hpx/pull/3783>

- PR #3782⁴⁵⁶⁰ - Cherry-picked tuple and thread_init_data fixes from #3701
- PR #3781⁴⁵⁶¹ - Fix generic context coroutines after lazy stack allocation changes
- PR #3780⁴⁵⁶² - Rename hello world examples
- PR #3776⁴⁵⁶³ - Sort algorithms now use the supplied chunker to determine the required minimal chunk size
- PR #3775⁴⁵⁶⁴ - Disable Boost auto-linking
- PR #3774⁴⁵⁶⁵ - Tag and push stable builds
- PR #3773⁴⁵⁶⁶ - Enable migration of polymorphic components
- PR #3771⁴⁵⁶⁷ - Fix link to stackoverflow in documentation
- PR #3770⁴⁵⁶⁸ - Replacing constexpr if in brace-serialization code
- PR #3769⁴⁵⁶⁹ - Fix SIGSEGV handler
- PR #3768⁴⁵⁷⁰ - Adding flags to scheduler allowing to control thread stealing and idle back-off
- PR #3767⁴⁵⁷¹ - Fix help formatting in hpxrun.py
- PR #3765⁴⁵⁷² - Fix a couple of bugs in the thread test
- PR #3764⁴⁵⁷³ - Workaround for SFINAE regression in msvc14.2
- PR #3762⁴⁵⁷⁴ - Prevent MSVC from prematurely instantiating things
- PR #3761⁴⁵⁷⁵ - Update python scripts to work with python 3
- PR #3760⁴⁵⁷⁶ - Fix callable vtable for GCC4.9
- PR #3759⁴⁵⁷⁷ - Rename PAGE_SIZE to PAGE_SIZE_ because AppleClang
- PR #3755⁴⁵⁷⁸ - Making sure locks are not held during suspension
- PR #3754⁴⁵⁷⁹ - Disable more code if networking is not available/not enabled
- PR #3752⁴⁵⁸⁰ - Move util::format implementation to source file
- PR #3751⁴⁵⁸¹ - Fixing problems with lcos::barrier and iostreams
- PR #3750⁴⁵⁸² - Change error message to take into account use_guard_page setting

⁴⁵⁸¹ <https://github.com/TheHPXProject/hpx/pull/3751>

⁴⁵⁸² <https://github.com/TheHPXProject/hpx/pull/3750>

- PR #3749⁴⁵⁸³ - Fix lifetime problem in `run_as_hpx_thread`
- PR #3748⁴⁵⁸⁴ - Fixed unusable behavior of the clang code analyzer.
- PR #3747⁴⁵⁸⁵ - Added `PMIX_RANK` to the defaults of `HPX_WITH_PARCELPOR_MPI_ENV`.
- PR #3745⁴⁵⁸⁶ - Introduced `cache_aligned_data` and `cache_line_data` helper structure
- PR #3742⁴⁵⁸⁷ - Remove more unused functionality from `util/logging`
- PR #3740⁴⁵⁸⁸ - Fix includes in partitioned vector tests
- PR #3739⁴⁵⁸⁹ - More fixes to make sure that `std::flush` really flushes all output
- PR #3737⁴⁵⁹⁰ - Fix potential shutdown problems
- PR #3736⁴⁵⁹¹ - Fix `guided_pool_executor` after dataflow changes caused compilation fail
- PR #3734⁴⁵⁹² - Limiting executor
- PR #3732⁴⁵⁹³ - More constrained bound constructors
- PR #3730⁴⁵⁹⁴ - Attempt to fix deadlocks during component loading
- PR #3729⁴⁵⁹⁵ - Add latch member function `count_up` and `reset`, requested by `hpxMP`
- PR #3728⁴⁵⁹⁶ - Send even empty buffers on `hpx::endl` and `hpx::flush`
- PR #3727⁴⁵⁹⁷ - Adding example demonstrating how to customize the memory management for a component
- PR #3726⁴⁵⁹⁸ - Adding support for passing command line options through the `HPX_COMMANDLINE_OPTIONS` environment variable
- PR #3722⁴⁵⁹⁹ - Document known broken OpenMPI builds
- PR #3716⁴⁶⁰⁰ - Add barrier reset function, requested by `hpxMP` for reusing barrier
- PR #3715⁴⁶⁰¹ - More work on functions and `vtables`
- PR #3714⁴⁶⁰² - Generate single-page HTML, PDF, manpage from documentation
- PR #3713⁴⁶⁰³ - Updating default APEX version to 2.1.2
- PR #3712⁴⁶⁰⁴ - Update release procedure
- PR #3710⁴⁶⁰⁵ - Fix the C++11 build, after #3704

⁴⁶⁰⁵ <https://github.com/TheHPXProject/hpx/pull/3710>

- PR #3709⁴⁶⁰⁶ - Move some component_registry functionality to source file
- PR #3708⁴⁶⁰⁷ - Ignore all locks while handling assertions
- PR #3707⁴⁶⁰⁸ - Remove obsolete hpx runtime executable
- PR #3705⁴⁶⁰⁹ - Fix and simplify make_ready_future overload sets
- PR #3704⁴⁶¹⁰ - Reduce use of binders
- PR #3703⁴⁶¹¹ - Ini
- PR #3702⁴⁶¹² - Fixing CUDA compiler errors
- PR #3700⁴⁶¹³ - Added barrier::increment function to increase total number of thread
- PR #3697⁴⁶¹⁴ - One more attempt to fix migration...
- PR #3694⁴⁶¹⁵ - Fixing component migration
- PR #3693⁴⁶¹⁶ - Print thread state when getting disallowed value in set_thread_state
- PR #3692⁴⁶¹⁷ - Only disable constexpr with clang-cuda, not nvcc+gcc
- PR #3691⁴⁶¹⁸ - Link with libsupc++ if needed for thread_local
- PR #3690⁴⁶¹⁹ - Remove thousands separators in set_operations_3442 to comply with C++11
- PR #3688⁴⁶²⁰ - Decouple serialization from function vtables
- PR #3687⁴⁶²¹ - Fix a couple of test failures
- PR #3686⁴⁶²² - Make sure tests.unit.build are run after install on CircleCI
- PR #3685⁴⁶²³ - Revise quickstart CMakeLists.txt explanation
- PR #3684⁴⁶²⁴ - Provide concept emulation for Ranges-TS concepts
- PR #3683⁴⁶²⁵ - Ignore uninitialized chunks
- PR #3682⁴⁶²⁶ - Ignore uninitialized chunks. Check proper indices.
- PR #3680⁴⁶²⁷ - Ignore uninitialized chunks. Check proper range indices
- PR #3679⁴⁶²⁸ - Simplify basic action implementations

- PR #3678⁴⁶²⁹ - Making sure HPX_HAVE_LIBATOMIC is unset before checking
- PR #3677⁴⁶³⁰ - Fix generated full version number to be usable in expressions
- PR #3674⁴⁶³¹ - Reduce functional utilities call depth
- PR #3672⁴⁶³² - Change new build system to use existing macros related to pseudo dependencies
- PR #3669⁴⁶³³ - Remove indirection in `function_ref` when thread description is disabled
- PR #3668⁴⁶³⁴ - Unbreaking `async_*cb*` tests
- PR #3667⁴⁶³⁵ - Generate `version.hpp`
- PR #3665⁴⁶³⁶ - Enabling MPI parcellport for gitlab runners
- PR #3664⁴⁶³⁷ - making clang-tidy work properly again
- PR #3662⁴⁶³⁸ - Attempt to fix exception handling
- PR #3661⁴⁶³⁹ - Move `lcos::latch` to source file
- PR #3660⁴⁶⁴⁰ - Fix accidentally explicit `gid_type` default constructor
- PR #3659⁴⁶⁴¹ - Parallel executor latch
- PR #3658⁴⁶⁴² - Fixing `execution_parameters`
- PR #3657⁴⁶⁴³ - Avoid dangling references in `wait_all`
- PR #3656⁴⁶⁴⁴ - Avoiding lifetime problems with `sync_put_parcel`
- PR #3655⁴⁶⁴⁵ - Fixing `nullptr` dereference inside of function
- PR #3652⁴⁶⁴⁶ - Attempt to fix `thread_map_type` definition with C++11
- PR #3650⁴⁶⁴⁷ - Allowing for end iterator being different from begin iterator
- PR #3649⁴⁶⁴⁸ - Added architecture identification to cmake to be able to detect timestamp support
- PR #3645⁴⁶⁴⁹ - Enabling sanitizers on gitlab runner
- PR #3644⁴⁶⁵⁰ - Attempt to tackle timeouts during startup
- PR #3642⁴⁶⁵¹ - Cleanup parallel partitioners

⁴⁶⁵¹ <https://github.com/TheHPXProject/hpx/pull/3642>

- PR #3640⁴⁶⁵² - Dataflow now works with functions that return a reference
- PR #3637⁴⁶⁵³ - Merging the executor-enabled overloads of `shared_future<>::then`
- PR #3633⁴⁶⁵⁴ - Replace deprecated boost endian macros
- PR #3632⁴⁶⁵⁵ - Add instructions on getting HPX to documentation
- PR #3631⁴⁶⁵⁶ - Simplify parcel creation
- PR #3630⁴⁶⁵⁷ - Small additions and fixes to release procedure
- PR #3629⁴⁶⁵⁸ - Modular pp
- PR #3627⁴⁶⁵⁹ - Implement `util::function_ref`
- PR #3626⁴⁶⁶⁰ - Fix cancelable_action_client example
- PR #3625⁴⁶⁶¹ - Added automatic serialization for simple structs (see #3034)
- PR #3624⁴⁶⁶² - Updating the default order of priority for `thread_description`
- PR #3621⁴⁶⁶³ - Update copyright year and other small formatting fixes
- PR #3620⁴⁶⁶⁴ - Adding support for gitlab runner
- PR #3619⁴⁶⁶⁵ - Store debug logs and core dumps on CircleCI
- PR #3618⁴⁶⁶⁶ - Various optimizations
- PR #3617⁴⁶⁶⁷ - Fix link to the gpg key (#2)
- PR #3615⁴⁶⁶⁸ - Fix unused variable warnings with networking off
- PR #3614⁴⁶⁶⁹ - Restructuring counter data in scheduler to reduce false sharing
- PR #3613⁴⁶⁷⁰ - Adding support for gitlab runners
- PR #3610⁴⁶⁷¹ - Don't wait for `stop_condition` in main thread
- PR #3608⁴⁶⁷² - Add inline keyword to `invalid_thread_id` definition for nvcc
- PR #3607⁴⁶⁷³ - Adding configuration key that allows one to explicitly add a directory to the component search path
- PR #3606⁴⁶⁷⁴ - Add nvcc to exclude constexpress since is it not supported by nvcc

- PR #3605⁴⁶⁷⁵ - Add `inline` to definition of checkpoint stream operators to fix link error
- PR #3604⁴⁶⁷⁶ - Use format for string formatting
- PR #3603⁴⁶⁷⁷ - Improve the error message for using to less `MAX_CPU_COUNT`
- PR #3602⁴⁶⁷⁸ - Improve the error message for to small values of `MAX_CPU_COUNT`
- PR #3600⁴⁶⁷⁹ - Parallel executor aggregated
- PR #3599⁴⁶⁸⁰ - Making sure networking is disabled for default one-locality-runs
- PR #3596⁴⁶⁸¹ - Store thread exit functions in `forward_list` instead of `deque` to avoid allocations
- PR #3590⁴⁶⁸² - Fix typo/mistake in thread queue `cleanup_terminated`
- PR #3588⁴⁶⁸³ - Fix formatting errors in `launching_and_configuring_hpx_applications.rst`
- PR #3586⁴⁶⁸⁴ - Make `bind` propagate value category
- PR #3585⁴⁶⁸⁵ - Extend Cmake for building `hpx` as distribution packages (refs #3575)
- PR #3584⁴⁶⁸⁶ - Untangle function storage from object pointer
- PR #3582⁴⁶⁸⁷ - Towards Modularized HPX
- PR #3580⁴⁶⁸⁸ - Remove extra `||` in `merge.hpp`
- PR #3577⁴⁶⁸⁹ - Partially revert “Remove vtable empty flag”
- PR #3576⁴⁶⁹⁰ - Make sure empty startup/shutdown functions are not being used
- PR #3574⁴⁶⁹¹ - Make sure `DATAPAR` settings are conveyed to depending projects
- PR #3573⁴⁶⁹² - Make sure HPX is usable with latest released version of Vc (V1.4.1)
- PR #3572⁴⁶⁹³ - Adding test ensuring ticket 3565 is fixed
- PR #3571⁴⁶⁹⁴ - Make empty `[unique_]` function vtable non-dependent
- PR #3566⁴⁶⁹⁵ - Fix compilation with dynamic bitset for CPU masks
- PR #3563⁴⁶⁹⁶ - Drop `util::[unique_]function target_type`
- PR #3562⁴⁶⁹⁷ - Removing the target suffixes

HPX V1.2.1 (Feb 19, 2019)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation on ARM, s390x and 32-bit architectures.
- Fix a critical bug in the `future` implementation.
- Fix several problems in the CMake configuration which affects external projects.
- Add support for Boost 1.69.0.

Closed issues

- Issue #3638⁴⁷¹⁷ - Build HPX 1.2 with boost 1.69
- Issue #3635⁴⁷¹⁸ - Non-deterministic crashing on Stampede2
- Issue #3550⁴⁷¹⁹ - `1>e:000workhpxsrcthrow_exception.cpp(54): error C2440: '<function-style-cast>': cannot convert from 'boost::system::error_code' to 'hpx::exception'`
- Issue #3549⁴⁷²⁰ - HPX 1.2.0 does not build on i686, but release candidate did
- Issue #3511⁴⁷²¹ - Build on s390x fails

HPX V1.2.0 (Nov 12, 2018)

General changes

Here are some of the main highlights and changes for this release:

- Thanks to the work of our Google Summer of Code student, Nikunj Gupta, we now have a new implementation of `hpx_main.hpp` on supported platforms (Linux, BSD and MacOS). This is intended to be a less fragile drop-in replacement for the old implementation relying on preprocessor macros. The new implementation does not require changes if you are using the [CMake](#)⁴⁷³⁵ or `pkg-config`. The old behaviour can be restored by setting `HPX_WITH_DYNAMIC_HPX_MAIN=OFF` during [CMake](#)⁴⁷³⁶ configuration. The implementation on Windows is unchanged.
- We have added functionality to allow passing scheduling hints to our schedulers. These will allow us to create executors that for example target a specific NUMA domain or allow for *HPX* threads to be pinned to a particular worker thread.
- We have significantly improved the performance of our futures implementation by making the shared state atomic.
- We have replaced Boostbook by Sphinx for our documentation. This means the documentation is easier to navigate with built-in search and table of contents. We have also added a quick start section and restructured the documentation to be easier to follow for new users.
- We have added a new option to the `--hpx:threads` command line option. It is now possible to use `cores` to tell *HPX* to only use one worker thread per core, unlike the existing option `all` which uses one worker thread per processing unit (processing unit can be a hyperthread if hyperthreads are available). The default value of `--hpx:threads` has also been changed to `cores` as this leads to better performance in most cases.
- All command line options can now be passed alongside configuration options when initializing *HPX*. This means that some options that were previously only available on the command line can now be set as configuration options.
- *HPXMP* is a portable, scalable, and flexible application programming interface using the OpenMP specification that supports multi-platform shared memory multiprocessing programming in C and C++. *HPXMP* can be enabled within *HPX* by setting `DHPX_WITH_HPXM=ON` during [CMake](#)⁴⁷³⁷ configuration.
- Two new performance counters were added for measuring the time spent doing background work. `/threads/time/background-work-duration` returns the time spent doing background on a given thread or locality, while `/threads/time/background-overhead` returns the fraction of time spent doing background work with respect to the overall time spent running the scheduler. The new performance counters are disabled by default and can be turned on by setting `HPX_WITH_BACKGROUND_THREAD_COUNTERS=ON` during [CMake](#)⁴⁷³⁸ configuration.

⁴⁷³¹ <https://github.com/TheHPXProject/hpx/pull/3591>

⁴⁷³² <https://github.com/TheHPXProject/hpx/pull/3558>

⁴⁷³³ <https://github.com/TheHPXProject/hpx/pull/3555>

⁴⁷³⁴ <https://github.com/TheHPXProject/hpx/pull/3551>

⁴⁷³⁵ <https://www.cmake.org>

⁴⁷³⁶ <https://www.cmake.org>

⁴⁷³⁷ <https://www.cmake.org>

⁴⁷³⁸ <https://www.cmake.org>

- The idling behaviour of *HPX* has been tweaked to allow for faster idling. This is useful in interactive applications where the *HPX* worker threads may not have work all the time. This behaviour can be tweaked and turned off as before with `HPX_WITH_THREAD_MANAGER_IDLE_BACKOFF=OFF` during [CMake](#)⁴⁷³⁹ configuration.
- It is now possible to register callback functions for *HPX* worker thread events. Callbacks can be registered for starting and stopping worker threads, and for when errors occur.

