$ ./create_library_skeleton <lib_name>
```

This creates a skeleton with the necessary files for an *HPX* module. It will not create any actual source files. The structure of this skeleton is as follows:

- `<lib_name>/`
  - `README.rst`
  - `CMakeLists.txt`
  - `cmake`
  - `docs/`

[1054] https://github.com/TheHPXProject/hpx/blob/master/libs/create_module_skeleton.py

    - `index.rst`
  - `examples/`
    - `CMakeLists.txt`
  - `include/`
    - `hpx/`
      - `<lib_name>`
  - `src/`
    - `CMakeLists.txt`
  - `tests/`
    - `CMakeLists.txt`
    - `unit/`
      - `CMakeLists.txt`
    - `regressions/`
      - `CMakeLists.txt`
    - `performance/`
      - `CMakeLists.txt`

A `README.rst` should be always included which explains the basic purpose of the library and a link to the generated documentation.

A main `CMakeLists.txt` is created in the root directory of the module. By default it contains a call to `add_hpx_module` which takes care of most of the boilerplate required for a module. You only need to fill in the source and header files in most cases.

`add_hpx_module` requires a module name. Optional flags are:

Optional single-value arguments are:

- `INSTALL_BINARIES`: Install the resulting library.

Optional multi-value arguments-are:

- `SOURCES`: List of source files.
- `HEADERS`: List of header files.
- `COMPAT_HEADERS`: List of compatibility header files.
- `DEPENDENCIES`: Libraries that this module depends on, such as other modules.
- `CMAKE_SUBDIRS`: List of subdirectories to add to the module.

The `include` directory should contain only headers that other libraries need. For each of those headers, an automatic header test to check for self containment will be generated. Private headers should be placed under the `src` directory. This allows for clear separation. The `cmake` subdirectory may include additional CMake[1055] scripts needed to generate the respective build configurations.

Compatibility headers (forwarding headers for headers whose location is changed when creating a module, if moving them from the main library) should be placed in an `include_compatibility` directory. This directory is not created by default.

[1055] https://www.cmake.org

Documentation is placed in the `docs` folder. A empty skeleton for the index is created, which is picked up by the main build system and will be part of the generated documentation. Each header inside the `include` directory will automatically be processed by Doxygen and included into the documentation.

Tests are placed in suitable subdirectories of `tests`.

When in doubt, consult existing modules for examples on how to structure the module.

Finding circular dependencies

Our CI will perform a check to see if there are circular dependencies between modules. In cases where it's not clear what is causing the circular dependency, running the cpp-dependencies[1056] tool manually can be helpful. It can give you detailed information on exactly which files are causing the circular dependency. If you do not have the `cpp-dependencies` tool already installed, one way of obtaining it is by using our docker image. This way you will have exactly the same environment as on the CI. See *Using docker for development* for details on how to use the docker image.

To produce the graph produced by CI run the following command (`HPX_SOURCE` is assumed to hold the path to the *HPX* source directory):

```
$ cpp-dependencies --dir $HPX_SOURCE/libs --graph-cycles circular_dependencies.dot
```

This will produce a `dot` file in the current directory. You can inspect this manually with a text editor. You can also convert this to an image if you have `graphviz` installed:

```
$ dot circular_dependencies.dot -Tsvg -o circular_dependencies.svg
```

This produces an `svg` file in the current directory which shows the circular dependencies. Note that if there are no cycles the image will be empty.

You can use `cpp-dependencies` to print the include paths between two modules.

```
$ cpp-dependencies --dir $HPX_SOURCE/libs --shortest <from> <to>
```

prints all possible paths from the module `<from>` to the module `<to>`. For example, as most modules depend on `config`, the following should give you a long list of paths from `algorithms` to `config`:

```
$ cpp-dependencies --dir $HPX_SOURCE/libs --shortest algorithms config
```

The following should report that it can't find a path between the two modules:

```
$ cpp-dependencies --dir $HPX_SOURCE/libs --shortest config algorithms
```

2.11 Releases

2.11.1 List of supported releases

HPX V2.1.0 (TBD)

[1056] https://github.com/tomtom-international/cpp-dependencies

Breaking changes

- The execution-policy overloads of `hpx::ranges::all_of`, `any_of`, `none_of`, `count`, `count_if`, `contains`, `equal`, `starts_with`, `ends_with`, `contains_subrange`, `is_partitioned`, and `lexicographical_compare` now follow P3179. Range arguments must model `std::ranges::random_access_range` and `std::ranges::sized_range`; iterator/sentinel arguments must model `std::random_access_iterator` and `std::sized_sentinel_for`. Overloads without an execution policy retain their existing constraints. In particular, the `contains` iterator/sentinel overload requires both types to model `std::input_iterator`.
- The P3179-aligned overloads use standard ranges callable defaults and pass predicates and projections by value. Their concept-based constraints may produce different diagnostics than the previous iterator `static_assert` checks. Code that explicitly names HPX's former default callable types may need to use the corresponding `std::ranges` callable types.
- The `count` and `contains` task-policy overloads store an owned copy of copyable search values in their asynchronous operation state. Noncopyable lvalues, including arrays, are borrowed and must remain valid until the returned future becomes ready, even if the future is discarded.

HPX V1.11.0 (Jun 30, 2025)

This release is the last version of HPX that supports C++17. Future versions of HPX will require compilation using C++20 or above.

General changes

- Added synchronous versions of all collective operations. Added global predefined communicator objects that are accessible through new APIs: `hpx::collectives::get_world_communicator()` refers to all localities and `hpx::collectives::get_local_communicator()` refers to all threads on the calling locality. We unified the interfaces of the different communicator objects.
- Added `hpx::experimental::run_on_all` allowing to run a given function (possibly concurrently) using a given execution policy.
- Added a helper object `hpx::runtime_manager` that simplifies the initialization of HPX without needing to modify the `main` function of the application.
- We improved the compatibility with various accelerator frameworks (SYCL, OneAPI).
- Applied build system changes that allow building HPX without any prerequisites. This requires to pass `-DHPX_WITH_FETCH_HWLOC=On` and `-DHPX_WITH_FETCH_BOOST=On` to the CMake[1057] configuration.
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- Added the `hpx::contains` and `hpx::contains_subrange` parallel algorithms.
- Adapted many of HPX' parallel algorithms to be usable with senders/receivers.

[1057] https://www.cmake.org

Breaking changes

- We have moved most of the APIs that were defined in the namespace `hpx::parallel::execution` to the namespace `hpx::execution::experimental`. It was not possible to add compatibility facilities that will allow to continue using the old APIs, applications will have to be changed in order to continue functioning correctly.
- The CMake configuration parameter `HPX_WITH_RUN_MAIN_EVERYWHERE` is now deprecated and will be removed in the future. Use the preprocessor macro `HPX_HAVE_RUN_MAIN_EVERYWHERE` on a target-by-target case instead.
- Removed the dysfunctional libfabric parcelport.
- Removed features that were long deprecated (starting V1.8): - `hpx::flush`, `hpx::endl`, `hpx::async_flush`, `hpx::async_endl` - Various enumerator types are now only available as `class enum` requiring explicit scoped use of the enumerator values - Various non-conforming overloads of parallel algorithms - `hpx::for_loop` and friends (now only available as

  `hpx::experimental::for_loop`)

  - `hpx::parallel::induction` is now only available as `hpx::experimental::induction`
  - `hpx::parallel::reduction` and friends are now only available as `hpx::experimental::reduction`
  - `hpx::assertion::source_location` is now only available as `hpx::source_location`
  - `hpx::lcos::split_future` is now only available as `hpx::split_future`
  - `hpx::lcos::wait` and friends have been removed altogether
  - `hpx::lcos::wait_any` and friends are now only available as `hpx::wait_any`
  - `hpx::lcos::wait_some` and friends are now only available as `hpx::wait_some`
  - `hpx::lcos::wait_each` and friends are now only available as `hpx::wait_each`
  - `hpx::lcos::wait_all` and friends are now only available as `hpx::wait_all`
  - `hpx::lcos::when_all` and friends are now only available as `hpx::when_all`
  - `hpx::lcos::when_any` and friends are now only available as `hpx::when_any`
  - `hpx::lcos::when_each` and friends are now only available as `hpx::when_each`
  - `hpx::lcos::when_some` and friends are now only available as `hpx::when_some`
  - `hpx::util::optional` and related facilities are now only available as `hpx::optional`
  - `hpx::util::bind` and related facilities are now only available as `hpx::bind`
  - `hpx::util::function` and friends are now only available as `hpx::function`
  - `hpx::traits::is_bound_action` and related facilities are now only available as `hpx::is_bound_action`
  - `hpx::traits::is_bind_expression` and related facilities are now only available as `hpx::is_bind_expression`
  - `hpx::traits::is_placeholder` and related facilities are now only available as `hpx::is_placeholder`
  - `hpx::lcos::future` and related facilities are now only available as `hpx::future`
  - `hpx::memory::intrusive_ptr` is now only available as `hpx::intrusive_ptr`
  - `hpx::lcos::local::barrier` is now only available as `hpx::barrier`
  - `hpx::lcos::barrier` is now only available as `hpx::distributed::barrier`

  - `hpx::lcos::local::cpp20_binary_semaphore` is now only available as `hpx::detail::binary_semaphore`
  - `hpx::lcos::local::condition_variable` and friends are now only available as `hpx::condition_variable`
  - `hpx::lcos::local::counting_semaphore` and friends are now only available as `hpx::counting_semaphore`
  - `hpx::lcos::local::cpp20_latch` and is now only available as `hpx::latch`
  - `hpx::lcos::latch` and is now only available as `hpx::distributed::latch`
  - `hpx::lcos::local::upgrade_lock` and friends are now only available as `hpx::upgrade_lock`
  - `hpx::lcos::local::mutex` and friends are now only available as `hpx::mutex`
  - `hpx::lcos::local::spinlock` and friends are now only available as `hpx::spinlock`
  - `hpx::lcos::local::call_once` and friends are now only available as `hpx::call_once`
  - `hpx::util::annotated_function` and is now only available as `hpx::annotated_function`
  - `hpx::components::abstract_simple_component_base` and is now only available as `hpx::components::abstract_component_base`
  - `hpx::naming::id_type` and is now only available as `hpx::id_type`

2.11.2 List of older releases

HPX V2.0.0 (Oct 31, 2026)

HPX V2.0.0 is one of the largest releases in the project's history, touching the language baseline, the execution model, the networking layer, the build system, and observability tooling. The inventories below cover more than 800 pull requests with merge commits in the release comparison, eight additional PRs incorporated through transplanted changes, and more than 220 closed milestone issues. The sections below expand on each major theme.

This release is the result of a broad community effort. Since V1.11.0, more than 90 contributors have authored more than 4,000 commits, and over 75 of them made their first contribution to *HPX* during this release cycle. We are grateful to everyone who contributed code, documentation, tests, bug reports, and reviews. Your work made this release possible.

Language and Standard Baseline

- C++20 is now the *minimum* required standard, up from C++17. V1.11.0 was the last release to support C++17 (Issue #5497[1207]).
- Compared with the 1.11 release branch, the minimum supported GCC version rises from 11 to 12, and Visual Studio from 2019 to 2022. The minimum Clang version remains 16. The configuration now rejects GCC versions older than 12 with a clear message instead of failing later with compile errors; `-DHPX_WITH_GCC_VERSION_CHECK=OFF` removes the check, at the user's own risk (PR #7886[1208]).
- Base builds require CMake 3.18 or newer. The prerequisite table has been corrected to match the enforced minimum; C++20 module builds require a newer CMake version as described below.
- A large volume of obsolete `#if`/feature-test guards that existed only to support pre-C++20 compilers were removed (Issue #6941[1209]), simplifying the codebase now that C++20 is guaranteed.

C++20 Modules

Native C++20 module support was added across the *HPX* module hierarchy (Issue #6014[1210]). It is optional: `HPX_WITH_CXX_MODULES` defaults to `OFF`. Enabling it requires CMake 3.28 or newer, a Ninja or Visual Studio generator, and GCC 14+, LLVM Clang 16+, or Visual Studio 17.4+. AppleClang is rejected by the module configuration checks.

With C++20 modules enabled, each *HPX* module is used through its generated header `hpx/modules/<module>.hpp`, which imports the corresponding C++ module, or through the public headers such as `hpx/init.hpp` and `hpx/future.hpp`. The headers inside an *HPX* module (`hpx/<module>/...`, for example `hpx/futures/future.hpp`) are not part of the public API. Including one of them in addition to the imported module defines its entities a second time, and the compilation fails with redefinition errors (see Breaking changes below).

C++26 Adoption (Ahead of Standardization)

Adopted early via reflection and experimental compiler support:

HPX adopted several not-yet-finalized C++26 features early, using experimental compiler support, well ahead of formal standardization:

- **Reflection-based serialization** - arbitrary user types can now be serialized without hand-written `serialize()` member functions, using compile-time reflection to enumerate members automatically.
- **Reflection-driven actions and components** - a large family of new reflection APIs replaced macro-heavy boilerplate:
  - `reflect_action` integrated with `basic_action` (PR #7281[1211]), including direct actions (PR #7349[1212]), component actions (PR #7311[1213]), and auto-registration (PR #7298[1214]).
  - `reflect_client` and the `HPX_REFLECT_CLIENT` macro for reflection-based client types (PR #7385[1215]), with `hpx::launch::sync` overload support (PR #7417[1216]).
  - `hpx::async<^^func>(target, ...)`-style reflection overloads (PR #7376[1217]), plus reflection overloads threaded through `async_distributed` (sync, post, dataflow, async_continue, launch-policy variants: PR #7509[1218], PR #7515[1219], PR #7523[1220], PR #7462[1221]).
  - Example programs migrated to demonstrate the new API: `factorial_reflection` (PR #7508[1222]), `fibonacci_reflection` (PR #7455[1223]).
  - A migration guide (PR #7348[1224]) and compile-time overhead benchmarks comparing macros vs. `reflect_action` (PR #7332[1225], PR #7459[1226]) were added to help users and maintainers evaluate the transition.
- **Early contract support** - *HPX* API functions have begun to be annotated with C++26 contract preconditions/postconditions, starting with sorting and heap algorithms (PR #7434[1227]). `HPX_CONTRACT_ASSERT` falls back onto `HPX_ASSERT` if contracts are disabled (PR #7700[1228]).

Senders/Receivers Overhaul

HPX's original, home-grown implementation of P0443/P1897/P2300 (Issue #5045[1229]) has been removed entirely and replaced by stdexec[1230] (NVIDIA[1231]'s reference implementation) as the sole senders/receivers foundation, usable from both C++20 and C++26:

- Multiple correctness/compliance passes: fixing P2300 compliance and `set_stopped` handling for `any_sender` (PR #7453[1232]), `get_allocator` query support for schedulers (PR #7320[1233]), allocator support for `when_all_vector` (PR #7346[1234]), and `get_completion_domain` advertisement on `run_loop` (PR #7276[1235]). Scheduler executors accept sized and unsized forward ranges with distinct sentinels as bulk shapes without traversing them repeatedly (PR #7651[1236]).
- Distributed and accelerator adaptors were updated to integrate cleanly with stdexec[1237]: `async_mpi` (PR #7341[1238], PR #7318[1239], PR #7277[1240]), `async_cuda` (PR #7330[1241], PR #7374[1242]), and the fork-join executor (fixing truncation bugs on large ranges, Issue #6922[1243]). Distributed sender/receiver facilities were also moved into their own module (PR #7396[1244]) with dedicated distributed test coverage (PR #7402[1245], PR #7354[1246]).
- Algorithm-level sender/receiver support was extended to more algorithms, e.g. `set_intersection` (PR #7365[1247]), `set_difference` (PR #7344[1248]), and `shift_left`/`shift_right` (PR #7296[1249]).
- Miscellaneous but important bug fixes: a lifetime race in `sync_wait`'s notify path (PR #7394[1250]), a silent hang in `make_future` with `run_loop_scheduler` (PR #7437[1251]), and a future/promise bridge redesign (PR #7355[1252]). The pinned stdexec[1253] is patched so that `exec::async_scope::on_empty()` compiles with nvcc (Issue #7676[1254], PR #7695[1255]). One of the constructors of `run_loop`'s operation state didn't set the function that completes the operation, so running such an operation jumped to an invalid address (PR #7762[1256]). Further patches of the pinned stdexec[1257] let NVCC 12.8 instantiate host sender chains and keep SYCL builds from picking up CUDA's atomic headers (PR #7711[1258]). Builds without CUDA, HIP builds included, now always use `std::atomic` in stdexec[1259]; they failed when an old libcu++ was installed in a default include directory

(Issue #7884[1260], PR #7885[1261]).

Runtime and Execution APIs

- The P2079 parallel scheduler integrates sender work with HPX thread pools (PR #6655[1262]). `hpx::execution::experimental::get_parallel_scheduler()` uses the default pool; the overload taking a pool reference supports named pools obtained through `hpx::resource::get_thread_pool` (PR #7579[1263]).
- Execution-policy traits and the independent `rebind_policy_executor_t` / `rebind_policy_parameters_t` utilities support inspecting and adapting policies (PR #7550[1264], PR #7551[1265]). The customization points `construct_rebound_policy_executor` and `construct_rebound_policy_parameters` let policies that carry additional state preserve it when being rebound (PR #7585[1266]).
- Thrust integration adds HPX execution policies for Thrust algorithms in CUDA builds (PR #6744[1267]), controlled by `HPX_WITH_THRUST`.
- New concurrent containers include vector, queue, unordered map, and unordered set (PR #6897[1268]).
- `hpx::local::termination_detection` waits for local work to finish, with timeout, deadline, and stop-token cancellation overloads (PR #6886[1269], PR #6890[1270]).
- `hpx::threads::set_thread_affinity` and `hpx::this_thread::set_affinity` expose thread-affinity control (PR #6861[1271]).
- `finalize` and `disconnect` accept `std::chrono` durations through new overloads (PR #7612[1272]).
- Tasks can be marked with their expected size: `hpx::threads::with_task_size<Size>(f)` and the shorthands `small_task`, `medium_task` and `large_task` attach a `hpx::threads::task_size` to a function, `hpx::traits::get_task_size` reads it, and `hpx::post`, `hpx::async`, the executors, `.then()` and dataflow pass it to the scheduler in the `thread_schedule_hint`. The schedulers don't use the size yet (Issue #7837[1273], PR #7848[1274]). Only functions carry a size: a size in the hint of an executor, a launch policy or a scheduler has no effect, and bulk operations don't pass sizes on, as their tasks run the function many times. The iteration wrappers of the parallel algorithms forward the size of the loop body. Each size stands for a run time, given by `hpx::task_size_duration`: `nano_task` (the new smallest size) about 1 ns, small about 100 ns, medium about 10 us and large about 1 ms or more. `hpx::bulk_task_size` gives the size of a task that calls a function of a given size many times (PR #7925[1275]). A function keeps its size when it is stored in an `hpx::function` or `hpx::move_only_function`, bound, or run by `hpx::thread`, the same way it keeps its annotation (PR #7926[1276]). `hpx::traits::get_task_size_for<F, Args...>` gives the size of a call with arguments of the given types: the function objects of the standard library, such as `std::plus<>` or `std::less<>`, called with

arithmetic, enum or pointer arguments are nano tasks. `reduce`, `transform_reduce`, `transform` and `merge` pass the size of their operations on (PR #7946[1277]).

- `hpx::execution::experimental::task_size_chunk_size` are executor parameters that chunk the iterations of a loop based on the task size of its body instead of measuring an iteration. A loop runs on as many cores as can be given `chunks_per_core` (8) chunks of at least `min_chunk_time` (2.5 us) each, and on the calling thread if that is only one chunk. The defaults can be changed with the configuration entries `hpx.task_size_chunk_size.min_chunk_time_us` and `hpx.task_size_chunk_size.chunks_per_core`, and the new benchmark `task_size_chunk_size_sweep` finds the best values for a machine. The new CMake option `HPX_WITH_TASK_SIZE_DEFAULT_PARAMETERS` (`OFF` by default) makes the default executor parameters use `task_size_chunk_size` for loops whose body has a size (PR #7948[1278]).
- `hpx::agas::set_rpc_timeout` now rejects positive durations shorter than one millisecond: it returns `false` and leaves the stored timeout unchanged instead of storing a zero-millisecond timeout.
- `HPX::init` supports runtime initialization from libraries, and `HPX::auto_wrap_main` starts the runtime around `main()` without requiring the wrapping header (PR #6775[1279], PR #6804[1280]). `HPX::auto_wrap_main` is also supported with MSVC (Issue #7662[1281], PR #7664[1282]). Local initialization was decoupled from the distributed runtime (PR #7103[1283]).

`tag_invoke` Removal

A systematic, multi-PR effort removed `tag_invoke`-based customization across nearly every layer of the library, replacing it with plain member functions - this is one of the more consequential breaking changes for downstream code that customized *HPX* behavior via ADL/`tag_invoke`:

- Core execution layer (PR #7368[1284]), executor CPOs (PR #7319[1285]), container algorithms (PR #7395[1286]), and parallel algorithms broadly (PR #7380[1287], PR #7301[1288]).
- Specific customization points converted to members, e.g. `connect_t` (PR #7292[1289]).
- Cleanup of now-stale `hpx_tag_invoke` module dependencies (PR #7451[1290]) and a final sweep (PR #7443[1291]).

Networking / Parcelport Work

- A new, optimized MPI parcelport, with orderly teardown that quiesces before `MPI_Finalize` (PR #7404[1292]).
- An optimized LCI[1293] parcelport.
- A separate LCW/MPIx parcelport was added (PR #6815[1294]), enabled with `HPX_WITH_PARCELPORT_LCW=ON` (default `OFF`).
- Substantial AGAS/parcelset hardening:
  - `force_disconnect` support for removing crashed/unreachable localities, including races between disconnect completion and AGAS resolve visibility (Issue #7483[1295], PR #7490[1296], PR #7491[1297], PR #7447[1298]).
  - Dijkstra termination detection improvements, including probe retry bounding and cursor restart per probe (PR #7496[1299], PR #7516[1300], PR #7495[1301]).
  - Connection/communicator caching fixes, e.g. avoiding communicator reuse between collectives test phases (PR #7526[1302], PR #7364[1303], PR #7781[1304], PR #7791[1305]) and caching channel communicators per site (PR #7481[1306]).
  - Disconnected-locality handling, including a dedicated dispatch guard (PR #7536[1307]) and correct error handling in `resolve_locality` (PR #7388[1308]).
  - A fix for the shared-pointer serialization type-confusion / deserialization vulnerability reported in Issue #7333[1309] (PR #7334[1310]).
- Non-blocking calls on distributed clients whose id is not resolved yet (e.g. a client created from `find_from_basename`) no longer block: the `launch::async` and `launch::apply` overloads of `channel`, `send_channel` and `receive_channel`, as well as `hpx::async` and `hpx::post` with a client target, are deferred until the id is available. `hpx::post` to such a client now returns `false`. MPI is now only finalized by whoever initialized it; `hpx::mpi::experimental::finalize` used to finalize MPI underneath the MPI parcelport (Issue #5919[1311], PR #7693[1312]).
- The MPI parcelport pre-posts several receives for incoming parcel headers instead of one, which caused intermittent timeouts while AGAS was bootstrapping. The number of receives is set by the new `hpx.parcel.mpi.max_header_receives` setting, which by default depends on the size of the communicator (Issue #7734[1313], PR #7739[1314]).

- On Windows, a refused TCP connection attempt now fails immediately instead of after about two seconds of SYN retransmissions. As refused attempts are retried up to 1000 times, sending a parcel to a locality whose process is gone could block the sending thread for more than half an hour (PR #7741[1315]). The TCP parcelport no longer terminates its I/O thread if a shutdown races with the cleanup of a send operation (PR #7720[1316]).
- With Asio 1.34 and later, host names without an IPv6 address didn't resolve: only the IPv6 lookup was used, and the fallback from IPv4 to IPv6 couldn't work. All address families are resolved again, as with older Asio versions (PR #7816[1317]).
- A send to a locality that has gone away (the connection was reset or aborted, the pipe broke, or the peer closed it) is now always reported to the caller as `locality_was_disconnected`. Before, the write handler got the raw Asio error, or during shutdown a success code, after which the caller waited for a reply that never came (PR #7865[1318]).
- A parcelport that rescheduled a suspended operation on a thread never armed the timer that resumes it, because the result of registering the thread was checked the wrong way round; delayed network operations stayed suspended (Issue #7893[1319], PR #7894[1320]).
- `hpx::force_disconnect` can now be called on any locality, not only on the console. On another locality it asks the console to remove the given locality and returns the result; before, it failed with `hpx::error::invalid_status`. Disconnecting the calling locality itself or the console is rejected with `hpx::error::bad_parameter` (PR #7901[1321]).
- Removing a locality from the connection cache no longer clears its entry while connections to it are still checked out, which threw `invalid_status` on the locality being disconnected and hung `force_disconnect` (PR #7912[1322]). Credit decrements still queued for a locality that was removed with `force_disconnect` are dropped, as they already were for a disconnected one, instead of escaping as a `bad_parameter` exception, and so are decrements whose target can't be resolved during shutdown. A locality that is being force-disconnected is reported as disconnected by `resolve_locality` until its disconnect is recorded (PR #7917[1323]).

Observability / Tracing

- A new, minimal tracing abstraction layer, `hpx::tracing` (Issue #7049[1324]), unifying the Intel ITT API[1325] (Intel VTune) and Tracy[1326] backends behind one API, with APEX[1327] also unified under it (PR #7293[1328]).
- Tracy[1329] support was added as a first-class profiler backend, including causal tracing (PR #7423[1330]), fiber support activation (Issue #6989[1331]), and per-subsystem event gating for overhead control (PR #7529[1332]).
- Instrumentation was added broadly: schedulers and work-stealing (PR #7450[1333]), background work and OS-

thread sleep events (PR #7484[1334]), parcel send/receive (PR #7511[1335]), future continuations (PR #7403[1336]), task lifecycle events (PR #7347[1337]), suspend/resume hooks (PR #7372[1338]), data-parallel workloads (PR #7392[1339]), and general runtime instrumentation (PR #7357[1340]).

- LIKWID profiling support was added (PR #6053[1341]), enabled with `HPX_LIKWID_WITH_LIKWID=ON`.
- New tooling built on top of this infrastructure: **hpx-top**, an interactive TUI performance monitor (Issue #7001[1342]), and **hpx_stat_viewer**; both scripts are now installed (Issue #7656[1343], PR #7658[1344]).
- A distributed-observability prototype ("HPX-Vision") was proposed and discussed (Issue #7225[1345]) as a longer-term direction beyond this release.
- The Intel ITT API[1346] tracing backend now provides a shared domain, regions, and markers (PR #7636[1347]). The Tracy targets are exported so that consumers can find them through HPX (PR #7654[1348]), and Tracy export annotations were moved off class heads to build with GCC 11 and 12 (PR #7669[1349]).