Breaking changes

- The implementation of `hpx_main.hpp` has changed. If you are using custom Makefiles you will need to make changes. Please see the documentation on [using Makefiles](#) for more details.
- The default value of `--hpx:threads` has changed from `all` to `cores`. The new option `cores` only starts one worker thread per core.
- We have dropped support for Boost 1.56 and 1.57. The minimal version of Boost we now test is 1.58.
- Our `boost::format`-based formatting implementation has been revised and replaced with a custom implementation. This changes the formatting syntax and requires changes if you are relying on `hpx::util::format` or `hpx::util::format_to`. The pull request for this change contains more information: [PR #3266](#)⁴⁷⁴⁰.
- The following deprecated options have now been completely removed:
`HPX_WITH_ASYNC_FUNCTION_COMPATIBILITY`, `HPX_WITH_LOCAL_DATAFLOW`,
`HPX_WITH_GENERIC_EXECUTION_POLICY`, `HPX_WITH_BOOST_CHRONO_COMPATIBILITY`,
`HPX_WITH_EXECUTOR_COMPATIBILITY`, `HPX_WITH_EXECUTION_POLICY_COMPATIBILITY`, and
`HPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY`.

- PR #3487⁴⁸²⁵ - Revert "Fixing type attribute warning for transfer_action"
- PR #3485⁴⁸²⁶ - Use BUILD_INTERFACE generator expression to fix cmake flag exports
- PR #3483⁴⁸²⁷ - Fixing type attribute warning for transfer_action
- PR #3481⁴⁸²⁸ - Remove unused variables
- PR #3480⁴⁸²⁹ - Towards a more lightweight transfer action
- PR #3479⁴⁸³⁰ - Fix FLAGS - Use correct version of target_compile_options
- PR #3478⁴⁸³¹ - Making sure the application's exit code is properly propagated back to the OS
- PR #3476⁴⁸³² - Don't print docker credentials as part of the environment.
- PR #3473⁴⁸³³ - Fixing invalid cmake code if no jemalloc prefix was given
- PR #3472⁴⁸³⁴ - Attempting to work around recent clang test compilation failures
- PR #3471⁴⁸³⁵ - Enable jemalloc on windows
- PR #3470⁴⁸³⁶ - Updates readme
- PR #3468⁴⁸³⁷ - Avoid hang if there is an exception thrown during startup
- PR #3467⁴⁸³⁸ - Add compiler specific fallback attributes if C++17 attribute is not available
- PR #3466⁴⁸³⁹ - - bugfix : fix compilation with llvm-7.0
- PR #3465⁴⁸⁴⁰ - This patch adds various optimizations extracted from the thread_local_allocator work
- PR #3464⁴⁸⁴¹ - Check for forked repos in CircleCI docker push step

- PR #3392⁴⁸⁸⁸ - Add performance counters background overhead and background work duration
- PR #3391⁴⁸⁸⁹ - Adapt integration of HPXMP to latest build system changes
- PR #3390⁴⁸⁹⁰ - Make AGAS measurements optional
- PR #3389⁴⁸⁹¹ - Fix deadlock during shutdown
- PR #3388⁴⁸⁹² - Add several functionalities allowing to optimize synchronous action invocation
- PR #3387⁴⁸⁹³ - Add cmake option to opt out of fail-compile tests
- PR #3386⁴⁸⁹⁴ - Adding support for boost::container::small_vector to dataflow
- PR #3385⁴⁸⁹⁵ - Adds Debug option for hpx initializing from main
- PR #3384⁴⁸⁹⁶ - This hopefully fixes two tests that occasionally fail
- PR #3383⁴⁸⁹⁷ - Making sure thread local storage is enable for hpxMP
- PR #3382⁴⁸⁹⁸ - Fix usage of HPX_CAPTURE together with default value capture [=]
- PR #3381⁴⁸⁹⁹ - Replace undefined instantiations of uniform_int_distribution
- PR #3380⁴⁹⁰⁰ - Add missing semicolons to uses of HPX_COMPILER_FENCE
- PR #3379⁴⁹⁰¹ - Fixing #3378
- PR #3377⁴⁹⁰² - Adding build system support to integrate hpxmp into hpx at the user's machine
- PR #3375⁴⁹⁰³ - Replacing wrapper for __libc_start_main with main
- PR #3374⁴⁹⁰⁴ - Adds hpx_wrap to HPX_LINK_LIBRARIES which links only when specified.
- PR #3373⁴⁹⁰⁵ - Forcing cache settings in HPXConfig.cmake to guarantee updated values
- PR #3372⁴⁹⁰⁶ - Fix some more c++11 build problems
- PR #3371⁴⁹⁰⁷ - Adds HPX_LINKER_FLAGS to HPX applications without editing their source codes
- PR #3370⁴⁹⁰⁸ - util::format: add type_specifier<> specializations for %!s(MISSING) and %!l(MISSING)s
- PR #3369⁴⁹⁰⁹ - Adding configuration option to allow explicit disable of the new hpx_main feature on Linux
- PR #3368⁴⁹¹⁰ - Updates doc with recent hpx_wrap implementation

- PR #3332⁴⁹³⁴ - Add notes on target suffixes to CMake documentation
- PR #3331⁴⁹³⁵ - Add quickstart section to documentation
- PR #3330⁴⁹³⁶ - Rename resource_partitioner test to avoid conflicts with pseudodependencies
- PR #3328⁴⁹³⁷ - Making sure object is pinned while executing actions, even if action returns a future
- PR #3327⁴⁹³⁸ - Add missing std::forward to tuple.hpp
- PR #3326⁴⁹³⁹ - Make sure logging is up and running while modules are being discovered.
- PR #3324⁴⁹⁴⁰ - Replace C++14 overload of std::equal with C++11 code.
- PR #3323⁴⁹⁴¹ - Fix a missing apex thread data (wrapper) initialization
- PR #3320⁴⁹⁴² - Adding support for -std=c++2a (define *HPX_WITH_CXX2A=On*)
- PR #3319⁴⁹⁴³ - Replacing C++14 feature with equivalent C++11 code
- PR #3317⁴⁹⁴⁴ - Fix compilation with VS 15.7.1 and /std:c++latest
- PR #3316⁴⁹⁴⁵ - Fix includes for 1d_stencil_*_omp examples
- PR #3314⁴⁹⁴⁶ - Remove some unused parameter warnings
- PR #3313⁴⁹⁴⁷ - Fix pu-step and pu-offset command line options
- PR #3312⁴⁹⁴⁸ - Add conversion of inspect reports to JUnit XML
- PR #3311⁴⁹⁴⁹ - Fix escaping of closing braces in format specification syntax
- PR #3310⁴⁹⁵⁰ - Don't overwrite user settings with defaults in registration database
- PR #3309⁴⁹⁵¹ - Fixing potential stack overflow for dataflow
- PR #3308⁴⁹⁵² - This updates the .clang-format configuration file to utilize newer features
- PR #3306⁴⁹⁵³ - Marking migratable objects in their gid to allow not handling migration in AGAS
- PR #3305⁴⁹⁵⁴ - Add proper exception handling to run_as_hpx_thread
- PR #3303⁴⁹⁵⁵ - Changed std::rand to a better inbuilt PRNG Generator
- PR #3302⁴⁹⁵⁶ - All non-migratable (simple) components now encode their lva and component type in their gid

- PR #3266⁴⁹⁸¹ - Replace boost::format with custom sprintf-based implementation
- PR #3265⁴⁹⁸² - Split parallel tests on CircleCI
- PR #3262⁴⁹⁸³ - Making sure documentation correctly links to source files
- PR #3261⁴⁹⁸⁴ - Apex refactoring fix rebind
- PR #3260⁴⁹⁸⁵ - Isolate performance counter parser into a separate TU
- PR #3256⁴⁹⁸⁶ - Post 1.1.0 version bumps
- PR #3254⁴⁹⁸⁷ - Adding trait for actions allowing to make runtime decision on whether to execute it directly
- PR #3253⁴⁹⁸⁸ - Bump minimal supported Boost to 1.58.0
- PR #3251⁴⁹⁸⁹ - Adds new feature: changing interval used in interval_timer (issue 3244)
- PR #3239⁴⁹⁹⁰ - Changing std::rand() to a better inbuilt PRNG generator.
- PR #3234⁴⁹⁹¹ - Disable background thread when networking is off
- PR #3232⁴⁹⁹² - Clean up suspension tests
- PR #3230⁴⁹⁹³ - Add optional scheduler mode parameter to create_thread_pool function
- PR #3228⁴⁹⁹⁴ - Allow suspension also on static schedulers
- PR #3163⁴⁹⁹⁵ - libfabric parcelport w/o HPX_PARCELPORTR_LIBFABRIC_ENDPOINT_RDM
- PR #3036⁴⁹⁹⁶ - Switching to CircleCI 2.0

HPX V1.1.0 (Mar 24, 2018)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- We have changed the way *HPX* manages the processing units on a node. We do not longer implicitly bind all available cores to a single thread pool. The user has now full control over what processing units are bound to what thread pool, each with a separate scheduler. It is now also possible to create your own scheduler implementation and control what processing units this scheduler should use. We added the `hpx::resource::partitioner` that manages all available processing units and assigns resources to the used thread pools. Thread pools can be

⁴⁹⁹³ <https://github.com/TheHPXProject/hpx/pull/3230>

⁴⁹⁹⁴ <https://github.com/TheHPXProject/hpx/pull/3228>

⁴⁹⁹⁵ <https://github.com/TheHPXProject/hpx/pull/3163>

⁴⁹⁹⁶ <https://github.com/TheHPXProject/hpx/pull/3036>

now be suspended/resumed independently. This functionality helps in running *HPX* concurrently to code that is directly relying on [OpenMP](https://openmp.org/wp/)⁴⁹⁹⁷ and/or [MPI](https://en.wikipedia.org/wiki/Message_Passing_Interface)⁴⁹⁹⁸.

- We have continued to implement various parallel algorithms. *HPX* now almost completely implements all of the parallel algorithms as specified by the [C++17 Standard](http://www.open-std.org/jtc1/sc22/wg21)⁴⁹⁹⁹. We have also continued to implement these algorithms for the distributed use case (for segmented data structures, such as `hpx::partitioned_vector`).
- Added a compatibility layer for `std::thread`, `std::mutex`, and `std::condition_variable` allowing for the code to use those facilities where available and to fall back to the corresponding Boost facilities otherwise. The [CMake](https://www.cmake.org)⁵⁰⁰⁰ configuration option `-DHPX_WITH_THREAD_COMPATIBILITY=On` can be used to force using the Boost equivalents.
- The parameter sequence for the `hpx::parallel::transform_inclusive_scan` overload taking one iterator range has changed (again) to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to [CMake](https://www.cmake.org)⁵⁰⁰¹.
- The parameter sequence for the `hpx::parallel::inclusive_scan` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY=On` to CMake.
- Added a helper facility `hpx::local_new` which is equivalent to `hpx::new_` except that it creates components locally only. As a consequence, the used component constructor may accept non-serializable argument types and/or non-const references or pointers.
- Removed the (broken) component type `hpx::lcos::queue<T>`. The old type is still available at configure time by passing `-DHPX_WITH_QUEUE_COMPATIBILITY=On` to CMake.
- The parallel algorithms adopted for C++17 restrict the iterator categories usable with those to at least forward iterators. Our implementation of the parallel algorithms was supporting input iterators (and output iterators) as well by simply falling back to sequential execution. We have now made our implementations conforming by requiring at least forward iterators. In order to enable the old behavior use the compatibility option `-DHPX_WITH_ALGORITHM_INPUT_ITERATOR_SUPPORT=On` on the [CMake](https://www.cmake.org)⁵⁰⁰² command line.
- We have added the functionalities allowing for LCOs being implemented using (simple) components. Before LCOs had to always be implemented using managed components.
- User defined components don't have to be default-constructible anymore. Return types from actions don't have to be default-constructible anymore either. Our serialization layer now in general supports non-default-constructible types.
- We have added a new launch policy `hpx::launch::lazy` that allows one to defer the decision on what launch policy to use to the point of execution. This policy is initialized with a function (object) that – when invoked – is expected to produce the desired launch policy.

⁵⁰⁰² <https://www.cmake.org>

Breaking changes

- We have dropped support for the gcc compiler version V4.8. The minimal gcc version we now test on is gcc V4.9. The minimally required version of [CMake](https://www.cmake.org)⁵⁰⁰³ is now V3.3.2.
- We have dropped support for the Visual Studio 2013 compiler version. The minimal Visual Studio version we now test on is Visual Studio 2015.5.
- We have dropped support for the Boost V1.51-V1.54. The minimal version of Boost we now test is Boost V1.55.
- We have dropped support for the `hpx::util::unwrapped` API. `hpx::util::unwrapped` will stay functional to some degree, until it finally gets removed in a later version of HPX. The functional usage of `hpx::util::unwrapped` should be changed to the new `hpx::util::unwrapping` function whereas the immediate usage should be replaced to `hpx::util::unwrap`.
- The performance counter names referring to properties as exposed by the threading subsystem have changes as those now additionally have to specify the thread-pool. See the corresponding documentation for more details.
- The overloads of `hpx::async` that invoke an action do not perform implicit unwrapping of the returned future anymore in case the invoked function does return a future in the first place. In this case `hpx::async` now returns a `hpx::future<future<T>>` making its behavior conforming to its local counterpart.
- We have replaced the use of `boost::exception_ptr` in our APIs with the equivalent `std::exception_ptr`. Please change your codes accordingly. No compatibility settings are provided.
- We have removed the compatibility settings for `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` as their life-cycle has reached its end.
- We have removed the experimental thread schedulers `hierarchy_scheduler`, `periodic_priority_scheduler` and `throttling_scheduler` in an effort to clean up and consolidate our thread schedulers.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #3250](#)⁵⁰⁰⁴ - Apex refactoring with guides
- [PR #3249](#)⁵⁰⁰⁵ - Updating People.qbk
- [PR #3246](#)⁵⁰⁰⁶ - Assorted fixes for CUDA

- PR #3233⁵⁰¹³ - Make `schedule_thread` take suspended threads into account
- Issue #3226⁵⁰¹⁴ - `memory_block` is breaking, signaling SIGSEGV on a thread on creation and freeing
- PR #3225⁵⁰¹⁵ - Applying quick fix for `hwloc-2.0`
- Issue #3224⁵⁰¹⁶ - HPX counters crashing the application
- PR #3223⁵⁰¹⁷ - Fix returns when setting config entries
- Issue #3222⁵⁰¹⁸ - Errors linking `libhpx.so`
- Issue #3221⁵⁰¹⁹ - HPX on Mac OS X with `HWLoc 2.0.0` fails to run
- PR #3216⁵⁰²⁰ - Reorder a variadic array to satisfy VS 2017 15.6
- PR #3214⁵⁰²¹ - Changed `prerequisites.qbk` to avoid confusion while building boost
- PR #3213⁵⁰²² - Relax locks for thread suspension to avoid holding locks when yielding
- PR #3212⁵⁰²³ - Fix check in `sequenced_executor` test
- PR #3211⁵⁰²⁴ - Use `preinit_array` to set `argc/argv` in `init_globally` example
- PR #3210⁵⁰²⁵ - Adapted `parallel::{search | search_n}` for Ranges TS (see #1668)
- PR #3209⁵⁰²⁶ - Fix locking problems during shutdown
- Issue #3208⁵⁰²⁷ - `init_globally` throwing a run-time error
- PR #3206⁵⁰²⁸ - Addition of new arithmetic performance counter “Count”
- PR #3205⁵⁰²⁹ - Fixing return type calculation for `bulk_then_execute`
- PR #3204⁵⁰³⁰ - Changing `std::rand()` to a better inbuilt PRNG generator
- PR #3203⁵⁰³¹ - Resolving problems during shutdown for VS2015
- PR #3202⁵⁰³² - Making sure resource partitioner is not accessed if its not valid
- PR #3201⁵⁰³³ - Fixing `optional::swap`
- Issue #3200⁵⁰³⁴ - `hpx::util::optional` fails
- PR #3199⁵⁰³⁵ - Fix `sliding_semaphore` test

⁵¹⁰³ <https://github.com/TheHPXProject/hpx/pull/3120>

⁵¹⁰⁴ <https://github.com/TheHPXProject/hpx/pull/3119>

- PR #3118⁵¹⁰⁵ - Adding performance_counter::reinit to allow for dynamically changing counter sets
- PR #3117⁵¹⁰⁶ - Replace uses of boost/experimental::optional with util::optional
- PR #3116⁵¹⁰⁷ - Moving background thread APEX timer #2980
- PR #3115⁵¹⁰⁸ - Fixing race condition in channel test
- PR #3114⁵¹⁰⁹ - Avoid using util::function for thread function wrappers
- PR #3113⁵¹¹⁰ - cmake V3.10.2 has changed the variable names used for MPI
- PR #3112⁵¹¹¹ - Minor fixes to exclusive_scan algorithm
- PR #3111⁵¹¹² - Revert “fix detection of cxx11_std_atomic”
- PR #3110⁵¹¹³ - Suspend thread pool
- PR #3109⁵¹¹⁴ - Fixing thread scheduling when yielding a thread id
- PR #3108⁵¹¹⁵ - Revert “Suspend thread pool”
- PR #3107⁵¹¹⁶ - Remove UB from thread::id relational operators
- PR #3106⁵¹¹⁷ - Add cmake test for std::decay_t to fix cuda build
- PR #3105⁵¹¹⁸ - Fixing refcount for async traversal frame
- PR #3104⁵¹¹⁹ - Local execution of direct actions is now actually performed directly
- PR #3103⁵¹²⁰ - Adding support for generic counter_raw_values performance counter type
- Issue #3102⁵¹²¹ - Introduce generic performance counter type returning an array of values
- PR #3101⁵¹²² - Revert “Adapting stack overhead limit for gcc 4.9”
- PR #3100⁵¹²³ - Fix #3068 (condition_variable deadlock)
- PR #3099⁵¹²⁴ - Fixing lock held during suspension in papi counter component
- PR #3098⁵¹²⁵ - Unbreak broadcast_wait_for_2822 test
- PR #3097⁵¹²⁶ - Adapting stack overhead limit for gcc 4.9
- PR #3096⁵¹²⁷ - fix detection of cxx11_std_atomic

- PR #3095⁵¹²⁸ - Add ciso646 header to get `_LIBCPP_VERSION` for testing inplace merge
- PR #3094⁵¹²⁹ - Relax atomic operations on performance counter values
- PR #3093⁵¹³⁰ - Short-circuit `all_of/any_of/none_of` instantiations
- PR #3092⁵¹³¹ - Take advantage of C++14 lambda capture initialization syntax, where possible
- PR #3091⁵¹³² - Remove more references to Boost from logging code
- PR #3090⁵¹³³ - Unify use of `yield/yield_k`
- PR #3089⁵¹³⁴ - Fix a strange thing in `parallel::detail::handle_exception`. (Fix #2834.)
- Issue #3088⁵¹³⁵ - A strange thing in `parallel::sort`.
- PR #3087⁵¹³⁶ - Fixing assertion in `default_distribution_policy`
- PR #3086⁵¹³⁷ - Implement `parallel::remove` and `parallel::remove_if`
- PR #3085⁵¹³⁸ - Addressing breaking changes in Boost V1.66
- PR #3084⁵¹³⁹ - Ignore build warnings round 2
- PR #3083⁵¹⁴⁰ - Fix typo `HPX_WITH_MM_PREFECTH`
- PR #3081⁵¹⁴¹ - Pre-decay template arguments early
- PR #3080⁵¹⁴² - Suspend thread pool
- PR #3079⁵¹⁴³ - Ignore build warnings
- PR #3078⁵¹⁴⁴ - Don't test `inplace_merge` with `libc++`
- PR #3076⁵¹⁴⁵ - Fixing 3075: Part 1
- PR #3074⁵¹⁴⁶ - Fix more build warnings
- PR #3073⁵¹⁴⁷ - Suspend thread cleanup
- PR #3072⁵¹⁴⁸ - Change existing `symbol_namespace::iterate` to return all data instead of invoking a callback
- PR #3071⁵¹⁴⁹ - Fixing `pack_traversal_async` test
- PR #3070⁵¹⁵⁰ - Fix `dynamic_counters_loaded_1508` test by adding dependency to `memory_component`

- PR #3069⁵¹⁵¹ - Fix scheduling loop exit
- Issue #3068⁵¹⁵² - `hpx::lcos::condition_variable` could be suspect to deadlocks
- PR #3067⁵¹⁵³ - `#ifdef` out `random_shuffle` deprecated in later c++
- PR #3066⁵¹⁵⁴ - Make coalescing test depend on coalescing library to ensure it gets built
- PR #3065⁵¹⁵⁵ - Workaround for `minimal_timed_async_executor_test` compilation failures, attempts to copy a deferred call (in unevaluated context)
- PR #3064⁵¹⁵⁶ - Fixing wrong condition in `wrapper_heap`
- PR #3062⁵¹⁵⁷ - Fix exception handling for `execution::seq`
- PR #3061⁵¹⁵⁸ - Adapt MSVC C++ mode handling to VS15.5
- PR #3060⁵¹⁵⁹ - Fix compiler problem in MSVC release mode
- PR #3059⁵¹⁶⁰ - Fixing #2931
- Issue #3058⁵¹⁶¹ - `minimal_timed_async_executor_test_exe` fails to compile on master (d6f505c)
- PR #3057⁵¹⁶² - Fix `stable_merge_2964` compilation problems
- PR #3056⁵¹⁶³ - Fix some build warnings caused by unused variables/unnecessary tests
- PR #3055⁵¹⁶⁴ - Update documentation for running tests
- Issue #3054⁵¹⁶⁵ - Assertion failure when using bulk `hpx::new_` in asynchronous mode
- PR #3052⁵¹⁶⁶ - Do not bind test running to `cmake` test build rule
- PR #3051⁵¹⁶⁷ - Fix HPX-Qt interaction in Qt example.
- Issue #3048⁵¹⁶⁸ - `nqueen` example fails occasionally
- PR #3047⁵¹⁶⁹ - Fixing #3044
- PR #3046⁵¹⁷⁰ - Add OS thread suspension
- PR #3042⁵¹⁷¹ - PyCicle - first attempt at a build tool for checking PR's
- PR #3041⁵¹⁷² - Fix a problem about asynchronous execution of `parallel::merge` and `parallel::partition`.
- PR #3040⁵¹⁷³ - Fix a mistake about exception handling in asynchronous execution of `scan_partitioner`.

⁵⁴⁰³ <https://github.com/TheHPXProject/hpx/pull/2783>

- PR #2782⁵⁴⁰⁴ - Replace boost::atomic with std::atomic (where possible)
- PR #2781⁵⁴⁰⁵ - Check for and optionally use [[deprecated]] attribute
- PR #2780⁵⁴⁰⁶ - Adding empty (but non-trivial) destructor to circumvent warnings
- PR #2779⁵⁴⁰⁷ - Exception info tweaks
- PR #2778⁵⁴⁰⁸ - Implement parallel::partition
- PR #2777⁵⁴⁰⁹ - Improve error handling in gather_here/gather_there
- PR #2776⁵⁴¹⁰ - Fix a bug in compiler version check
- PR #2775⁵⁴¹¹ - Fix compilation when HPX_WITH_LOGGING is OFF
- PR #2774⁵⁴¹² - Removing dependency on Boost.Date_Time
- PR #2773⁵⁴¹³ - Add sync_images() method to spmd_block class
- PR #2772⁵⁴¹⁴ - Adding documentation for PAPI counters
- PR #2771⁵⁴¹⁵ - Removing boost preprocessor dependency
- PR #2770⁵⁴¹⁶ - Adding test, fixing deadlock in config registry
- PR #2769⁵⁴¹⁷ - Remove some other warnings and errors detected by clang 5.0
- Issue #2768⁵⁴¹⁸ - Is there iterator tag for HPX?
- PR #2767⁵⁴¹⁹ - Improvements to continuation annotation
- PR #2765⁵⁴²⁰ - gcc split stack support for HPX threads #620
- PR #2764⁵⁴²¹ - Fix some uses of begin/end, remove unnecessary includes
- PR #2763⁵⁴²² - Bump minimal Boost version to 1.55.0
- PR #2762⁵⁴²³ - hpx::partitioned_vector serializer
- PR #2761⁵⁴²⁴ - Adding configuration summary to cmake output and -hpx:info
- PR #2760⁵⁴²⁵ - Removing 1d_hydro example as it is broken
- PR #2758⁵⁴²⁶ - Remove various warnings detected by clang 5.0

HPX V1.0.0 (Apr 24, 2017)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- Added the facility `hpx::split_future` which allows one to convert a `future<tuple<Ts...>>` into a `tuple<future<Ts>...>`. This functionality is not available when compiling *HPX* with VS2012.
- Added a new type of performance counter which allows one to return a list of values for each invocation. We also added a first counter of this type which collects a histogram of the times between parcels being created.
- Added new LCOs: `hpx::lcos::channel` and `hpx::lcos::local::channel` which are very similar to the well known channel constructs used in the Go language.
- Added new performance counters reporting the amount of data handled by the networking layer on a action-by-action basis (please see [PR #2289](#)⁵⁶¹³ for more details).
- Added a new facility `hpx::lcos::barrier`, replacing the equally named older one. The new facility has a slightly changed API and is much more efficient. Most notable, the new facility exposes a (global) function `hpx::lcos::barrier::synchronize()` which represents a global barrier across all localities.
- We have started to add support for vectorization to our parallel algorithm implementations. This support depends on using an external library, currently either Vc Library or `|boost_simd|`. Please see [Issue #2333](#)⁵⁶¹⁴ for a list of currently supported algorithms. This is an experimental feature and its implementation and/or API might change in the future. Please see this [blog-post](#)⁵⁶¹⁵ for more information.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overload can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17. The old `inner_product` names can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- Added versions of `hpx::get_ptr` taking client side representations for component instances as their parameter (instead of a global id).
- Added the helper utility `hpx::performance_counters::performance_counter_set` helping to encapsulate a set of performance counters to be managed concurrently.
- All execution policies and related classes have been renamed to be consistent with the naming changes applied for C++17. All policies now live in the namespace `hpx::parallel::execution`. The old names can be still enabled at configure time by specifying `-DHPX_WITH_EXECUTION_POLICY_COMPATIBILITY=On` to CMake.
- The thread scheduling subsystem has undergone a major refactoring which results in significant performance improvements. We have also improved the performance of creating `hpx::future` and of various facilities handling those.

⁵⁶¹¹ <https://github.com/TheHPXProject/hpx/issues/701>

⁵⁶¹² <https://github.com/TheHPXProject/hpx/issues/528>

⁵⁶¹³ <https://github.com/TheHPXProject/hpx/pull/2289>

⁵⁶¹⁴ <https://github.com/TheHPXProject/hpx/issues/2333>

⁵⁶¹⁵ <http://stellar-group.org/2016/09/vectorized-cpp-parallel-algorithms-with-hpx/>

- We have consolidated all of the code in `HPX.Compute` related to the integration of CUDA. `hpx::partitioned_vector` has been enabled to be usable with `hpx::compute::vector` which allows one to place the partitions on one or more GPU devices.
- Added new performance counters exposing various internals of the thread scheduling subsystem, such as the current idle- and busy-loop counters and instantaneous scheduler utilization.
- Extended and improved the use of the ITTNotify hooks allowing to collect performance counter data and function annotation information from within the Intel Amplifier tool.

Breaking changes

- We have dropped support for the gcc compiler versions V4.6 and 4.7. The minimal gcc version we now test on is gcc V4.8.
- We have removed (default) support for `boost::chrono` in interfaces, uses of it have been replaced with `std::chrono`. This facility can be still enabled at configure time by specifying `-DHPX_WITH_BOOST_CHRONO_COMPATIBILITY=On` to CMake.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17.
- the build options `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` are now disabled by default. Please change your code still depending on the deprecated interfaces.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2596](#)⁵⁶¹⁶ - Adding apex data
- [PR #2595](#)⁵⁶¹⁷ - Remove obsolete file
- [Issue #2594](#)⁵⁶¹⁸ - FindOpenCL.cmake mismatch with the official cmake module
- [PR #2592](#)⁵⁶¹⁹ - First attempt to introduce `spmd_block` in `hpx`
- [Issue #2591](#)⁵⁶²⁰ - Feature request: continuation (then) which does not require the callable object to take a `future<R>` as parameter
- [PR #2588](#)⁵⁶²¹ - Daint fixes
- [PR #2587](#)⁵⁶²² - Fixing `transfer_(continuation)_action::schedule`
- [PR #2585](#)⁵⁶²³ - Work around MSVC having an ICE when compiling with `-Ob2`
- [PR #2583](#)⁵⁶²⁴ - changing 7zip command to 7za in `roll_release.sh`

- PR #2502⁵⁶⁹⁴ - Resolve various, minor compiler warnings
- PR #2501⁵⁶⁹⁵ - Some other fixes around cuda examples
- Issue #2500⁵⁶⁹⁶ - nvcc / cuda clang issue due to a missing -DHPX_WITH_CUDA flag
- PR #2499⁵⁶⁹⁷ - Adding support for std::array to wait_all and friends
- PR #2498⁵⁶⁹⁸ - Execute background work as HPX thread
- PR #2497⁵⁶⁹⁹ - Fixing configuration options for spinlock-deadlock detection
- PR #2496⁵⁷⁰⁰ - Accounting for different compilers in CrayKNL toolchain file
- PR #2494⁵⁷⁰¹ - Adding component base class which ties a component instance to a given executor
- PR #2493⁵⁷⁰² - Enable controlling amount of pending threads which must be available to allow thread stealing
- PR #2492⁵⁷⁰³ - Adding new command line option -hpx:print-counter-reset
- PR #2491⁵⁷⁰⁴ - Resolve ambiguities when compiling with APEX
- PR #2490⁵⁷⁰⁵ - Resuming threads waiting on future with higher priority
- Issue #2489⁵⁷⁰⁶ - nvcc issue because -std=c++11 appears twice
- PR #2488⁵⁷⁰⁷ - Adding performance counters exposing the internal idle and busy-loop counters
- PR #2487⁵⁷⁰⁸ - Allowing for plain suspend to reschedule thread right away
- PR #2486⁵⁷⁰⁹ - Only flag HPX code for CUDA if HPX_WITH_CUDA is set
- PR #2485⁵⁷¹⁰ - Making thread-queue parameters runtime-configurable
- PR #2484⁵⁷¹¹ - Added atomic counter for parcel-destinations
- PR #2483⁵⁷¹² - Added priority-queue lifo scheduler
- PR #2482⁵⁷¹³ - Changing scheduler to steal only if more than a minimal number of tasks are available
- PR #2481⁵⁷¹⁴ - Extending command line option -hpx:print-counter-destination to support value 'none'
- PR #2479⁵⁷¹⁵ - Added option to disable signal handler
- PR #2478⁵⁷¹⁶ - Making sure the sine performance counter module gets loaded only for the corresponding example

- Issue #475⁵⁹³⁸ - Create a means of combining performance counters into querysets

HPX V0.9.99 (Jul 15, 2016)

General changes

As the version number of this release hints, we consider this release to be a preview for the upcoming *HPX* V1.0. All of the functionalities we set out to implement for V1.0 are in place; all of the features we wanted to have exposed are ready. We are very happy with the stability and performance of *HPX* and we would like to present this release to the community in order for us to gather broad feedback before releasing V1.0. We still expect for some minor details to change, but on the whole this release represents what we would like to have in a V1.0.

Overall, since the last release we have had almost 1600 commits while closing almost 400 tickets. These numbers reflect the incredible development activity we have seen over the last couple of months. We would like to express a big ‘Thank you!’ to all contributors and those who helped to make this release happen.

The most notable addition in terms of new functionality available with this release is the full implementation of object migration (i.e. the ability to transparently move *HPX* components to a different compute node). Additionally, this release of *HPX* cleans up many minor issues and some API inconsistencies.