- APEX[1350] can now be used with the local runtime (`HPX_WITH_DISTRIBUTED_RUNTIME=OFF`) (Issue #4567[1351], PR #7686[1352]).
- The Intel ITT API[1353] backend now emits task lifecycle and work-stealing events when ITTNotify is enabled at runtime (`--hpx:ini=hpx.use_itt_notify=1`): each task is shown as an overlapped task with its execution segments, and stolen tasks are marked. This is `ON` by default for `HPX_WITH_ITTNOTIFY=ON` builds; pass `-DHPX_WITH_TRACING_LIFECYCLE_EVENTS=OFF` and `-DHPX_WITH_TRACING_WORK_STEALING_EVENTS=OFF` to the CMake[1354] configuration to get the earlier behavior (PR #7675[1355]).

Collectives Infrastructure

Hierarchical collectives were built out and hardened substantially this cycle:

- New hierarchical primitives: `all_reduce` (with the reduction seed now moved instead of copied, PR #7398[1356]), `all_gather/scatter` (flattened payloads, PR #7375[1357]), `all_to_all` (flattened exchange payloads PR #7377[1358], hierarchical implementation PR #7307[1359], size-based pairwise dispatch PR #7431[1360], and a ~66x performance regression fix for the flat variant, Issue #7411[1361]), and a hierarchical **scan** collective (PR #7343[1362]).

[1360] https://github.com/TheHPXProject/hpx/pull/7431

- Validation and robustness hardening across collectives, including rejecting explicit generations mixed with auto-generation (PR #7369[1363]), unifying generation handling across collective types (PR #7326[1364]), and broad input-validation/tree-coverage hardening (PR #7321[1365], PR #7359[1366]).
- `hpx::distributed::barrier` was reimplemented on top of the collectives infrastructure rather than its own ad hoc protocol (Issue #7203[1367]).
- Any site can now be the root of a hierarchical communicator; the tree used to be rooted at site 0. The communicator names of a root other than 0 get a `root<N>/` prefix, so that communicators with different roots can share a base name (PR #7829[1368]).

Supervision Module

A new lifecycle/observability subsystem, "supervision," was introduced for managing dispatch of distributed work under crash/partial-failure conditions:

- Core infrastructure for lifecycle events and observers (PR #7399[1369]), a dispatch component (PR #7413[1370]), and admission control (PR #7409[1371]).
- Fenced dispatch support (PR #7425[1372]), dispatch locality and join epoch handling (PR #7438[1373]), and target resolution (PR #7427[1374]), plus general dispatch fixes and cleanup (PR #7457[1375]).
- A reflection overload for `dispatch_work` was added consistent with the broader C++26 reflection push (PR #7432[1376]).
- The module can be disabled at build time (`HPX_WITH_SUPERVISION=OFF`); a related abort-on-disable regression was fixed (Issue #7513[1377]).
- The supervision dispatch manual and API reference were brought in line with the API (PR #7804[1378], PR #7805[1379]).
- Pending `await_terminal()` waiters are now completed with `invalid_status` before the runtime shuts down, instead of their promises being broken after it stopped, which aborted a locality that called `supervision::finalize()` while a failure detection sweep was in flight (Issue #7825[1380], PR #7835[1381]). `discover_and_join` leaves time for the join: a registry name that never resolves no longer uses up the whole budget, so that the join to the root failed even though the other peers were found (PR #7867[1382]). At shutdown, activity agents on other localities are no longer asked whether they are still active: an agent whose locality had

already left never answered, and the shutdown of the thread manager hung (PR #7866[1383]). A notification that can't be delivered to an observer whose locality went away no longer marks the publishing target as failed; the observer is unregistered instead (PR #7897[1384]).

Parallel Algorithms

A large, ongoing wave of standard-conformance and correctness work across the parallel algorithms library:

- **C++20/23 conformance**: fixing sentinel return-type mismatches in `hpx::ranges` container CPOs (PR #7322[1385]), unifying projection support across `starts_with`/`ends_with` (PR #7314[1386]), and adding projection coverage for `unique`/`unique_copy` (PR #7393[1387]) and `minmax_element` (PR #7230[1388]).
- **New algorithms**: `hpx::experimental::for_each_index` per P4150 (Issue #7214[1389]), `hpx::ranges::iota` (Issue #6969[1390]), `find_last`/`find_last_if`/`find_last_if_not` (Issue #6892[1391]), and the C++23 fold family: `fold_left`, `fold_right`, `fold_left_first`, `fold_right_last`, `fold_left_with_iter`, and `fold_left_first_with_iter` (PR #6884[1392], PR #6910[1393]).
- **Correctness fixes**: `max_element` returning the last, rather than first, greatest element (PR #7304[1394]), two bugs in `chunk_size.hpp` involving swapped arguments (Issue #6931[1395]), an incorrect single-segment subrange handling bug in segmented `scan` (Issue #7052[1396]), and non-preserved sequenced semantics in parallel `uninitialized_relocate` for overlapping ranges (Issue #6878[1397]).
- **Proxy/iterator support**: proxy support for `find` algorithms (Issue #6719[1398]), unwrapping contiguous iterators (Issue #6729[1399]), and conditional special member functions for `zip_iterator` (Issue #6752[1400]).
- **Distributed segmented merge**: added `merge` support for segmented input and output ranges distributed across localities, with sequential, parallel, and task execution policies (PR #7545[1401]), also with C++20 modules enabled (PR #7698[1402], PR #7707[1403]).
- **Strided loops**: `for_loop_strided`, `for_loop_n_strided` and their range variants now follow N4755: `for_loop_n_strided` invokes the body `n` times, the stride must be positive, and live-out induction variables advance by the number of iterations (see Breaking changes below, PR #7703[1404]).
- **Datapar/SIMD**: fixing EVE - the Expressive Vector Engine[1405]/simd unaligned load/store broadcast bugs (PR #7435[1406], Issue #7287[1407]), and guarding a mismatched SIMD path on `zip_iterator` compatibility (PR

#7328[1408]).

- **Fixed-size SIMD policies**: added `hpx::execution::fixed_size_simd<N>` and `hpx::execution::par_fixed_size_simd<N>` (plus their `task` variants) to select vector lane counts explicitly. Datapar loops and algorithms use the policy's lane count, exposed through `hpx::execution::policy_traits`. Existing SIMD policies retain the native lane count (PR #7674[1409]).
- **Boolean chunk results**: the partitioners no longer collect chunk results of type `bool` in a `std::vector<bool>`, whose elements share memory locations, so that concurrently finishing chunks could lose a result. This made `hpx::ranges::contains` return `false` sporadically for values in the range (PR #7736[1410]).
- **Chunk iterators**: decrementing `chunk_size_iterator` and `chunk_size_idx_iterator` over a bidirectional iterator no longer hangs with MSVC (PR #7735[1411]).
- **find_end**: the parallel `find_end` compared the rest of the subsequence with the values following its first element (`t + 1`, `t + 2`, ...) instead of with the subsequence itself, so it could miss matches or report false ones, and it didn't compile for element types without `operator++` (Issue #7766[1412], PR #7767[1413]).
- **Static chunk sizes**: with a chunk size larger than the number of elements, `chunk_size_iterator` and `chunk_size_idx_iterator` computed the last chunk and the end of the range from the unclamped chunk size. The range now consists of one chunk covering all elements (Issue #7859[1414], PR #7860[1415]).
- **Merge**: the parallel `merge` is partitioned over all of its output elements instead of over the longer input, so that executor parameters see the whole work of the merge (PR #7942[1416]).
- **Bulk completion**: the bulk operations of `parallel_executor`, and so the parallel algorithms, complete when their last chunk is done, instead of when all of their worker tasks have finished. A worker whose chunks were all stolen by others no longer holds up the operation, and workers without chunks are no longer spawned (PR #7949[1417]).

Scheduler / Threading Improvements

- **NUMA-aware work stealing**: a distance-aware scheduling feature (Issue #7091[1418]), plus fixes for suspended-processing-unit handling in NUMA-aware scheduling (Issue #6963[1419]) and reduced lock contention via randomized victim selection (Issue #6904[1420]).
- **Queue performance**: SPSC queue performance work for the work-requesting scheduler (Issue #7112[1421]), and comparative benchmarking / hardening of the MPMC queue (Issue #7167[1422]), plus a fix for a race condition in `lockfree::deque::empty()` (Issue #7158[1423]).
- **Memory/lifetime fixes**: memory accumulating while iterating with a sliding semaphore (Issue #7185[1424]) and while creating tasks (Issue #7150[1425]); better lifetime management for background/pool

threads (PR #7350[1426]); thread-data size reductions (PR #7379[1427]); and batched atomic decrements in `thread_queue::cleanup_terminated_locked()` (Issue #7085[1428]).

- **Fork-join executor**: fixed silent truncation for ranges larger than 2^32 (Issue #6922[1429]).
- **Shared priority scheduler**: the scheduler now creates a new thread when one is requested (Issue #5189[1430], PR #7682[1431]). Destroying a thread from outside the pool no longer indexes the scheduler's per-worker data with an invalid worker number (Issue #7908[1432], PR #7909[1433]).
- **Fork dispatch**: fixed `hpx::launch::fork` tasks remaining unscheduled when launched from a plain OS thread or an HPX thread in another pool. Both `post` and `async` now schedule the task directly when an immediate handoff is unavailable (PR #7687[1434], PR #7699[1435]).
- **Staged task stealing**: `hpx.thread_queue.min_tasks_to_steal_staged` now only applies to other workers stealing staged tasks. A worker always converts its own staged tasks, even if there are fewer of them than the configured minimum; before, such tasks were never run, so any non-zero setting could hang applications. The default (`0`) is not affected (PR #7730[1436]).
- **Spin-wait hints**: `HPX_SMT_PAUSE` now emits `yield` on ARM and AArch64 (`__yield()` with MSVC) (PR #7727[1437]).
- **Scheduler contention**: the local priority queue scheduler starts stealing staged tasks after 30 empty scheduling loop iterations instead of `hpx.max_idle_loop_count / 2` (100000 by default), but until the latter only from workers holding at least 10 staged tasks. Both can be changed with the new settings `hpx.thread_queue.idle_loop_count_steal_staged` and `hpx.thread_queue.min_tasks_to_steal_staged_early`. New work items now only wake workers that are backing off, and a worker that finds work resets its own idle backoff (PR #7725[1438]).
- **Early steal minima**: with the local priority queue scheduler, idle workers steal pending threads only from workers that have at least `hpx.thread_queue.min_tasks_to_steal_pending_early` (4) of them, which avoids contention on a queue that all idle workers find at the same time. The early minima for pending and staged tasks no longer apply during a window of idle scheduling loop iterations. Instead, they are lifted for a victim once the thieves find that its owner doesn't get to its few tasks, and a worker woken up because new work arrived ignores them for its first steal. This shortens the time until a few tasks posted by a busy worker run from milliseconds to microseconds (PR #7856[1439]).
- **Hierarchical spawning**: the tasks posted by `parallel_executor_spawn_hierarchically` captured the launch policy of a loop iteration by reference and could read it after the iteration ended, which hung bulk execution with GCC (Issue #7887[1440], PR #7900[1441]).
- **Work-requesting schedulers**: these schedulers never actually stole tasks. They do now, which also required fixing a reference leak for every stolen thread with `local-workrequesting-mc` and a hang when suspending worker threads (PR #7726[1442]). Idle workers now send steal requests right away, as the schedulers stay in fast idle

[1442] https://github.com/TheHPXProject/hpx/pull/7726

mode (Issue #7746[1443], PR #7755[1444]). A worker answering a steal request no longer hands out tasks while it has fewer pending tasks than `hpx.thread_queue.min_tasks_to_steal_pending`, as with the other schedulers, and stealing fewer tasks than that minimum is no longer always refused (PR #7771[1445]).

- **Bound threads**: a thread with `thread_priority::bound` that yields with `pending_boost`, for instance while spinning on a contended spinlock, now stays on its worker thread. Before, it could resume on a different OS thread, which aborted if it held a `std::mutex` (PR #7740[1446]).
- **Background threads**: a background thread that yielded in the middle of its work is no longer dropped when its worker thread stops; this could leave a parcel half sent and hang the shutdown of a locality (PR #7723[1447]). Creating background threads is now tested with every scheduler (Issue #6190[1448], PR #7749[1449], PR #7797[1450]), and the background thread helpers are exported from the C++20 module (Issue #7758[1451], PR #7759[1452]). A pool with a background work function no longer raises `hpx.max_background_threads` for the pools created after it (Issue #7747[1453], PR #7752[1454]), and the background scheduler no longer sets every scheduler mode bit, which turned stealing back on (Issue #7742[1455], PR #7750[1456]).
- **Scheduler settings**: `--hpx:queuing=!<name>` selected an empty scheduler name and always failed, and `--hpx:high-priority-threads` is now only accepted for schedulers that have high priority queues (Issue #7743[1457], PR #7749[1458], PR #7757[1459]). The default of `hpx.thread_queue.max_delete_count` is now `HPX_THREAD_QUEUE_MAX_DELETE_COUNT`, `min_add_new_count` is limited to `max_add_new_count`, and the shared priority scheduler cleans up all terminated threads once `max_terminated_threads` is exceeded (Issue #7748[1460], PR #7754[1461]). Changing scheduler modes at runtime (`add_scheduler_mode` and friends) now applies each scheduler's own rules, as setting them does: `hpx.numa_sensitive` works with the shared priority scheduler again, `local-workrequesting` keeps stealing, and the static schedulers keep it off (Issue #7745[1462], PR #7753[1463]). The documentation now states that the `local` scheduler ignores thread priorities, including `thread_priority::bound` (Issue #7761[1464], PR #7770[1465]).
- **NUMA-sensitive stealing**: `--hpx:numa-sensitive` and `hpx.numa_sensitive` distinguish three levels again for the local, local priority and ABP priority schedulers: at level 0 all workers may steal across NUMA domains, at level 1 only the workers at a domain boundary steal from the nearest domains, and at level 2 nobody steals across domains. The default, and the value of the bare option, is now 1; before, the bare option turned NUMA sensitivity off, and levels 1 and 2 behaved the same. `hpx::is_scheduler_numa_sensitive()` reports the configured setting. The work-requesting schedulers ignore the setting for now (Issue #7744[1466], PR #7756[1467]).
- **Running tasks as children**: `post()` could access a task launched with the `run_as_child` hint after another

worker had already finished and released it, and dropped the schedule hint of such a task (Issue #7724[1468], PR #7751[1469]). A stackless task can now be run directly by its waiting parent; this crashed before (Issue #7708[1470], PR #7718[1471]). A stackful task run directly by its parent now ends as `terminated`, like a stackless one; before, it was left in state `unknown`, so the parent didn't notice that it had run (Issue #7713[1472], PR #7819[1473]). Children run directly by their parent are now counted in the thread and phase counts of the pool (Issue #7830[1474], PR #7836[1475]).

- **Per-worker data**: the per-worker data of the schedulers and the `thread_queue` objects are aligned to the cache line size, so that the data of different workers no longer shares cache lines. This removes most of the processes whose spawn throughput was stuck in a slow mode (PR #7845[1476]). They are now aligned to the new `hpx::threads::get_destructive_interference_size()` instead, 128 bytes on x86-64, ARM64 and 64-bit POWER, as the spatial prefetcher of Intel CPUs fetches pairs of 64-byte lines. The new advanced CMake option `HPX_WITH_DESTRUCTIVE_INTERFERENCE_SIZE` overrides the default. The scheduler's per-worker data is grouped by who writes it, and the mutex of each `thread_queue` and the scheduling counters of each worker get a region of their own (PR #7872[1477]).
- **Shutdown**: a pool no longer hangs at shutdown when an *HPX* thread places new work on the queue of a worker that has already left its scheduling loop. The last worker to leave now takes over the work left on any queue (PR #7864[1478]). A timed suspension that is woken early no longer leaves its timer helper thread pending after the workers stopped, which hung the shutdown (PR #7918[1479]).
- **Suspending workers**: resuming a worker right after it decided to suspend could lose the wakeup and leave the worker asleep, and a spurious wakeup could end the suspension early (Issue #7783[1480], PR #7784[1481]).
- **Queue length**: `get_queue_length()` for all workers, which the `/threadqueue/length` performance counter uses, threw with the shared priority scheduler; it now returns the sum over all queues (PR #7855[1482]). With thread manager logging enabled, the exit message of a worker read the counters of the wrong worker for every pool but the first (PR #7838[1483]).
- **Documentation**: a new manual section, "Configuring and tuning the thread schedulers", describes how a worker finds work, all settings that influence it, and which scheduler uses which setting; the configuration tables now list all keys of the `[hpx]` and `[hpx.thread_queue]` sections (PR #7832[1484]).

Build / CI Modernization

- A `CMakePresets.json` file was added for simplified configuration (Issue #6798[1485]), along with support for the Ninja Multi-Config generator (Issue #6710[1486]).
- GitHub Actions workflows were consolidated into composite actions (Issue #7087[1487]), and a slash-command-driven CI workflow was introduced (Issue #7075[1488]).
- Dynamic build-and-test discovery replaced some hard-coded exclusion lists, though this briefly regressed test coverage on Windows (Issue #7151[1489], Issue #7199[1490]) before being fixed.
- CircleCI usage was reduced/removed in favor of GitHub Actions.
- Numerous obsolete C++20 feature-test guards were deleted now that C++20 is the guaranteed baseline (Issue #6941[1491]).
- macOS/vcpkg and hidden-visibility build issues were fixed (Issue #6772[1492], Issue #6653[1493]), and Fedora-specific macro collisions (`BLOCK_SIZE`) were resolved (Issue #6961[1494]).
- Conan builds now alias lowercase targets for Asio and Hwloc (Issue #7659[1495], PR #7661[1496]).
- MSVC and MinGW fixes: `dbghelp.lib` is named from `backtrace.cpp` (PR #7665[1497]), and the static empty vtable fallback in `execution_base` is used on Windows builds (Issue #7650[1498], PR #7652[1499]). The raw MSVC `hpx_main` path of `godbolt-minimal` is now CI-tested and documented, and passes `/SUBSYSTEM:CONSOLE` (PR #7644[1500], PR #7683[1501]).
- A Linux CI workflow with `_GLIBCXX_DEBUG` enabled was added (PR #7673[1502]), and the parallel scheduler tests were fixed on Clang 16 (PR #7679[1503]).
- `HPX_WITH_MALLOC` was silently ignored with MSVC: the selected allocator was not linked. It is now, and the Windows release CI builds with mi-malloc[1504] (PR #7732[1505]).
- The configuration tests are no longer compiled with warnings treated as errors, so warnings caused by a packager's compiler flags no longer make feature checks such as the one for `std::atomic` fail (Issue #7719[1506], PR #7729[1507]).
- Tests no longer use names that the Windows SDK headers define as macros or types (such as `SIZE`), and the inspect tool's `--windows_macro` check now reports them (PR #7738[1508]).

[1508] https://github.com/TheHPXProject/hpx/pull/7738

- `HPX_WITH_NANOBENCH` no longer requires networking to be enabled, and works with MSVC (PR #7800[1509]).
- Fetching hwloc (`HPX_WITH_FETCH_HWLOC=ON`) keeps the timestamps of its archive, so that its build no longer tries to rerun automake, and a failing hwloc build now stops the configuration right away (Issue #7820[1510], PR #7821[1511]).
- The performance tests of the CI are registered with `add_hpx_performance_report_test` and report to CDash. Each benchmark runs 30 times, the medians of the executions are compared with reference results of the node the tests ran on, and pull requests get a comment only about measurements that changed by more than 5%. The runs of the commits of the master branch are recorded in the performance history at hpx-performance[1512], with graphs of every benchmark over time (PR #6514[1513], PR #7831[1514], PR #7839[1515]). The graphs show the medians over the commits of the master branch and list the commits after which a median moved by more than 5% (PR #7899[1516]), and runs missing from the history can be added by hand (PR #7903[1517]). Two scheduler reports measure task creation, stealing and the waking of idle workers on many cores (PR #7888[1518]).
- The `cancel-ci` label and the `/cancel-ci` comment now also cancel the running workflows of pull requests from forks (PR #7228[1519]).
- The pkg-config files can be generated again when the MPI link flags are wrapped in `$<HOST_LINK:...>` by FindMPI, which failed the configuration with the modules built as object libraries (Issue #7826[1520], PR #7833[1521]).
- The Windows CI workflows build their dependencies with vcpkg and keep them in the GitHub Actions cache, instead of downloading a prebuilt export (Issue #7857[1522], PR #7858[1523]).

Security / Robustness Fixes

- **Shared-pointer serialization vulnerability**: an insecure deserialization / type-confusion issue in shared-pointer serialization was fixed (Issue #7333[1524], PR #7334[1525]).
- **Data races**: a race in `hostname_print_helper::get_hostname()` on worker-thread startup (Issue #7520[1526], PR #7525[1527], with a regression test added in PR #7546[1528]), and on the wait counter of the scheduler's idle backoff (Issue #7701[1529], PR #7702[1530]).
- **Synchronization**: corrected timed semaphore waits (PR #7617[1531]), a deadlock and race in `latch::reset` (PR #7555[1532]), and handling of spurious wakeups in `hpx::barrier` (PR #7611[1533]).

[1530] https://github.com/TheHPXProject/hpx/pull/7702
[1531] https://github.com/TheHPXProject/hpx/pull/7617
[1532] https://github.com/TheHPXProject/hpx/pull/7555
[1533] https://github.com/TheHPXProject/hpx/pull/7611

`hpx::barrier::arrive_and_wait` no longer reads the phase after the lock was released (PR #7685[1534]), and `timed_mutex::try_lock_until` now keeps waiting until the deadline instead of giving up after the first wakeup (PR #7714[1535]). The destructor of an `hpx::stop_callback` created for a token without any remaining `hpx::stop_source` no longer waits forever for a callback that never runs (PR #7782[1536]). A timed wait on a counting semaphore that timed out no longer loses a release that arrived at the same time (PR #7802[1537]). Move-assigning to an `hpx::jthread` that still owned a running thread terminated the program; it now requests that thread to stop and joins it first, as the standard requires (PR #7817[1538]). The memory order used after a condition-variable wakeup in future `wait()` was upgraded from relaxed to acquire (PR #7677[1539]). `condition_variable::notify_all` and `abort_all` left the waiting entries pointing to a local queue on the stack of the notifying thread, which a waiter that timed out or was aborted later accessed (Issue #7786[1540], PR #7787[1541]). `condition_variable::abort_all` and `notify_one` could still wake a waiter that had already left the wait, which terminated the process or woke an unrelated thread; `abort_all` now rejects new waiters until it has drained the queue (PR #7879[1542]). A waiter is now woken only once it is suspended, and one that left its wait is no longer woken at all, which removes the late wakeups behind intermittent `future_uncompleted` errors. This needs no reference counting of the waiting threads (PR #7904[1543]). `shared_mutex::lock` and `try_lock` could take the lock while another thread was upgrading its shared lock to an exclusive one, so both threads owned it (Issue #7873[1544], PR #7874[1545]).

- **Stopping the runtime**: concurrent calls to `hpx::local::stop()` could take ownership of the same runtime and destroy it twice. A second call now fails with `invalid_status` (Issue #7768[1546], PR #7769[1547]).
- **AGAS garbage collection**: fixed background collection when networking is disabled (PR #7627[1548]).
- **Exception safety**: a memory-leak risk in `options_description_easy_init` under exceptions was fixed (Issue #7040[1549]), and unsafe `std::strcat` usage in `print.cpp` was replaced with safer string operations (Issue #7046[1550]). `hpx::split_future` on a future without a shared state, for instance a default-constructed or moved-from one, now reports `no_state` instead of dereferencing a null pointer (Issue #7806[1551], PR #7809[1552]).
- **Serialization correctness**: a double-read/type-mismatch bug in `exception_ptr::load()` was fixed (PR #7278[1553]), along with a semantic mismatch in serialization archive flags (Issue #7034[1554]). Collection sizes read from archives are now checked before use (PR #7594[1555]), as is the length of a checkpoint read from a stream (PR #7705[1556]).
- **Process launching**: failures while setting up a child process, such as a failed change of the working directory, are now reported (Issue #7646[1557], PR #7649[1558]).

[1558] https://github.com/TheHPXProject/hpx/pull/7649

- **Caches**: `local_cache::reserve` evicted entries based on the difference between the old and the new capacity instead of the number of entries over the new limit, so it could empty a cache that already fit, or leave an unlimited cache over its new limit (Issue #7792[1559], PR #7793[1560]). `local_cache::free_space` skipped the entry to be evicted next, so the following evictions didn't follow the policy of the cache, and inserting an entry larger than the whole cache could crash (Issue #7823[1561], PR #7824[1562]). `local_cache::update` didn't account for the size of an entry it replaced, and accepted a replacement larger than the cache (Issue #7846[1563], PR #7847[1564]). On 64-bit Windows an amount of space to free of 2 GiB or more turned negative, so that `local_cache` evicted nothing and still stored entries beyond its capacity (PR #7889[1565]). With the `size_entry` and `lfu_entry` policies, `local_cache` discarded entries in the opposite of the documented order: the smallest entries instead of the biggest, and the most frequently used instead of the least frequently used (PR #7892[1566]).

Breaking changes

The items below require changes in user code. Each is covered in more detail in the sections above.

- C++20 is now the minimum required standard. Compiling *HPX* or applications using it with C++17 is no longer supported.
- The minimum supported compiler versions have changed. Please see our *Prerequisites* page for the current support matrix.
- Applications must include only the public *HPX* headers (for example `hpx/init.hpp` or `hpx/future.hpp`) and the generated module headers `hpx/modules/<module>.hpp`. The headers inside an *HPX* module (`hpx/<module>/...`) are internal. They still work when `HPX_WITH_CXX_MODULES` is `OFF`, but with C++20 modules enabled including them leads to redefinition errors, since the same entities are imported from the C++ module as well.
- The use of `tag_invoke` for API customization has been removed where possible. Code that relied on overloading *HPX* functionality through `tag_invoke` will have to be adapted.
- Our own, by now outdated, implementation of `std::execution` (senders and receivers) has been removed. It is replaced by the reference implementation (stdexec[1567]).
- `hpx::experimental::for_loop_n_strided` now invokes the loop body exactly `n` times, as required by N4755, 7.2.4, paragraph 2.1. It used to read `n` as the distance to cover and invoked the body `ceil(n / stride)` times instead, so code that scaled `n` by the stride to work around this has to stop doing that.
- Negative strides are no longer supported by `hpx::experimental::for_loop_strided`, `hpx::experimental::for_loop_n_strided` and `hpx::ranges::experimental::for_loop_strided`. N4755, 7.2.4, paragraph 2.1 only describes a forward traversal, so the stride is now required to be positive.
- A live-out induction variable handed to one of the strided `for_loop` algorithms is now advanced by the number of iterations instead of by the distance those iterations cover. The value it ended up with used to be too large by a factor of the stride.
- `thread_schedule_hint::mode` is no longer a public data member: use `mode()` and `mode(x)`, as for the other parts of the hint (PR #7848[1568]).