Here are some of the main highlights and changes for this release (in no particular order):

- ⁵⁹²⁴ <https://github.com/TheHPXProject/hpx/pull/2232>
- ⁵⁹²⁵ <https://github.com/TheHPXProject/hpx/issues/2147>
- ⁵⁹²⁶ <https://github.com/TheHPXProject/hpx/issues/2109>
- ⁵⁹²⁷ <https://github.com/TheHPXProject/hpx/issues/1973>
- ⁵⁹²⁸ <https://github.com/TheHPXProject/hpx/issues/1864>
- ⁵⁹²⁹ <https://github.com/TheHPXProject/hpx/issues/1754>
- ⁵⁹³⁰ <https://github.com/TheHPXProject/hpx/issues/1655>
- ⁵⁹³¹ <https://github.com/TheHPXProject/hpx/issues/1591>
- ⁵⁹³² <https://github.com/TheHPXProject/hpx/issues/1401>
- ⁵⁹³³ <https://github.com/TheHPXProject/hpx/issues/1125>
- ⁵⁹³⁴ <https://github.com/TheHPXProject/hpx/issues/839>
- ⁵⁹³⁵ <https://github.com/TheHPXProject/hpx/issues/702>
- ⁵⁹³⁶ <https://github.com/TheHPXProject/hpx/issues/668>
- ⁵⁹³⁷ <https://github.com/TheHPXProject/hpx/issues/533>
- ⁵⁹³⁸ <https://github.com/TheHPXProject/hpx/issues/475>

- We have fixed a couple of issues in AGAS and the parcel layer which have caused hangs, segmentation faults at exit, and a slowdown of applications over time. Fixing those has significantly increased the overall stability and performance of distributed runs.
- We have started to add parallel algorithm overloads based on the C++ Extensions for Ranges (N4560⁵⁹³⁹) proposal. This also includes the addition of projections to the existing algorithms. Please see [Issue #1668](#)⁵⁹⁴⁰ for a list of algorithms which have been adapted to N4560⁵⁹⁴¹.
- We have implemented index-based parallel for-loops based on a corresponding standardization proposal (P0075R1⁵⁹⁴²). Please see [Issue #2016](#)⁵⁹⁴³ for a list of available algorithms.
- We have added implementations for more parallel algorithms as proposed for the upcoming C++ 17 Standard. See [Issue #1141](#)⁵⁹⁴⁴ for an overview of which algorithms are available by now.
- We have started to implement a new prototypical functionality with *HPX.Compute* which uniformly exposes some of the higher level APIs to heterogeneous architectures (currently CUDA). This functionality is an early preview and should not be considered stable. It may change considerably in the future.
- We have pervasively added (optional) executor arguments to all API functions which schedule new work. Executors are now used throughout the code base as the main means of executing tasks.
- Added `hpx::make_future<R>(future<T> &&)` allowing to convert a future of any type T into a future of any other type R, either based on default conversion rules of the embedded types or using a given explicit conversion function.
- We finally finished the implementation of transparent migration of components to another locality. It is now possible to trigger a migration operation without ‘stopping the world’ for the object to migrate. *HPX* will make sure that no work is being performed on an object before it is migrated and that all subsequently scheduled work for the migrated object will be transparently forwarded to the new locality. Please note that the global id of the migrated object does not change, thus the application will not have to be changed in any way to support this new functionality. Please note that this feature is currently considered experimental. See [Issue #559](#)⁵⁹⁴⁵ and [PR #1966](#)⁵⁹⁴⁶ for more details.
- The `hpx::dataflow` facility is now usable with actions. Similarly to `hpx::async`, actions can be specified as an explicit template argument (`hpx::dataflow<Action>(target, ...)`) or as the first argument (`hpx::dataflow(Action(), target, ...)`). We have also enabled the use of distribution policies as the target for dataflow invocations. Please see [Issue #1265](#)⁵⁹⁴⁷ and [PR #1912](#)⁵⁹⁴⁸ for more information.
- Adding overloads of `gather_here` and `gather_there` to accept the plain values of the data to gather (in addition to the existing overloads expecting futures).
- We have cleaned up and refactored large parts of the code base. This helped reducing compile and link times of *HPX* itself and also of applications depending on it. We have further decreased the dependency of *HPX* on the Boost libraries by replacing part of those with facilities available from the standard libraries.
- Wherever possible we have removed dependencies of our API on Boost by replacing those with the equivalent facility from the C++11 standard library.
- We have added new performance counters for parcel coalescing, file-IO, the AGAS cache, and overall scheduler time. Resetting performance counters has been overhauled and fixed.

⁵⁹³⁹ <http://wg21.link/n4560>

⁵⁹⁴⁰ <https://github.com/TheHPXProject/hpx/issues/1668>

⁵⁹⁴¹ <http://wg21.link/n4560>

⁵⁹⁴² <http://wg21.link/p0075r1>

⁵⁹⁴³ <https://github.com/TheHPXProject/hpx/issues/2016>

⁵⁹⁴⁴ <https://github.com/TheHPXProject/hpx/issues/1141>

⁵⁹⁴⁵ <https://github.com/TheHPXProject/hpx/issues/559>

⁵⁹⁴⁶ <https://github.com/TheHPXProject/hpx/pull/1966>

⁵⁹⁴⁷ <https://github.com/TheHPXProject/hpx/issues/1265>

⁵⁹⁴⁸ <https://github.com/TheHPXProject/hpx/pull/1912>

- We have introduced a generic client type `hpx::components::client<>` and added support for using it with `hpx::async`. This removes the necessity to implement specific client types for every component type without losing type safety. This deemphasizes the need for using the low level `hpx::id_type` for referencing (possibly remote) component instances. The plan is to deprecate the direct use of `hpx::id_type` in user code in the future.
- We have added a special iterator which supports automatic prefetching of one or more arrays for speeding up loop-like code (see `hpx::parallel::util::make_prefetcher_context()`).
- We have extended the interfaces exposed from executors (as proposed by [N4406](#)⁵⁹⁴⁹) to accept an arbitrary number of arguments.

Breaking changes

- In order to move the dataflow facility to namespace `hpx` we added a definition of `hpx::dataflow` which might create ambiguities in existing codes. The previous definition of this facility (`hpx::lcos::local::dataflow`) has been deprecated and is available only if the constant `-DHPX_WITH_LOCAL_DATAFLOW_COMPATIBILITY=On` to `CMake`⁵⁹⁵⁰ is defined at configuration time. Please explicitly qualify all uses of the dataflow facility if you enable this compatibility setting and encounter ambiguities.
- The adaptation of the C++ Extensions for Ranges ([N4560](#)⁵⁹⁵¹) proposal imposes some breaking changes related to the return types of some of the parallel algorithms. Please see [Issue #1668](#)⁵⁹⁵² for a list of algorithms which have already been adapted.
- The facility `hpx::lcos::make_future_void()` has been replaced by `hpx::make_future<void>()`.
- We have removed support for Intel V13 and gcc 4.4.x.
- We have removed (default) support for the generic `hpx::parallel::execution_policy` because it was removed from the Parallelism TS (`__cpp11_n4104__`) while it was being added to the upcoming C++17 Standard. This facility can be still enabled at configure time by specifying `-DHPX_WITH_GENERIC_EXECUTION_POLICY=On` to `CMake`.
- Uses of `boost::shared_ptr` and related facilities have been replaced with `std::shared_ptr` and friends. Uses of `boost::unique_lock`, `boost::lock_guard` etc. have also been replaced by the equivalent (and equally named) tools available from the C++11 standard library.
- Facilities that used to expect an explicit `boost::unique_lock` now take an `std::unique_lock`. Additionally, `condition_variable` no longer aliases `condition_variable_any`; its interface now only works with `std::unique_lock<local::mutex>`.
- Uses of `boost::function`, `boost::bind`, `boost::tuple` have been replaced by the corresponding facilities in *HPX* (`hpx::util::function`, `hpx::util::bind`, and `hpx::util::tuple`, respectively).

HPX V0.9.11 (Nov 11, 2015)

Our main focus for this release was the design and development of a coherent set of higher-level APIs exposing various types of parallelism to the application programmer. We introduced the concepts of an `executor`, which can be used to customize the `where` and `when` of execution of tasks in the context of parallelizing codes. We extended all APIs related to managing parallel tasks to support executors which gives the user the choice of either using one of the predefined executor types or to provide its own, possibly application specific, executor. We paid very close attention to align all of these changes with the existing C++ Standards documents or with the ongoing proposals for standardization.

This release is the first after our change to a new development policy. We switched all development to be strictly performed on branches only, all direct commits to our main branch (`master`) are prohibited. Any change has to go through a peer review before it will be merged to `master`. As a result the overall stability of our code base has significantly increased, the development process itself has been simplified. This change manifests itself in a large number of pull-requests which have been merged (please see below for a full list of closed issues and pull-requests). All in all for this release, we closed almost 100 issues and merged over 290 pull-requests. There have been over 1600 commits to the master branch since the last release.

General changes

- We are moving into the direction of unifying managed and simple components. As such, the classes `hpx::components::component` and `hpx::components::component_base` have been added which currently just forward to the currently existing simple component facilities. The examples have been converted to only use those two classes.
- Added integration with the [CircleCI](https://circleci.com/gh/TheHPXProject/hpx)⁶³⁴⁷ hosted continuous integration service. This gives us constant and immediate feedback on the health of our master branch.
- The compiler configuration subsystem in the build system has been reimplemented. Instead of using `Boost.Config` we now use our own lightweight set of `cmake` scripts to determine the available language and library features supported by the used compiler.
- The API for creating instances of components has been consolidated. All component instances should be created using the `hpx::new_` only. It allows one to instantiate both, single component instances and multiple component instances. The placement of the created components can be controlled by special distribution policies. Please see the corresponding documentation outlining the use of `hpx::new_`.
- Introduced four new distribution policies which can be used with many API functions which traditionally expected to be used with a locality id. The new distribution policies are:
 - `hpx::components::default_distribution_policy` which tries to place multiple component instances as evenly as possible.

⁶³⁴² <https://github.com/TheHPXProject/hpx/issues/559>

⁶³⁴³ <https://github.com/TheHPXProject/hpx/issues/449>

⁶³⁴⁴ <https://github.com/TheHPXProject/hpx/issues/279>

⁶³⁴⁵ <https://github.com/TheHPXProject/hpx/issues/224>

⁶³⁴⁶ <https://github.com/TheHPXProject/hpx/issues/55>

⁶³⁴⁷ <https://circleci.com/gh/TheHPXProject/hpx>

- `hpx::components::colocating_distribution_policy` which will refer to the locality where a given component instance is currently placed.
 - `hpx::components::binpacking_distribution_policy` which will place multiple component instances as evenly as possible based on any performance counter.
 - `hpx::components::target_distribution_policy` which allows one to represent a given locality in the context of a distribution policy.
- The new distribution policies can now be also used with `hpx::async`. This change also deprecates `hpx::async_colocated(id, ...)` which now is replaced by a distribution policy: `hpx::async(hpx::colocated(id), ...)`.
 - The `hpx::vector` and `hpx::unordered_map` data structures can now be used with the new distribution policies as well.
 - The parallel facility `hpx::parallel::task_region` has been renamed to `hpx::parallel::task_block` based on the changes in the corresponding standardization proposal [N4411](#)⁶³⁴⁸.
 - Added extensions to the parallel facility `hpx::parallel::task_block` allowing to combine a `task_block` with an execution policy. This implies a minor breaking change as the `hpx::parallel::task_block` is now a template.
 - Added new LCOs: `hpx::lcos::latch` and `hpx::lcos::local::latch` which semantically conform to the proposed `std::latch` (see [N4399](#)⁶³⁴⁹).
 - Added performance counters exposing data related to data transferred by input/output (filesystem) operations (thanks to Maciej Brodowicz).
 - Added performance counters allowing to track the number of action invocations (local and remote invocations).
 - Added new command line options `-hpx:print-counter-at` and `-hpx:reset-counters`.
 - The `hpx::vector` component has been renamed to `hpx::partitioned_vector` to make it explicit that the underlying memory is not contiguous.
 - Introduced a completely new and uniform higher-level parallelism API which is based on executors. All existing parallelism APIs have been adapted to this. We have added a large number of different executor types, such as a numa-aware executor, a this-thread executor, etc.
 - Added support for the MingW toolchain on Windows (thanks to Eric Lemanissier).
 - HPX now includes support for APEX, (Autonomic Performance Environment for eXascale). APEX is an instrumentation and software adaptation library that provides an interface to TAU profiling / tracing as well as runtime adaptation of HPX applications through policy definitions. For more information and documentation, please see <https://github.com/UO-OACISS/xpress-apex>. To enable APEX at configuration time, specify `-DHPX_WITH_APEX=On`. To also include support for TAU profiling, specify `-DHPX_WITH_TAU=On` and specify the `-DTAU_ROOT`, `-DTAU_ARCH` and `-DTAU_OPTIONS` cmake parameters.
 - We have implemented many more of the *Using parallel algorithms*. Please see [Issue #1141](#)⁶³⁵⁰ for the list of all available parallel algorithms (thanks to Daniel Bourgeois and John Biddiscombe for contributing their work).

⁶³⁴⁸ <http://wg21.link/n4411>

⁶³⁴⁹ <http://wg21.link/n4399>

⁶³⁵⁰ <https://github.com/TheHPXProject/hpx/issues/1141>

Breaking changes

- We are moving into the direction of unifying managed and simple components. In order to stop exposing the old facilities, all examples have been converted to use the new classes. The breaking change in this release is that performance counters are now a `hpx::components::component_base` instead of `hpx::components::managed_component_base`.
- We removed the support for stackless threads. It turned out that there was no performance benefit when using stackless threads. As such, we decided to clean up our codebase. This feature was not documented.
- The CMake project name has changed from 'hpx' to 'HPX' for consistency and compatibility with naming conventions and other CMake projects. Generated config files go into `<prefix>/lib/cmake/HPX` and not `<prefix>/lib/cmake/hpx`.
- The macro `HPX_REGISTER_MINIMAL_COMPONENT_FACTORY` has been deprecated. Please use `HPX_REGISTER_COMPONENT` instead. The old macro will be removed in the next release.
- The obsolete `distributing_factory` and `binpacking_factory` components have been removed. The corresponding functionality is now provided by the `hpx::new_` API function in conjunction with the `hpx::default_layout` and `hpx::binpacking` distribution policies (`hpx::components::default_distribution_policy` and `hpx::components::binpacking_distribution_policy`).
- The API function `hpx::new_colocated` has been deprecated. Please use the consolidated API `hpx::new_` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The API function `hpx::async_colocated` has been deprecated. Please use the consolidated API `hpx::async` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The obsolete `remote_object` component has been removed.
- Replaced the use of Boost.Serialization with our own solution. While the new version is mostly compatible with Boost.Serialization, this change requires some minor code modifications in user code. For more information, please see the corresponding [announcement](#)⁶³⁵¹ on the `hpx-users@stellar.cct.lsu.edu` mailing list.
- The names used by cmake to influence various configuration options have been unified. The new naming scheme relies on all configuration constants to start with `HPX_WITH_...`, while the preprocessor constant which is used at build time starts with `HPX_HAVE_...`. For instance, the former cmake command line `-DHPX_MALLOC=...` now has to be specified as `-DHPX_WITH_MALLOC=...` and will cause the preprocessor constant `HPX_HAVE_MALLOC` to be defined. The actual name of the constant (i.e. `MALLOC`) has not changed. Please see the corresponding documentation for more details (*CMake options*).
- The `get_gid()` functions exposed by the component base classes `hpx::components::server::simple_component_base`, `hpx::components::server::managed_component_base`, and `hpx::components::server::fixed_component_base` have been replaced by two new functions: `get_unmanaged_id()` and `get_id()`. To enable the old function name for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.
- All functions which were named `get_gid()` but were returning `hpx::id_type` have been renamed to `get_id()`. To enable the old function names for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

- Issue #1817⁶³⁸⁵ - Hyperlinks generated by inspect tool are wrong
- PR #1816⁶³⁸⁶ - Support hpxrx
- PR #1814⁶³⁸⁷ - Fix async to dispatch to the correct locality in all cases
- Issue #1813⁶³⁸⁸ - async(launch::..., action(), ...) always invokes locally
- PR #1812⁶³⁸⁹ - fixed syntax error in CMakeLists.txt
- PR #1811⁶³⁹⁰ - Agas optimizations
- PR #1810⁶³⁹¹ - drop superfluous typedefs
- PR #1809⁶³⁹² - Allow HPX to be used as an optional package in 3rd party code
- PR #1808⁶³⁹³ - Fixing #1723
- PR #1807⁶³⁹⁴ - Making sure resolve_localities does not hang during normal operation
- Issue #1806⁶³⁹⁵ - Spinlock no longer movable and deletes operator '=', breaks MiniGhost

- Issue #1656⁶⁵³⁴ - 1d_stencil codes all have wrong factor
- PR #1654⁶⁵³⁵ - When using runtime_mode_connect, find the correct localhost public ip address
- PR #1653⁶⁵³⁶ - Fixing 1617
- PR #1652⁶⁵³⁷ - Remove traits::action_may_require_id_splitting
- PR #1651⁶⁵³⁸ - Fixed performance counters related to AGAS cache timings
- PR #1650⁶⁵³⁹ - Remove leftovers of traits::type_size
- PR #1649⁶⁵⁴⁰ - Shorten target names on Windows to shorten used path names
- PR #1648⁶⁵⁴¹ - Fixing problems introduced by merging #1623 for older compilers
- PR #1647⁶⁵⁴² - Simplify running automatic builds on Windows
- Issue #1646⁶⁵⁴³ - Cache insert and update performance counters are broken
- Issue #1644⁶⁵⁴⁴ - Remove leftovers of traits::type_size
- Issue #1643⁶⁵⁴⁵ - Remove traits::action_may_require_id_splitting
- PR #1642⁶⁵⁴⁶ - Adds spell checker to the inspect tool for qbk and doxygen comments
- PR #1640⁶⁵⁴⁷ - First step towards fixing 688
- PR #1639⁶⁵⁴⁸ - Re-apply remaining changes from limit_dataflow_recursion branch
- PR #1638⁶⁵⁴⁹ - This fixes possible deadlock in the test ignore_while_locked_1485
- PR #1637⁶⁵⁵⁰ - Fixing hpx::wait_all() invoked with two vector<future<T>>
- PR #1636⁶⁵⁵¹ - Partially re-apply changes from limit_dataflow_recursion branch
- PR #1635⁶⁵⁵² - Adding missing test for #1572
- PR #1634⁶⁵⁵³ - Revert “Limit recursion-depth in dataflow to a configurable constant”
- PR #1633⁶⁵⁵⁴ - Add command line option to ignore batch environment
- PR #1631⁶⁵⁵⁵ - hpx::lcos::queue exhibits strange behavior
- PR #1630⁶⁵⁵⁶ - Fixed endline_whitespace_check.cpp to detect lines with only whitespace

- [Issue #1629⁶⁵⁵⁷](#) - Inspect trailing whitespace checker problem
- [PR #1628⁶⁵⁵⁸](#) - Removed meaningless const qualifiers. Minor icpc fix.
- [PR #1627⁶⁵⁵⁹](#) - Fixing the queue LCO and add example demonstrating its use
- [PR #1626⁶⁵⁶⁰](#) - Deprecating `get_gid()`, add `get_id()` and `get_unmanaged_id()`
- [PR #1625⁶⁵⁶¹](#) - Allowing to specify whether to send credits along with message
- [Issue #1624⁶⁵⁶²](#) - Lifetime issue
- [Issue #1623⁶⁵⁶³](#) - `hpx::wait_all()` invoked with two `vector<future<T>>` fails
- [PR #1622⁶⁵⁶⁴](#) - Executor partitioners
- [PR #1621⁶⁵⁶⁵](#) - Clean up coroutines implementation
- [Issue #1620⁶⁵⁶⁶](#) - Revert #1535
- [PR #1619⁶⁵⁶⁷](#) - Fix result type calculation for `hpx::make_continuation`
- [PR #1618⁶⁵⁶⁸](#) - Fixing RDTSC on Xeon/Phi
- [Issue #1617⁶⁵⁶⁹](#) - `hpx cmake` not working when run as a subproject
- [Issue #1616⁶⁵⁷⁰](#) - `cmake` problem resulting in RDTSC not working correctly for Xeon Phi creates very strange results for duration counters
- [Issue #1615⁶⁵⁷¹](#) - `hpx::make_continuation` requires input and output to be the same
- [PR #1614⁶⁵⁷²](#) - Fixed remove copy test
- [Issue #1613⁶⁵⁷³](#) - Dataflow causes stack overflow
- [PR #1612⁶⁵⁷⁴](#) - Modified foreach partitioner to use bulk execute
- [PR #1611⁶⁵⁷⁵](#) - Limit recursion-depth in dataflow to a configurable constant
- [PR #1610⁶⁵⁷⁶](#) - Increase timeout for CircleCI
- [PR #1609⁶⁵⁷⁷](#) - Refactoring thread manager, mainly extracting thread pool
- [PR #1608⁶⁵⁷⁸](#) - Fixed running multiple localities without localities parameter
- [PR #1607⁶⁵⁷⁹](#) - More algorithm fixes to `adjacentfind`

HPX V0.9.10 (Mar 24, 2015)

General changes

This is the 12th official release of *HPX*. It coincides with the 7th anniversary of the first commit to our source code repository. Since then, we have seen over 12300 commits amounting to more than 220000 lines of C++ code.

The major focus of this release was to improve the reliability of large scale runs. We believe to have achieved this goal as we now can reliably run *HPX* applications on up to ~24k cores. We have also shown that HPX can be used with success for symmetric runs (applications using both, host cores and Intel Xeon/Phi coprocessors). This is a huge step forward in terms of the usability of *HPX*. The main focus of this work involved isolating the causes of the segmentation faults at start up and shut down. Many of these issues were discovered to be the result of the suspension of threads which hold locks.

A very important improvement introduced with this release is the refactoring of the code representing our parcel-port implementation. Parcel- ports can now be implemented by 3rd parties as independent plugins which are dynamically loaded at runtime (static linking of parcel-ports is also supported). This refactoring also includes a massive improvement of the performance of our existing parcel-ports. We were able to significantly reduce the networking latencies

⁶⁷⁵⁴ <https://github.com/TheHPXProject/hpx/issues/721>

⁶⁷⁵⁵ <https://github.com/TheHPXProject/hpx/issues/524>

and to improve the available networking bandwidth. Please note that in this release we disabled the `ibverbs` and `ipc` parcel ports as those have not been ported to the new plugin system yet (see [Issue #839](#)⁶⁷⁵⁶).

Another corner stone of this release is our work towards a complete implementation of `__cpp11_n4104__` (Working Draft, Technical Specification for C++ Extensions for Parallelism). This document defines a set of parallel algorithms to be added to the C++ standard library. We now have implemented about 75% of all specified parallel algorithms (see [[link hpx.manual.parallel.parallel_algorithms](#) Parallel Algorithms] for more details). We also implemented some extensions to `__cpp11_n4104__` allowing to invoke all of the algorithms asynchronously.

This release adds a first implementation of `hpx::vector` which is a distributed data structure closely aligned to the functionality of `std::vector`. The difference is that `hpx::vector` stores the data in partitions where the partitions can be distributed over different localities. We started to work on allowing to use the parallel algorithms with `hpx::vector`. At this point we have implemented only a few of the parallel algorithms to support distributed data structures (like `hpx::vector`) for testing purposes (see [Issue #1338](#)⁶⁷⁵⁷ for a documentation of our progress).

Breaking changes

With this release we put a lot of effort into changing the code base to be more compatible to C++11. These changes have caused the following issues for backward compatibility:

- Move to Variadics- All of the API now uses variadic templates. However, this change required to modify the argument sequence for some of the exiting API functions ([hpx::async_continue](#), [hpx::apply_continue](#), [hpx::when_each](#), [hpx::wait_each](#), synchronous invocation of actions).
- Changes to Macros- We also removed the macros `HPX_STD_FUNCTION` and `HPX_STD_TUPLE`. This shouldn't affect any user code as we replaced `HPX_STD_FUNCTION` with `hpx::util::function_nonser` which was the default expansion used for this macro. All `HPX` API functions which expect a `hpx::util::function_nonser` (or a `hpx::util::unique_function_nonser`) can now be transparently called with a compatible `std::function` instead. Similarly, `HPX_STD_TUPLE` was replaced by its default expansion as well: `hpx::util::tuple`.
- Changes to `hpx::unique_future`- `hpx::unique_future`, which was deprecated in the previous release for [hpx::future](#) is now completely removed from `HPX`. This completes the transition to a completely standards conforming implementation of `hpx::future`.
- Changes to Supported Compilers. Finally, in order to utilize more C++11 semantics, we have officially dropped support for GCC 4.4 and MSVC 2012. Please see our [Prerequisites](#) page for more details.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1402](#)⁶⁷⁵⁸ - Internal `shared_future` serialization copies
- [Issue #1399](#)⁶⁷⁵⁹ - Build takes unusually long time...
- [Issue #1398](#)⁶⁷⁶⁰ - Tests using the scan partitioner are broken on at least gcc 4.7 and intel compiler
- [Issue #1397](#)⁶⁷⁶¹ - Completely remove `hpx::unique_future`
- [Issue #1396](#)⁶⁷⁶² - Parallel scan algorithms with different initial values

- Issue #1267⁶⁸⁵⁶ - Added classes and unit tests for local_file, orangefs_file and pxfs_file
- Issue #1264⁶⁸⁵⁷ - Error “assertion ‘!m_fun’ failed” randomly occurs when using TCP
- Issue #1254⁶⁸⁵⁸ - thread binding seems to not work properly
- Issue #1220⁶⁸⁵⁹ - parallel::copy_if is broken
- Issue #1217⁶⁸⁶⁰ - Find a better way of fixing the issue patched by #1216
- Issue #1168⁶⁸⁶¹ - Starting HPX on Cray machines using aprun isn’t working correctly
- Issue #1085⁶⁸⁶² - Replace startup and shutdown barriers with broadcasts
- Issue #981⁶⁸⁶³ - With SLURM, -hpx:threads=8 should not be necessary
- Issue #857⁶⁸⁶⁴ - hpx::naming::locality leaks parcelport specific information into the public interface
- Issue #850⁶⁸⁶⁵ - “flush” not documented
- Issue #763⁶⁸⁶⁶ - Create buildbot instance that uses std::bind as HPX_STD_BIND
- Issue #680⁶⁸⁶⁷ - Convert parcel ports into a plugin system
- Issue #582⁶⁸⁶⁸ - Make exception thrown from HPX threads available from hpx::init
- Issue #504⁶⁸⁶⁹ - Refactor Dataflow LCO to work with futures
- Issue #196⁶⁸⁷⁰ - Don’t store copies of the locality network metadata in the gva table

HPX V0.9.9 (Oct 31, 2014, codename Spooky)

General changes

We have had over 1500 commits since the last release and we have closed over 200 tickets (bugs, feature requests, pull requests, etc.). These are by far the largest numbers of commits and resolved issues for any of the *HPX* releases so far. We are especially happy about the large number of people who contributed for the first time to *HPX*.

- We completed the transition from the older (non-conforming) implementation of `hpx::future` to the new and fully conforming version by removing the old code and by renaming the type `hpx::unique_future` to `hpx::future`. In order to maintain backwards compatibility with existing code which uses the type `hpx::unique_future` we support the configuration variable `HPX_UNIQUE_FUTURE_ALIAS`. If this variable is set to ON while running cmake it will additionally define a template alias for this type.

⁶⁸⁶⁹ <https://github.com/TheHPXProject/hpx/issues/504>

⁶⁸⁷⁰ <https://github.com/TheHPXProject/hpx/issues/196>

- We rewrote and significantly changed our build system. Please have a look at the new (now generated) documentation here: *Building HPX*. Please revisit your build scripts to adapt to the changes. The most notable changes are:
 - HPX_NO_INSTALL is no longer necessary.
 - For external builds, you need to set HPX_DIR instead of HPX_ROOT as described here: *Using HPX with CMake-based projects*.
 - IDEs that support multiple configurations (Visual Studio and XCode) can now be used as intended. that means no build dir.
 - Building HPX statically (without dynamic libraries) is now supported (-DHPX_STATIC_LINKING=On).
 - Please note that many variables used to configure the build process have been renamed to unify the naming conventions (see the section *CMake options* for more information).
 - This also fixes a long list of issues, for more information see [Issue #1204](#)⁶⁸⁷¹.
- We started to implement various proposals to the C++ Standardization committee related to parallelism and concurrency, most notably [N4409](#)⁶⁸⁷² (Working Draft, Technical Specification for C++ Extensions for Parallelism), [N4411](#)⁶⁸⁷³ (Task Region Rev. 3), and [N4313](#)⁶⁸⁷⁴ (Working Draft, Technical Specification for C++ Extensions for Concurrency).
- We completely remodeled our automatic build system to run builds and unit tests on various systems and compilers. This allows us to find most bugs right as they were introduced and helps to maintain a high level of quality and compatibility. The newest build logs can be found at *HPX Buildbot Website*⁶⁸⁷⁵.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1296](#)⁶⁸⁷⁶ - Rename make_error_future to make_exceptional_future, adjust to N4123
- [Issue #1295](#)⁶⁸⁷⁷ - building issue
- [Issue #1293](#)⁶⁸⁷⁸ - Transpose example
- [Issue #1292](#)⁶⁸⁷⁹ - Wrong abs() function used in example
- [Issue #1291](#)⁶⁸⁸⁰ - non-synchronized shift operators have been removed
- [Issue #1290](#)⁶⁸⁸¹ - RDTSCP is defined as true for Xeon Phi build
- [Issue #1289](#)⁶⁸⁸² - Fixing 1288
- [Issue #1288](#)⁶⁸⁸³ - Add new performance counters
- [Issue #1287](#)⁶⁸⁸⁴ - Hierarchy scheduler broken performance counters

- Issue #1232⁶⁹³¹ - Fixing race in wait_XXX
- Issue #1231⁶⁹³² - Parallel minmax
- Issue #1230⁶⁹³³ - Distributed run of 1d_stencil_8 uses less threads than spec. & sometimes gives errors
- Issue #1229⁶⁹³⁴ - Unstable number of threads
- Issue #1228⁶⁹³⁵ - HPX link error (cmake / MPI)
- Issue #1226⁶⁹³⁶ - Warning about struct/class thread_counters
- Issue #1225⁶⁹³⁷ - Adding parallel::replace etc
- Issue #1224⁶⁹³⁸ - Extending dataflow to pass through non-future arguments
- Issue #1223⁶⁹³⁹ - Remaining find algorithms implemented, N4071
- Issue #1222⁶⁹⁴⁰ - Merging all the changes
- Issue #1221⁶⁹⁴¹ - No error output when using mpirun with hpx
- Issue #1219⁶⁹⁴² - Adding new AGAS cache performance counters
- Issue #1216⁶⁹⁴³ - Fixing using futures (clients) as arguments to actions
- Issue #1215⁶⁹⁴⁴ - Error compiling simple component
- Issue #1214⁶⁹⁴⁵ - Stencil docs
- Issue #1213⁶⁹⁴⁶ - Using more than a few dozen MPI processes on SuperMike results in a seg fault before getting to hpx_main
- Issue #1212⁶⁹⁴⁷ - Parallel rotate
- Issue #1211⁶⁹⁴⁸ - Direct actions cause the future's shared_state to be leaked
- Issue #1210⁶⁹⁴⁹ - Refactored local::promise to be standard conformant
- Issue #1209⁶⁹⁵⁰ - Improve command line handling
- Issue #1208⁶⁹⁵¹ - Adding parallel::reverse and parallel::reverse_copy
- Issue #1207⁶⁹⁵² - Add copy_backward and move_backward
- Issue #1206⁶⁹⁵³ - N4071 additional algorithms implemented

HPX V0.9.8 (Mar 24, 2014)

We have had over 800 commits since the last release and we have closed over 65 tickets (bugs, feature requests, etc.).

With the changes below, *HPX* is once again leading the charge of a whole new era of computation. By intrinsically breaking down and synchronizing the work to be done, *HPX* insures that application developers will no longer have to fret about where a segment of code executes. That allows coders to focus their time and energy to understanding the data dependencies of their algorithms and thereby the core obstacles to an efficient code. Here are some of the advantages of using *HPX*:

- *HPX* is solidly rooted in a sophisticated theoretical execution model – ParalleX
- *HPX* exposes an API fully conforming to the C++11 and the draft C++14 standards, extended and applied to distributed computing. Everything programmers know about the concurrency primitives of the standard C++ library is still valid in the context of *HPX*.
- It provides a competitive, high performance implementation of modern, future-proof ideas which gives an smooth migration path from today's mainstream techniques
- There is no need for the programmer to worry about lower level parallelization paradigms like threads or message passing; no need to understand pthreads, MPI, OpenMP, or Windows threads, etc.
- There is no need to think about different types of parallelism such as tasks, pipelines, or fork-join, task or data parallelism.
- The same source of your program compiles and runs on Linux, BlueGene/Q, Mac OS X, Windows, and Android.
- The same code runs on shared memory multi-core systems and supercomputers, on handheld devices and Intel® Xeon Phi™ accelerators, or a heterogeneous mix of those.

⁷⁰⁹⁹ <https://github.com/TheHPXProject/hpx/issues/44>

General changes

- A major API breaking change for this release was introduced by implementing `hpx::future` and `hpx::shared_future` fully in conformance with the C++11 Standard⁷¹⁰⁰. While `hpx::shared_future` is new and will not create any compatibility problems, we revised the interface and implementation of the existing `hpx::future`. For more details please see the [mailing list archive](#)⁷¹⁰¹. To avoid any incompatibilities for existing code we named the type which implements the `std::future` interface as `hpx::unique_future`. For the next release this will be renamed to `hpx::future`, making it full conforming to C++11 Standard⁷¹⁰².
- A large part of the code base of *HPX* has been refactored and partially re-implemented. The main changes were related to
 - The threading subsystem: these changes significantly reduce the amount of overheads caused by the schedulers, improve the modularity of the code base, and extend the variety of available scheduling algorithms.
 - The parcel subsystem: these changes improve the performance of the *HPX* networking layer, modularize the structure of the parcelports, and simplify the creation of new parcelports for other underlying networking libraries.
 - The API subsystem: these changes improved the conformance of the API to C++11 Standard, extend and unify the available API functionality, and decrease the overheads created by various elements of the API.
 - The robustness of the component loading subsystem has been improved significantly, allowing to more portably and more reliably register the components needed by an application as startup. This additionally speeds up general application initialization.
- We added new API functionality like `hpx::migrate` and `hpx::copy_component` which are the basic building blocks necessary for implementing higher level abstractions for system-wide load balancing, runtime-adaptive resource management, and object-oriented checkpointing and state-management.
- We removed the use of C++11 move emulation (using `Boost.Move`), replacing it with C++11 rvalue references. This is the first step towards using more and more native C++11 facilities which we plan to introduce in the future.
- We improved the reference counting scheme used by *HPX* which helps managing distributed objects and memory. This improves the overall stability of *HPX* and further simplifies writing real world applications.
- The minimal Boost version required to use *HPX* is now V1.49.0.
- This release coincides with the first release of HPXPI (V0.1.0), the first implementation of the [XPI specification](#)⁷¹⁰³.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1086](#)⁷¹⁰⁴ - Expose internal `boost::shared_array` to allow user management of array lifetime
- [Issue #1083](#)⁷¹⁰⁵ - Make shell examples copyable in docs
- [Issue #1080](#)⁷¹⁰⁶ - `/threads{locality#*/total}/count/cumulative` broken
- [Issue #1079](#)⁷¹⁰⁷ - Build problems on OS X

- [Issue #175](#)⁷¹⁷⁷ - Asynchronous AGAS API

HPX V0.9.7 (Nov 13, 2013)

We have had over 1000 commits since the last release and we have closed over 180 tickets (bugs, feature requests, etc.).