Closed Issues and Pull Requests

The lists below were reconciled against release-2.0.X at `ff34ecf0ec7118366fa6d297a5cd41a7aed440e5`, using the v1.11.0 tag (`c9b81b401fbe6ba4a0306feff71d18ef01c71b34`) as the baseline.

There are 834 merged PRs whose merge commits are reachable from the release and absent from that baseline, including PRs outside milestone 2.0.0. The 226 closed issues are the milestone inventory; closure does not necessarily mean an implementation was delivered. Closed, unmerged PRs are excluded. Eight further PRs with verified transplanted changes are recorded separately below the generated list.

Closed issues

- Issue #7908[1569] - Out-of-bounds array access and SIGSEGV in shared_priority_queue_scheduler::destroy_thread
- Issue #7893[1570] - Inverted Error Check in reschedule_on_thread Causes Permanent Task Starvation
- Issue #7887[1571] - Hierarchical bulk execution uses a launch policy after its scope ends (hangs with GCC)
- Issue #7884[1572] - Compilation issues on 2.0 hpx with 11.4 g++ compiler in ubuntu 22.04
- Issue #7875[1573] - Atomic Publication Memory Ordering Violation in future_data_base::set_on_completed
- Issue #7873[1574] - Dual-Ownership Race Condition in shared_mutex::try_lock
- Issue #7859[1575] - chunk_size_iterator is inconsistent when the chunk size exceeds the element count: reduce, transform_reduce, inclusive_scan and exclusive_scan crash
- Issue #7857[1576] - Use the GitHub Actions cache for vcpkg instead of the prebuilt vcpkg export in the Windows CIs
- Issue #7846[1577] - local_cache::update with a replacement entry does not account for its size
- Issue #7842[1578] - Data Race and False Self-Cancellation UAF in stop_state::remove_callback
- Issue #7840[1579] - Premature Shared-State Destruction and Use-After-Free in make_future
- Issue #7830[1580] - A run_as_child thread run directly by its parent is not counted in /threads/count/cumulative
- Issue #7827[1581] - Unit test failures on Linux
- Issue #7826[1582] - Configuring fails with Unix Makefiles generator
- Issue #7825[1583] - *supervision::finalize()* leaves *await_terminal* calls pending; locality aborts in *hpx::stop*
- Issue #7823[1584] - local_cache::free_space skips the next entry to evict and can dereference past the end
- Issue #7820[1585] - HWLoc fetch CI broken since ubuntu-latest moved to 26.04

- Issue #7792[1586] - local_cache::reserve evicts based on the old capacity instead of the current size
- Issue #7786[1587] - Critical queue corruption, stack-use-after-return, and data races in condition_variable
- Issue #7785[1588] - Critical Use-After-Free (UAF) in split execution algorithm shared state
- Issue #7783[1589] - Lost wakeup and spurious wakeup deadlock in scheduler_base suspend/resume
- Issue #7768[1590] - Dangling pointer and double-free vulnerability in hpx::local::stop
- Issue #7766[1591] - Parallel hpx::find_end compares against incremented copies of the first element
- Issue #7763[1592] - Cross-thread data race on non-atomic requested_ counter in local_workrequesting_scheduler
- Issue #7761[1593] - Document that *local_queue_scheduler* ignores thread priorities, including *bound*
- Issue #7758[1594] - C++20 Modules CI fails since #7723: background thread helpers are not exported
- Issue #7748[1595] - Small defects in the handling of hpx.thread_queue parameters
- Issue #7747[1596] - hpx.max_background_threads raised for one thread pool carries over to all later pools
- Issue #7746[1597] - local_workrequesting_scheduler loses fast_idle_mode, so idle workers send steal requests only after max_idle_loop_count / 2 iterations
- Issue #7745[1598] - add/remove/update_scheduler_mode bypass the scheduler specific set_scheduler_mode overrides
- Issue #7744[1599] - –hpx:numa-sensitive: bare option means "not sensitive", values 1 and 2 behave the same, is_scheduler_numa_sensitive() is broken
- Issue #7743[1600] - Two bugs in the command line handling of –hpx:queuing and –hpx:high-priority-threads
- Issue #7742[1601] - background_scheduler::set_scheduler_mode sets almost all scheduler mode bits
- Issue #7734[1602] - Intermittent AGAS bootstrap timeout in distributed MPI tests (partitioned_vector_merge_regressions)
- Issue #7724[1603] - Intermittent hang / crash with *HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=* when children are both stolen and run inline by their waiting parent
- Issue #7719[1604] - hpx-2.0.0 packaging: HPX needs support for C++11 std::atomic
- Issue #7713[1605] - *invoke_directly* returns *unknown* for a finished stackful child, so *execute_thread* never reports success

[1646] https://github.com/TheHPXProject/hpx/issues/7411

- Issue #7406[1647] - TCP parcelport advertises its configured port, so a locality cannot bind an OS-assigned port (hpx.parcel.port=0)
- Issue #7390[1648] - Expose completion and loss events for dynamically connected localities
- Issue #7389[1649] - *waittime* vs *wait_time* name mismatch when *HPX_HAVE_THREAD_QUEUE_WAITTIME* is ON
- Issue #7384[1650] - addressing_service::resolve_locality calls unlock() on a non-owning unique_lock when resolving a departed locality
- Issue #7383[1651] - HPX affinity binds introduce randomised offsets for multiple localities in single node
- Issue #7358[1652] - Memory usage increases during runtime
- Issue #7333[1653] - Insecure Deserialization - Type Confusion in Shared Pointers - HPX v1.11.0
- Issue #7287[1654] - vector_pack_load::unaligned broadcasts scalar instead of loading pack
- Issue #7265[1655] - –hpx:bind syntax for multiple localities per node (required for Aurora experiments)
- Issue #7251[1656] - stdexec warning about transform_completion_signatures
- Issue #7245[1657] - CMake developer warning regarding fetching Stdexec
- Issue #7225[1658] - Proposal / Feedback Request: HPX-Vision (Distributed Observability Prototype for HPX)
- Issue #7214[1659] - Implement *hpx::experimental::for_each_index* as described in P4150
- Issue #7212[1660] - Make inspect report links use the scanned tree’s actual Git commit
- Issue #7203[1661] - Reimplement the distributed barrier on top of collectives infrastructure
- Issue #7199[1662] - Deduplicate tests.examples exclusion regex generation in Windows workflows
- Issue #7197[1663] - Fix external builds with C++ modules enabled
- Issue #7185[1664] - Memory usage accumulates while iterating, using a sliding semaphore
- Issue #7184[1665] - Memory leak in overlapping relocation test functions
- Issue #7167[1666] - Compare performance of HPX’s MPMC queue with other implementations
- Issue #7158[1667] - Potential Inconsistent State and Race Condition in hpx::lockfree::deque::empty()
- Issue #7151[1668] - Dynamic build-and-test workflow lost several previously excluded tests

- Issue #7150[1669] - Memory usage accumulates while creating tasks
- Issue #7131[1670] - Fix Sender Algorithm Customization
- Issue #7124[1671] - 1d_stencil_5 uses non-owning serialization for partition_data buffer
- Issue #7117[1672] - CircleCI container_algorithms shard uses partial ctest regex and runs unbuilt test target
- Issue #7112[1673] - Improve performance of SPSC queue used in work-requesting scheduler
- Issue #7111[1674] - Duplicate queues in scheduler(s)
- Issue #7099[1675] - [wrap] Enable hpx_main wrapping for local-only (non-distributed) builds
- Issue #7091[1676] - [Feature] NUMA-Distance-Aware Work Stealing in Schedulers
- Issue #7087[1677] - Unify and Restructure GitHub Actions Workflows via Composite Actions
- Issue #7085[1678] - thread_queue: batch the atomic decrement in cleanup_terminated_locked()
- Issue #7077[1679] - par policy silently falls back to sequential for non-contiguous iterators in all three uninitialized_relocate CPOs
- Issue #7075[1680] - [FEA] Implement CI Workflow using Slash Commands
- Issue #7062[1681] - Remove usage of deprecated asio::ip::tcp::resolver::query
- Issue #7059[1682] - HPX Build Configuration Error: Missing Asio Dependency
- Issue #7052[1683] - Segmented algorithms: Incorrect single-segment subrange handling + Few other bugs in scan.hpp
- Issue #7050[1684] - thread_queue: per-task heap allocation in staged queue could be further optimised
- Issue #7049[1685] - Introduce minimal tracing abstraction layer (hpx::tracing) for Tracy
- Issue #7046[1686] - Replace unsafe *std::strcat* with safer string operations in *print.cpp*
- Issue #7040[1687] - exception Safety Risk in *options_description_easy_init* Could Lead to Memory Leaks
- Issue #7037[1688] - *is_sorted* / *is_sorted_until* force class level template parameters in methods
- Issue #7035[1689] - hpx::compute::vector is missing standard std::vector methods (assign, at, const iterators)
- Issue #7034[1690] - Semantic Mismatch in Serialization Archive Flags

[1690] https://github.com/TheHPXProject/hpx/issues/7034

- Issue #7030[1691] - mpi::experimental::detail::async ignores MPI error codes from MPI_Ixxx calls, leading to potential hangs
- Issue #7028[1692] - async_replay_validate incorrectly throws abort_replay_exception when the last attempt succeeds
- Issue #7027[1693] - Fix failing test related to numa_allocator
- Issue #7025[1694] - Incorrect Return Type Usage in *get_next_threads*
- Issue #7022[1695] - scheduler_executor performance regression with stdexec integration
- Issue #7019[1696] - Hpx Install problems / examples won't compile
- Issue #7001[1697] - Feature Proposal: HPX-Top (Interactive TUI Performance Monitor)
- Issue #7000[1698] - tests: 7 sender test files declare std::mt19937 gen but hpx_main calls std::srand(seed) instead of gen.seed(seed), making –seed silently ineffective
- Issue #6989[1699] - Tracy fiber support present but currently unused in HPX runtime
- Issue #6982[1700] - Missing validation of thread_schedule_hint.hint in shared_priority_queue_scheduler
- Issue #6978[1701] - shared_priority_queue_scheduler: possible stale (domain_num, q_index) after select_active_pu() in schedule_thread() *none* path
- Issue #6975[1702] - Fix failing unit tests related to move algorithm
- Issue #6974[1703] - Fix failing unit tests related to sort algorithms
- Issue #6969[1704] - Implementation of *hpx::ranges::iota*
- Issue #6963[1705] - shared_priority_queue_scheduler: NUMA scheduling does not handle suspended processing units
- Issue #6961[1706] - BLOCK_SIZE is defined on Fedora
- Issue #6953[1707] - base_component::get_unmanaged_id incorrectly returns management_type::managed ID
- Issue #6941[1708] - Remove obsolete feature tests
- Issue #6931[1709] - Two correctness bugs in chunk_size.hpp : swapped next_or_subrange args and mismatched add_ready_future_idx parameter order
- Issue #6922[1710] - fork_join_executor silently truncates ranges > 2^32

[1710] https://github.com/TheHPXProject/hpx/issues/6922

- Issue #6908[1711] - Implement missing C++23 range algorithms: fold, chunk_by, slide, stride, cartesian_product
- Issue #6906[1712] - Add missing subtraction unit tests for gid_type
- Issue #6905[1713] - Split fast path ignores receiver's scheduler leading to mismatched completion thread
- Issue #6904[1714] - reduce lock contention in local_priority_queue_scheduler via randomized victim selection
- Issue #6896[1715] - Fix incomplete sentence in README.rst
- Issue #6892[1716] - Add find_last, find_last_if, and find_last_if_not algorithms
- Issue #6888[1717] - Enhancement: Add timeout and cancellation support to hpx::local::termination_detection()
- Issue #6881[1718] - Asynchronous channel communicator construction
- Issue #6878[1719] - Parallel uninitialized_relocate does not preserve sequenced semantics for overlapping ranges
- Issue #6874[1720] - tests.examples.1d_stencil.1d_stencil_5 is failing in some CI runs
- Issue #6867[1721] - v1.11.0 fails to build on F44
- Issue #6854[1722] - hpx::shared_mutex deadlock
- Issue #6842[1723] - Errors when building tests relying on stdexec
- Issue #6798[1724] - Provide a CMakePresets.json file
- Issue #6793[1725] - Performance in recursive fork-join is very bad
- Issue #6786[1726] - Problem : Building hpx [have boost installed]
- Issue #6776[1727] - Bug with hpx::collectives::set on macOS (arm64)
- Issue #6772[1728] - Broken bundle HPX + vcpkg + macOS since v1.10
- Issue #6754[1729] - Incorrect is_known_contiguous_iterator support for string
- Issue #6752[1730] - zip_iterator should have conditional special member functions
- Issue #6745[1731] - Forward *stdexec::bulk* in HPX to support full S/R NVIDIA's integration implementation
- Issue #6735[1732] - Failure when calling a parallel algorithm from a Python extension
- Issue #6733[1733] - Annotated subroutines don't show up in OTF2 traces when executed by IO_pool_executor

- Issue #6729[1734] - Consider unwrapping contiguous iterators in parallel algorithms
- Issue #6728[1735] - Building on ubuntu-24.04-arm
- Issue #6722[1736] - Unreachable code warning in advance_and_get_distance
- Issue #6721[1737] - Unreachable code warning in merge algorithm
- Issue #6719[1738] - Proxy support for find algorithms
- Issue #6718[1739] - Bad user experience with algorithms interface
- Issue #6717[1740] - Extensible execution policy design
- Issue #6710[1741] - Support Ninja Multi-Config generator
- Issue #6653[1742] - Passing *HPX_WITH_HIDDEN_VISIBILITY=TRUE* on MacOS results in library which can't be used
- Issue #6627[1743] - Extrema algorithms with repeated values
- Issue #6625[1744] - Update relocation semantics to match P2786R13
- Issue #6624[1745] - Remove type alias sender completions
- Issue #6601[1746] - Implement P2079 for HPX (System execution context)
- Issue #6574[1747] - Using the parcelport TCP causes the memory usage to continuously increase, and I'm not sure if it is a memory leak
- Issue #6541[1748] - Add HPX to Godbolt Compiler Explorer
- Issue #6540[1749] - Race conditions related to thread_local variables
- Issue #6536[1750] - Non-Standard Conforming Parallel Algorithms
- Issue #6534[1751] - Addressing remaining Stdexec issues
- Issue #6528[1752] - Wrong version recommendation of shpinx when building documentation
- Issue #6506[1753] - Create API similar to pthread_setaffinity_np for HPX threads
- Issue #6504[1754] - *FindTBB.cmake* cannot find correct TBB library.
- Issue #6502[1755] - The test executable numa_allocator_test fails with an assertion

- Issue #6500[1756] - The test partitioned_vector_ doesn't finish in a very long time
- Issue #6399[1757] - Warning: type attributes ignored after type is already defined
- Issue #6347[1758] - Failed Linking CXX executable due to undefined references
- Issue #6345[1759] - Initialization hangs when only setting –hpx:cores
- Issue #6333[1760] - Current thread_id changing after suspending in direct execution
- Issue #6240[1761] - HPX does not compile with G++ version prior to 9.3.
- Issue #6232[1762] - Par performance of hpx::reverse
- Issue #6224[1763] - Add C++23 fold algorithms
- Issue #6190[1764] - –hpx:queuing=shared fails for distributed runs
- Issue #6163[1765] - Expose global termination detection through a new API
- Issue #6097[1766] - Parcelport fails to initialize when multiple jobs run on the same cluster
- Issue #6028[1767] - *hpx* namespaces without corresponding *std*
- Issue #6014[1768] - Support C++20 modules
- Issue #6000[1769] - Change namespaces of Public API
- Issue #5978[1770] - Registering Nested Component Actions
- Issue #5918[1771] - HpxChannels Registration fails for written out template types
- Issue #5907[1772] - HPX_DEBUG/CMAKE_BUILD_TYPE not correctly decoupled/consistently used.
- Issue #5903[1773] - Support for Windows HPC Pack
- Issue #5544[1774] - Use _GLIBCXX_DEBUG in CI
- Issue #5498[1775] - Add concepts alongside type traits
- Issue #5497[1776] - Start using C++17 features unconditionally
- Issue #5411[1777] - Add support for conan
- Issue #5189[1778] - Shared priority scheduler does not always create a new thread

- Issue #5045[1779] - Implement P0443/P1897/P2300
- Issue #4702[1780] - Prefer enum class over unscoped enums
- Issue #4697[1781] - get_num_localities and get_locality_id should return size_t
- Issue #4672[1782] - Consistently use hpx::function_* instead of std::function
- Issue #4657[1783] - HEP 1 implementation tracker
- Issue #4627[1784] - Allow HPX counters to be requested before they are registered
- Issue #4568[1785] - Make performance counters work locally
- Issue #4567[1786] - Make APEX work with local runtime
- Issue #4565[1787] - Make iostreams component work locally
- Issue #4371[1788] - Using *std::get* on type derived from *std::pair* fails compilation
- Issue #4367[1789] - Rewrite history to remove unneeded binary files
- Issue #4329[1790] - HPX 2
- Issue #4274[1791] - Implement Task-Bench (potentially as a GSoC project)
- Issue #4074[1792] - HPX module “configurations”
- Issue #2589[1793] - Missing documentation for LCOs
- Issue #2235[1794] - Concurrent data structures support

Merged pull requests

- PR #7949[1795] - Complete index-queue bulk operations when their last chunk is done
- PR #7948[1796] - Add task_size_chunk_size executor parameters
- PR #7946[1797] - Size the builtin operations from the types of their arguments
- PR #7944[1798] - Run one timed step of the scheduler latency report as a test
- PR #7942[1799] - Partition merge over all output elements
- PR #7926[1800] - Give task sizes the run-time lookup function annotations have

- PR #7925[1801] - Take task sizes from functions only
- PR #7920[1802] - fix the all_reduce return docs and drop a broadcast_to overload that doesn't exist
- PR #7919[1803] - let late_component survive its crashing and departing workers
- PR #7918[1804] - don't leave a wake_timer thread pending after the workers stopped
- PR #7917[1805] - drop credit decrements for localities that are gone
- PR #7912[1806] - Don't clear a connection cache entry while sends are in flight
- PR #7911[1807] - Fix a race in the thread_queue_get_next_threads test
- PR #7909[1808] - Fix out-of-bounds array access in shared_priority_queue_scheduler::destroy_thread
- PR #7904[1809] - Fix late condition_variable wakeups and wake waiters without reference counting
- PR #7903[1810] - Add scripts to backfill the performance history by hand
- PR #7901[1811] - Allow hpx::force_disconnect to be called from any locality
- PR #7900[1812] - Fix hierarchical dangling policy
- PR #7899[1813] - Show the commits and the changes of the medians on the performance history graphs
- PR #7897[1814] - Don't fail a target when an observer's locality went away
- PR #7896[1815] - Mention the Discord server in the README support section
- PR #7895[1816] - test shutdown with a remote activity observer
- PR #7894[1817] - Fix inverted error check in reschedule_on_thread causing task starvation
- PR #7892[1818] - Discard entries in the documented order with size_entry and lfu_entry
- PR #7889[1819] - Use size_type for the amount local_cache::free_space has to free
- PR #7888[1820] - Add scheduler throughput and latency performance reports
- PR #7886[1821] - Require GCC 12 in the configuration
- PR #7885[1822] - Use std::atomic in stdexec for builds without CUDA
- PR #7883[1823] - Bump github/codeql-action from 4.39.0 to 4.39.1

[1823] https://github.com/TheHPXProject/hpx/pull/7883

- PR #7879[1824] - Fix condition_variable abort_all/notify_one waking threads that already left the wait
- PR #7874[1825] - Fix dual-ownership race in shared_mutex::try_lock
- PR #7872[1826] - Add threads::get_destructive_interference_size() and regroup the scheduler's per-worker data
- PR #7868[1827] - Report unexpected force_disconnect exceptions
- PR #7867[1828] - leave discover_and_join time to join the peers it found
- PR #7866[1829] - don't wait on remote activity agents while shutting down
- PR #7865[1830] - report a send to a locality that went away as disconnected
- PR #7864[1831] - Fix shutdown hang: work scheduled on the queue of a worker that has already left
- PR #7863[1832] - Avoid modulo by zero in test_simd_helpers
- PR #7860[1833] - Fix chunk_size_iterator for chunk sizes larger than the element count
- PR #7858[1834] - Install the Windows CI dependencies with vcpkg and the GitHub Actions cache
- PR #7856[1835] - Replace the iteration windows of the early steal minima
- PR #7855[1836] - Let the shared priority scheduler report the length of all its queues
- PR #7848[1837] - Add hpx::threads::task_size and with_task_size (step 1 of #7837)
- PR #7847[1838] - Fix size accounting in local_cache::update for replaced entries
- PR #7845[1839] - Align the per-worker scheduler data to the cache line size
- PR #7839[1840] - Link the Jenkins builds in the yearly index of the performance history
- PR #7838[1841] - Index counter_data_ by the pool-local thread number in thread_func's exit log
- PR #7836[1842] - futures: count run_as_child children run directly by their parent
- PR #7835[1843] - Cancel pending await_terminal waiters before runtime shutdown
- PR #7833[1844] - Fix pkg-config generation with MPI link flags wrapped in HOST_LINK
- PR #7832[1845] - Document the thread scheduler settings
- PR #7831[1846] - Make the links of the timeline graphs relative to their directory

- PR #7829[1847] - Allow any site to be the root of a hierarchical communicator
- PR #7828[1848] - Forcing unknown parcelset settings
- PR #7824[1849] - Fix local_cache::free_space skipping the next entry to evict
- PR #7822[1850] - synchronization: make counting_semaphore wait_until timeout test independent of scheduling
- PR #7821[1851] - cmake: keep hwloc's archive timestamps and check its build result
- PR #7819[1852] - futures: keep the result of a stackful run_as_child child run directly
- PR #7817[1853] - threading: stop and join the running thread in jthread move assignment
- PR #7816[1854] - Fix host name resolution with Asio 1.34+
- PR #7809[1855] - Fix null pointer dereference in split_future on invalid futures (#7806)
- PR #7805[1856] - Fill gaps in the supervision_dispatch API reference
- PR #7804[1857] - Fix supervision_dispatch manual drift from the API
- PR #7802[1858] - synchronization: don't lose a release() when counting_semaphore::wait_until times out
- PR #7800[1859] - Set up nanobench independently of networking, and build it with MSVC
- PR #7797[1860] - Create the background thread without a run_as_child hint
- PR #7794[1861] - build(deps): bump github/codeql-action from 4.38.3 to 4.39.0
- PR #7793[1862] - Fix local_cache::reserve evicting based on the old capacity
- PR #7791[1863] - give each scatter test phase its own basename
- PR #7790[1864] - Fix documentation warnings
- PR #7787[1865] - Fix data race and queue desynchronization in condition_variable
- PR #7784[1866] - Fix lost wakeup and spurious wakeup race condition in scheduler_base
- PR #7782[1867] - synchronization: don't wait for an unregistered stop_callback in its destructor
- PR #7781[1868] - give each all_to_all test phase its own basename
- PR #7776[1869] - Fix the rejoin race in failure_detection_join

- PR #7771[1870] - Honor min_tasks_to_steal_pending in the work-requesting schedulers
- PR #7770[1871] - Document that local_queue_scheduler ignores thread priorities
- PR #7769[1872] - Fix dangling pointer and double-free in hpx::local::stop (#7768)
- PR #7767[1873] - Fix parallel find_end comparing the wrong elements
- PR #7765[1874] - Fix cross-thread data race in local_workrequesting_scheduler
- PR #7764[1875] - Fix queuing regression under configured schedulers
- PR #7762[1876] - Fix uninitialized execute_ function pointer in run_loop_opstate
- PR #7759[1877] - Export the background thread helpers from the HPX.Core module
- PR #7757[1878] - Fix command line scheduler option handling
- PR #7756[1879] - Restore NUMA sensitivity option behavior
- PR #7755[1880] - Keep work-requesting schedulers in fast idle mode
- PR #7754[1881] - Fix thread queue parameter handling
- PR #7753[1882] - Fix scheduler mode overrides being skipped
- PR #7752[1883] - Fix hpx.max_background_threads state leakage across pools
- PR #7751[1884] - Take runs_child_ safely and keep the schedule hint in post()
- PR #7750[1885] - Fix background_scheduler::set_scheduler_mode setting all mode bits
- PR #7749[1886] - Cover background thread creation under every scheduler
- PR #7741[1887] - Make refused TCP connection attempts fail fast on Windows
- PR #7740[1888] - Keep bound threads on their worker thread when they yield with pending_boost
- PR #7739[1889] - parcelport_mpi: Pre-post pool of wildcard header receives to prevent AGAS bootstrap timeout
- PR #7738[1890] - Avoid names that collide with the Windows SDK and check for them in inspect
- PR #7736[1891] - Don't collect bool chunk results in a std::vector<bool>
- PR #7735[1892] - Fix chunk_size_iterator decrement for bidirectional iterators on MSVC

[1892] https://github.com/TheHPXProject/hpx/pull/7735

- PR #7732[1893] - Pass /INCLUDE for custom allocators to the linker on MSVC
- PR #7731[1894] - Update performance baseline
- PR #7730[1895] - Don't apply min_tasks_to_steal_staged to a queue's own staged tasks
- PR #7729[1896] - Update HPX_AddConfigTest.cmake
- PR #7728[1897] - Pass build configuration to Jenkins CTest driver
- PR #7727[1898] - Use yield for HPX_SMT_PAUSE on AArch64
- PR #7726[1899] - Make the work-requesting schedulers actually steal
- PR #7725[1900] - Reduce cross-core contention in the scheduling loop and local_priority_queue_scheduler
- PR #7723[1901] - don't drop a yielded background thread at shutdown
- PR #7722[1902] - build(deps): bump github/codeql-action from 4.38.2 to 4.38.3
- PR #7720[1903] - don't crash the tcp sender when shutdown races its cleanup
- PR #7718[1904] - futures: run stackless run_as_child children directly
- PR #7717[1905] - Fix networking requirements for segmented merge tests
- PR #7714[1906] - synchronization: keep waiting in timed_mutex::try_lock_until until timeout or lock
- PR #7711[1907] - Fix bundled stdexec compatibility for NVCC host senders and SYCL
- PR #7709[1908] - Adding explicit timeouts to test
- PR #7707[1909] - Enable C++20 modules for segmented merge
- PR #7706[1910] - Convert a range length to std::size_t explicitly
- PR #7705[1911] - Check the checkpoint length read off a stream before using it
- PR #7704[1912] - Convert counter path indices to pool indices explicitly
- PR #7703[1913] - Fix the stride semantics of the strided for_loop algorithms
- PR #7702[1914] - Make idle_backoff_data::wait_count atomic
- PR #7700[1915] - Let HPX_CONTRACT_ASSERT fall back onto HPX_ASSERT if contracts are disabled

[2076] https://github.com/TheHPXProject/hpx/pull/7471

- PR #7466[2077] - build(deps): bump github/codeql-action from 4.37.6 to 4.37.7
- PR #7465[2078] - Updating weblinks to new hpx.dev website
- PR #7464[2079] - Fix cpp-dependencies parser crash by removing quotes in comments
- PR #7462[2080] - async_distributed: add C++26 reflection overloads for sync, post, async_cb, post_cb
- PR #7460[2081] - fix(async_distributed): add missing Enable=void to promise_lco dtor policy specialization
- PR #7459[2082] - actions_base: add runtime dispatch overhead benchmark
- PR #7458[2083] - Adding helper simplifying to launch a connecting locality
- PR #7457[2084] - Supervision module and dispatch fixes and cleanup
- PR #7456[2085] - tests: expand hpx::search_n unit tests to match HPX algorithm test standards
- PR #7455[2086] - examples: add fibonacci_reflection demonstrating C++26 reflection API
- PR #7453[2087] - fix(execution_base): complete P2300 compliance and fix set_stopped crash for any_sender
- PR #7451[2088] - Remove stale hpx_tag_invoke module dependencies
- PR #7450[2089] - tracing: Add work-stealing instrumentation for Tracy profiler
- PR #7449[2090] - Fix pairwise all_to_all build with Clang 17 and OpenMP
- PR #7448[2091] - components_base: add reflection-based default for get_component_name
- PR #7447[2092] - Adding hpx::force_disconnect to support the use case described in #7441
- PR #7446[2093] - Documentation fixes
- PR #7445[2094] - Add collectives API documentation metadata
- PR #7443[2095] - final tag_invoke cleanup
- PR #7442[2096] - build(deps): bump github/codeql-action from 4.37.4 to 4.37.6
- PR #7438[2097] - Supervision dispatch locality and join epochs
- PR #7437[2098] - fix(execution): prevent silent hang in make_future with run_loop_scheduler
- PR #7436[2099] - runtime_components: add distributed integration test for reflect_action

[2099] https://github.com/TheHPXProject/hpx/pull/7436

- PR #7435[2100] - Fix EVE/simd unaligned load and store broadcast
- PR #7434[2101] - Add contract preconditions to sorting/heap algorithms
- PR #7433[2102] - Bump lukka/get-cmake from 4.4.1 to 4.4.2
- PR #7432[2103] - supervision_dispatch: add C++26 reflection overload for dispatch_work
- PR #7431[2104] - Add size-based pairwise dispatch to all_to_all
- PR #7429[2105] - Bump github/codeql-action from 4.37.3 to 4.37.4
- PR #7427[2106] - Supervision dispatch and target resolution
- PR #7426[2107] - Fix the build with HPX_WITH_THREAD_QUEUE_WAITTIME=ON
- PR #7425[2108] - Adding support for fenced dispatch to supervision component
- PR #7423[2109] - tracing: add causal tracing API for Tracy
- PR #7422[2110] - Bump github/codeql-action from 4 to 4.37.3
- PR #7420[2111] - CodeRabbit CI Fix: Fix ARM SVE CI build failures
- PR #7419[2112] - Advertise the parcelport port that was actually bound
- PR #7418[2113] - actions_base: annotation-driven action registration via C++26 reflection
- PR #7417[2114] - components: add hpx::launch::sync overload to reflect_client
- PR #7416[2115] - Bump lukka/get-cmake from 4.3.4 to 4.4.1
- PR #7415[2116] - Bump actions/stale from 10 to 11
- PR #7414[2117] - Don’t disabled first core placement if –hpx:bind=none
- PR #7413[2118] - Adding supervision dispatch component
- PR #7412[2119] - Give the launched locality the endpoint the probe actually bound
- PR #7410[2120] - tag_invoke cleanup
- PR #7409[2121] - Implement check_admission in supervision module
- PR #7408[2122] - Adding a set of tests for pool_timer

- PR #7407[2123] - Adding await_terminal support to supervision module
- PR #7405[2124] - Let the OS pick the parcelport port in the departed locality test
- PR #7404[2125] - Make MPI parcelport teardown orderly: quiesce before MPI_Finalize
- PR #7403[2126] - Tracing inline future continuations
- PR #7402[2127] - Feat/distributed adaptors
- PR #7401[2128] - Cache the first collective finalizer failure and rethrow it for every site
- PR #7400[2129] - remove tag_invoke from algorithm loop
- PR #7399[2130] - Add supervision infrastructure for lifecycle events and observers
- PR #7398[2131] - Move the all_reduce reduction seed instead of copying it
- PR #7396[2132] - Move distributed sender&receiver facilities to separate module
- PR #7395[2133] - remove tag_invoke from container algorithms
- PR #7394[2134] - execution: fix sync_wait notify lifetime race
- PR #7393[2135] - Add projection tests for ranges::unique algorithms
- PR #7392[2136] - Tracing data parallel workloads
- PR #7391[2137] - Fix doxygen warnings when building docs
- PR #7388[2138] - Fix resolve_locality error handling for departed localities
- PR #7387[2139] - Don't apply PU offset for localities that explicitly use core bindings
- PR #7385[2140] - components: add reflect_client<^^Server> and HPX_REFLECT_CLIENT macro
- PR #7382[2141] - Fixing issue with the latch_notification test
- PR #7380[2142] - remove tag invoke from parallel algorithms
- PR #7379[2143] - Thread data size reductions
- PR #7378[2144] - Move communicator basenames into owned storage
- PR #7377[2145] - Flatten hierarchical all-to-all exchange payloads

[2145] https://github.com/TheHPXProject/hpx/pull/7377

- PR #7376[2146] - async: add hpx::async<^^func>(target, …) reflection overload
- PR #7375[2147] - Flatten hierarchical gather and scatter payloads
- PR #7374[2148] - async_cuda: preserve transform_stream environment
- PR #7372[2149] - Tracing suspend resume hooks
- PR #7371[2150] - Working around Clang ICE happening when compiling the algorithm sender tests
- PR #7369[2151] - Reject explicit generations after auto generation on the same communicator
- PR #7368[2152] - remove tag_invoke from core execution
- PR #7367[2153] - Fixing future::wait_until (and wait_for) to return once future was made ready
- PR #7366[2154] - Adding unit tests for and_gate
- PR #7365[2155] - add sender/receiver support to set_intersection
- PR #7364[2156] - Avoid communicator reuse between scan test phases
- PR #7363[2157] - Implement minmax_element to use less comparisons
- PR #7361[2158] - add pre commit hooks
- PR #7360[2159] - Duplication of the thread queues in the schedulers
- PR #7359[2160] - Harden collectives validation paths
- PR #7357[2161] - Tracing runtime instrumentation
- PR #7356[2162] - Allowing for a test to fail only for a given configuration
- PR #7355[2163] - keep future bridge redesign
- PR #7354[2164] - Feat/distributed transfer
- PR #7353[2165] - remove tag_invoke usage
- PR #7352[2166] - ci: add actions_base reflection tests to CI workflows
- PR #7350[2167] - Introduces better lifetime management for background/pool threads
- PR #7349[2168] - actions_base: add reflect_direct_action and direct action macro reflection support

- PR #7348[2169] - docs: add C++26 reflection-based action migration guide
- PR #7347[2170] - Add tracing support for task lifecycle events
- PR #7346[2171] - feat(algorithms): implement P2300 allocator support for when_all_vector
- PR #7344[2172] - add sender/receiver support to set_difference
- PR #7343[2173] - Add hierarchical scan collectives
- PR #7342[2174] - actions_base: fix reflect_action for noexcept functions, add arity
- PR #7341[2175] - async_mpi: modernize transform_mpi sender participation
- PR #7340[2176] - Harden collectives validation paths
- PR #7339[2177] - Fixing various test failures.
- PR #7337[2178] - tracing: remove legacy ITT hooks from full components
- PR #7336[2179] - removed unnecessary thread id info in merge
- PR #7335[2180] - feat(executors): implement domain-optimized continues_on for thread_p…
- PR #7334[2181] - Fixing shared_ptr serialization vulnerabilities
- PR #7332[2182] - actions_base: add compile-time benchmark for macro vs reflect_action
- PR #7331[2183] - async_mpi: use member async_execute on mpi executor
- PR #7330[2184] - async_cuda: use member dispatch for executor entry points
- PR #7329[2185] - build(deps): bump lukka/get-cmake from 4.3.3 to 4.3.4
- PR #7328[2186] - fix(datapar): guard mismatch SIMD path on zip_iterator compatibility
- PR #7327[2187] - build(deps): bump actions/checkout from 6 to 7
- PR #7326[2188] - Hierarchical collectives: unify the per-call generation step for cross-collective sharing
- PR #7324[2189] - Improve collective benchmark
- PR #7322[2190] - Fix sentinel return type mismatch in hpx::ranges container algorithm CPOs
- PR #7321[2191] - Harden hierarchical collectives: flat fallback unification, input validation, tree test coverage

- PR #7267[2238] - Add DCO to check if commits are signed
- PR #7266[2239] - actions_base: add reflection-based action definition (reflect_action)
- PR #7264[2240] - tracing: add lock_context and migrate synchronization primitives to unified tracing
- PR #7263[2241] - tracing: add hpx::tracing::rename_region abstraction
- PR #7261[2242] - Removing export declarations from non-primary templates
- PR #7260[2243] - Feat/fork join executor p2300 bridge
- PR #7259[2244] - [test] Add projection tests for hpx::ranges::{unique_copy, partition_copy, remove_copy, remove_copy_if}
- PR #7258[2245] - Add ITTNotify CI workflow and smoke test
- PR #7257[2246] - Migrate to stdexec & Fix deadlock on HPX worker threads
- PR #7256[2247] - Implement HPX Future-Sender Bridge (P2300 interoperability)
- PR #7255[2248] - Re-enable automatically closing stale issues
- PR #7253[2249] - Add parallel distributed algorithms for segmented copy
- PR #7250[2250] - Unified tracing API: merge ITT/Tracy instrumentation
- PR #7249[2251] - ci: pin VS 2022 workflows to windows-2022 runner
- PR #7248[2252] - make_future: static_assert against silent-hang run_loop_scheduler sender
- PR #7247[2253] - make_future: isolate __loop_ private-member access in single detail helper
- PR #7246[2254] - fix #7245: switch Stdexec FetchContent_Populate to FetchContent_MakeA vailable
- PR #7244[2255] - drop dead trait, dead test guards, and migrate async_mpi receiver to native P2300
- PR #7242[2256] - Update HPX URL for perftest commenting
- PR #7240[2257] - Implement P2300 bulk adapter for HPX executors
- PR #7239[2258] - Implement P2300 get_scheduler bridge for parallel_executor
- PR #7238[2259] - Implement P2300 get_scheduler bridge for executors
- PR #7237[2260] - Adapting HPX actions module to C++20 modules

- PR #7235[2261] - Silence Codacy warnings
- PR #7234[2262] - Bump lukka/get-cmake from 4.3.0 to 4.3.2
- PR #7233[2263] - Suppress MSVC linker warnings in C++ 20 module mode
- PR #7232[2264] - ci: switch to lukka/get-cmake to resolve GitHub API rate limits
- PR #7231[2265] - Bump dawidd6/action-download-artifact from 20 to 21
- PR #7230[2266] - algorithms: expose Proj parameter in hpx::min/max/minmax_element CPOs
- PR #7228[2267] - CI: Fix cancellation workflow API flags, permissions, and filters
- PR #7227[2268] - Adding const version of some of the looping constructs to support datapar
- PR #7224[2269] - Making sure chunking iterators are detected as random access
- PR #7223[2270] - Fix missing invoke header in for_each_index algorithm
- PR #7220[2271] - [parallel] Add projection support to hpx::is_sorted, hpx::is_sorted_until, and hpx::is_partitioned CPOs
- PR #7219[2272] - Fix iteration mismatch in collective tests local timing
- PR #7218[2273] - Multi line warning fix
- PR #7217[2274] - Allow using counting_iterator with datapar policies
- PR #7216[2275] - tracing: add hpx::tracing::set_thread_name abstraction
- PR #7215[2276] - Implement hpx::experimental::for_each_index (P4150R0)
- PR #7213[2277] - Use scanned tree commit in inspect links
- PR #7211[2278] - [parallel] Fix incorrect return types in max_element and minmax_element parallel reduction
- PR #7210[2279] - Reimplement distributed::barrier on top of collectives infrastructure
- PR #7209[2280] - executors: fix performance regressions
- PR #7208[2281] - [parallel] Fix element_type deduction in minmax algorithms
- PR #7206[2282] - Fix C++ modules BMI installation and re-enable external build tests
- PR #7205[2283] - CI: Add manual "Cancel All Workflows" automation via label

- PR #7043[2399] - build(deps): bump actions/download-artifact from 7 to 8
- PR #7042[2400] - *is_sorted*: add independent iterator template parameters to support segmented algorithms
- PR #7041[2401] - Fix exception safety risk in options_description_easy_init
- PR #7039[2402] - fix compiler inconsistencies for fundamental types in reflecting names
- PR #7038[2403] - [Core] Use hpx::parallel::detail::distance in unsequenced algorithms
- PR #7036[2404] - implement missing standard methods in hpx::compute::vector
- PR #7033[2405] - Replace actions/cache to actions/artifacts
- PR #7032[2406] - Fix numa allocator test 7027
- PR #7031[2407] - fix: handle immediate failures in mpi::experimental::detail::async
- PR #7029[2408] - fix logic bug in async_replay exhaustion handling
- PR #7026[2409] - replace 'return false' with 'return 0'
- PR #7024[2410] - fix: validate thread_schedule_hint.hint bounds in shared_priority_queue_scheduler
- PR #7023[2411] - Fix adaptation of the Tracy module to C++ modules
- PR #7021[2412] - fix scheduler_executor bulk
- PR #7020[2413] - Fix incorrect return iterators in buffer_memcpy relocation path
- PR #7018[2414] - Fix heap corruption and out-of-bounds access in sort_thread partitioning
- PR #7017[2415] - Enable Tracy fiber-based task tracing for HPX scheduler
- PR #7016[2416] - support GCC trunk/C++26 reflection in build, tests and CI
- PR #7015[2417] - Fix critical edge cases in reduce_by_key and improve sentinel support
- PR #7014[2418] - Fix std::distance usage in is_partitioned and find_first_of
- PR #7012[2419] - Added Dark mode to the website
- PR #7011[2420] - Cleaning up minor issues that slipped into master
- PR #7010[2421] - use optimised image for reflection ci

- PR #6914[2490] - Cleaning up recently added debug suffix configuration
- PR #6913[2491] - Add comprehensive subtraction unit tests for gid_type
- PR #6910[2492] - Implement C++23 Algorithms: fold_left, fold_right.
- PR #6909[2493] - Refactoring local_priority_queue_scheduler for better cache behavior
- PR #6907[2494] - reduce lock contention in local_priority_queue_scheduler via randomized victim selection
- PR #6903[2495] - Migrate HPX CI from CircleCI to GitHub Actions
- PR #6902[2496] - using standard traits present in iterator library
- PR #6900[2497] - shared_mutex: follow-up fix and add regression test
- PR #6899[2498] - Implemented forwarding_sender_query for sender adaptors
- PR #6898[2499] - Removed the incomplete line in Readme
- PR #6897[2500] - Implement concurrent data structures for Issue #2235
- PR #6894[2501] - Implement find_last, find_last_if, and find_last_if_not algorithms as CPOs
- PR #6893[2502] - fix: decouple hpx_debug from cmake_build_type and allow custom debug postfix
- PR #6891[2503] - Refine unordered_map unit tests and add operator[] size stability check
- PR #6890[2504] - Feature/termination detection timeout
- PR #6889[2505] - Fixing set_affinity_test
- PR #6886[2506] - Expose global termination detection through new API (#6163)
- PR #6885[2507] - refactor execution parameters and steady clock usage
- PR #6884[2508] - implement fold algorithms acc. to c++26
- PR #6883[2509] - Fix initialization hang when –hpx:threads exceeds –hpx:cores
- PR #6882[2510] - Adjust filewriter for collective benchmark
- PR #6880[2511] - Added SPDX License Identifier
- PR #6879[2512] - Implement parallel hpx::uninitialized_relocate_* algorithms for overlapping ranges

[2511] https://github.com/TheHPXProject/hpx/pull/6880
[2512] https://github.com/TheHPXProject/hpx/pull/6879

- PR #6876[2513] - Feature/task bench support
- PR #6875[2514] - implement serialization for partition_data in 1d_stencil_5
- PR #6873[2515] - Fix runtime shutdown ordering for collectives on macOS Debug - Issue #6776
- PR #6872[2516] - Added random repeating numbers in tests and fixed sentinel tests for extrema algorithms
- PR #6870[2517] - standardise hpx::generate function signature
- PR #6869[2518] - update relocation definitions to track p2786r13 standard
- PR #6866[2519] - Fix threads hanging indefinitely by acquiring the state mutex before checking for an exclusive lock
- PR #6864[2520] - [Serialization] [Feature] Add serialization for multi containers and unordered_set
- PR #6863[2521] - Fix partitioned_vector tests timeout by reducing vector dimensions #6500
- PR #6862[2522] - Bump jwlawson/actions-setup-cmake from 2.0 to 2.1
- PR #6861[2523] - implement thread affinity api similar to pthread_setaffinity_np
- PR #6859[2524] - [Serialization] [Feature] Add experimental C++26 reflection support
- PR #6858[2525] - Adding intrinsic support for the Tracy profiler
- PR #6857[2526] - Bump jwlawson/actions-setup-cmake from 2.0 to 2.1
- PR #6856[2527] - Godbolt Boost detection: search for static libs if shared not found
- PR #6853[2528] - Remove type alias sender completions support (#6624)
- PR #6852[2529] - Add HPX_EXPORT to plugin factory types to fix MacOS visibility issues
- PR #6851[2530] - added CMakePresets.json with multiple build configurations for HPX development
- PR #6850[2531] - Fix Ninja Multi-Config generator support for pkg-config files
- PR #6849[2532] - Fix ARM build failure by automatically enabling generic context coroutines Fixes #6728
- PR #6848[2533] - Forking and modernizing Boost.iostreams
- PR #6846[2534] - fix(stdexec): added adaption to ensure successful build with stdexec
- PR #6845[2535] - Starting to adapt HPX full modules to C++ modules

- PR #6053[2628] - Support for new performance tool suite : LIKWID

Additional incorporated pull requests

These PRs were merged into development branches. Their GitHub merge commits are not ancestors of either comparison revision, but their changes were incorporated into this release through other commits:

- PR #7666[2629] - ci: pin ittapi to v3.27.0 on the release branch
- PR #7610[2630] - Regenerate the closed issue and pull request lists for V2.0.0
- PR #7584[2631] - Regenerate V2.0.0 release notes Closed issues and pull requests lists
- PR #7583[2632] - docs: fix script name in release procedure
- PR #7549[2633] - Add a first draft of the V2.0.0 release notes
- PR #7548[2634] - Port generate_issue_pr_list.sh from hub to the GitHub CLI
- PR #7351[2635] - CodeRabbit Generated Unit Tests: Add unit tests for PR changes
- PR #6702[2636] - When_all_vector update

HPX V1.10.0 (May 29, 2024)

General changes

- The HPX documentation has seen a major overhaul for this release. We finished documenting the public local HPX API, we have added migration guides from widely used parallelization platforms to HPX (OpenMP, TBB, and MPI).
- We have added facilities enabling optimizations for trivially-relocatable types (see P1144[2637] for more details).
- We have added (and use) the `scope_xxx` helper facilities as specified by the C++ library fundamentals TS v3 (see: N4948[2638]).
- We have added configuration options that allow to build HPX without pre-installing any prerequisites. Use `HPX_WITH_FETCH_HWLOC=On` to have Portable Hardware Locality (HWLOC)[2639] installed for you. Similarly, setting `HPX_WITH_FETCH_BOOST=On` during configuration time will install the necessary Boost[2640] libraries (currently V1.84.0).
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- The collective operations APIs have seen an unification, we have fixed issues and performance problems for the collectives.

[2640] https://www.boost.org/

- The HPX executors have seen a streamlining and some consistency changes. We have applied many performance improvements to the executor implementations that directly positively impact the performance of our parallel algorithms.
- We have added a new parcelport allowing to use Gasnet as a communication platform.
- We have added optimizations to various parcelports improving overall communication performance. This includes - amongst other things - send immediate optimizations and receiver-side zero-copy optimizations.
- Futures will now execute the associated task eagerly and inline on any wait operation if the task has not started running yet. This feature can be enabled using the `HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=On` configuration setting (which is *Off* by default).
- We have enabled using json files to supply configuration information through the command line. This feature can be enabled with the configuration option `HPX_COMMAND_LINE_HANDLING_WITH_JSON_CONFIGURATION_FILES=On`. This functionality depends on the external JSon library[2641], which can be built at configuration time by supplying `HPX_WITH_FETCH_JSON=On` to CMake[2642].
- We have applied many fixes to our CUDA, ROCm, and SYCL build environments.

Breaking changes

- The CMake[2643] configuration keys `SOMELIB_ROOT` (e.g., `BOOST_ROOT`) have been renamed to `Somelib_ROOT` (e.g., `Boost_ROOT`) to avoid warnings when using newer versions of CMake[2644]. Please update your scripts accordingly. For now, the old variable names are re-assigned to the new names and unset in the CMake[2645] cache.

[2651] https://github.com/TheHPXProject/hpx/issues/6443
[2652] https://github.com/TheHPXProject/hpx/issues/6440
[2653] https://github.com/TheHPXProject/hpx/issues/6437

- Issue #6419[2654] - Enhancement of the macro functionalities within hpx
- Issue #6417[2655] - The current HPX master branch is still not compatible with Kokkos 4.0.1
- Issue #6414[2656] - Current HPX master causes segfaults within Octo-Tiger
- Issue #6412[2657] - Clangd (Language Server) throws error for __integer_pack at pack.hpp
- Issue #6407[2658] - Cannot build Kokkos 4.0.01 with current HPX master
- Issue #6405[2659] - Spack Build Error with ROCm 5.7.0
- Issue #6398[2660] - HPX sets affinity wrong with multiple processes per node and LCI parcelport enabled
- Issue #6392[2661] - [Feature] Install dependencies using CMake
- Issue #6388[2662] - HPX error: "Host not found" when running on Expanse with 128 nodes
- Issue #6366[2663] - serialize_buffer allocator support needs adjustments
- Issue #6361[2664] - HPX 1.9.1 does not compile on Fedora 40
- Issue #6355[2665] - Single page documentation is broken
- Issue #6334[2666] - Segmentation fault after adding a padding in one_size_heap_list
- Issue #6329[2667] - Log hpx threads on forced shutdown
- Issue #6316[2668] - Build breaks on FreeBSD
- Issue #6299[2669] - HPX does not use distributed localities on Fugaku
- Issue #6298[2670] - Update config for coroutines on ARM
- Issue #6291[2671] - Zero-copy receive optimization disabled the invocation of direct actions
- Issue #6261[2672] - Add optional reading of json files for command line options
- Issue #6087[2673] - Support for vcpkg on Linux is broken
- Issue #5921[2674] - hpx::info claims that async_mpi was not built, while cmake assures its existence
- Issue #5893[2675] - Tests fail on FreeBSD: Executable copyn_test does not exist
- Issue #5833[2676] - barrier lockup

- Issue #5799[2677] - Investigate CUDA compilation problems
- Issue #5340[2678] - Examples do not run on Mac OSX using the M1 chip

Closed pull requests

- PR #6493[2679] - Fix distributed latch documentation
- PR #6492[2680] - Fix kokkos hpx nvcc compilation
- PR #6491[2681] - More fixes to handling bool arguments for collective operations
- PR #6490[2682] - Remove the default max cpu count
- PR #6489[2683] - Ensure TCP parcelport is deactivated if not needed
- PR #6488[2684] - Fixing handling of bool value type for collective operations
- PR #6485[2685] - Destructive interference size
- PR #6484[2686] - Improve performance counter error handling
- PR #6482[2687] - Generalize the notion of bitwise serialization
- PR #6481[2688] - Fixing use of HPX_WITH_CXX_STANDARD
- PR #6480[2689] - Remove equal_to from hpx::any
- PR #6479[2690] - Remove optimizations for certain built-in compiler intrinsics
- PR #6478[2691] - Fixing issues on MacOS
- PR #6477[2692] - lci pp: lci's github repo name changed from LC to lci
- PR #6476[2693] - Fixing binary filter test target names
- PR #6475[2694] - Fix mac os github actions
- PR #6472[2695] - Troubleshoot CI hangs
- PR #6469[2696] - improve(lci pp): more options to control the LCI parcelport
- PR #6467[2697] - Bump jwlawson/actions-setup-cmake from 1.14 to 2.0
- PR #6464[2698] - Update docs of "Writing distributed applications" page

- PR #6463[2699] - Revert "Always return outermost thread id"
- PR #6458[2700] - Reduce test workload to fix CI/CD time-out
- PR #6457[2701] - replace boost::array with std::array and update file name
- PR #6456[2702] - Move APEX CI to rostam
- PR #6455[2703] - Fixing compilation if HPX_HAVE_THREAD_QUEUE_WAITTIME is defined
- PR #6454[2704] - Update perftests reference measurements
- PR #6453[2705] - Update supported platforms of Manual/Prerequisites page
- PR #6452[2706] - Fix nvcc crashes in transform_stream.cu and synchronize.cu
- PR #6450[2707] - Fix git tag name in Getting HPX page
- PR #6449[2708] - LCI parcelport: add yield to potentially infinite retry loop
- PR #6447[2709] - Use compressed ptr in schedulers when 128 atomics are not lockfree
- PR #6445[2710] - Fix agas addressing cache
- PR #6444[2711] - Update CTestConfig.cmake
- PR #6442[2712] - Update CMakeLists.txt
- PR #6441[2713] - Minor documentation fixes
- PR #6439[2714] - Optimizing use of certain #includes
- PR #6438[2715] - Bump jwlawson/actions-setup-cmake from 1.14 to 2.0
- PR #6436[2716] - Update docs
- PR #6435[2717] - Parcel layer tweaks
- PR #6434[2718] - improve termination detection: removing lock from critical path
- PR #6433[2719] - Use shared mutex for resolve_locality procedure
- PR #6432[2720] - Module cleanup up to level 30
- PR #6429[2721] - Making sure HPX_WITH_ASYNC_MPI is reported properly

- PR #6394[2745] - Adding option for installing Hwloc using CMake FetchContent
- PR #6393[2746] - Optionally disable caching allocator
- PR #6391[2747] - Cleaning up collective operations
- PR #6390[2748] - Making function local constexpr variables non-static
- PR #6389[2749] - Disable resolving hostnames if TCP is disabled
- PR #6387[2750] - Need to break out of the loop when searching the suffixes.
- PR #6384[2751] - Fixing allocation/deallocation mismatch in serialize_buffer
- PR #6383[2752] - Enable fork_join_executor to handle return values from scheduled functions
- PR #6381[2753] - Consistently treat conflicting parameters provided by executors and parameter objects
- PR #6380[2754] - Fixing setting an annotation for an execution policy
- PR #6378[2755] - Allowing to disable signal handlers
- PR #6377[2756] - Fix gasnet-related test failures
- PR #6375[2757] - Update LSU Jenkins with 2023-10 libraries
- PR #6374[2758] - Investigate builder gasnet failure
- PR #6373[2759] - Fixing communicator API, adding docs
- PR #6372[2760] - Fix resource partitioner tests for small thread count
- PR #6371[2761] - Fix jacobi omp examples.