General changes

- Ported HPX to BlueGene/Q
- Improved HPX support for Xeon/Phi accelerators
- Reimplemented `hpx::bind`, `hpx::tuple`, and `hpx::function` for better performance and better compliance with the C++11 Standard. Added `hpx::mem_fn`.
- Reworked `hpx::when_all` and `hpx::when_any` for better compliance with the ongoing C++ standardization effort, added heterogeneous version for those functions. Added `hpx::when_any_swapped`.
- Added `hpx::copy` as a precursor for a migrate functionality
- Added `hpx::get_ptr` allowing to directly access the memory underlying a given component
- Added the `hpx::lcos::broadcast`, `hpx::lcos::reduce`, and `hpx::lcos::fold` collective operations
- Added `hpx::get_locality_name` allowing to retrieve the name of any of the localities for the application.
- Added support for more flexible thread affinity control from the HPX command line, such as new modes for `--hpx:bind` (balanced, scattered, compact), improved default settings when running multiple localities on the same node.
- Added experimental executors for simpler thread pooling and scheduling. This API may change in the future as it will stay aligned with the ongoing C++ standardization efforts.
- Massively improved the performance of the HPX serialization code. Added partial support for zero copy serialization of array and bitwise-copyable types.
- General performance improvements of the code related to threads and futures.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1005](#)⁷¹⁷⁸ - Allow one to disable array optimizations and zero copy optimizations for each parcelport

- [Issue #936](#)⁷²³³ - Want doxygen-like source code index
- [Issue #935](#)⁷²³⁴ - Build error with gcc 4.6 and Boost 1.54.0 on hpx trunk and 0.9.6
- [Issue #933](#)⁷²³⁵ - Cannot build HPX with Boost 1.54.0
- [Issue #932](#)⁷²³⁶ - Components are destructed too early
- [Issue #931](#)⁷²³⁷ - Make HPX work on BG/Q
- [Issue #930](#)⁷²³⁸ - make git-docs is broken
- [Issue #929](#)⁷²³⁹ - Generating index in docs broken
- [Issue #928](#)⁷²⁴⁰ - Optimize `hpx::util::static_` for C++11 compilers supporting magic statics
- [Issue #924](#)⁷²⁴¹ - Make `kill_process_tree` (in `process.py`) more robust on Mac OSX
- [Issue #923](#)⁷²⁴² - Correct BLAS and RNPL cmake tests
- [Issue #922](#)⁷²⁴³ - Cannot link against BLAS
- [Issue #921](#)⁷²⁴⁴ - Implement `hpx::mem_fn`
- [Issue #920](#)⁷²⁴⁵ - Output locality with `--hpx:print-bind`
- [Issue #919](#)⁷²⁴⁶ - Correct grammar; simplify boolean expressions
- [Issue #918](#)⁷²⁴⁷ - Link to `hello_world.cpp` is broken
- [Issue #917](#)⁷²⁴⁸ - adapt cmake file to new boostbook version
- [Issue #916](#)⁷²⁴⁹ - fix problem building documentation with `xsltproc` $\geq$ 1.1.27
- [Issue #915](#)⁷²⁵⁰ - Add another TBBMalloc library search path
- [Issue #914](#)⁷²⁵¹ - Build problem with Intel compiler on Stampede (TACC)
- [Issue #913](#)⁷²⁵² - fix error messages in fibonacci examples

HPX V0.9.6 (Jul 30, 2013)

We have had over 1200 commits since the last release and we have closed roughly 140 tickets (bugs, feature requests, etc.).

General changes

The major new features in this release are:

- We further consolidated the API exposed by *HPX*. We aligned our APIs as much as possible with the existing C++11 Standard⁷³⁶⁴ and related proposals to the C++ standardization committee (such as N3632⁷³⁶⁵ and N3857⁷³⁶⁶).
- We implemented a first version of a distributed AGAS service which essentially eliminates all explicit AGAS network traffic.
- We created a native ibverbs parcelport allowing to take advantage of the superior latency and bandwidth characteristics of Infiniband networks.
- We successfully ported *HPX* to the Xeon Phi platform.
- Support for the SLURM scheduling system was implemented.
- Major efforts have been dedicated to improving the performance counter framework, numerous new counters were implemented and new APIs were added.
- We added a modular parcel compression system allowing to improve bandwidth utilization (by reducing the overall size of the transferred data).
- We added a modular parcel coalescing system allowing to combine several parcels into larger messages. This reduces latencies introduced by the communication layer.
- Added an experimental executors API allowing to use different scheduling policies for different parts of the code. This API has been modelled after the Standards proposal N3562⁷³⁶⁷. This API is bound to change in the future, though.
- Added minimal security support for localities which is enforced on the parcelport level. This support is preliminary and experimental and might change in the future.
- We created a parcelport using low level MPI functions. This is in support of legacy applications which are to be gradually ported and to support platforms where MPI is the only available portable networking layer.
- We added a preliminary and experimental implementation of a tuple-space object which exposes an interface similar to such systems described in the literature (see for instance *The Linda Coordination Language*⁷³⁶⁸).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is again a very long list of newly implemented features and fixed issues.

- [Issue #806⁷³⁶⁹](#) - make (all) in examples folder does nothing
- [Issue #805⁷³⁷⁰](#) - Adding the introduction and fixing DOCTEST dependencies for Windows use
- [Issue #804⁷³⁷¹](#) - Add stackless (non-suspendable) thread type
- [Issue #803⁷³⁷²](#) - Create proper serialization support functions for util::tuple
- [Issue #800⁷³⁷³](#) - Add possibility to disable array optimizations during serialization
- [Issue #798⁷³⁷⁴](#) - HPX_LIMIT does not work for local dataflow
- [Issue #797⁷³⁷⁵](#) - Create a parcellport which uses MPI
- [Issue #796⁷³⁷⁶](#) - Problem with Large Numbers of Threads
- [Issue #793⁷³⁷⁷](#) - Changing dataflow test case to hang consistently
- [Issue #792⁷³⁷⁸](#) - CMake Error
- [Issue #791⁷³⁷⁹](#) - Problems with local::dataflow
- [Issue #790⁷³⁸⁰](#) - wait_for() doesn't compile
- [Issue #789⁷³⁸¹](#) - HPX with Intel compiler segfaults
- [Issue #788⁷³⁸²](#) - Intel compiler support
- [Issue #787⁷³⁸³](#) - Fixed SFINAE specializations
- [Issue #786⁷³⁸⁴](#) - Memory issues during benchmarking.
- [Issue #785⁷³⁸⁵](#) - Create an API allowing to register external threads with HPX
- [Issue #784⁷³⁸⁶](#) - util::plugin is throwing an error when a symbol is not found
- [Issue #783⁷³⁸⁷](#) - How does hpx::bind work?
- [Issue #782⁷³⁸⁸](#) - Added quotes around STRING REPLACE potentially empty arguments
- [Issue #781⁷³⁸⁹](#) - Make sure no exceptions propagate into the thread manager

HPX V0.9.5 (Jan 16, 2013)

We have had over 1000 commits since the last release and we have closed roughly 150 tickets (bugs, feature requests, etc.).

General changes

This release is continuing along the lines of code and API consolidation, and overall usability improvements. We dedicated much attention to performance and we were able to significantly improve the threading and networking subsystems.

We successfully ported *HPX* to the Android platform. *HPX* applications now not only can run on mobile devices, but we support heterogeneous applications running across architecture boundaries. At the Supercomputing Conference 2012 we demonstrated connecting Android tablets to simulations running on a Linux cluster. The Android tablet was used to query performance counters from the Linux simulation and to steer its parameters.

We successfully ported *HPX* to Mac OSX (using the Clang compiler). Thanks to Pyry Jähkölä for contributing the corresponding patches. Please see the section `macos_installation` for more details.

We made a special effort to make *HPX* usable in highly concurrent use cases. Many of the *HPX* API functions which possibly take longer than 100 microseconds to execute now can be invoked asynchronously. We added uniform support for composing futures which simplifies to write asynchronous code. *HPX* actions (function objects encapsulating possibly concurrent remote function invocations) are now well integrated with all other API facilities such like `hpx::bind`.

All of the API has been aligned as much as possible with established paradigms. *HPX* now mirrors many of the facilities as defined in the C++11 Standard, such as `hpx::thread`, `hpx::function`, `hpx::future`, etc.

A lot of work has been put into improving the documentation. Many of the API functions are documented now, concepts are explained in detail, and examples are better described than before. The new documentation index enables finding information with lesser effort.

This is the first release of *HPX* we perform after the move to [Github](#)⁷⁵⁰⁹. This step has enabled a wider participation from the community and further encourages us in our decision to release *HPX* as a true open source library (*HPX* is licensed under the very liberal [Boost Software License](#)⁷⁵¹⁰).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is by far the longest list of newly implemented features and fixed issues for any of HPX' releases so far.

- [Issue #666](#)⁷⁵¹¹ - Segfault on calling `hpx::finalize` twice
- [Issue #665](#)⁷⁵¹² - Adding declaration `num_of_cores`
- [Issue #662](#)⁷⁵¹³ - `pkgconfig` is building wrong
- [Issue #660](#)⁷⁵¹⁴ - Need `uninterrupt` function
- [Issue #659](#)⁷⁵¹⁵ - Move our logging library into a different namespace
- [Issue #658](#)⁷⁵¹⁶ - Dynamic performance counter types are broken
- [Issue #657](#)⁷⁵¹⁷ - HPX v0.9.5 (RC1) `hello_world` example segfaulting
- [Issue #656](#)⁷⁵¹⁸ - Define the affinity of `parcel-pool`, `io-pool`, and `timer-pool` threads
- [Issue #654](#)⁷⁵¹⁹ - Integrate the Boost `auto_index` tool with documentation
- [Issue #653](#)⁷⁵²⁰ - Make HPX build on OS X + Clang + `libc++`
- [Issue #651](#)⁷⁵²¹ - Add fine-grained control for thread pinning
- [Issue #650](#)⁷⁵²² - Command line no error message when using `-hpx:(anything)`
- [Issue #645](#)⁷⁵²³ - Command line aliases don't work in `[teletype]`@file`[c++]`
- [Issue #644](#)⁷⁵²⁴ - Terminated threads are not always properly cleaned up
- [Issue #640](#)⁷⁵²⁵ - `future_data<T>::set_on_completed_` used without locks
- [Issue #638](#)⁷⁵²⁶ - `hpx` build with intel compilers fails on linux
- [Issue #637](#)⁷⁵²⁷ - `--copy-dt-needed-entries` breaks with gold
- [Issue #635](#)⁷⁵²⁸ - Boost V1.53 will add `Boost.Lockfree` and `Boost.Atomic`
- [Issue #633](#)⁷⁵²⁹ - Re-add examples to final 0.9.5 release
- [Issue #632](#)⁷⁵³⁰ - Example `thread_aware_timer` is broken
- [Issue #631](#)⁷⁵³¹ - FFT application throws error in `parcellayer`

⁷⁵³¹ <https://github.com/TheHPXProject/hpx/issues/631>

- Issue #630⁷⁵³² - Event synchronization example is broken
- Issue #629⁷⁵³³ - Waiting on futures hangs
- Issue #628⁷⁵³⁴ - Add an HPX_ALWAYS_ASSERT macro
- Issue #625⁷⁵³⁵ - Port coroutines context switch benchmark
- Issue #621⁷⁵³⁶ - New INI section for stack sizes
- Issue #618⁷⁵³⁷ - pkg_config support does not work with a HPX debug build
- Issue #617⁷⁵³⁸ - hpx/external/logging/boost/logging/detail/cache_before_init.hpp:139:67: error: 'get_thread_id' was not declared in this scope
- Issue #616⁷⁵³⁹ - Change wait_xxx not to use locking
- Issue #615⁷⁵⁴⁰ - Revert visibility 'fix' (fb0b6b8245dad1127b0c25ebafd9386b3945cca9)
- Issue #614⁷⁵⁴¹ - Fix Dataflow linker error
- Issue #613⁷⁵⁴² - find_here should throw an exception on failure
- Issue #612⁷⁵⁴³ - Thread phase doesn't show up in debug mode
- Issue #611⁷⁵⁴⁴ - Make stack guard pages configurable at runtime (initialization time)
- Issue #610⁷⁵⁴⁵ - Co-Locate Components
- Issue #609⁷⁵⁴⁶ - future_overhead
- Issue #608⁷⁵⁴⁷ - --hpx:list-counter-infos problem
- Issue #607⁷⁵⁴⁸ - Update Boost.Context based backend for coroutines
- Issue #606⁷⁵⁴⁹ - 1d_wave_equation is not working
- Issue #605⁷⁵⁵⁰ - Any C++ function that has serializable arguments and a serializable return type should be remotable
- Issue #604⁷⁵⁵¹ - Connecting localities isn't working anymore
- Issue #603⁷⁵⁵² - Do not verify any ini entries read from a file
- Issue #602⁷⁵⁵³ - Rename argument_size to type_size/ added implementation to get parcel size

HPX V0.9.0 (Jul 5, 2012)

We have had roughly 800 commits since the last release and we have closed approximately 80 tickets (bugs, feature requests, etc.).

General changes

- Significant improvements made to the usability of *HPX* in large-scale, distributed environments.
- Renamed `hpx::lcos::packaged_task` to `hpx::lcos::packaged_action` to reflect the semantic differences to a `packaged_task` as defined by the [C++11 Standard](#)⁷⁶⁶⁷.
- *HPX* now exposes `hpx::thread` which is compliant to the C++11 `std::thread` type except that it (purely locally) represents an *HPX* thread. This new type does not expose any of the remote capabilities of the underlying *HPX*-thread implementation.
- The type `hpx::lcos::future` is now compliant to the C++11 `std::future<>` type. This type can be used to synchronize both, local and remote operations. In both cases the control flow will ‘return’ to the future in order to trigger any continuation.
- The types `hpx::lcos::local::promise` and `hpx::lcos::local::packaged_task` are now compliant to the C++11 `std::promise<>` and `std::packaged_task<>` types. These can be used to create a future representing local work only. Use the types `hpx::lcos::promise` and `hpx::lcos::packaged_action` to wrap any (possibly remote) action into a future.
- `hpx::thread` and `hpx::lcos::future` are now cancelable.
- Added support for sequential and logic composition of `hpx::lcos::futures`. The member function `hpx::lcos::future::when` permits futures to be sequentially composed. The helper functions `hpx::wait_all`, `hpx::wait_any`, and `hpx::wait_n` can be used to wait for more than one future at a time.
- *HPX* now exposes `hpx::apply` and `hpx::async` as the preferred way of creating (or invoking) any deferred work. These functions are usable with various types of functions, function objects, and actions and provide a uniform way to spawn deferred tasks.
- *HPX* now utilizes `hpx::util::bind` to (partially) bind local functions and function objects, and also actions. Remote bound actions can have placeholders as well.
- *HPX* continuations are now fully polymorphic. The class `hpx::actions::forwarding_continuation` is an example of how the user can write its own types of continuations. It can be used to execute any function as an continuation of a particular action.
- Reworked the action invocation API to be fully conformant to normal functions. Actions can now be invoked using `hpx::apply`, `hpx::async`, or using the `operator()` implemented on actions. Actions themselves can now be cheaply instantiated as they do not have any members anymore.
- Reworked the lazy action invocation API. Actions can now be directly bound using `hpx::util::bind` by passing an action instance as the first argument.
- A minimal *HPX* program now looks like this:

```
#include <hpx/hpx_init.hpp>

int hpx_main()
{
    return hpx::finalize();
}
```

(continues on next page)

⁷⁶⁶⁷ <http://www.open-std.org/jtc1/sc22/wg21>

(continued from previous page)

```
int main()
{
    return hpx::init();
}
```

This removes the immediate dependency on the `Boost.Program_options`⁷⁶⁶⁸ library.

Note

This minimal version of an *HPX* program does not support any of the default command line arguments (such as `-help`, or command line options related to PBS). It is suggested to always pass `argc` and `argv` to *HPX* as shown in the example below.