- PR #6370[2762] - improve one_size_heap_list: use rwlock to speedup the allocation/free
- PR #6369[2763] - working issue with MPI_CC / CC conflict in automake
- PR #6368[2764] - Making sure serialize_buffer properly destroys buffer, if needed.
- PR #6367[2765] - Fix parallel relocation test
- PR #6364[2766] - Relocation variants
- PR #6363[2767] - Update the lci parcelport to use LCI v1.7.6

- PR #6332[2791] - More fixes for CMake V3.27
- PR #6330[2792] - Adding basic logging to collective operations
- PR #6328[2793] - Cleanup previous patch adapting to CMake V3.27
- PR #6327[2794] - Modernize modules in level 17 and 18
- PR #6324[2795] - P1144 Relocation primitives
- PR #6321[2796] - Ensure hpx_main is a proper thread_function
- PR #6320[2797] - Fixing cyclic dependencies in naming and agas modules
- PR #6319[2798] - Generate git tag if needed but it is not available
- PR #6317[2799] - Fixing linker problem on FreeBSD
- PR #6315[2800] - acknowledge triv-rel and nothrow-rel types
- PR #6314[2801] - Relocation algorithms Clean
- PR #6313[2802] - Trivial relocation of c-v-ref-array types
- PR #6312[2803] - Fixing warning/error
- PR #6311[2804] - Adding executor parallel invoke CPOs
- PR #6310[2805] - Define HPX_COMPUTE_CODE in builds with SYCL
- PR #6309[2806] - Making sure changed number of cores is propagated to executor
- PR #6308[2807] - openshmem-parcelport initial import
- PR #6306[2808] - The hpxcxx script was broken such that it could only compile for _release
- PR #6305[2809] - Adapting build system for CMake V3.27
- PR #6304[2810] - Fixing an integral type mismatch warning
- PR #6303[2811] - omp for default vectorization
- PR #6301[2812] - Add MPI migration guide
- PR #6294[2813] - Add internal reference counting to semaphores

HPX V1.9.1 (August 4, 2023)

General changes

This point release fixes a couple of problems reported for the V1.9.0 release. Most importantly, we fixed various occasional hanging during startup and shutdown in distributed scenarios. We also added support for zero-copy serialization on the receiving side to the TCP, MPI, and LCI parcelports. Last but not least, we have added support for Visual Studio 2019 and gcc using MINGW on Windows, and also support for gcc V13 and clang V15.

HPX headers are now made consistently named the same as their standard library counterparts, e.g. *#include <thread>* now corresponds to *#include <hpx/thread.hpp>*. This significantly simplifies porting existing standards conforming codes to HPX.

A lot of work has been done to improve and optimize our network communication layers. Primary focus of this work was on the LCI parcelport, but we have also cleaned up and improved the MPI parcelport.

Additionally, we have continued working on our documentation. The main focus here was on completing the API documentation of the most important API functions. We have started adding migration guides for people interested in moving their codes away from other, commonplace parallelization frameworks like OpenMP.

HPX V1.9.0 (May 2, 2023)

General changes

- Added RISC-V 64bit support. HPX is now compatible with RISC-V architectures which have revolutionized the HPC world.
- LCI parcelport has been optimized to transfer parcels with fewer messages and use the HPX resource partitioner for its progress thread allocation. It should generally provide better performance than before. It also removes its dependency on the MPI library.
- HPX dependency on Boost was further relaxed by replacing headers from Boost.Range, Boost.Tokenizer and Boost.Lockfree.
- Improvements took place on our parallel algorithms implementation.
- Our Senders/Receivers (P2300) integration was extended:
  - Coroutines were integrated with senders/receivers.

  `get_completion_signatures` now works with awaitable senders. - `with_awaitable_senders` allows the passed senders to retrieve the value i.e. senders are transparently awaitable from within a coroutine. - `when_all_vector` was added.
- `sync_wait` and `sync_wait_with_variant` sender consumers were added. The user can now initiate the execution of their asynchronous pipeline by blocking the current thread that executes the main() function until the result is retrieved.
- The combinators for futures (a.k.a. async_combinators) `when_*`, `wait_*`, `wait_*_nothrow` were turned into CPOs allowing for end-user customization. For more information on the async_combinators refer to the documentation, https://hpx-docs.stellar-group.org/latest/html/libs/core/async_combinators/docs/index.html?highlight=combinators.
- The new datapar backend SVE allows simd and par_simd execution policies to exploit dataparalleism in the processors that have SVE vector registers like A64FX and Neoverse V1.
- The documentation for parallel algorithms, container algorithms was further improved. The Public API page was vastly enriched.
- Copy button shortkey was added at the top-right of code-blocks.

[2875] https://github.com/TheHPXProject/hpx/pull/6281
[2876] https://github.com/TheHPXProject/hpx/pull/6283

- Pragma directive that reports warnings as errors on MSVC was fixed.
- Command line argument `--hpx:loopback_network` was added to facilitate debugging with networks.
- We added an HPX-SYCL integration, allowing users to obtain HPX futures for SYCL events. This effectively enables the integration of arbitrary asynchronous SYCL operations into the HPX task graph. Bolted on top of this integration, we further added an HPX-SYCL executor for ease of use.

Breaking changes

- Stopped supporting Clang V8, the minimal version supported is now Clang V10.
- Stopped supporting gcc V8, the minimal version supported is now gcc V9.
- Stopped supporting Visual Studio 2015, the minimal version supported is now Visual Studio 2019.
- `tag_policy_tag` et.al. were re-added after HPX V1.8.1 depracation.
- `get_chunk_size` and `processing_units_count` API is now expecting the time for one iteration as an argument.
- The list of all the namespace changes can be found here: *HPX V1.9.0 Namespace changes*.

Closed issues

- PR #6166[2935] - Add missing header for std::intmax_t
- PR #6165[2936] - Attempt to work around MSVC problem
- PR #6161[2937] - Update EVE integration
- PR #6160[2938] - More cleanup for module levels 0 to 10
- PR #6159[2939] - Fix minor spelling mistake in generate_issue_pr_list.sh
- PR #6158[2940] - Update documentation in *writing single-node applications* page
- PR #6157[2941] - Improve index_queue_spawning
- PR #6154[2942] - Avoid performing late command line handling twice in distributed runtime
- PR #6152[2943] - The -rd and -mr options didn't work, and they should have been –rd and –mr
- PR #6151[2944] - Refactoring the Manual page in documentation
- PR #6148[2945] - Investigate the failure of the LCI parcelport.
- PR #6147[2946] - Make posix co-routine stacks non-executable
- PR #6146[2947] - Avoid ambiguities wrt tag_invoke
- PR #6144[2948] - General improvements to scheduling and related fixes
- PR #6143[2949] - Add list of new namespaces for new release
- PR #6140[2950] - Fixing background scheduler to properly exit in the end
- PR #6139[2951] - [P2300] execution: Cleanup coroutines integration and improve ADL isolation
- PR #6137[2952] - Adding example of a simple master/slave distributed application
- PR #6136[2953] - Deprecate *execution::experimental::task_group* in favor of *experimental::task_group*
- PR #6135[2954] - Fixing warnings reported by MSVC analysis
- PR #6134[2955] - Adding notification function for parcelports to be called after early parcel handling
- PR #6132[2956] - Fixing to_non_par() for parallel simd policies
- PR #6131[2957] - modernize modules from level 25

- PR #6130[2958] - Remove the mutex lock in the critical path of get_partitioner.
- PR #6129[2959] - Modernize module from levels 22, 23
- PR #6127[2960] - Working around gccV9 problem that prevent us from storing enum classes in bit fields
- PR #6126[2961] - Deprecate hpx::parallel::task_block in favor of hpx::experimental::task_block
- PR #6125[2962] - Making sure sync_wait compiles when used with an lvalue sender involving bulk
- PR #6124[2963] - Fixing use of any_sender in combination with when_all
- PR #6123[2964] - Fixed issues found by PVS-Studio
- PR #6121[2965] - Modernize modules of level 21, 22
- PR #6120[2966] - Use index_queue for parallel executors bulk_async_execute
- PR #6119[2967] - Update CMakeLists.txt
- PR #6118[2968] - Modernize modules from level 17, 18, 19, and 20
- PR #6117[2969] - Initialize **buffer_allocate_time_** to 0
- PR #6116[2970] - Add new command line argument –hpx:loopback_network
- PR #6115[2971] - Modernize modules of levels 14, 15, and 16
- PR #6114[2972] - Enhance the formatting of the documentation
- PR #6113[2973] - Modernize modules in module level 11, 12, and 13
- PR #6112[2974] - Modernize modules from levels 9 and 10
- PR #6111[2975] - Modernize all modules from module level 8
- PR #6110[2976] - Use pragma error directive to report warnings as errors on msvc
- PR #6109[2977] - Modernize serialization module
- PR #6107[2978] - Modernize error module
- PR #6106[2979] - Modernizing modules of levels 0 to 5
- PR #6105[2980] - Optimizations on LCI parcelport: merge small messages; remove sender mutex lock.

- PR #6104[2981] - Adding parameters API: measure_iteration
- PR #6103[2982] - Document *task_group* and include in Public API
- PR #6102[2983] - Prevent warnings generated by clang-cl
- PR #6101[2984] - Using more fold expressions
- PR #6100[2985] - Deprecate *hpx::parallel::reduce_by_key* in favor of *hpx::experimental::reduce_by_key*
- PR #6098[2986] - Forking Boost.Lockfree
- PR #6096[2987] - Forking Boost.Tokenizer
- PR #6095[2988] - Replacing facilities from Boost.Range
- PR #6094[2989] - Removing object_semaphore
- PR #6093[2990] - Replace boost::string_ref with std::string_view
- PR #6092[2991] - Use C++17 static_assert where possible
- PR #6091[2992] - Replace artificial sequencing with fold expressions
- PR #6090[2993] - Fixing use of get_chunk_size customization point
- PR #6088[2994] - Add/fix Public API documentation
- PR #6086[2995] - Deprecate *hpx::util::unlock_guard* in favor of *hpx::unlock_guard*
- PR #6085[2996] - Add experimental sycl integration/executor
- PR #6084[2997] - Renaming hpx::apply and friends to hpx::post
- PR #6083[2998] - Using if constexpr instead of tag-dispatching, where possible
- PR #6082[2999] - Replace util::always_void_t with std::void_t
- PR #6081[3000] - Update github actions to avoid warnings
- PR #6080[3001] - Disable some tests that fail on LCI
- PR #6079[3002] - Adding more natvis files, correct existing
- PR #6078[3003] - Changing target name of memory_counters component

- PR #6026[3050] - add option hpx:force_ipv4 to force resolving hostnames to ipv4 addresses
- PR #6025[3051] - build(docs): remove leftover sections
- PR #6023[3052] - Minor fixes on "How to build on Windows"
- PR #6022[3053] - build(doxy): don't extract private members
- PR #6021[3054] - Adding pu_mask to thread_pool_bulk_scheduler
- PR #6020[3055] - docs: add cppref NamedRequirements support
- PR #6018[3056] - Unseq adaptation for for_each, transform, reduce, transform_reduce, etc.
- PR #6017[3057] - loop and transform_loop unseq adaptation
- PR #6016[3058] - Config and structural updates to support unseq implementation
- PR #6015[3059] - Integrating sync_wait & sync_wait_with_variant
- PR #6012[3060] - docs: add missing links to public api
- PR #6009[3061] - Fixing sender&receiver integration with for_each and for_loop
- PR #6007[3062] - docs: add docs for mutex.hpp
- PR #6006[3063] - Relax future::is_ready where possible
- PR #6005[3064] - reshuffle header tests to different instances
- PR #6004[3065] - Add documentation Public API
- PR #6003[3066] - Always exporting get_component_name implementations
- PR #6002[3067] - Making sure that default constructble arguments are properly constructed during deserialization
- PR #5996[3068] - Add back explicit template parameters to lock_guards for nvcc
- PR #5994[3069] - Fix CTRL+C on windows
- PR #5993[3070] - Using EVE requires C++20
- PR #5992[3071] - This properly terminates an application on Ctrl-C on Windows
- PR #5991[3072] - Support IPV6 on command line for explicit network initialization

HPX V1.8.1 (Aug 5, 2022)

This is a bugfix release with a few minor additions and resolved problems.

General changes

This patch release adds a number of small new features and fixes a handful of problems discovered since the last release, in particular:

- A lot of work has been done to improve vectorization support for our parallel algorithms. HPX now supports using EVE - the Expressive Vector Engine as a vectorization backend.
- Added a simple average power consumption performance counter.
- Added performance counters related to the use of zero-copy chunks in the networking layer.
- More work was done towards full compatibility with the sender/receivers proposal P2300.
- Fixing sync_wait to decay the result types
- Fixed collective operations to properly avoid overalapping consecutive operations on the same communicator.
- Simplified the implementation of our execution policies and added mapping functions between those.
- Fixed performance issues with our implementation of *small_vector*.
- Serialization now works with buffers of unsigned characters.
- Fixing dangling reference in serialization of non-default constructible types
- Fixed static linking on Windows.
- Fixed support for M1/MacOS based architectures.
- Fixed support for gentoo/musl.
- Fixed *hpx::counting_semaphore_var*.
- Properly check start and end bounds for *hpx::for_loop*
- A lot of changes and fixes to the documentation (see https://hpx-docs.stellar-group.org).

- PR #5879[3166] - New performance counters related to zero-copy chunks.

HPX V1.8.0 (May 18, 2022)

With HPX parallel algorithms been fully adapted to C++20 the new release achieves full conformance with C++20 concurrency and parallelism facilities. HPX now supports all of the algorithms as specified by C++20. We have added support for vectorization to more of our algorithms. Much work has been done towards implementing P2300 (“std::execution”) and implementing the underlying senders/receivers facilities. Finally, The new release comes with a brand new documentation interface!

General changes

- The new documentation can now be found on our webpage: https://hpx-docs.stellar-group.org. This includes a completely new and user-friendly interface environment along with restructuring of certain components. The content in the “Quick start”, “Manual” and “Examples” was improved, while the “Build system” page was adapted to include necessary information for newcommers.
- With the vectorization support available in modern hardware architectures HPX now provides new data-parallel vector execution policies `hpx::execution::simd` and `hpx::execution::par_simd` that enable significant speed-up of our parallel algorithm implementations. The following algorithms now support SIMD execution:
  - `copy`, `copy_n`
  - `generate`
  - `adjacent_difference`, `adjacent_find`
  - `all_of`, `any_of`, `none_of`
  - `equal`, `mismatch`,
  - `inner_product`
  - `count`, `count_if`
  - `fill`, `fill_n`
  - `find`, `find_end`, `find_first_of`, `find_if`, `find_if_not`
  - `for_each`, `for_each_n`
  - `generate`, `generate_n`.
- Based on top of P2300 the HPX parallel algorithms now support the pipeline syntax towards an effort to unify their usage along with senders/receivers. The HPX parallel algorithms can now bind with senders/receivers using the pipeline operator.
- Several changes took place on the executors provided by HPX:
- The executors now support the `num_cores` options in order for the user to be able to specify the desired number of cores to be used in the correspodning execution.
- The `scheduler` executor was implemented on top of senders/receivers and can be used with all HPX facilities that schedule new work, such as parallel algorithms, `hpx::async`, `hpx::dataflow`, etc.
- The performance of `fork_join_executor` was improved.
- The following algorithms have been added/adapted to be C++20 conformant:
  - `min_element`

[3166] https://github.com/TheHPXProject/hpx/pull/5879

  - `max_element`
  - `minmax_element`
  - `starts_with`
  - `ends_with`
  - `swap_ranges`
  - `unique`
  - `unique_copy`
  - `rotate`
  - `rotate_copy`
  - `sort`
  - `shift_left`
  - `shift_right`
  - `stable_sort`
  - `partition`
  - `partition_copy`
  - `stable_partition`
  - `adjacent_difference`
  - `nth_element`
  - `partial_sort`
  - `partial_sort_copy`.
- `HPX_FORWARD`/`HPX_MOVE` macros were introduced that replaced the `std::move` and `std::forward` facilities that in the library code.
- Hangs on distributed barrier were fixed.
- The performance of `scan_partitioner` was improved.
- Support was added for `thread_priority` to the `parallel_execution_policy`
- Regarding senders/receivers and the P2300 proposal various actions took place. `stop_token` was adapted to the recent proposal version (`in_place_stop_token` was introduced). Also hint, annotation, priority and stacksize properties were added to the scheduler executor. Stop support was added to `when_all`. Support for completion signatures was added. The following schedulers and algorithms were added:
  - `get_completion_scheduler`
  - `any_sender` and `unique_any_sender`
  - `split` sender
  - `transform_mpi` sender
  - `transfer` sender
  - `let_error`, `let_stopped`
  - `get_env` and related environment queries
  - `schedule`, `set_value`, `set_error`, `set_done`, `start` and `connect` are now proper customization points as defined in P2300.

- Several namespaces were altered towards conformance with C++20. Compatibility layers have been added and the old versions will be removed in next releases. The namespace changes are the following:
  - `hpx::parallel::induction/reduction` were movied into namespace `hpx::experimental`
  - `for_loop` and friends were moved into namespace `hpx::experimental`.
  - `hpx::util::optional` and friends were moved into namespace `hpx`.
  - `hpx::lcos::barrier` has been moved into the `hpx::distributed` namespace and `hpx::lcos::local::cpp20_barrier` has been renamed to `barrier` and moved into the `hpx` namespace.
  - `hpx::lcos::latch` has been moved into the `hpx::distributed` namespace and `lcos::local::latch` has been moved into the `hpx` namespace. The `count_down_and_wait()` functionality of `latch` has been renamed to `arrive_and_wait()`.
  - `hpx::util::unique_function_nonser` has been renamed to `hpx::move_only_function`.
  - `hpx::util::unique_function` has been renamed to `hpx::distributed::move_only_function`.
  - `hpx::util::function` has been renamed to `hpx::distributed::function`.
  - `hpx::util::function_nonser` has been renamed to `hpx::function`.
  - `hpx::util::function_ref` have been moved to namespace `hpx`.
  - `hpx::lcos::split_future` changed namespace and is now used as `hpx::split_future`.
  - `hpx::lcos::local::counting_semaphore` has been deprecated and `hpx::lcos::local::cpp20_counting_semaphore` has been renamed to `hpx::counting_semaphore`.
  - `hpx::lcos::local::cpp20_binary_semaphore` has been renamed to `hpx::binary_semaphore`.
  - `hpx::lcos::local::sliding_semaphore` has been renamed to `hpx::sliding_semaphore` and
  - `hpx::lcos::local::sliding_semaphore_var` has been renamed to `hpx::sliding_semaphore_var`.
  - `hpx::lcos::local::spinlock` has been renamed to `hpx::spinlock`.
  - `hpx::lcos::local::mutex` has been renamed to `hpx::mutex`.
  - `hpx::lcos::local::timed_mutex` has been renamed to `hpx::timed_mutex`.
  - `hpx::lcos::local::no_mutex` has been renamed to `hpx::no_mutex`.
  - `hpx::lcos::local::recursive_mutex` has been renamed to `hpx::recursive_mutex`.
  - `hpx::lcos::local::shared_mutex` has been renamed to `hpx::shared_mutex`.
  - `hpx::lcos::local::upgrade_lock` has been renamed to `hpx::upgrade_lock`.
  - `hpx::lcos::local::upgrade_to_unique_lock` has been renamed to `hpx::upgrade_to_unique_lock`.
  - `hpx::lcos::local::condition_variable` has been renamed to `hpx::condition_variable`. `hpx::lcos::local::condition_variable_var` has been renamed to `hpx::condition_variable_var`.
  - `hpx::lcos::local::once_flag` has been renamed to `hpx::once_flag`, and . `hpx::lcos::local::call_once` has been renamed to `hpx::call_once`.
- The new LCI (Lightweight Communication Interface) parcelport was added that supports irregular and asynchronous applications like graph analysis, sparce linear algebra, modern parallel architectures etc. Major features include:

  - Support for advanced communication primitives like two sided send/recv and one sided remote put.
  - Better multi-threaded performance.
  - Explicit user control of communication resource.
  - Flexible signaling mechanisms (synchronizer, completion queue, active message handler).
- The following CMake flags were added, mostly to support using HPX as a backend for SHAD (https://github.com/pnnl/SHAD). Please note that these options enable questionable functionalities, partially they even enable undefined behavior. Please only use any of them if you know what you're doing:
  - `HPX_SERIALIZATION_WITH_ALLOW_RAW_POINTER_SERIALIZATION`
  - `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`
  - `HPX_SERIALIZATION_WITH_ALLOW_CONST_TUPLE_MEMBERS`

Breaking changes

- Minimum required C++ standard library is C++17.
- Support for GCC 7 and Clang 8.0.0 and below has been removed.
- CUDA version required updated to 11.4.
- CMake version required updated to 3.18.
- The default version of Asio used was updated to 1.20.0.
- The default version of APEX used was updated to 2.5.1.
- APEX version was updated to 2.5.1.
- `tagged_pair` and `tagged_tuple` were removed.
- `tag_dispatch` was renamed to `tag_invoke`.
- `hpx.max_backgroud_threads` was renamed to `hpx.parcel.max_background_threads`.
- The following CMake flags were removed after being deprecated for at least two releases:
  - `HPX_SCHEDULER_MAX_TERMINATED_THREADS`
  - `HPX_WITH_GOOGLE_PERFTOOLS`
  - `HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY`
  - `HPX_HAVE_{COROUTINE,PLUGIN}_GCC_HIDDEN_VISIBILITY`
  - `HPX_TOP_LEVEL`
  - `HPX_WITH_COMPUTE_CUDA`
  - `HPX_WITH_ASYNC_CUDA`
- `annotate_function` was renamed to `scoped_annotation`.
- `execution::transform` was renamed to `execution::then`.
- `execution::detach` was renamed to `execution::start_detached`.
- `execution::on_sender` was renamed to `execution::schedule_on`.
- `execution::just_on` was renamed to `execution::just_transfer`.
- `execution::set_done` was renamed to `execution::set_stopped`.

- Issue #4822[3212] - Adapt parallel algorithms to C++20
- Issue #4736[3213] - Deprecate hpx::flush and hpx::endl
- Issue #4558[3214] - Prevent work-stealing from stalling
- Issue #4495[3215] - Add anchor links to table rows in documentation
- Issue #4469[3216] - New thread state: *pending_low*
- Issue #4321[3217] - After the modularization the libfabric parcelport does not compile
- Issue #4308[3218] - Using APEX on multinode jobs when HPX_WITH_NETWORKING = OFF
- Issue #3995[3219] - Use C++20 std::source_location where available, adapt ours to conform
- Issue #3861[3220] - Selected processor does not support 'yield' in ARM mode
- Issue #3706[3221] - Add shift_left and shift_right algorithms
- Issue #3646[3222] - Parallel algorithms should accept iterator/sentinel pairs
- Issue #3636[3223] - HPX Modularization
- Issue #3546[3224] - Modularization of HPX
- Issue #3474[3225] - Modernize CMake used in HPX
- Issue #1836[3226] - hpx::parallel does not have a sort implementation
- Issue #1668[3227] - Adapt all parallel algorithms to Ranges TS
- Issue #1141[3228] - Implement N4409 on top of HPX

Closed pull requests

- PR #5885[3229] - Testing newer ASIO version
- PR #5884[3230] - Fix miscellaneous doc sections
- PR #5882[3231] - Fixing OctoTiger incompatibility introduced recently
- PR #5881[3232] - Fixing recent patch that disables ATOMIC_FLAG_INIT for C++20 and up
- PR #5880[3233] - refactor: convert *counter_status* enum to enum class

- PR #5684[3372] - Move lock registration to separate module and remove global lock registration
- PR #5683[3373] - Make hpx::wait_all etc. throw exceptions when waited futures hold exceptions and deprecate hpx::lcos::wait_all[_n] in favor of hpx::wait_all[_n]
- PR #5682[3374] - Fix macOS test exceptions
- PR #5681[3375] - docs: add links to hpx recepies
- PR #5680[3376] - Embed base execution policies to datapar execution policies
- PR #5679[3377] - Fix *fork_join_executor* with dynamic schedule
- PR #5678[3378] - Fix compilation of service executors with nvcc
- PR #5677[3379] - Remove compute_cuda module
- PR #5676[3380] - Don't require up-to-date approvals for bors
- PR #5675[3381] - Add default template type parameters for algorithms
- PR #5674[3382] - Allow using *any_sender* in global variables
- PR #5671[3383] - Making sure task_group can be reused
- PR #5670[3384] - Relax constraints on *execution::when_all*
- PR #5669[3385] - Use HPX_WITH_CXX_STANDARD for controlling C++ version
- PR #5667[3386] - Attempt to fix compilation issues with Boost V1.76
- PR #5664[3387] - Change logging errors to warnings in schedulers
- PR #5663[3388] - Use dynamic bitsets by default for CPU masks
- PR #5662[3389] - Disambiguate namespace for MSVC
- PR #5660[3390] - Replacing remaining std::forward and std::move with HPX_FORWARD and HPX_MOVE
- PR #5659[3391] - Modernize hpx::future and related facilities
- PR #5658[3392] - Replace HPX_INLINE_CONSTEXPR_VARIABLE with inline constexpr
- PR #5657[3393] - Remove tagged, tagged_pair and tagged_tuple, remove tuple/pair specializations
- PR #5656[3394] - Rename on execution::schedule_from, rename just_on to just_transfer, and add transfer

HPX V1.7.1 (Aug 12, 2021)

This is a bugfix release with a few minor fixes.

General changes

- Added a CMake option to assume that all types are bitwise serializable by default: `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`. The default value `OFF` corresponds to the old behaviour.
- Added a version check for Asio. The minimum Asio version supported by *HPX* is 1.12.0.
- Fixed a bug affecting usage of actions, where the internals of *HPX* relied on function addresses being unique. This was fixed by relying on variable addresses being unique instead.
- Made `hpx::util::bind` more strict in checking the validity of placeholders.
- Small performance improvement to spinlocks.
- Adapted the following parallel algorithms to C++20: `inclusive_scan`, `exclusive_scan`, `transform_inclusive_scan`, `transform_exclusive_scan`.

Breaking changes

- The experimental `hpx::execution::simdpar` execution policy (introduced in 1.7.0) was renamed to `hpx::execution::par_simd` for consistency with the other parallel policies.

Closed issues

- Issue #5494[3556] - Rename *simdpar* execution policy to *par_simd*
- Issue #5488[3557] - *hpx::util::bind* doesn't bounds-check placeholders
- Issue #5486[3558] - Possible V1.7.1 release

Closed pull requests

- PR #5500[3559] - Minor bug fix in transform exclusive and inclusive scan tests
- PR #5499[3560] - Rename simdpar to par_simd
- PR #5489[3561] - Adding bound-checking for bind placeholders
- PR #5485[3562] - Add Asio version check
- PR #5482[3563] - Change extra archive data to rely on uniqueness of a variable address, not a function address
- PR #5448[3564] - More fixes to enable for all types to be assumed to be bitwise copyable

HPX V1.7.0 (Jul 14, 2021)

This release is again focused on C++20 conformance of algorithms. Additionally, many new experimental sender-based algorithms have been added based on the latest proposals.

General changes

- The following algorithms have been adapted to be C++20 conformant:
  - `remove`,
  - `remove_if`,
  - `remove_copy`,
  - `remove_copy_if`,
  - `replace`,
  - `replace_if`,
  - `reverse`, and
  - `lexicographical_compare`.
- When the compiler and standard library support the standard execution policies `std::execution::seq`, `std::execution::par`, and `std::execution::par_unseq` they can now be used in all *HPX* parallel algorithms with equivalent behaviour to the non-task policies `hpx::execution::seq`, `hpx::execution::par`, and `hpx::execution::par_unseq`.
- Vc support has been fixed, after being broken in 1.6.0. In addition, *HPX* now experimentally supports GCC's SIMD implementation, when available. The implementation can be used through the `hpx::execution::simd` and `hpx::execution::simdpar` execution policies.
- The customization points `sync_execute`, `async_execute`, `then_execute`, `post`, `bulk_sync_execute`, `bulk_async_execute`, and `bulk_then_execute` are now implemented using `tag_dispatch` (previously `tag_invoke`). Executors can still be implemented by providing the aforementioned functions as member functions of an executor.
- New functionality, enhancements, and fixes based on P0443r14 (executors proposal) and P1897 (sender-based algorithms) have been added to the `hpx::execution::experimental` namespace. These can be accessed through the `hpx/execution.hpp` and `hpx/local/execution.hpp` headers. In particular, the following sender-based algorithms have been added:
  - `detach`,

[3565] https://github.com/TheHPXProject/hpx/pull/5445
[3566] https://github.com/TheHPXProject/hpx/pull/5444
[3567] https://github.com/TheHPXProject/hpx/pull/5440
[3568] https://github.com/TheHPXProject/hpx/pull/5439
[3569] https://github.com/TheHPXProject/hpx/pull/5436

  - `ensure_started`,
  - `just`,
  - `just_on`,
  - `let_error`,
  - `let_value`,
  - `on`,
  - `transform`, and
  - `when_all`.

  Additionally, futures now implement the sender concept. `make_future` can be used to turn a sender into a future. All functionality is experimental and can change without notice.

- All `hpx::init` and `hpx::start` overloads now take `std::functions` instead of `hpx::util::function_nonser`. No changes should be required in user code to accommodate this change.
- `hpx::util::unwrapping` and other related unwrapping functionality has been moved up into the `hpx` namespace. Names in `hpx::util` are still usable with a deprecation warning. This functionality can now be accessed through the `hpx/unwrap.hpp` and `hpx/local/unwrap.hpp` headers.
- The default tag for APEX has been update from 2.3.1 to 2.4.0. In particular, this fixes a bug which could lead to hangs in distributed runs.
- The dependency on Boost.Asio has been replaced with the standalone Asio available at https://github.com/chriskohlhoff/asio. By default, a system-installed Asio will be used. `ASIO_ROOT` can be given as a hint to tell CMake where to find Asio. Alternatively, Asio can be fetched automatically using CMake's fetchcontent by setting `HPX_WITH_FETCH_ASIO=ON`. In general, dependencies on Boost have again been reduced.
- Modularization of the library has continued. In this release almost all functionality has been moved into modules. These changes do not generally affect user code. Warnings are still issued for headers that have moved.
- hipBLAS is now optional when compiling with `hipcc`. A warning instead of an error will be printed if hipBLAS is not found during configuration.
- Previously `HPX_COMPUTE_HOST_CODE` was defined in host code only if HPX was configured with CUDA or HIP. In this release `HPX_COMPUTE_HOST_CODE` is always defined in host code.
- An experimental `HPX_WITH_PRECOMPILED_HEADERS` CMake option has been added to use precompiled headers when building *HPX*. This option should not be used on Windows.
- Numerous bug fixes.

Breaking changes

- The minimum required CMake version is now 3.17.
- The minimum required Boost version is now 1.71.0.
- The customization mechanism used to implement and extend sender functionality and algorithms has been renamed from `tag_invoke` to `tag_dispatch`. All customization of sender functionality should be done by overloading `tag_dispatch`.
- The following compatibility options have been removed, along with their compatibility implementations: - `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY` - `HPX_WITH_ACTION_BASE_COMPATIBILITY` - `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY` - `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`. - `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY` -

`HPX_WITH_REGISTER_THREAD_COMPATIBILITY` - `HPX_WITH_REGISTER_THREAD_OVERLOADS_COMPATIBILITY` - `HPX_WITH_THREAD_AWARE_TIMER_COMPATIBILITY` - `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY` - `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`

- The `HPX_WITH_THREAD_SCHEDULERS` CMake option has been removed. All schedulers are now enabled when possible.
- `HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY` has been turned off by default.

Closed issues

- PR #5417[3609] - Final release notes for 1.7.0
- PR #5416[3610] - Adapt `uninitialized_value_construct` and `uninitialized_value_construct_n` to C++ 20
- PR #5415[3611] - Adapt `uninitialized_default_construct` and `uninitialized_default_construct_n` to C++ 20
- PR #5414[3612] - Improve integration of futures and senders
- PR #5413[3613] - Fixing sender/receiver code base to compile with MSVC
- PR #5407[3614] - Handle exceptions thrown during initialization of parcel handler
- PR #5406[3615] - Simplify dispatching to annotation handlers
- PR #5405[3616] - Fetch Asio automatically in perftests CI
- PR #5403[3617] - Create generic executor that adds annotations to any other executor
- PR #5402[3618] - Adapt `uninitialized_fill` and `uninitialized_fill_n` to C++ 20
- PR #5401[3619] - Modernize a variety of facilities related to parallel algorithms
- PR #5400[3620] - Fix sliding semaphore test
- PR #5399[3621] - Rename leftover `tag_fallback_invoke` to `tag_fallback_dispatch`
- PR #5398[3622] - Improve logging in AGAS symbol namespace
- PR #5396[3623] - Introduce compatibility layer for collective operations
- PR #5394[3624] - Enable OTF2 in APEX CI configuration
- PR #5393[3625] - Update APEX tag
- PR #5392[3626] - Fixing wrong usage of `std::forward`
- PR #5391[3627] - Fix forwarding in transform_receiver constructor
- PR #5390[3628] - Make sure shared priority scheduler steals tasks on the current NUMA domain when (core) stealing is enabled
- PR #5389[3629] - Adapt `uninitialized_move` and `uninitialized_move_n` to C++ 20
- PR #5388[3630] - Fixing `gather_there` for used with lvalue reference argument

- PR #5387[3631] - Extend thread state logging and change default stealing parameters
- PR #5386[3632] - Attempt to fix the startup hang with nodes > 32
- PR #5384[3633] - Remove HPX 1.5.0 deprecations
- PR #5382[3634] - Prefer installed Asio before considering FetchContent
- PR #5379[3635] - Allow using pre-downloaded (not installed) versions of Asio and/or Apex
- PR #5376[3636] - Remove unnecessary explicit listing of library modules.rst files in CMakeLists.txt
- PR #5375[3637] - Slight performance improvement for `hpx::copy` and `hpx::move` et.al.
- PR #5374[3638] - Remove unnecessary moves from future sender implementations
- PR #5373[3639] - More changes to clang-cuda Jenkins configuration
- PR #5372[3640] - Slight improvements to `min/max/minmax_element` algorithms
- PR #5371[3641] - Adapt `uninitialized_copy` and `uninitialized_copy_n` to C++ 20
- PR #5370[3642] - Decay types in `just_sender` `value_types` to match stored types
- PR #5367[3643] - Disable pkgconfig by default again on macOS
- PR #5365[3644] - Use ccache for Jenkins builds on Piz Daint
- PR #5363[3645] - Update cudatoolkit module name in clang-cuda Jenkins configuration
- PR #5362[3646] - Adding `channel_communicator`
- PR #5361[3647] - Fix compilation with MPI enabled
- PR #5360[3648] - Update APEX and asio tags
- PR #5359[3649] - Fix check for pu-step in single-core case
- PR #5357[3650] - Making sure collective operations can be reused by preallocating communicator
- PR #5356[3651] - Update API documentation
- PR #5355[3652] - Make the `sequenced_executor` `processing_units_count` member function const
- PR #5354[3653] - Making sure `default_stack_size` is defined whenever declared

- PR #5353[3654] - Add CUDA timestamp support to HPX Hardware Clock
- PR #5352[3655] - Adding missing includes
- PR #5351[3656] - Adding `enable_logging/disable_logging` API functions
- PR #5350[3657] - Adapt lexicographical_compare to C++20
- PR #5349[3658] - Update minimum boost version needed on the docs
- PR #5348[3659] - Rename `tag_invoke` and related facilities to `tag_dispatch`
- PR #5347[3660] - Remove `make_` prefix for executor properties
- PR #5346[3661] - Remove and disable compatibility options for 1.7.0
- PR #5343[3662] - Fix timed_executor static cast conversion
- PR #5342[3663] - Refactor CUDA event polling
- PR #5341[3664] - Adding `make_with_annotation` and `get_annotation` properties
- PR #5339[3665] - Making sure `hpx::util::hardware::timestamp()` is always defined
- PR #5338[3666] - Fixing `timed_executor` specializations of customization points
- PR #5335[3667] - Make `partial_algorithm` work with any number of arguments
- PR #5334[3668] - Follow up `iter_sent` include on #5225
- PR #5332[3669] - Simplify `tag_invoke` and friends
- PR #5331[3670] - More work on cleaning up executor CPOs
- PR #5330[3671] - Add option to disable pkgconfig generation
- PR #5328[3672] - Adapt data parallel support using std-simd
- PR #5327[3673] - Fix missing `ifdef HPX_SMT_PAUSE`
- PR #5326[3674] - Adding `resize()` to `serialize_buffer` allowing to shrink its size
- PR #5324[3675] - Add get member functions to `async_rw_mutex` proxy objects for explicitly getting the wrapped value
- PR #5323[3676] - Add `keep_future` algorithm

- PR #5322[3677] - Replace executor customization point implementations with `tag_invoke`
- PR #5321[3678] - Seperate segmented algorithms for reduce
- PR #5320[3679] - Fix `is_sender` trait and other small fixes to p0443 traits
- PR #5319[3680] - gcc 11.1 c++20 build fixes
- PR #5318[3681] - Make hipblas dependency optional as not always available
- PR #5316[3682] - Attempt to fix checking for libatomic
- PR #5315[3683] - Add explicit keyword to fixture constructor
- PR #5314[3684] - Fix a race condition in async mpi affecting limiting executor
- PR #5312[3685] - Use local runtime and local headers in local-only modules and tests
- PR #5311[3686] - Add GCC 11 builder to jenkins
- PR #5310[3687] - Adding `hpx::execution::experimental::task_group`
- PR #5309[3688] - Seperate datapar
- PR #5308[3689] - Seperate segmented algorithms for `find`, `find_if`, `find_if_not`
- PR #5307[3690] - Seperate segmented algorithms for `fill` and `generate`
- PR #5304[3691] - Fix compilation of sender CPOs with nvcc
- PR #5300[3692] - Remove `PRIVATE` flag that was propagated into the `LANGUAGES`
- PR #5298[3693] - Seperate datapar
- PR #5297[3694] - Specify exact cmake and ninja versions when loading them in jenkins jobs
- PR #5295[3695] - Update clang-newest configuration to use clang 12 and Boost 1.76.0
- PR #5293[3696] - Fix Clang 11 cuda_future test bug
- PR #5292[3697] - Add `async_rw_mutex` based on senders
- PR #5291[3698] - "Fix" termination detection
- PR #5290[3699] - Fixed source file line statements in examples documentation

- PR #5289[3700] - Allow splitting of futures holding `std::tuple`
- PR #5288[3701] - Move algorithms to `tag_fallback_invoke`
- PR #5287[3702] - Move algorithms to `tag_fallback_invoke`
- PR #5285[3703] - Fix clang-format failure on master
- PR #5284[3704] - Replacing `util::function_nonser` on std::function in `hpx_init`
- PR #5282[3705] - Update Boost for daint 20.11 after update
- PR #5281[3706] - Fix Segmentation fault on `foreach_datapar_zipiter`
- PR #5280[3707] - Avoid modulo by zero in `counting_iterator` test
- PR #5279[3708] - Fix more GCC 10 deprecation warnings
- PR #5277[3709] - Small fixes and improvements to CUDA/MPI polling
- PR #5276[3710] - Fix typo in docs
- PR #5274[3711] - More P1897 algorithms
- PR #5273[3712] - Retry CDash submissions on failure
- PR #5272[3713] - Fix bogus deprecation warnings with GCC 10
- PR #5271[3714] - Correcting target ids for `symbol_namespace::iterate`
- PR #5268[3715] - Adding generic `require`, `require_concept`, and `query` properties
- PR #5267[3716] - Support annotations in `hpx::transform_reduce`
- PR #5266[3717] - Making late command line options available for local runtime
- PR #5265[3718] - Leverage `no_unique_address` for `member_pack`
- PR #5264[3719] - Adopt format in more places
- PR #5262[3720] - Install HPX in Rostam Jenkins jobs
- PR #5261[3721] - Limit Rostam Jenkins jobs to marvin partition temporarily
- PR #5260[3722] - Separate segmented algorithms for transform_reduce

- PR #5259[3723] - Making sure late command line options are recognized as configuration options
- PR #5258[3724] - Allow for HPX algorithms being invoked with std execution policies
- PR #5256[3725] - Separate segmented algorithms for transform
- PR #5255[3726] - Future/sender adapters
- PR #5254[3727] - Fixing datapar
- PR #5253[3728] - Add utility to format ranges
- PR #5252[3729] - Remove uses of Boost.Bimap
- PR #5251[3730] - Banish `<iostream>` from library headers
- PR #5250[3731] - Try fixing vc circle ci
- PR #5249[3732] - Adding missing header
- PR #5248[3733] - Use old Piz Daint modules after upgrade
- PR #5247[3734] - Significantly speedup simple `for_each`, `for_loop`, and `transform`
- PR #5245[3735] - P1897 `operator|` overloads
- PR #5244[3736] - P1897 `when_all`
- PR #5243[3737] - Make sure `HPX_DEBUG` is set based on HPX's build type, not consuming project's build type
- PR #5242[3738] - Moving last files unrelated to parcel layer to modules
- PR #5240[3739] - change namespace for `transform_loop.hpp`
- PR #5238[3740] - Make sure annotations are used in the binary transform
- PR #5237[3741] - Add P1897 `just`, `just_on`, and `on` algorithms
- PR #5236[3742] - Add an example demonstrating the use of the `invoke_function_action` facility
- PR #5235[3743] - Attempting to fix datapar compilation issues
- PR #5234[3744] - Fix small typo in `--hpx:local` option description
- PR #5233[3745] - Only find Boost.Iostreams if required for plugins

- PR #5044[3815] - Add performance test in jenkins and reports

HPX V1.6.0 (Feb 17, 2021)

General changes

This release continues the focus on C++20 conformance with multiple new algorithms adapted to be C++20 conformant and becoming customization point objects (CPOs). We have also added experimental support for HIP, allowing previous CUDA features to now be compiled with hipcc and run on AMD GPUs.

- The following algorithms have been adapted to be C++20 conformant: `adjacent_find`, `includes`, `inplace_merge`, `is_heap`, `is_heap_until`, `is_partitioned`, `is_sorted`, `is_sorted_until`, `merge`, `set_difference`, `set_intersection`, `set_symmetric_difference`, `set_union`.
- Experimental HIP support can be enabled by compiling *HPX* with `hipcc`. All CUDA functionality in *HPX* can now be used with HIP. The HIP functionality is for the time being exposed through the same API as the CUDA functionality, i.e. no changes are required in user code. The CUDA, and now HIP, functionality is in the `hpx::cuda` namespace.
- We have added `partial_sort` based on Francisco Tapia's implementation.
- `hpx::init` and `hpx::start` gained new overloads taking an `hpx::init_params` struct in 1.5.0. All overloads not taking an `hpx::init_params` are now deprecated.
- We have added an experimental `fork_join_executor`. This executor can be used for OpenMP-style fork-join parallelism, where the latency of a parallel region is important for performance.
- The `parallel_executor` now uses a hierarchical spawning scheme for bulk execution, which improves data locality and performance.
- `hpx::dataflow` can now be used with executors that inject additional parameters into the call of the user-provided function.
- We have added experimental support for properties as proposed in P2220[3816]. Currently the only supported property is the scheduling hint on `parallel_executor`.
- `hpx::util::annotated_function` can now be passed a dynamically generated `std::string`.
- In moving functionality to new namespaces, old names have been deprecated. A deprecation warning will be issued if you are using deprecated functionality, with instructions on how to correct or ignore the warning.
- We have removed all support for C and Fortran from our build system.
- We have further reduced the use of Boost types within *HPX* (`boost::system::error_code` and `boost::detail::spinlock`).
- We have enabled more warnings in our CI builds (unused variables and unused typedefs).

[3815] https://github.com/TheHPXProject/hpx/pull/5044

[3816] https://wg21.link/p2220

Breaking changes

- hpxMP support has been completely removed.
- The `verbs` parcelport has been removed.
- The following compatibility options have been disabled by default: `HPX_WITH_ACTION_BASE_COMPATIBILITY`, `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`, `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`, `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`, `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`, `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`, `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`, `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY`, `HPX_THREAD_AWARE_TIMER_COMPATIBILITY`, `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`. Unless noted here, the above functionalities do not come with replacements. Unscoped enumerations have been replaced by scoped enumerations. Previously deprecated unscoped enumerations are disabled by `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`. Newly deprecated unscoped enumerations have been given deprecation warnings and replaced by scoped enumerations. `hpx::promise` has been replaced with `hpx::distributed::promise`. `hpx::program_options` is a drop-in replacement for `boost::program_options`. `hpx::execution::parallel_executor` now has constructors which take a thread pool, covering the use case of `hpx::threads::executors::pool_executor`. A pool can be supplied with `hpx::resource::get_thread_pool`.

Closed issues

- Issue #5148[3817] - `runtime_support.hpp` does not work with newer cling
- Issue #5147[3818] - Wrong results with parallel reduce

HPX V1.5.1 (Sep 30, 2020)

General changes

This is a patch release. It contains the following changes:

- Remove restriction on suspending runtime with multiple localities, users are now responsible for synchronizing work between localities before suspending.
- Fixes several compilation problems and warnings.
- Adds notes in the documentation explaining how to cite HPX.

Closed issues

- Issue #4971[3991] - Parallel sort fails to compile with C++20
- Issue #4950[3992] - Build with *HPX_WITH_PARCELPORT_ACTION_COUNTERS ON* fails
- Issue #4940[3993] - Codespell report for "HPX" (on fossies.org)
- Issue #4937[3994] - Allow suspension of runtime for multiple localities

Closed pull requests

HPX V1.5.0 (Sep 02, 2020)

General changes

The main focus of this release is on APIs and C++20 conformance. We have added many new C++20 features and adapted multiple algorithms to be fully C++20 conformant. As part of the modularization we have begun specifying the public API of *HPX* in terms of headers and functionality, and aligning it more closely to the C++ standard. All non-distributed modules are now in place, along with an experimental option to completely disable distributed features in *HPX*. We have also added experimental asynchronous MPI and CUDA executors. Lastly this release introduces CMake targets for depending projects, performance improvements, and many bug fixes.

- We have added the C++20 features `hpx::jthread` and `hpx::stop_token`. `hpx::condition_variable_any` now exposes new functions supporting `hpx::stop_token`.
- We have added `hpx::stable_sort` based on Francisco Tapia's implementation.
- We have adapted existing synchronization primitives to be fully conformant C++20: `hpx::barrier`, `hpx::latch`, `hpx::counting_semaphore`, and `hpx::binary_semaphore`.
- We have started using customization point objects (CPOs) to make the corresponding algorithms fully conformant to C++20 as well as to make algorithm extension easier for the user. `all_of`/`any_of`/`none_of`, `copy`, `count`, `destroy`, `equal`, `fill`, `find`, `for_each`, `generate`, `mismatch`, `move`, `reduce`, `transform_reduce` are using those CPOs (all in namespace `hpx`). We also have adapted their corresponding `hpx::ranges` versions to be conforming to C++20 in this release.
- We have adapted support for `co_await` to C++20, in addition to `hpx::future` it now also supports `hpx::shared_future`. We have also added allocator support for futures returned by `co_return`. It is no longer in the `experimental` namespace.
- We added serialization support for `std::variant` and `std::tuple`.
- `result_of` and `is_callable` are now deprecated and replaced by `invoke_result` and `is_invocable` to conform to C++20.
- We continued with the modularization, making it easier for us to add the new experimental `HPX_WITH_DISTRIBUTED_RUNTIME` CMake option (see below) . An significant amount of headers have been deprecated. We adapted the namespaces and headers we could to be closer to the standard ones (*Public API*). Depending code should still compile, however warnings are now generated instructing to change the include statements accordingly.
- It is now possible to have a basic CUDA support including a helper function to get a future from a CUDA stream and target handling. They are available under the `hpx::cuda::experimental` namespace and they can be enabled with the `-DHPX_WITH_ASYNC_CUDA=ON` CMake option.
- We added a new `hpx::mpi::experimental` namespace for getting futures from an asynchronous MPI call and a new minimal MPI executor `hpx::mpi::experimental::executor`. These can be enabled with the `-DHPX_WITH_ASYNC_MPI=On` CMake option.
- A polymorphic executor has been implemented to reduce compile times as a function accepting executors can potentially be instantiated only once instead of multiple times with different executors. It accepts the function signature as a template argument. It needs to be constructed from any other executor. Please note, that the function signatures that can be scheduled using `then_execute`, `bulk_sync_execute`, `bulk_async_execute` and `bulk_then_execute` are slightly different (See the comment in PR #4514[4005] for more details).
- The underlying executor of `block_executor` has been updated to a newer one.

[4004] https://github.com/TheHPXProject/hpx/pull/4939
[4005] https://github.com/TheHPXProject/hpx/pull/4514

- We have added a parameter to `auto_chunk_size` to control the amount of iterations to measure.
- All executor parameter hooks can now be exposed through the executor itself. This will allow to deprecate the `.with()` functionality on execution policies in the future. This is also a first step towards simplifying our executor APIs in preparation for the upcoming C++23 executors (senders/receivers).
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`. Please note this is a breaking change without backwards-compatibility option. We have converted all of those APIs to be based on customization point objects. Two new executors have been added to enable easy integration of the existing resiliency features with other facilities (like the parallel algorithms): `replay_executor` and `replicate_executor`.
- We have added performance counters type information (`aggregating`, `monotonically increasing`, `average count`, `average timer`, etc.).
- HPX threads are now re-scheduled on the same worker thread they were suspended on to avoid cache misses from moving from one thread to the other. This behavior doesn't prevent the thread from being stolen, however.
- We have added a new configuration option `hpx.exception_verbosity` to allow to control the level of verbosity of the exceptions (3 levels available).
- `broadcast_to`, `broadcast_from`, `scatter_to` and `scatter_from` have been added to the collectives, modernization of `gather_here` and `gather_there` with futures taken by rvalue references. See the breaking change on `all_to_all` in the next section. None of the collectives need supporting macros anymore (e.g. specifying the data types used for a collective operation using `HPX_REGISTER_ALLGATHER` and similar is not needed anymore).
- New API functions have been added: a) to get the number of cores which are idle (`hpx::get_idle_core_count`) and b) returning a bitmask representing the currently idle cores (`hpx::get_idle_core_mask`).
- We have added an experimental option to only enable the local runtime, you can disable the distributed runtime with `HPX_WITH_DISTRIBUTED_RUNTIME=OFF`. You can also enable the local runtime by using the `--hpx:local` runtime option.
- We fixed task annotations for actions.
- The alias `hpx::promise` to `hpx::lcos::promise` is now deprecated. You can use `hpx::lcos::promise` directly instead. `hpx::promise` will refer to the local-only promise in the future.
- We have added a `prepare_checkpoint` API function that calculates the amount of necessary buffer space for a particular set of arguments checkpointed.
- We have added `hpx::upgrade_lock` and `hpx::upgrade_to_unique_lock`, which make `hpx::shared_mutex` (and similar) usable in more flexible ways.
- We have changed the CMake targets exposed to the user, it now includes `HPX::hpx`, `HPX::wrap_main` (`int main` as the first *HPX* thread of the application, see *Starting the HPX runtime*), `HPX::plugin`, `HPX::component`. The CMake variables `HPX_INCLUDE_DIRS` and `HPX_LIBRARIES` are deprecated and will be removed in a future release, you should now link directly to the `HPX::hpx` CMake target.
- A new example is demonstrating how to create and use a wrapping executor (`quickstart/executor_with_thread_hooks.cpp`)
- A new example is demonstrating how to disable thread stealing during the execution of parallel algorithms (`quickstart/disable_thread_stealing_executor.cpp`)
- We now require for our CMake build system configuration files to be formatted using cmake-format.
- We have removed more dependencies on various Boost libraries.
- We have added an experimental option enabling unity builds of HPX using the `-DHPX_WITH_UNITY_BUILD=On` CMake option.

- Many bug fixes.

Breaking changes

- *HPX* now requires a C++14 capable compiler. We have set the *HPX* C++ standard automatically to C++14 and if it needs to be set explicitly, it should be specified through the `CMAKE_CXX_STANDARD` setting as mandated by CMake. The `HPX_WITH_CXX*` variables are now deprecated and will be removed in the future.
- Building and using HPX is now supported only when using CMake V3.13 or later, Boost V1.64 or newer, and when compiling with clang V5, gcc V7, or VS2019, or later. Other compilers might still work but have not been tested thoroughly.
- We have added a `hpx::init_params` struct to pass parameters for *HPX* initialization e.g. the resource partitioner callback to initialize thread pools (*Using the resource partitioner*).
- The `all_to_all` algorithm is renamed to `all_gather`, and the new `all_to_all` algorithm is not compatible with the old one.
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`.