- In order to support those, but still not to depend on `Boost.Program_options`⁷⁶⁶⁹, the minimal program can be written as:

```
#include <hpx/hpx_init.hpp>

// The arguments for hpx_main can be left off, which very similar to the
// behavior of ``main()`` as defined by C++.
int hpx_main(int argc, char* argv[])
{
    return hpx::finalize();
}

int main(int argc, char* argv[])
{
    return hpx::init(argc, argv);
}
```

- Added performance counters exposing the number of component instances which are alive on a given locality.
- Added performance counters exposing then number of messages sent and received, the number of parcels sent and received, the number of bytes sent and received, the overall time required to send and receive data, and the overall time required to serialize and deserialize the data.
- Added a new component: `hpx::components::binpacking_factory` which is equivalent to the existing `hpx::components::distributing_factory` component, except that it equalizes the overall population of the components to create. It exposes two factory methods, one based on the number of existing instances of the component type to create, and one based on an arbitrary performance counter which will be queried for all relevant localities.
- Added API functions allowing to access elements of the diagnostic information embedded in the given exception: `hpx::get_locality_id`, `hpx::get_host_name`, `hpx::get_process_id`, `hpx::get_function_name`, `hpx::get_file_name`, `hpx::get_line_number`, `hpx::get_os_thread`, `hpx::get_thread_id`, and `hpx::get_thread_description`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #71⁷⁶⁷⁰](#) - GIDs that are not serialized via `handle_gid<>` should raise an exception
- [Issue #105⁷⁶⁷¹](#) - Allow for `hpx::util::functions` to be registered in the AGAS symbolic namespace
- [Issue #107⁷⁶⁷²](#) - Nasty threadmanger race condition (reproducible in `sheneos_test`)
- [Issue #108⁷⁶⁷³](#) - Add millisecond resolution to *HPX* logs on Linux
- [Issue #110⁷⁶⁷⁴](#) - Shutdown hang in distributed with release build
- [Issue #116⁷⁶⁷⁵](#) - Don't use TSS for the applier and runtime pointers
- [Issue #162⁷⁶⁷⁶](#) - Move local synchronous execution shortcut from `hpx::function` to the applier
- [Issue #172⁷⁶⁷⁷](#) - Cache sources in CMake and check if they change manually
- [Issue #178⁷⁶⁷⁸](#) - Add an INI option to turn off ranged-based AGAS caching
- [Issue #187⁷⁶⁷⁹](#) - Support for disabling performance counter deployment
- [Issue #202⁷⁶⁸⁰](#) - Support for sending performance counter data to a specific file
- [Issue #218⁷⁶⁸¹](#) - `boost.coroutines` allows different stack sizes, but stack pool is unaware of this
- [Issue #231⁷⁶⁸²](#) - Implement movable `boost::bind`
- [Issue #232⁷⁶⁸³](#) - Implement movable `boost::function`
- [Issue #236⁷⁶⁸⁴](#) - Allow binding `hpx::util::function` to actions
- [Issue #239⁷⁶⁸⁵](#) - Replace `hpx::function` with `hpx::util::function`
- [Issue #240⁷⁶⁸⁶](#) - Can't specify `RemoteResult` with `lcos::async`
- [Issue #242⁷⁶⁸⁷](#) - `REGISTER_TEMPLATE` support for plain actions
- [Issue #243⁷⁶⁸⁸](#) - `handle_gid<>` support for `hpx::util::function`
- [Issue #245⁷⁶⁸⁹](#) - `*_c_cache` code throws an exception if the queried GID is not in the local cache
- [Issue #246⁷⁶⁹⁰](#) - Undefined references in `dataflow/adaptive1d` example

⁷⁷³⁰ <https://github.com/TheHPXProject/hpx/issues/425>

⁷⁷³¹ <https://github.com/TheHPXProject/hpx/issues/426>

General changes

- *HPX* does not need to be installed anymore to be functional.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this point release:

- [Issue #295⁷⁷³²](https://github.com/TheHPXProject/hpx/issues/295) - Don't require install path to be known at compile time.
- [Issue #371⁷⁷³³](https://github.com/TheHPXProject/hpx/issues/371) - Add `hpx::iostreams` to standard build.
- [Issue #384⁷⁷³⁴](https://github.com/TheHPXProject/hpx/issues/384) - Fix compilation with GCC 4.7.
- [Issue #390⁷⁷³⁵](https://github.com/TheHPXProject/hpx/issues/390) - Remove `keep_factory_alive` startup call from ShenEOS; add shutdown call to `H5close`.
- [Issue #393⁷⁷³⁶](https://github.com/TheHPXProject/hpx/issues/393) - Thread affinity control is broken.

Bug fixes (commits)

Here is a list of the important commits included in this point release:

- `r7642` - External: Fix backtrace memory violation.
- **`r7775` - Components: Fix symbol visibility bug with component startup providers.** This prevents one components providers from overriding another components.
- `r7778` - Components: Fix startup/shutdown provider shadowing issues.

HPX V0.8.0 (Mar 23, 2012)

We have had roughly 1000 commits since the last release and we have closed approximately 70 tickets (bugs, feature requests, etc.).

General changes

- Improved PBS support, allowing for arbitrary naming schemes of node-hostnames.
- Finished verification of the reference counting framework.
- Implemented decrement merging logic to optimize the distributed reference counting system.
- Restructured the LCO framework. Renamed `hpx::lcos::eager_future<>` and `hpx::lcos::lazy_future<>` into `hpx::lcos::packaged_task` and `hpx::lcos::deferred_packaged_task`. Split `hpx::lcos::promise` into `hpx::lcos::packaged_task` and `hpx::lcos::future`. Added 'local' futures (in namespace `hpx::lcos::local`).
- Improved the general performance of local and remote action invocations. This (under certain circumstances) drastically reduces the number of copies created for each of the parameters and return values.

⁷⁷³² <https://github.com/TheHPXProject/hpx/issues/295>

⁷⁷³³ <https://github.com/TheHPXProject/hpx/issues/371>

⁷⁷³⁴ <https://github.com/TheHPXProject/hpx/issues/384>

⁷⁷³⁵ <https://github.com/TheHPXProject/hpx/issues/390>

⁷⁷³⁶ <https://github.com/TheHPXProject/hpx/issues/393>

- Reworked the performance counter framework. Performance counters are now created only when needed, which reduces the overall resource requirements. The new framework allows for much more flexible creation and management of performance counters. The new sine example application demonstrates some of the capabilities of the new infrastructure.
- Added a buildbot-based continuous build system which gives instant, automated feedback on each commit to SVN.
- Added more automated tests to verify proper functioning of *HPX*.
- Started to create documentation for *HPX* and its API.
- Added documentation toolchain to the build system.
- Added dataflow LCO.
- Changed default *HPX* command line options to have `hpx:` prefix. For instance, the former option `--threads` is now `--hpx:threads`. This has been done to make ambiguities with possible application specific command line options as unlikely as possible. See the section *HPX Command Line Options* for a full list of available options.
- Added the possibility to define command line aliases. The former short (one-letter) command line options have been predefined as aliases for backwards compatibility. See the section *HPX Command Line Options* for a detailed description of command line option aliasing.
- Network connections are now cached based on the connected host. The number of simultaneous connections to a particular host is now limited. Parcels are buffered and bundled if all connections are in use.
- Added more refined thread affinity control. This is based on the external library Portable Hardware Locality (HWLOC).
- Improved support for Windows builds with CMake.
- Added support for components to register their own command line options.
- Added the possibility to register custom startup/shutdown functions for any component. These functions are guaranteed to be executed by an *HPX* thread.
- Added two new experimental thread schedulers: `hierarchy_scheduler` and `periodic_priority_scheduler`. These can be activated by using the command line options `--hpx:queuing=hierarchy` or `--hpx:queuing=periodic`.

Example applications

- [Graph500 performance benchmark](http://www.graph500.org/)⁷⁷³⁷ (thanks to Matthew Anderson for contributing this application).
- [GTC \(Gyrokinetic Toroidal Code\)](http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/)⁷⁷³⁸: a skeleton for particle in cell type codes.
- Random Memory Access: an example demonstrating random memory accesses in a large array
- [ShenEOS example](http://stellarcollapse.org/equationofstate)⁷⁷³⁹, demonstrating partitioning of large read-only data structures and exposing an interpolation API.
- Sine performance counter demo.
- Accumulator examples demonstrating how to write and use *HPX* components.
- Quickstart examples (like `hello_world`, `fibonacci`, `quicksort`, `factorial`, etc.) demonstrating simple *HPX* concepts which introduce some of the concepts in *HPX*.
- Load balancing and work stealing demos.

⁷⁷³⁷ <http://www.graph500.org/>

⁷⁷³⁸ <http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/>

⁷⁷³⁹ <http://stellarcollapse.org/equationofstate>

API changes

- Moved all local LCOs into a separate namespace `hpx::lcos::local` (for instance, `hpx::lcos::local_mutex` is now `hpx::lcos::local::mutex`).
- Replaced `hpx::actions::function` with `hpx::util::function`. Cleaned up related code.
- Removed `hpx::traits::handle_gid` and moved handling of global reference counts into the corresponding serialization code.
- Changed terminology: `prefix` is now called `locality_id`, renamed the corresponding API functions (such as `hpx::get_prefix`, which is now called `hpx::get_locality_id`).
- Adding `hpx::find_remote_localities`, and `hpx::get_num_localities`.
- Changed performance counter naming scheme to make it more bash friendly. The new performance counter naming scheme is now

`/object{parentname#parentindex/instance#index}/counter#parameters`

- Added `hpx::get_worker_thread_num` replacing `hpx::threadmanager_base::get_thread_num`.
- Renamed `hpx::get_num_os_threads` to `hpx::get_os_threads_count`.
- Added `hpx::threads::get_thread_count`.
- Restructured the Futures sub-system, renaming types in accordance with the terminology used by the C++11 ISO standard.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #31](#)⁷⁷⁴⁰ - Specialize `handle_gid<>` for examples and tests
- [Issue #72](#)⁷⁷⁴¹ - Fix AGAS reference counting
- [Issue #104](#)⁷⁷⁴² - heartbeat throws an exception when decrefing the performance counter it's watching
- [Issue #111](#)⁷⁷⁴³ - throttle causes an exception on the target application
- [Issue #142](#)⁷⁷⁴⁴ - One failed component loading causes an unrelated component to fail
- [Issue #165](#)⁷⁷⁴⁵ - Remote exception propagation bug in AGAS reference counting test
- [Issue #186](#)⁷⁷⁴⁶ - Test credit exhaustion/splitting (e.g. `prepare_gid` and symbol NS)
- [Issue #188](#)⁷⁷⁴⁷ - Implement remaining AGAS reference counting test cases
- [Issue #258](#)⁷⁷⁴⁸ - No type checking of GIDs in stubs classes
- [Issue #271](#)⁷⁷⁴⁹ - Seg fault/shared pointer assertion in distributed code

- Issue #324⁷⁷⁷⁴ - Duplicate exception messages
- Issue #326⁷⁷⁷⁵ - Integrate Quickbook with CMake
- Issue #329⁷⁷⁷⁶ - --help and --version should still work
- Issue #330⁷⁷⁷⁷ - Create pkg-config files
- Issue #337⁷⁷⁷⁸ - Improve usability of performance counter timestamps
- Issue #338⁷⁷⁷⁹ - Non-std exceptions deriving from std::exceptions in tfunc may be sliced
- Issue #339⁷⁷⁸⁰ - Decrease the number of send_pending_parcel threads
- Issue #343⁷⁷⁸¹ - Dynamically setting the stack size doesn't work
- Issue #351⁷⁷⁸² - 'make install' does not update documents
- Issue #353⁷⁷⁸³ - Disable FIXMEs in the docs by default; add a doc developer CMake option to enable FIXMEs
- Issue #355⁷⁷⁸⁴ - 'make' doesn't do anything after correct configuration
- Issue #356⁷⁷⁸⁵ - Don't use `hpx::util::static_` in topology code
- Issue #359⁷⁷⁸⁶ - Infinite recursion in `hpx::tuple` serialization
- Issue #361⁷⁷⁸⁷ - Add compile time option to disable logging completely
- Issue #364⁷⁷⁸⁸ - Installation seriously broken in r7443

HPX V0.7.0 (Dec 12, 2011)

We have had roughly 1000 commits since the last release and we have closed approximately 120 tickets (bugs, feature requests, etc.).

⁷⁷⁸⁸ <https://github.com/TheHPXProject/hpx/issues/364>

General changes

- Completely removed code related to deprecated AGAS V1, started to work on AGAS V2.1.
- Started to clean up and streamline the exposed APIs (see ‘API changes’ below for more details).
- Revamped and unified performance counter framework, added a lot of new performance counter instances for monitoring of a diverse set of internal *HPX* parameters (queue lengths, access statistics, etc.).
- Improved general error handling and logging support.
- Fixed several race conditions, improved overall stability, decreased memory footprint, improved overall performance (major optimizations include native TLS support and ranged-based AGAS caching).
- Added support for running *HPX* applications with PBS.
- Many updates to the build system, added support for gcc 4.5.x and 4.6.x, added C++11 support.
- Many updates to default command line options.
- Added many tests, set up buildbot for continuous integration testing.
- Better shutdown handling of distributed applications.

Example applications

- quickstart/factorial and quickstart/fibonacci, future-recursive parallel algorithms.
- quickstart/hello_world, distributed hello world example.
- quickstart/rma, simple remote memory access example
- quickstart/quicksort, parallel quicksort implementation.
- gtc, gyrokinetic torodial code.
- bfs, breadth-first-search, example code for a graph application.
- sheneos, partitioning of large data sets.
- accumulator, simple component example.
- balancing/os_thread_num, balancing/px_thread_phase, examples demonstrating load balancing and work stealing.

API changes

- Added `hpx::find_all_localities`.
- Added `hpx::terminate` for non-graceful termination of applications.
- Added `hpx::lcos::async` functions for simpler asynchronous programming.
- Added new AGAS interface for handling of symbolic namespace (`hpx::agas::*`).
- Renamed `hpx::components::wait` to `hpx::lcos::wait`.
- Renamed `hpx::lcos::future_value` to `hpx::lcos::promise`.
- Renamed `hpx::lcos::recursive_mutex` to `hpx::lcos::local_recursive_mutex`, `hpx::lcos::mutex` to `hpx::lcos::local_mutex`
- Removed support for Boost versions older than V1.38, recommended Boost version is now V1.47 and newer.

- Removed `hpx::process` (this will be replaced by a real process implementation in the future).
- Removed non-functional LCO code (`hpx::lcos::dataflow`, `hpx::lcos::thunk`, `hpx::lcos::dataflow_variable`).
- Removed deprecated `hpx::naming::full_address`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #28⁷⁷⁸⁹](#) - Integrate Windows/Linux CMake code for *HPX* core
- [Issue #32⁷⁷⁹⁰](#) - `hpx::cout()` should be `hpx::cout`
- [Issue #33⁷⁷⁹¹](#) - AGAS V2 legacy client does not properly handle `error_code`
- [Issue #60⁷⁷⁹²](#) - AGAS: allow for `registerid` to optionally take ownership of the `gid`
- [Issue #62⁷⁷⁹³](#) - `adaptive1d` compilation failure in Fusion
- [Issue #64⁷⁷⁹⁴](#) - Parcel subsystem doesn't resolve domain names
- [Issue #83⁷⁷⁹⁵](#) - No error handling if no console is available
- [Issue #84⁷⁷⁹⁶](#) - No error handling if a hosted locality is treated as the bootstrap server
- [Issue #90⁷⁷⁹⁷](#) - Add general commandline option `-N`
- [Issue #91⁷⁷⁹⁸](#) - Add possibility to read command line arguments from file
- [Issue #92⁷⁷⁹⁹](#) - Always log exceptions/errors to the log file
- [Issue #93⁷⁸⁰⁰](#) - Log the command line/program name
- [Issue #95⁷⁸⁰¹](#) - Support for distributed launches
- [Issue #97⁷⁸⁰²](#) - Attempt to create a bad component type in AMR examples
- [Issue #100⁷⁸⁰³](#) - `factorial` and `factorial_get` examples trigger AGAS component type assertions
- [Issue #101⁷⁸⁰⁴](#) - Segfault when `hpx::process::here()` is called in `fibonacci2`
- [Issue #102⁷⁸⁰⁵](#) - `unknown_component_address` in `int_object_semaphore_client`
- [Issue #114⁷⁸⁰⁶](#) - `marduk` raises assertion with default parameters

- Issue #154⁷⁸³⁰ - Compilation fails for r5661
- Issue #155⁷⁸³¹ - Sine performance counters example chokes on chrono headers
- Issue #156⁷⁸³² - Add build type to `--version`
- Issue #157⁷⁸³³ - Extend AGAS caching to store gid ranges
- Issue #158⁷⁸³⁴ - r5691 doesn't compile
- Issue #160⁷⁸³⁵ - Re-add AGAS function for resolving a locality to its prefix
- Issue #168⁷⁸³⁶ - Managed components should be able to access their own GID
- Issue #169⁷⁸³⁷ - Rewrite AGAS future pool
- Issue #179⁷⁸³⁸ - Complete switch to request class for AGAS server interface
- Issue #182⁷⁸³⁹ - Sine performance counter is loaded by other examples
- Issue #185⁷⁸⁴⁰ - Write tests for symbol namespace reference counting
- Issue #191⁷⁸⁴¹ - Assignment of read-only variable in `point_geometry`
- Issue #200⁷⁸⁴² - Seg faults when querying performance counters
- Issue #204⁷⁸⁴³ - `--ifnames` and suffix stripping needs to be more generic
- Issue #205⁷⁸⁴⁴ - `--list-*` and `--print-counter-*` options do not work together and produce no warning
- Issue #207⁷⁸⁴⁵ - Implement decrement entry merging
- Issue #208⁷⁸⁴⁶ - Replace the spinlocks in AGAS with `hpx::lcos::local_mutexes`
- Issue #210⁷⁸⁴⁷ - Add an `--ifprefix` option
- Issue #214⁷⁸⁴⁸ - Performance test for PX-thread creation
- Issue #216⁷⁸⁴⁹ - VS2010 compilation
- Issue #222⁷⁸⁵⁰ - r6045 `context_linux_x86.hpp`
- Issue #223⁷⁸⁵¹ - fibonacci hangs when changing the state of an active thread
- Issue #225⁷⁸⁵² - Active threads end up in the FEB wait queue

2.11.3 Namespace changes

HPX V1.9.0 Namespace changes

The latest release includes amongst others changes in the namespaces so that *HPX* facilities correspond to the C++ Standard Library. The old namespaces are deprecated. Below is a comprehensive list of the namespace changes.