Closed issues

- PR #4854[4154] - Removing obsolete code
- PR #4853[4155] - Adding test that derives component from two other components
- PR #4852[4156] - Fix mpi_ring test in distributed mode by ensuring all ranks run hpx_main
- PR #4851[4157] - Converting resiliency APIs to tag_invoke based CPOs
- PR #4849[4158] - Enable use of future_overhead test when DISTRIBUTED_RUNTIME is OFF
- PR #4847[4159] - Fixing 'error prone' constructs as reported by Codacy
- PR #4846[4160] - Disable Boost.Asio concepts support
- PR #4845[4161] - Fix PAPI counters
- PR #4843[4162] - Remove dependency on various Boost headers
- PR #4841[4163] - Rearrange public API headers
- PR #4840[4164] - Fixing TSS problems during thread termination
- PR #4839[4165] - Fix async_cuda build problems when distributed runtime is disabled
- PR #4837[4166] - Restore compatibility for old (now deprecated) copy algorithms
- PR #4836[4167] - Adding CPOs for hpx::reduce
- PR #4835[4168] - Remove *using util::result_of* from namespace hpx
- PR #4834[4169] - Fixing the calculation of the number of idle cores and the corresponding idle masks
- PR #4833[4170] - Allow thread function destructors to yield
- PR #4832[4171] - Fixing assertion in split_gids and memory leaks in 1d_stencil_7
- PR #4831[4172] - Making sure MPI_CXX_COMPILE_FLAGS is interpreted as a sequence of options
- PR #4830[4173] - Update documentation on using HPX::wrap_main
- PR #4827[4174] - Update clang-newest configuration to use clang 10
- PR #4826[4175] - Add Jenkins configuration for rostam
- PR #4825[4176] - Move all CUDA functionality to hpx::cuda::experimental namespace

- PR #4824[4177] - Add support for building master/release branches to Jenkins configuration
- PR #4821[4178] - Implement customization point for hpx::copy and hpx::ranges::copy
- PR #4819[4179] - Allow finding Boost components before finding HPX
- PR #4817[4180] - Adding range version of stable sort
- PR #4815[4181] - Fix a wrong #ifdef for IO/TIMER pools causing build errors
- PR #4814[4182] - Replace hpx::function_nonser with std::function in error module
- PR #4809[4183] - Foreach adapt
- PR #4808[4184] - Make internal algorithms functions const
- PR #4807[4185] - Add Jenkins configuration for running on Piz Daint
- PR #4806[4186] - Update documentation links to new domain name
- PR #4805[4187] - Applying changes that resolve time complexity issues in sort
- PR #4803[4188] - Adding implementation of stable_sort
- PR #4802[4189] - Fix datapar header paths
- PR #4801[4190] - Replace boost::shared_array<T> with std::shared_ptr<T[]> if supported
- PR #4799[4191] - Fixing #include paths in compatibility headers
- PR #4798[4192] - Include the main module header (fixes partially #4488)
- PR #4797[4193] - Change cmake targets
- PR #4794[4194] - Removing 128bit integer emulation
- PR #4793[4195] - Make sure global variable is handled properly
- PR #4792[4196] - Replace enable_if with **HPX_CONCEPT_REQUIRES_** and add is_sentinel_for constraint
- PR #4790[4197] - Move deprecation warnings from base template to template specializations for result_of etc. structs
- PR #4789[4198] - Fix hangs during assertion handling and distributed runtime construction
- PR #4788[4199] - Fixing inclusive transform scan algorithm to properly handle initial value

[4291] https://github.com/TheHPXProject/hpx/pull/4616

- PR #4615[4292] - Add handler for serializing custom exceptions
- PR #4614[4293] - Fix error message when HPX_IGNORE_CMAKE_BUILD_TYPE_COMPATIBILITY=OFF
- PR #4613[4294] - Make partitioner constructor private
- PR #4611[4295] - Making auto_chunk_size execute the given function using the given executor
- PR #4610[4296] - Making sure the thread-local lock registration data is moving to the core the suspended HPX thread is resumed on
- PR #4609[4297] - Adding an API function that exposes the number of idle cores
- PR #4608[4298] - Fixing moodycamel namespace
- PR #4607[4299] - Moving winsocket initialization to core library
- PR #4606[4300] - Local runtime module etc.
- PR #4604[4301] - Add config_registry module
- PR #4603[4302] - Deal with distributed modules in their respective CMakeLists.txt
- PR #4602[4303] - Small module fixes
- PR #4598[4304] - Making sure current_executor and service_executor functions are linked into the core library
- PR #4597[4305] - Adding broadcast_to/broadcast_from to collectives module
- PR #4596[4306] - Fix performance regression in block_executor
- PR #4595[4307] - Making sure main.cpp is built as a library if HPX_WITH_DYNAMIC_MAIN=OFF
- PR #4592[4308] - Futures module
- PR #4591[4309] - Adapting co_await support for C++20
- PR #4590[4310] - Adding missing exception test for for_loop()
- PR #4587[4311] - Move traits headers to hpx/modulename/traits directory
- PR #4586[4312] - Remove Travis CI config
- PR #4585[4313] - Update macOS test blacklist
- PR #4584[4314] - Attempting to fix missing symbols in stack trace

- PR #4583[4315] - Fixing bad static_cast
- PR #4582[4316] - Changing download url for Windows prerequisites to circumvent bandwidth limitations
- PR #4581[4317] - Adding missing using placeholder::_X
- PR #4579[4318] - Move get_stack_size_name and related functions
- PR #4575[4319] - Excluding unconditional definition of class backtrace from global header
- PR #4574[4320] - Changing return type of hardware_concurrency() to unsigned int
- PR #4570[4321] - Move tests to modules
- PR #4564[4322] - Reshuffle internal targets and add HPX::hpx_no_wrap_main target
- PR #4563[4323] - fix CMake option typo
- PR #4562[4324] - Unregister lock earlier to avoid holding it while suspending
- PR #4561[4325] - Adding test macros supporting custom output stream
- PR #4560[4326] - Making sure hash_any::operator()() is linked into core library
- PR #4559[4327] - Fixing compilation if HPX_WITH_THREAD_BACKTRACE_ON_SUSPENSION=On
- PR #4557[4328] - Improve spinlock implementation to perform better in high-contention situations
- PR #4553[4329] - Fix a runtime_ptr problem at shutdown when apex is enabled
- PR #4552[4330] - Add configuration option for making exceptions less noisy
- PR #4551[4331] - Clean up thread creation parameters
- PR #4549[4332] - Test FetchContent build on GitHub actions
- PR #4548[4333] - Fix stack size
- PR #4545[4334] - Fix header tests
- PR #4544[4335] - Fix a typo in sanitizer build
- PR #4541[4336] - Add API to check if a thread pool exists
- PR #4540[4337] - Making sure MPI support is enabled if MPI futures are used but networking is disabled

- PR #4538[4338] - Move channel documentation examples to examples directory
- PR #4536[4339] - Add generic allocator for execution policies
- PR #4534[4340] - Enable compatibility headers for thread_executors module
- PR #4532[4341] - Fixing broken url in README.rst
- PR #4531[4342] - Update scripts
- PR #4530[4343] - Make sure module API docs show up in correct order
- PR #4529[4344] - Adding missing template code to module creation script
- PR #4528[4345] - Make sure version module uses HPX's binary dir, not the parent's
- PR #4527[4346] - Creating actions_base and actions module
- PR #4526[4347] - Shared state for cv
- PR #4525[4348] - Changing sub-name sequencing for experimental namespace
- PR #4524[4349] - Add API guarantee notes to API reference documentation
- PR #4522[4350] - Enable and fix deprecation warnings in execution module
- PR #4521[4351] - Moves more miscellaneous files to modules
- PR #4520[4352] - Skip execution customization points when executor is known
- PR #4518[4353] - Module distributed lcos
- PR #4516[4354] - Fix various builds
- PR #4515[4355] - Replace backslashes by slashes in windows paths
- PR #4514[4356] - Adding polymorphic_executor
- PR #4512[4357] - Adding C++20 jthread and stop_token
- PR #4510[4358] - Attempt to fix APEX linking in external packages again
- PR #4508[4359] - Only test pull requests (not all branches) with GitHub actions
- PR #4505[4360] - Fix duplicate linking in tests (ODR violations)

- PR #4464[4384] - Include module
- PR #4462[4385] - Merge hpx_init and hpx_wrap into one static library
- PR #4461[4386] - Making thread_data test more realistic
- PR #4460[4387] - Suppress MPI warnings in version.cpp
- PR #4459[4388] - Make sure pkgconfig applications link with hpx_init
- PR #4458[4389] - Added example demonstrating how to create and use a wrapping executor
- PR #4457[4390] - Fixing execution of thread exit functions
- PR #4456[4391] - Move backtrace files to debugging module
- PR #4455[4392] - Move deadlock_detection and maintain_queue_wait_times source files into schedulers module
- PR #4450[4393] - Fixing compilation with std::filesystem enabled
- PR #4449[4394] - Fixing build system to actually build variant test
- PR #4447[4395] - This fixes an obsolete #include
- PR #4446[4396] - Resume tasks where they were suspended
- PR #4444[4397] - Minor CUDA fixes
- PR #4443[4398] - Add missing tests to CircleCI config
- PR #4442[4399] - Adding a tag to all auto-generated files allowing for tools to visually distinguish those
- PR #4441[4400] - Adding performance counter type information
- PR #4440[4401] - Fixing MSVC build
- PR #4439[4402] - Link HPX::plugin and component privately in hpx_setup_target
- PR #4437[4403] - Adding a test that verifies the problem can be solved using a trait specialization
- PR #4434[4404] - Clean up Boost dependencies and copy string algorithms to new module
- PR #4433[4405] - Fixing compilation issues (!) if MPI parcelport is enabled
- PR #4431[4406] - Ignore warnings about name mangling changing

- PR #4430[4407] - Add performance_counters module
- PR #4428[4408] - Don't add compatibility headers to module API reference
- PR #4426[4409] - Add currently failing tests on GitHub actions to blacklist
- PR #4425[4410] - Clean up and correct minimum required versions
- PR #4424[4411] - Making sure hpx.lock_detection=0 works as advertized
- PR #4421[4412] - Making sure interval time stops underlying timer thread on termination
- PR #4417[4413] - Adding serialization support for std::variant (if available) and std::tuple
- PR #4415[4414] - Partially reverting changes applied by PR 4373
- PR #4414[4415] - Added documentation for the compiler-wrapper script hpxcxx.in in creating_hpx_projects.rst
- PR #4413[4416] - Merging from V1.4.1 release
- PR #4412[4417] - Making sure to issue a warning if a file specified using –hpx:options-file is not found
- PR #4411[4418] - Make test specific to HPX_WITH_SHARED_PRIORITY_SCHEDULER
- PR #4407[4419] - Adding minimal MPI executor
- PR #4405[4420] - Fix cross pool injection test, use default scheduler as falback
- PR #4404[4421] - Fix a race condition and clean-up usage of scheduler mode
- PR #4399[4422] - Add more threading modules
- PR #4398[4423] - Add CODEOWNERS file
- PR #4395[4424] - Adding a parameter to auto_chunk_size allowing to control the amount of iterations to measure
- PR #4393[4425] - Use appropriate cache-line size defaults for different platforms
- PR #4391[4426] - Fixing use of allocator for C++20
- PR #4390[4427] - Making –hpx:help behavior consistent
- PR #4388[4428] - Change the resource partitioner initialization
- PR #4387[4429] - Fix roll_release.sh

- PR #4386[4430] - Add warning messages for using thread binding options on macOS
- PR #4385[4431] - Cuda futures
- PR #4384[4432] - Make enabling dynamic hpx_main on non-Linux systems a configuration error
- PR #4383[4433] - Use configure_file for HPXCacheVariables.cmake
- PR #4382[4434] - Update spellchecking whitelist and fix more typos
- PR #4380[4435] - Add a helper function to get a future from a cuda stream
- PR #4379[4436] - Add Windows and macOS CI with GitHub actions
- PR #4378[4437] - Change C++ standard handling
- PR #4377[4438] - Remove Python scripts
- PR #4374[4439] - Adding overload for *hpx::init*/*hpx::start* for use with resource partitioner
- PR #4373[4440] - Adding test that verifies for 4369 to be fixed
- PR #4372[4441] - Another attempt at fixing the integral mismatch and conversion warnings
- PR #4370[4442] - Doc updates quick start
- PR #4368[4443] - Add a whitelist of words for weird spelling suggestions
- PR #4366[4444] - Suppress or fix clang-tidy-9 warnings
- PR #4365[4445] - Removing more Boost dependencies
- PR #4363[4446] - Update clang-format config file for version 9
- PR #4362[4447] - Fix indices typo
- PR #4361[4448] - Boost cleanup
- PR #4360[4449] - Move plugins
- PR #4358[4450] - Doc updates; generating documentation. Will likely need heavy editing.
- PR #4356[4451] - Remove some minor unused and unnecessary Boost includes
- PR #4355[4452] - Fix spellcheck step in CircleCI config

HPX V1.4.1 (Feb 12, 2020)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation issues on Windows, macOS, FreeBSD, and with gcc 10
- Install missing `pdb` files on Windows
- Allow running tests using an installed version of *HPX*
- Skip MPI finalization if HPX has not initialized MPI
- Give a hard error when attempting to use IO counters on Windows

Closed issues

- Issue #4320[4504] - HPX 1.4.0 does not compile with gcc 10
- Issue #4336[4505] - Building HPX 1.4.0 with IO Counters breaks (Windows)
- Issue #4334[4506] - HPX `Debug` and `RelWithDebinfo` builds on Windows not installing `.pdb` files
- Issue #4322[4507] - Undefine VT1 and VT2 after boost includes
- Issue #4314[4508] - Compile error on 1.4.0
- Issue #4307[4509] - `ld: error: duplicate symbol: freebsd_environ`

- PR #4315[4516] - Forcing exported symbols from composable_guard to be linked into core library
- PR #4310[4517] - Remove environment handling from `exception.cpp`

HPX V1.4.0 (January 15, 2020)

General changes

- We have added the collectives `all_to_all` and `all_reduce`.
- We have added APIs for resiliency, which allows replication and replay for failed tasks. See the *documentation* for more details.
- Components can now be checkpointed.
- Performance improvements to schedulers and coroutines. A significant change is the addition of stackless coroutines. These are to be used for tasks that do not need to be suspended and can reduce overheads noticeably in applications with short tasks. A stackless coroutine can be created with the new stack size `thread_stacksize_nostack`.
- We have added an implementation of `unique_any`, which is a non-copyable version of `any`.
- The `shared_priority_queue_scheduler` has been improved. It now has lower overheads than the default scheduler in many situations. Unlike the default scheduler it fully supports NUMA scheduling hints. Enable it with the command line option `--hpx:queuing=shared-priority`. This scheduler should still be considered experimental, but its use is encouraged in real applications to help us make it production ready.
- We have added the performance counters `background-receive-duration` and `background-receive-overhead` for inspecting the time and overhead spent on receiving parcels in the background.
- Compilation time has been further improved when `HPX_WITH_NETWORKING=OFF`.
- We no longer require compiled Boost dependencies in certain configurations. This requires at least Boost 1.70, compiling on x86 with GCC 9, clang (libc++) 9, or VS2019 in C++17 mode. The dependency on Boost.Filesystem can explicitly be turned on with `HPX_FILESYSTEM_WITH_BOOST_FILESYSTEM_COMPATIBILITY=ON` (it is off by default if the standard library supports `std::filesystem`). Boost.ProgramOptions has been copied into the HPX repository. We have a compatibility layer for users who must explicitly use

---

[4517] https://github.com/TheHPXProject/hpx/pull/4310

Boost.ProgramOptions instead of the ProgramOptions provided by HPX. To remove the dependency `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY` must be explicitly set to `OFF`. This option will be removed in a future release. We have also removed several other header-only dependencies on Boost.

- It is now possible to use the process affinity mask set by tools like `numactl` and various batch environments with the command line option *--hpx:use-process-mask*. Enabling this option implies *--hpx:ignore-batch-env*.
- It is now possible to create standalone thread pools without starting the runtime. See the `standalone_thread_pool_executor.cpp` test in the `execution` module for an example.
- Tasks annotated with `hpx::util::annotated_function` now have their correct name when using APEX to generate OTF2 files.
- Cloning of APEX was defective in previous releases (it required manual intervention to check out the correct tag or branch). This has been fixed.
- The option `HPX_WITH_MORE_THAN_64_THREADS` is now ignored and will be removed in a future release. The value is instead derived directly from `HPX_WITH_MAX_CPU_COUNT` option.
- We have deprecated compiling in C++11 mode. The next release will require a C++14 capable compiler.
- We have deprecated support for the Vc library. This option will be replaced with SIMD support from the standard library in a future release.
- We have significantly refactored our CMake setup. This is intended to be a non-breaking change and will allow for using HPX through CMake targets in the future.
- We have continued modularizing the HPX library. In the process we have rearranged many header files into module-specific directories. All moved headers have compatibility headers which forward from the old location to the new location, together with a deprecation warning. The compatibility headers will eventually be removed.
- We now enforce formatting with `clang-format` on the majority of our source files.
- We have added SPDX license tags to all files.
- Many bugfixes.

Breaking changes

- The `HPX_WITH_THREAD_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_UNWRAPPED_COMPATIBLITY` option and the associated compatibility layer has been removed.

Closed issues

- Issue #3560[4578] - Apex integration with HPX not working properly
- Issue #3322[4579] - No warning when mixing debug/release builds

Closed pull requests

- PR #4300[4580] - Checks for `MPI_Init` being called twice
- PR #4299[4581] - Small CMake fixes
- PR #4298[4582] - Remove extra call to annotate function that messes up traces
- PR #4296[4583] - Fixing collectives locking problem
- PR #4295[4584] - Do not check `LICENSE_1_0.txt` for inspect violations
- PR #4293[4585] - Applying two small changes fixing carious MSVC/Windows problems
- PR #4285[4586] - Delete `apex.hpp`
- PR #4276[4587] - Disable doxygen generation for `hpx/debugging/print.hpp` file
- PR #4275[4588] - Make sure APEX is linked to even when not explicitly referenced
- PR #4272[4589] - Fix pushing of documentation

- PR #4271[4590] - Updating APEX tag, don't create new task_wrapper on `operator`= of hpx_thread object
- PR #4268[4591] - Testing for noexcept function specializations in C++11/14 mode
- PR #4267[4592] - Fixing MSVC warning
- PR #4266[4593] - Make sure macOS Travis CI fails if build step fails
- PR #4264[4594] - Clean up compatibility header options
- PR #4262[4595] - Cleanup modules `CMakeLists.txt`
- PR #4261[4596] - Fixing HPX/APEX linking and dependencies for external projects like Phylanx
- PR #4260[4597] - Fix docs compilation problems
- PR #4258[4598] - Couple of minor changes
- PR #4257[4599] - Fix apex annotation for async dispatch
- PR #4256[4600] - Remove lambdas from assert expressions
- PR #4255[4601] - Ignoring lock in `all_to_all` and `all_reduce`
- PR #4254[4602] - Adding action specializations for noexcept functions
- PR #4253[4603] - Move `partlit.hpp` to affinity module
- PR #4252[4604] - Make mismatching build types a hard error in CMake
- PR #4249[4605] - Scheduler improvement
- PR #4248[4606] - update hpxmp tag to v0.3.0
- PR #4245[4607] - Adding high performance channels
- PR #4244[4608] - Ignore lock in ignore_while_locked_1485 test
- PR #4243[4609] - Fix PAPI command line option documentation
- PR #4242[4610] - Ignore lock in target_distribution_policy
- PR #4241[4611] - Fix `start_stop_callbacks` test
- PR #4240[4612] - Mostly fix clang CUDA compilation

- PR #4238[4613] - Google Season of Docs updates to documentation; grammar edits.
- PR #4237[4614] - fixing annotated task to use the name, not the desc
- PR #4236[4615] - Move module print summary to modules
- PR #4235[4616] - Don't use alignas in `cache_{aligned,line}_data`
- PR #4234[4617] - Add basic overview sentence to all modules
- PR #4230[4618] - Add OS X builds to Travis CI
- PR #4229[4619] - Remove leftover queue compatibility checks
- PR #4226[4620] - Fixing APEX shutdown by explicitly shutting down throttling
- PR #4225[4621] - Allow `CMAKE_INSTALL_PREFIX` to be a relative path
- PR #4224[4622] - Deprecate verbs parcelport
- PR #4222[4623] - Update `register_{thread,work}` namespaces
- PR #4221[4624] - Changing `HPX_GCC_VERSION` check from `70000` to `70300`
- PR #4218[4625] - Google Season of Docs updates to documentation; grammar edits.
- PR #4217[4626] - Google Season of Docs updates to documentation; grammar edits.
- PR #4216[4627] - Fixing gcc warning on 32bit platforms (integer truncation)
- PR #4214[4628] - Apex callback refactoring
- PR #4213[4629] - Clean up allocator checks for dependent projects
- PR #4212[4630] - Google Season of Docs updates to documentation; grammar edits.
- PR #4211[4631] - Google Season of Docs updates to documentation; contributing to hpx
- PR #4210[4632] - Attempting to fix Intel compilation
- PR #4209[4633] - Fix CUDA 10 build
- PR #4205[4634] - Making sure that differences in `CMAKE_BUILD_TYPE` are not reported on multi-configuration cmake generators
- PR #4203[4635] - Deprecate Vc

- PR #4202[4636] - Fix CUDA configuration
- PR #4200[4637] - Making sure `hpx_wrap` is not passed on to linker on non-Linux systems
- PR #4198[4638] - Fix `execution_agent.cpp` compilation with GCC 5
- PR #4197[4639] - Remove deprecated options for 1.4.0 release
- PR #4196[4640] - minor fixes for building on OSX Darwin
- PR #4195[4641] - Use full clone on CircleCI for pushing stable tag
- PR #4193[4642] - Add scheduling hints to hello_world_distributed
- PR #4192[4643] - Set up CUDA in HPXConfig.cmake
- PR #4191[4644] - Export allocators root variables
- PR #4190[4645] - Don't use `constexpr` in `thread_data` with GCC <= 6
- PR #4189[4646] - Only use `quick_exit` if available
- PR #4188[4647] - Google Season of Docs updates to documentation; writing single node hpx applications
- PR #4186[4648] - correct vc to cuda in cuda cmake
- PR #4184[4649] - Resetting some cached variables to make sure those are re-filled
- PR #4183[4650] - Fix `hpxcxx` configuration
- PR #4181[4651] - Rename base libraries var
- PR #4180[4652] - Move header left behind earlier to plugin module
- PR #4179[4653] - Moving `zip_iterator` and `transform_iterator` to iterator_support module
- PR #4178[4654] - Move checkpointing support to its own module
- PR #4177[4655] - Small const fix to `basic_execution` module
- PR #4176[4656] - Add back `HPX_LIBRARIES` and friends to `HPXConfig.cmake`
- PR #4175[4657] - Make Vc public and add it to `HPXConfig.cmake`
- PR #4173[4658] - Wait for runtime to be running before returning from hpx::start

- PR #4172[4659] - More protection against shutdown problems in error handling scenarios.
- PR #4171[4660] - Ignore lock in `condition_variable::wait`
- PR #4170[4661] - Adding APEX dependency to MPI parcelport
- PR #4168[4662] - Adding utility include
- PR #4167[4663] - Add a condition to setup the external libraries
- PR #4166[4664] - Add an `INTERNAL_FLAGS` option to link to `hpx_internal_flags`
- PR #4165[4665] - Forward `HPX_*` cmake cache variables to external projects
- PR #4164[4666] - Affinity and batch environment modules
- PR #4162[4667] - Handle `quick exit`
- PR #4160[4668] - Using `target_link_libraries` for cmake versions >= 3.12
- PR #4159[4669] - Make sure `HPX_WITH_NATIVE_TLS` is forwarded to dependent projects
- PR #4158[4670] - Adding allocator imported target as a dependency of allocator module
- PR #4157[4671] - Add `hpx_memory` as a dependency of parcelport plugins
- PR #4156[4672] - Stackless coroutines now can refer to themselves (through get_self() and friends)
- PR #4154[4673] - Added CMake policy CMP0060 for HPX applications.
- PR #4153[4674] - add header `iomanip` to tests and tool
- PR #4152[4675] - Casting MPI tag value
- PR #4149[4676] - Add back private `m_desc` member variable in program_options module
- PR #4147[4677] - Resource partitioner and threadmanager modules
- PR #4146[4678] - Google Season of Docs updates to documentation; creating hpx projects
- PR #4145[4679] - Adding basic support for stackless threads
- PR #4143[4680] - Exclude `test_client_1950` from all target
- PR #4142[4681] - Add a new `thread_pool_executor`

- PR #4140[4682] - Google Season of Docs updates to documentation; why hpx
- PR #4139[4683] - Remove runtime includes from coroutines module
- PR #4138[4684] - Forking `boost::intrusive_ptr` and adding it as `hpx::intrusive_ptr`
- PR #4137[4685] - Fixing TSS destruction
- PR #4136[4686] - HPX.Compute modules
- PR #4133[4687] - Fix `block_executor`
- PR #4131[4688] - Applying fixes based on reports from PVS Studio
- PR #4130[4689] - Adding missing header to build system
- PR #4129[4690] - Fixing compilation if `HPX_WITH_DATAPAR_VC` is enabled
- PR #4128[4691] - Renaming `moveonly_any` to `unique_any`
- PR #4126[4692] - Attempt to fix `basic_any` constructor for gcc 7
- PR #4125[4693] - Changing `extra_archive_data` implementation
- PR #4124[4694] - Don't link to Boost.System unless required
- PR #4122[4695] - Add kernel launch helper utility (+saxpy demo) and merge in octotiger changes
- PR #4121[4696] - Fixing migration test if networking is disabled.
- PR #4120[4697] - Google Season of Docs updates to documentation; hpx build system v1
- PR #4119[4698] - Making sure `chunk_size` and `max_chunk` are actually applied to parallel algorithms if specified
- PR #4117[4699] - Make CircleCI formatting check store diff
- PR #4116[4700] - Fix automatically setting C++ standard
- PR #4114[4701] - Module serialization
- PR #4113[4702] - Module datastructures
- PR #4111[4703] - Fixing performance regression introduced earlier
- PR #4110[4704] - Adding missing SPDX tags

- PR #4109[4705] - Overload for start without entry point/argv.