Table 2.194: Namespace changes in V1.9.0

Old namespace	New namespace
<code>hpx::util::mem_fn</code>	<code>hpx::mem_fn</code>
<code>hpx::util::invoke</code>	<code>hpx::invoke</code>
<code>hpx::util::invoke_r</code>	<code>hpx::invoke_r</code>
<code>hpx::util::invoke_fused</code>	<code>hpx::invoke_fused</code>
<code>hpx::util::invoke_fused_r</code>	<code>hpx::invoke_fused_r</code>
<code>hpx::util::unlock_guard</code>	<code>hpx::unlock_guard</code>
<code>hpx::parallel::v1::reduce_by_key</code>	<code>hpx::experimental::reduce_by_key</code>
<code>hpx::parallel::v1::sort_by_key</code>	<code>hpx::experimental::sort_by_key</code>
<code>hpx::parallel::task_canceled_exception</code>	<code>hpx::experimental::task_canceled_exception</code>
<code>hpx::parallel::task_block</code>	<code>hpx::experimental::task_block</code>
<code>hpx::parallel::define_task_block</code>	<code>hpx::experimental::define_task_block </code>
<code>hpx::parallel::define_task_block_restore_thread</code>	<code>hpx::experimental::define_task_block_restore_thread</code>
<code>hpx::execution::experimental::task_group</code>	<code>hpx::experimental::task_group</code>

2.14 About *HPX*

2.14.1 History

The development of High Performance ParalleX (*HPX*) began in 2007. At that time, Hartmut Kaiser became interested in the work done by the ParalleX group at the [Center for Computation and Technology \(CCT\)](#)⁷⁸⁶⁸, a multi-disciplinary research institute at [Louisiana State University \(LSU\)](#)⁷⁸⁶⁹. The ParalleX group was working to develop a new and experimental execution model for future high performance computing architectures. This model was christened ParalleX. The first implementations of ParalleX were crude, and many of those designs had to be discarded entirely. However, over time the team learned quite a bit about how to design a parallel, distributed runtime system which implements the concepts of ParalleX.

From the very beginning, this endeavour has been a group effort. In addition to a handful of interested researchers, there have always been graduate and undergraduate students participating in the discussions, design, and implementation of *HPX*. In 2011 we decided to formalize our collective research efforts by creating the [STE||AR](#)⁷⁸⁷⁰ group (Systems Technology, Emergent Parallelism, and Algorithm Research). Over time, the team grew to include researchers around the country and the world. In 2014, the [STE||AR](#)⁷⁸⁷¹ Group was reorganized to become the international community it is today. This consortium of researchers aims to develop stable, sustainable, and scalable tools which will enable application developers to exploit the parallelism latent in the machines of today and tomorrow. Our goal of the *HPX* project is to create a high quality, freely available, open source implementation of ParalleX concepts for conventional and future systems by building a modular and standards conforming runtime system for SMP and distributed application environments. The API exposed by *HPX* is conformant to the interfaces defined by the C++ ISO Standard and adheres to the programming guidelines used by the [Boost](#)⁷⁸⁷² collection of C++ libraries. We steer the development of *HPX* with real world applications and aim to provide a smooth migration path for domain scientists.

To learn more about [STE||AR](#)⁷⁸⁷³ and ParalleX, see [People](#) and [Why HPX?](#).

2.14.2 People

The **STE||AR**⁷⁸⁷⁴ Group (pronounced as stellar) stands for “**S**ystems **T**echnology, **E**mergent **P**arallelism, and **A**lgorithm **R**esearch”. We are an international group of faculty, researchers, and students working at various institutions around the world. The goal of the **STE||AR**⁷⁸⁷⁵ Group is to promote the development of scalable parallel applications by providing a community for ideas, a framework for collaboration, and a platform for communicating these concepts to the broader community.

Our work is focused on building technologies for scalable parallel applications. *HPX*, our general purpose C++ runtime system for parallel and distributed applications, is no exception. We use *HPX* for a broad range of scientific applications, helping scientists and developers to write code which scales better and shows better performance compared to more conventional programming models such as MPI.

HPX is based on *ParalleX* which is a new (and still experimental) parallel execution model aiming to overcome the limitations imposed by the current hardware and the techniques we use to write applications today. Our group focuses on two types of applications - those requiring excellent strong scaling, allowing for a dramatic reduction of execution time for fixed workloads and those needing highest level of sustained performance through massive parallelism. These applications are presently unable (through conventional practices) to effectively exploit a relatively small number of cores in a multi-core system. By extension, these application will not be able to exploit high-end exascale computing systems which are likely to employ hundreds of millions of such cores by the end of this decade.

Critical bottlenecks to the effective use of new generation high performance computing (HPC) systems include:

- *Starvation*: due to lack of usable application parallelism and means of managing it,
- *Overhead*: reduction to permit strong scalability, improve efficiency, and enable dynamic resource management,
- *Latency*: from remote access across system or to local memories,
- *Contention*: due to multicore chip I/O pins, memory banks, and system interconnects.

The *ParalleX* model has been devised to address these challenges by enabling a new computing dynamic through the application of message-driven computation in a global address space context with lightweight synchronization. The work on *HPX* is centered around implementing the concepts as defined by the *ParalleX* model. *HPX* is currently targeted at conventional machines, such as classical Linux based Beowulf clusters and SMP nodes.

We fully understand that the success of *HPX* (and *ParalleX*) is very much the result of the work of many people. To see a list of who is contributing see our tables below.

Acknowledgements

Thanks also to the following people who contributed directly or indirectly to the project through discussions, pull requests, documentation patches, etc.

- Panos Syskakis for benchmarking and optimizing our parallel algorithms.
- Shreyas Atre, for contributing fixes to our implementation of senders/receivers and extending our coroutines integration with senders/receivers.
- Alexander Neumann, for contributing fixes to the cmake build system.
- Dimitra Karatza, for her work on refactoring the documentation and providing a new user-friendly environment during and after Google Season of Docs 2021.
- Srinivas Yadav, for his work on SIMD support in algorithms before and during Google Summer of Code 2021.
- Akhil Nair, for his work on adapting algorithms to C++20 before and during Google Summer of Code 2021.
- Alexander Toktarev, for updating the parallel algorithm customization points to use `tag_fallback_invoke` for the default implementations.
- Brice Goglin, for reporting and helping fix issues related to the integration of hwloc in *HPX*.
- Giannis Gonidelis, for his work on the ranges adaptation during the Google Summer of Code 2020.
- Auriane Reverdell ([Swiss National Supercomputing Centre](https://www.cct.lsu.edu)⁷⁹⁰⁵), for her tireless work on refactoring our CMake setup and modularizing *HPX*.
- Christopher Hinz, for his work on refactoring our CMake setup.
- Weile Wei, for fixing *HPX* builds with CUDA on Summit.
- Severin Strobl, for fixing our CMake setup related to linking and adding new entry points to the *HPX* runtime.
- Rebecca Stobaugh, for her major documentation review and contributions during and after the 2019 Google Season of Documentation.
- Jan Melech, for adding automatic serialization of simple structs.
- Austin McCartney, for adding concept emulation of the Ranges TS bidirectional and random access iterator concepts.
- Marco Diers, reporting and fixing issues related PMIx.
- Maximilian Bremer, for reporting multiple issues and extending the component migration tests.
- Piotr Mikolajczyk, for his improvements and fixes to the set and count algorithms.
- Grant Rostig, for reporting several deficiencies on our web pages.
- Jakub Golinowski, for implementing an *HPX* backend for OpenCV and in the process improving documentation and reporting issues.

⁷⁹⁰⁵ <https://www.cscs.ch>

- Mikael Simberg ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹⁰⁶), for his tireless help cleaning up and maintaining *HPX*.
- Tianyi Zhang, for his work on HPXMP.
- Shahrzad Shirzad, for her contributions related to Phylanx.
- Christopher Ogle, for his contributions to the parallel algorithms.
- Surya Priy, for his work with statistic performance counters.
- Anushi Maheshwari, for her work on random number generation.
- Bruno Pitrus, for his work with parallel algorithms.
- Nikunj Gupta, for rewriting the implementation of `hpx_main.hpp` and for his fixes for tests.
- Christopher Taylor, for his interest in *HPX* and the fixes he provided. Chris also contributed support for RISC-V architectures.
- Shoshana Jakobovits, for her work on the resource partitioner.
- Denis Blank, who re-wrote our unwrapped function to accept plain values arbitrary containers, and properly deal with nested futures.
- Ajai V. George, who implemented several of the parallel algorithms.
- Taeguk Kwon, who worked on implementing parallel algorithms as well as adapting the parallel algorithms to the Ranges TS.
- Zach Byerly ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁰⁷), who in his work developing applications on top of *HPX* opened tickets and contributed to the *HPX* examples.
- Daniel Estermann, for his work porting *HPX* to the Raspberry Pi.
- Alireza Kheirkhahan ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁰⁸), who built and administered our local cluster as well as his work in distributed IO.
- Abhimanyu Rawat, who worked on stack overflow detection.
- David Pfander, who improved signal handling in *HPX*, provided his optimization expertise, and worked on incorporating the Vc vectorization into *HPX*.
- Denis Demidov, who contributed his insights with VexCL.
- Khalid Hasanov, who contributed changes which allowed to run *HPX* on 64Bit power-pc architectures.
- Zahra Khatami ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁰⁹), who contributed the prefetching iterators and the persistent auto chunking executor parameters implementation.
- Marcin Copik, who worked on implementing GPU support for C++AMP and HCC. He also worked on implementing a HCC backend for *HPX.Compute*.
- Minh-Khanh Do, who contributed the implementation of several segmented algorithms.
- Bibek Wagle ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹¹⁰), who worked on fixing and analyzing the performance of the *parcel* coalescing plugin in *HPX*.
- Lukas Troska, who reported several problems and contributed various test cases allowing to reproduce the corresponding issues.

⁷⁹⁰⁶ <https://www.cscs.ch>

⁷⁹⁰⁷ <https://www.lsu.edu>

⁷⁹⁰⁸ <https://www.lsu.edu>

⁷⁹⁰⁹ <https://www.lsu.edu>

⁷⁹¹⁰ <https://www.lsu.edu>

- Andreas Schaefer, who worked on integrating his library ([LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁹¹¹) with *HPX*. He reported various problems and submitted several patches to fix issues allowing for a better integration with [LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁹¹².
- Satyaki Upadhyay, who contributed several examples to *HPX*.
- Brandon Cordes, who contributed several improvements to the inspect tool.
- Harris Brakmic, who contributed an extensive build system description for building *HPX* with Visual Studio.
- Parsa Amini ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹¹³), who refactored and simplified the implementation of *AGAS* in *HPX* and who works on its implementation and optimization.
- Luis Martinez de Bartolome who implemented a build system extension for *HPX* integrating it with the [Conan](https://www.conan.io/)⁷⁹¹⁴ C/C++ package manager.
- Vinay C Amatya ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹¹⁵), who contributed to the documentation and provided some of the *HPX* examples.
- Kevin Huck and Nick Chaimov ([University of Oregon](https://uoregon.edu)⁷⁹¹⁶), who contributed the integration of APEX (Autonomic Performance Environment for eXascale) with *HPX*.
- Francisco Jose Tapia, who helped with implementing the parallel sort algorithm for *HPX*.
- Patrick Diehl, who worked on implementing CUDA support for our companion library targeting GPGPUs ([HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹¹⁷).
- Eric Lemanissier contributed fixes to allow compilation using the MingW toolchain.
- Nidhi Makhijani who helped cleaning up some enum consistencies in *HPX* and contributed to the resource manager used in the thread scheduling subsystem. She also worked on *HPX* in the context of the Google Summer of Code 2015.
- Larry Xiao, Devang Bacharwar, Marcin Copik, and Konstantin Kronfeldner who worked on *HPX* in the context of the Google Summer of Code program 2015.
- Daniel Bourgeois ([Center for Computation and Technology \(CCT\)](https://www.cct.lsu.edu)⁷⁹¹⁸) who contributed to *HPX* the implementation of several parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁹¹⁹).
- Anuj Sharma and Christopher Bross ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁹²⁰), who worked on *HPX* in the context of the [Google Summer of Code](https://developers.google.com/open-source/soc/)⁷⁹²¹ program 2014.
- Martin Stumpf ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁹²²), who rebuilt our contiguous testing infrastructure (see the [HPX Buildbot Website](http://rostam.cct.lsu.edu/)⁷⁹²³). Martin is also working on [HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹²⁴ (mainly all work related to [OpenCL](https://www.khronos.org/ocl/)⁷⁹²⁵) and implementing an *HPX* backend for [POCL](https://portablecl.org/)⁷⁹²⁶, a portable computing language solution based on [OpenCL](https://www.khronos.org/ocl/)⁷⁹²⁷.

⁷⁹²⁶ <https://portablecl.org/>

⁷⁹²⁷ <https://www.khronos.org/ocl/>

- Grant Mercer ([University of Nevada, Las Vegas](https://www.unlv.edu)⁷⁹²⁸), who helped creating many of the parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁹²⁹).
- Damond Howard ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹³⁰), who works on [HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹³¹ (mainly all work related to [CUDA](https://www.nvidia.com/object/cuda_home_new.html)⁷⁹³²).
- Christoph Junghans (Los Alamos National Lab), who helped making our buildsystem more portable.
- Antoine Tran Tan (Laboratoire de Recherche en Informatique, Paris), who worked on integrating *HPX* as a backend for [NT2](https://www.numscale.com/nt2/)⁷⁹³³. He also contributed an implementation of an API similar to Fortran co-arrays on top of *HPX*.
- John Biddiscombe ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹³⁴), who helped with the BlueGene/Q port of *HPX*, implemented the parallel sort algorithm, and made several other contributions.
- Erik Schnetter (Perimeter Institute for Theoretical Physics), who greatly helped to make *HPX* more robust by submitting a large amount of problem reports, feature requests, and made several direct contributions.
- Mathias Gaunard (Metascale), who contributed several patches to reduce compile time warnings generated while compiling *HPX*.
- Andreas Buhr, who helped with improving our documentation, especially by suggesting some fixes for inconsistencies.
- Patricia Grubel ([New Mexico State University](https://www.nmsu.edu)⁷⁹³⁵), who contributed the description of the different *HPX* thread scheduler policies and is working on the performance analysis of our thread scheduling subsystem.
- Lars Viklund, whose wit, passion for testing, and love of odd architectures has been an amazing contribution to our team. He has also contributed platform specific patches for FreeBSD and MSVC12.
- Agustin Berge, who contributed patches fixing some very nasty hidden template meta-programming issues. He rewrote large parts of the API elements ensuring strict conformance with the C++ ISO Standard.
- Anton Bikineev for contributing changes to make using `boost::lexical_cast` safer, he also contributed a thread safety fix to the `iostreams` module. He also contributed a complete rewrite of the serialization infrastructure replacing `Boost.Serialization` inside *HPX*.
- Pyry Jähkölä, who contributed the Mac OS build system and build documentation on how to build *HPX* using Clang and `libc++`.
- Mario Mulansky, who created an *HPX* backend for his `Boost.Odeint` library, and who submitted several test cases allowing us to reproduce and fix problems in *HPX*.
- Rekha Raj, who contributed changes to the description of the Windows build instructions.
- Jeremy Kemp how worked on an *HPX* OpenMP backend and added regression tests.
- Alex Nagelberg for his work on implementing a C wrapper API for *HPX*.
- Chen Guo, helvihartmann, Nicholas Pezolano, and John West who added and improved examples in *HPX*.
- Joseph Kleinhenz, Markus Elfring, Kirill Kropivnyansky, Alexander Neundorff, Bryant Lam, and Alex Hirsch who improved our CMake.
- Tapasweni Pathak, Praveen Velliengiri, Jean-Loup Tastet, Michael Levine, Aalekh Nigam, HadrienG2, Prayag Verma, Islada, Alex Myczko, and Avyav Kumar who improved the documentation.