- PR #4108[4706] - Making sure C++ standard is properly detected and propagated
- PR #4106[4707] - use `std::round` for guaranteed rounding without errors
- PR #4104[4708] - Extend `scheduler_mode` with new `work_stealing` and task assignment modes
- PR #4103[4709] - Add this to lambda capture list
- PR #4102[4710] - Add spdx license and check
- PR #4099[4711] - Module coroutines
- PR #4098[4712] - Fix append module path in module CMakeLists template
- PR #4097[4713] - Function tests
- PR #4096[4714] - Removing return of `thread_result_type` from functions not needing them
- PR #4095[4715] - Stop-gap measure until cmake overhaul is in place
- PR #4094[4716] - Deprecate `HPX_WITH_MORE_THAN_64_THREADS`
- PR #4093[4717] - Fix initialization of `global_num_tasks` in `parallel_executor`
- PR #4092[4718] - Add support for mi-malloc
- PR #4090[4719] - Execution context
- PR #4089[4720] - Make counters in coroutines optional
- PR #4087[4721] - Making `hpx::util::any` compatible with C++17
- PR #4084[4722] - Making sure destination array for `std::transform` is properly resized
- PR #4083[4723] - Adapting `thread_queue_mc` to behave even if no 128bit atomics are available
- PR #4082[4724] - Fix compilation on GCC 5
- PR #4081[4725] - Adding option allowing to force using Boost.FileSystem
- PR #4080[4726] - Updating module dependencies
- PR #4079[4727] - Add missing tests for iterator_support module

- PR #4078[4728] - Disable parcel-layer if networking is disabled
- PR #4077[4729] - Add missing include that causes build fails
- PR #4076[4730] - Enable compatibility headers for functional module
- PR #4075[4731] - Coroutines module
- PR #4073[4732] - Use `configure_file` for generated files in modules
- PR #4071[4733] - Fixing MPI detection for PMIx
- PR #4070[4734] - Fix macOS builds
- PR #4069[4735] - Moving more facilities to the collectives module
- PR #4068[4736] - Adding main HPX `#include` directory to modules
- PR #4066[4737] - Switching the use of `message(STATUS "...")` to hpx_info
- PR #4065[4738] - Move Boost.Filesystem handling to filesystem module
- PR #4064[4739] - Fix program_options test with older boost versions
- PR #4062[4740] - The `cpu_features` tool fails to compile on anything but x86 architectures
- PR #4061[4741] - Add `clang-format` checking step for modules
- PR #4060[4742] - Making sure `HPX_IDLE_BACKOFF_TIME_MAX` is always defined (even if its unused)
- PR #4059[4743] - Renaming module `hpx_parallel_executors` into `hpx_execution`
- PR #4058[4744] - Do not build networking tests when networking disabled
- PR #4057[4745] - Printing configuration summary for modules as well
- PR #4055[4746] - Google Season of Docs updates to documentation; hpx build systems
- PR #4054[4747] - Add troubleshooting section to manual
- PR #4051[4748] - Add more variations to `future_overhead` test
- PR #4050[4749] - Creating plugin module
- PR #4049[4750] - Move missing modules tests

- PR #3956[4820] - [`HPX_AddModule`] Fix lower name var to upper
- PR #3955[4821] - Fix CMake configuration with examples off and tests on
- PR #3954[4822] - Move components to separate subdirectory in root of repository
- PR #3952[4823] - Update `papi.cpp`
- PR #3951[4824] - Exclude modules header tests from all target
- PR #3950[4825] - Adding `all_reduce` facility to collectives module
- PR #3949[4826] - This adds a configuration file that will cause for stale issues to be automatically closed
- PR #3948[4827] - Fixing ALPS environment
- PR #3947[4828] - Add major compiler version check for building hpx as a binary package
- PR #3946[4829] - [Modules] Move the location of the generated headers
- PR #3945[4830] - Simplify tests and examples cmake
- PR #3943[4831] - Remove example module
- PR #3942[4832] - Add `NOEXPORT` option to `add_hpx_{component,library}`
- PR #3938[4833] - Use https for CDash submissions
- PR #3937[4834] - Add `HPX_WITH_BUILD_BINARY_PACKAGE` to the compiler check (refs #3935)
- PR #3936[4835] - Fixing installation of binaries on windows
- PR #3934[4836] - Add set function for `sliding_semaphore` `max_difference`
- PR #3933[4837] - Remove `cudadevrt` from compile/link flags as it breaks downstream projects
- PR #3932[4838] - Fixing 3929
- PR #3931[4839] - Adding `all_to_all`
- PR #3930[4840] - Add test demonstrating the use of broadcast with component actions
- PR #3928[4841] - fixed number of tasks and number of threads for heterogeneous slurm environments
- PR #3927[4842] - Moving Cache module's tests into separate solution folder

HPX V1.3.0 (May 23, 2019)

General changes

- Performance improvements: the schedulers have significantly reduced overheads from removing false sharing and the parallel executor has been updated to create fewer futures.
- HPX now defaults to not turning on networking when running on one locality. This means that you can run multiple instances on the same system without adding command line options.
- Multiple issues reported by Clang sanitizers have been fixed.
- We have added (back) single-page HTML documentation and PDF documentation.
- We have started modularizing the HPX library. This is useful both for developers and users. In the long term users will be able to consume only parts of the HPX libraries if they do not require all the functionality that HPX currently provides.
- We have added an implementation of `function_ref`.
- The `barrier` and `latch` classes have gained a few additional member functions.

Breaking changes

- Executable and library targets are now created without the `_exe` and `_lib` suffix respectively. For example, the target `1d_stencil_1_exe` is now simply called `1d_stencil_1`.
- We have removed the following deprecated functionality: `queue`, `scoped_unlock`, and support for input iterators in algorithms.
- We have turned off the compatibility layer for `unwrapped` by default. The functionality will be removed in the next release. The option can still be turned on using the CMake[4885] option `HPX_WITH_UNWRAPPED_SUPPORT`. Likewise, `inclusive_scan` compatibility overloads have been turned off by default. They can still be turned on with `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY`.
- The minimum compiler and dependency versions have been updated. We now support GCC from version 5 onwards, Clang from version 4 onwards, and Boost from version 1.61.0 onwards.
- The headers for preprocessor macros have moved as a result of the functionality being moved to a separate module. The old headers are deprecated and will be removed in a future version of HPX. You can turn off the warnings by setting `HPX_PREPROCESSOR_WITH_DEPRECATION_WARNINGS=OFF` or turn off the compatibility headers completely with `HPX_PREPROCESSOR_WITH_COMPATIBILITY_HEADERS=OFF`.

Closed issues

- Issue #3863[4886] - shouldn't "-faligned-new" be a usage requirement?
- Issue #3841[4887] - Build error with msvc 19 caused by SFINAE and C++17
- Issue #3836[4888] - master branch does not build with idle rate counters enabled
- Issue #3819[4889] - Add debug suffix to modules built in debug mode

- PR #3749[5027] - Fix lifetime problem in `run_as_hpx_thread`
- PR #3748[5028] - Fixed unusable behavior of the clang code analyzer.
- PR #3747[5029] - Added `PMIX_RANK` to the defaults of `HPX_WITH_PARCELPORT_MPI_ENV`.
- PR #3745[5030] - Introduced `cache_aligned_data` and `cache_line_data` helper structure
- PR #3742[5031] - Remove more unused functionality from util/logging
- PR #3740[5032] - Fix includes in partitioned vector tests
- PR #3739[5033] - More fixes to make sure that `std::flush` really flushes all output
- PR #3737[5034] - Fix potential shutdown problems
- PR #3736[5035] - Fix `guided_pool_executor` after dataflow changes caused compilation fail
- PR #3734[5036] - Limiting executor
- PR #3732[5037] - More constrained bound constructors
- PR #3730[5038] - Attempt to fix deadlocks during component loading
- PR #3729[5039] - Add latch member function `count_up` and reset, requested by hpxMP
- PR #3728[5040] - Send even empty buffers on `hpx::endl` and `hpx::flush`
- PR #3727[5041] - Adding example demonstrating how to customize the memory management for a component
- PR #3726[5042] - Adding support for passing command line options through the `HPX_COMMANDLINE_OPTIONS` environment variable
- PR #3722[5043] - Document known broken OpenMPI builds
- PR #3716[5044] - Add barrier reset function, requested by hpxMP for reusing barrier
- PR #3715[5045] - More work on functions and vtables
- PR #3714[5046] - Generate single-page HTML, PDF, manpage from documentation
- PR #3713[5047] - Updating default APEX version to 2.1.2
- PR #3712[5048] - Update release procedure
- PR #3710[5049] - Fix the C++11 build, after #3704

- PR #3709[5050] - Move some component_registry functionality to source file
- PR #3708[5051] - Ignore all locks while handling assertions
- PR #3707[5052] - Remove obsolete hpx runtime executable
- PR #3705[5053] - Fix and simplify `make_ready_future` overload sets
- PR #3704[5054] - Reduce use of binders
- PR #3703[5055] - Ini
- PR #3702[5056] - Fixing CUDA compiler errors
- PR #3700[5057] - Added `barrier::increment` function to increase total number of thread
- PR #3697[5058] - One more attempt to fix migration…
- PR #3694[5059] - Fixing component migration
- PR #3693[5060] - Print thread state when getting disallowed value in set_thread_state
- PR #3692[5061] - Only disable `constexpr` with clang-cuda, not nvcc+gcc
- PR #3691[5062] - Link with libsupc++ if needed for thread_local
- PR #3690[5063] - Remove thousands separators in set_operations_3442 to comply with C++11
- PR #3688[5064] - Decouple serialization from function vtables
- PR #3687[5065] - Fix a couple of test failures
- PR #3686[5066] - Make sure tests.unit.build are run after install on CircleCI
- PR #3685[5067] - Revise quickstart CMakeLists.txt explanation
- PR #3684[5068] - Provide concept emulation for Ranges-TS concepts
- PR #3683[5069] - Ignore uninitialized chunks
- PR #3682[5070] - Ignore uninitialized chunks. Check proper indices.
- PR #3680[5071] - Ignore uninitialized chunks. Check proper range indices
- PR #3679[5072] - Simplify basic action implementations

- PR #3678[5073] - Making sure `HPX_HAVE_LIBATOMIC` is unset before checking
- PR #3677[5074] - Fix generated full version number to be usable in expressions
- PR #3674[5075] - Reduce functional utilities call depth
- PR #3672[5076] - Change new build system to use existing macros related to pseudo dependencies
- PR #3669[5077] - Remove indirection in `function_ref` when thread description is disabled
- PR #3668[5078] - Unbreaking `async_*cb*` tests
- PR #3667[5079] - Generate version.hpp
- PR #3665[5080] - Enabling MPI parcelport for gitlab runners
- PR #3664[5081] - making clang-tidy work properly again
- PR #3662[5082] - Attempt to fix exception handling
- PR #3661[5083] - Move `lcos::latch` to source file
- PR #3660[5084] - Fix accidentally explicit gid_type default constructor
- PR #3659[5085] - Parallel executor latch
- PR #3658[5086] - Fixing execution_parameters
- PR #3657[5087] - Avoid dangling references in wait_all
- PR #3656[5088] - Avoiding lifetime problems with sync_put_parcel
- PR #3655[5089] - Fixing nullptr dereference inside of function
- PR #3652[5090] - Attempt to fix `thread_map_type` definition with C++11
- PR #3650[5091] - Allowing for end iterator being different from begin iterator
- PR #3649[5092] - Added architecture identification to cmake to be able to detect timestamp support
- PR #3645[5093] - Enabling sanitizers on gitlab runner
- PR #3644[5094] - Attempt to tackle timeouts during startup
- PR #3642[5095] - Cleanup parallel partitioners

- PR #3640[5096] - Dataflow now works with functions that return a reference
- PR #3637[5097] - Merging the executor-enabled overloads of `shared_future<>::then`
- PR #3633[5098] - Replace deprecated boost endian macros
- PR #3632[5099] - Add instructions on getting HPX to documentation
- PR #3631[5100] - Simplify parcel creation
- PR #3630[5101] - Small additions and fixes to release procedure
- PR #3629[5102] - Modular pp
- PR #3627[5103] - Implement `util::function_ref`
- PR #3626[5104] - Fix cancelable_action_client example
- PR #3625[5105] - Added automatic serialization for simple structs (see #3034)
- PR #3624[5106] - Updating the default order of priority for `thread_description`
- PR #3621[5107] - Update copyright year and other small formatting fixes
- PR #3620[5108] - Adding support for gitlab runner
- PR #3619[5109] - Store debug logs and core dumps on CircleCI
- PR #3618[5110] - Various optimizations
- PR #3617[5111] - Fix link to the gpg key (#2)
- PR #3615[5112] - Fix unused variable warnings with networking off
- PR #3614[5113] - Restructuring counter data in scheduler to reduce false sharing
- PR #3613[5114] - Adding support for gitlab runners
- PR #3610[5115] - Don't wait for `stop_condition` in main thread
- PR #3608[5116] - Add inline keyword to `invalid_thread_id` definition for nvcc
- PR #3607[5117] - Adding configuration key that allows one to explicitly add a directory to the component search path
- PR #3606[5118] - Add nvcc to exclude constexpress since is it not supported by nvcc

HPX V1.2.1 (Feb 19, 2019)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation on ARM, s390x and 32-bit architectures.
- Fix a critical bug in the `future` implementation.
- Fix several problems in the CMake configuration which affects external projects.
- Add support for Boost 1.69.0.

Closed issues

- Issue #3638[5161] - Build HPX 1.2 with boost 1.69
- Issue #3635[5162] - Non-deterministic crashing on Stampede2
- Issue #3550[5163] - 1>e:000workhpxsrcthrow_exception.cpp(54): error C2440: '<function-style-cast>': cannot convert from 'boost::system::error_code' to 'hpx::exception'
- Issue #3549[5164] - HPX 1.2.0 does not build on i686, but release candidate did
- Issue #3511[5165] - Build on s390x fails
- Issue #3509[5166] - Build on armv7l fails

Closed pull requests

- PR #3555[5177] - cmake: make install locations configurable
- PR #3551[5178] - Fix uint64_t causing compilation fail on i686

HPX V1.2.0 (Nov 12, 2018)

General changes

Here are some of the main highlights and changes for this release:

- Thanks to the work of our Google Summer of Code student, Nikunj Gupta, we now have a new implementation of `hpx_main.hpp` on supported platforms (Linux, BSD and MacOS). This is intended to be a less fragile drop-in replacement for the old implementation relying on preprocessor macros. The new implementation does not require changes if you are using the CMake[5179] or pkg-config. The old behaviour can be restored by setting `HPX_WITH_DYNAMIC_HPX_MAIN=OFF` during CMake[5180] configuration. The implementation on Windows is unchanged.
- We have added functionality to allow passing scheduling hints to our schedulers. These will allow us to create executors that for example target a specific NUMA domain or allow for *HPX* threads to be pinned to a particular worker thread.
- We have significantly improved the performance of our futures implementation by making the shared state atomic.
- We have replaced Boostbook by Sphinx for our documentation. This means the documentation is easier to navigate with built-in search and table of contents. We have also added a quick start section and restructured the documentation to be easier to follow for new users.
- We have added a new option to the `--hpx:threads` command line option. It is now possible to use `cores` to tell *HPX* to only use one worker thread per core, unlike the existing option `all` which uses one worker thread per processing unit (processing unit can be a hyperthread if hyperthreads are available). The default value of `--hpx:threads` has also been changed to `cores` as this leads to better performance in most cases.
- All command line options can now be passed alongside configuration options when initializing *HPX*. This means that some options that were previously only available on the command line can now be set as configuration options.
- HPXMP is a portable, scalable, and flexible application programming interface using the OpenMP specification that supports multi-platform shared memory multiprocessing programming in C and C++. HPXMP can be enabled within *HPX* by setting `DHPX_WITH_HPXMP=ON` during CMake[5181] configuration.
- Two new performance counters were added for measuring the time spent doing background work. `/threads/time/background-work-duration` returns the time spent doing background on a given thread or locality, while `/threads/time/background-overhead` returns the fraction of time spent doing background work with respect to the overall time spent running the scheduler. The new performance counters are disabled by default and can be turned on by setting `HPX_WITH_BACKGROUND_THREAD_COUNTERS=ON` during CMake[5182] configuration.

[5175] https://github.com/TheHPXProject/hpx/pull/3591
[5176] https://github.com/TheHPXProject/hpx/pull/3558
[5177] https://github.com/TheHPXProject/hpx/pull/3555
[5178] https://github.com/TheHPXProject/hpx/pull/3551
[5179] https://www.cmake.org
[5180] https://www.cmake.org
[5181] https://www.cmake.org
[5182] https://www.cmake.org

- The idling behaviour of *HPX* has been tweaked to allow for faster idling. This is useful in interactive applications where the *HPX* worker threads may not have work all the time. This behaviour can be tweaked and turned off as before with `HPX_WITH_THREAD_MANAGER_IDLE_BACKOFF=OFF` during CMake[5183] configuration.
- It is now possible to register callback functions for *HPX* worker thread events. Callbacks can be registered for starting and stopping worker threads, and for when errors occur.

Breaking changes

- The implementation of `hpx_main.hpp` has changed. If you are using custom Makefiles you will need to make changes. Please see the documentation on *using Makefiles* for more details.
- The default value of `--hpx:threads` has changed from `all` to `cores`. The new option `cores` only starts one worker thread per core.
- We have dropped support for Boost 1.56 and 1.57. The minimal version of Boost we now test is 1.58.
- Our `boost::format`-based formatting implementation has been revised and replaced with a custom implementation. This changes the formatting syntax and requires changes if you are relying on `hpx::util::format` or `hpx::util::format_to`. The pull request for this change contains more information: PR #3266[5184].
- The following deprecated options have now been completely removed: `HPX_WITH_ASYNC_FUNCTION_COMPATIBILITY`, `HPX_WITH_LOCAL_DATAFLOW`, `HPX_WITH_GENERIC_EXECUTION_POLICY`, `HPX_WITH_BOOST_CHRONO_COMPATIBILITY`, `HPX_WITH_EXECUTOR_COMPATIBILITY`, `HPX_WITH_EXECUTION_POLICY_COMPATIBILITY`, and `HPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY`.

- PR #3425[5309] - Use source cache and workspace between job steps on CircleCI
- PR #3421[5310] - Add CDash timing output to future overhead test (for graphs)
- PR #3420[5311] - Add guided_pool_executor
- PR #3419[5312] - Fix typo in CircleCI config
- PR #3418[5313] - Add sphinx documentation
- PR #3415[5314] - Scheduler NUMA hint and shared priority scheduler
- PR #3414[5315] - Adding step to synchronize the APEX release
- PR #3413[5316] - Fixing multiple defines of APEX_HAVE_HPX
- PR #3412[5317] - Fixes linking with libhpx_wrap error with BSD and Windows based systems
- PR #3410[5318] - Fix typo in CMakeLists.txt
- PR #3409[5319] - Fix brackets and indentation in existing_performance_counters.qbk
- PR #3407[5320] - Fix unused param and extra ; warnings emitted by gcc 8.x
- PR #3406[5321] - Adding thread local allocator and use it for future shared states
- PR #3405[5322] - Adding DHPX_HAVE_THREAD_LOCAL_STORAGE=ON to builds
- PR #3404[5323] - fixing multiple definition of main() in linux
- PR #3402[5324] - Allow debug option to be enabled only for Linux systems with dynamic main on
- PR #3401[5325] - Fix cuda_future_helper.h when compiling with C++11
- PR #3400[5326] - Fix floating point exception scheduler_base idle backoff
- PR #3398[5327] - Atomic future state
- PR #3397[5328] - Fixing code for older gcc versions
- PR #3396[5329] - Allowing to register thread event functions (start/stop/error)
- PR #3394[5330] - Fix small mistake in primary_namespace_server.cpp
- PR #3393[5331] - Explicitly instantiate configured schedulers

[5331] https://github.com/TheHPXProject/hpx/pull/3393

- PR #3392[5332] - Add performance counters background overhead and background work duration
- PR #3391[5333] - Adapt integration of HPXMP to latest build system changes
- PR #3390[5334] - Make AGAS measurements optional
- PR #3389[5335] - Fix deadlock during shutdown
- PR #3388[5336] - Add several functionalities allowing to optimize synchronous action invocation
- PR #3387[5337] - Add cmake option to opt out of fail-compile tests
- PR #3386[5338] - Adding support for boost::container::small_vector to dataflow
- PR #3385[5339] - Adds Debug option for hpx initializing from main
- PR #3384[5340] - This hopefully fixes two tests that occasionally fail
- PR #3383[5341] - Making sure thread local storage is enable for hpxMP
- PR #3382[5342] - Fix usage of HPX_CAPTURE together with default value capture [=]
- PR #3381[5343] - Replace undefined instantiations of uniform_int_distribution
- PR #3380[5344] - Add missing semicolons to uses of HPX_COMPILER_FENCE
- PR #3379[5345] - Fixing #3378
- PR #3377[5346] - Adding build system support to integrate hpxmp into hpx at the user's machine
- PR #3375[5347] - Replacing wrapper for __libc_start_main with main
- PR #3374[5348] - Adds hpx_wrap to HPX_LINK_LIBRARIES which links only when specified.
- PR #3373[5349] - Forcing cache settings in HPXConfig.cmake to guarantee updated values
- PR #3372[5350] - Fix some more c++11 build problems
- PR #3371[5351] - Adds HPX_LINKER_FLAGS to HPX applications without editing their source codes
- PR #3370[5352] - util::format: add type_specifier<> specializations for %!s(MISSING) and %!l(MISSING)s
- PR #3369[5353] - Adding configuration option to allow explicit disable of the new hpx_main feature on Linux
- PR #3368[5354] - Updates doc with recent hpx_wrap implementation

- PR #3367[5355] - Adds Mac OS implementation to hpx_main.hpp
- PR #3365[5356] - Fix order of hpx libs in HPX_CONF_LIBRARIES.
- PR #3363[5357] - Apex fixing null wrapper
- PR #3361[5358] - Making sure all parcels get destroyed on an HPX thread (TCP pp)
- PR #3359[5359] - Feature/improveerrorforcompiler
- PR #3357[5360] - Static/dynamic executable implementation
- PR #3355[5361] - Reverting changes introduced by #3283 as those make applications hang
- PR #3354[5362] - Add external dependencies to HPX_LIBRARY_DIR
- PR #3353[5363] - Fix libfabric tcp
- PR #3351[5364] - Move obsolete header to tests directory.
- PR #3350[5365] - Renaming two functions to avoid problem described in #3285
- PR #3349[5366] - Make idle backoff exponential with maximum sleep time
- PR #3347[5367] - Replace *simple_component** with *component** in the Documentation
- PR #3346[5368] - Fix CMakeLists.txt example in quick start
- PR #3345[5369] - Fix automatic setting of HPX_MORE_THAN_64_THREADS
- PR #3344[5370] - Reduce amount of information printed for unknown command line options
- PR #3343[5371] - Safeguard HPX against destruction in global contexts
- PR #3341[5372] - Allowing for all command line options to be used as configuration settings
- PR #3340[5373] - Always convert inspect results to JUnit XML
- PR #3336[5374] - Only run docker push on master on CircleCI
- PR #3335[5375] - Update description of hpx.os_threads config parameter.
- PR #3334[5376] - Making sure early logging settings don't get mixed with others
- PR #3333[5377] - Update CMake links and versions in documentation

- PR #3332[5378] - Add notes on target suffixes to CMake documentation
- PR #3331[5379] - Add quickstart section to documentation
- PR #3330[5380] - Rename resource_partitioner test to avoid conflicts with pseudodependencies
- PR #3328[5381] - Making sure object is pinned while executing actions, even if action returns a future
- PR #3327[5382] - Add missing std::forward to tuple.hpp
- PR #3326[5383] - Make sure logging is up and running while modules are being discovered.
- PR #3324[5384] - Replace C++14 overload of std::equal with C++11 code.
- PR #3323[5385] - Fix a missing apex thread data (wrapper) initialization
- PR #3320[5386] - Adding support for -std=c++2a (define *HPX_WITH_CXX2A=On*)
- PR #3319[5387] - Replacing C++14 feature with equivalent C++11 code
- PR #3317[5388] - Fix compilation with VS 15.7.1 and /std:c++latest
- PR #3316[5389] - Fix includes for 1d_stencil_*_omp examples
- PR #3314[5390] - Remove some unused parameter warnings
- PR #3313[5391] - Fix pu-step and pu-offset command line options
- PR #3312[5392] - Add conversion of inspect reports to JUnit XML
- PR #3311[5393] - Fix escaping of closing braces in format specification syntax
- PR #3310[5394] - Don't overwrite user settings with defaults in registration database
- PR #3309[5395] - Fixing potential stack overflow for dataflow
- PR #3308[5396] - This updates the .clang-format configuration file to utilize newer features
- PR #3306[5397] - Marking migratable objects in their gid to allow not handling migration in AGAS
- PR #3305[5398] - Add proper exception handling to run_as_hpx_thread
- PR #3303[5399] - Changed std::rand to a better inbuilt PRNG Generator
- PR #3302[5400] - All non-migratable (simple) components now encode their lva and component type in their gid

- PR #3268[5424] - Replace constexpr with HPX_CXX14_CONSTEXPR and HPX_CONSTEXPR
- PR #3266[5425] - Replace boost::format with custom sprintf-based implementation
- PR #3265[5426] - Split parallel tests on CircleCI
- PR #3262[5427] - Making sure documentation correctly links to source files
- PR #3261[5428] - Apex refactoring fix rebind
- PR #3260[5429] - Isolate performance counter parser into a separate TU
- PR #3256[5430] - Post 1.1.0 version bumps
- PR #3254[5431] - Adding trait for actions allowing to make runtime decision on whether to execute it directly
- PR #3253[5432] - Bump minimal supported Boost to 1.58.0
- PR #3251[5433] - Adds new feature: changing interval used in interval_timer (issue 3244)
- PR #3239[5434] - Changing std::rand() to a better inbuilt PRNG generator.
- PR #3234[5435] - Disable background thread when networking is off
- PR #3232[5436] - Clean up suspension tests
- PR #3230[5437] - Add optional scheduler mode parameter to create_thread_pool function
- PR #3228[5438] - Allow suspension also on static schedulers
- PR #3163[5439] - libfabric parcelport w/o HPX_PARCELPORT_LIBFABRIC_ENDPOINT_RDM
- PR #3036[5440] - Switching to CircleCI 2.0

HPX V1.1.0 (Mar 24, 2018)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- We have changed the way *HPX* manages the processing units on a node. We do not longer implicitly bind all available cores to a single thread pool. The user has now full control over what processing units are bound to what thread pool, each with a separate scheduler. It is now also possible to create your own scheduler implementation and control what processing units this scheduler should use. We added the `hpx::resource::partitioner` that manages all available processing units and assigns resources to the used thread pools. Thread pools can be now be suspended/resumed independently. This functionality helps in running *HPX* concurrently to code that is directly relying on OpenMP[5441] and/or MPI[5442].

[5439] https://github.com/TheHPXProject/hpx/pull/3163
[5440] https://github.com/TheHPXProject/hpx/pull/3036

- We have continued to implement various parallel algorithms. *HPX* now almost completely implements all of the parallel algorithms as specified by the C++17 Standard[5443]. We have also continued to implement these algorithms for the distributed use case (for segmented data structures, such as `hpx::partitioned_vector`).
- Added a compatibility layer for `std::thread`, `std::mutex`, and `std::condition_variable` allowing for the code to use those facilities where available and to fall back to the corresponding Boost facilities otherwise. The CMake[5444] configuration option `-DHPX_WITH_THREAD_COMPATIBILITY=On` can be used to force using the Boost equivalents.
- The parameter sequence for the `hpx::parallel::transform_inclusive_scan` overload taking one iterator range has changed (again) to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake[5445].
- The parameter sequence for the `hpx::parallel::inclusive_scan` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY=On` to CMake.
- Added a helper facility `hpx::local_new` which is equivalent to `hpx::new_` except that it creates components locally only. As a consequence, the used component constructor may accept non-serializable argument types and/or non-const references or pointers.
- Removed the (broken) component type `hpx::lcos::queue<T>`. The old type is still available at configure time by passing `-DHPX_WITH_QUEUE_COMPATIBILITY=On` to CMake.
- The parallel algorithms adopted for C++17 restrict the iterator categories usable with those to at least forward iterators. Our implementation of the parallel algorithms was supporting input iterators (and output iterators) as well by simply falling back to sequential execution. We have now made our implementations conforming by requiring at least forward iterators. In order to enable the old behavior use the compatibility option `-DHPX_WITH_ALGORITHM_INPUT_ITERATOR_SUPPORT=On` on the CMake[5446] command line.
- We have added the functionalities allowing for LCOs being implemented using (simple) components. Before LCOs had to always be implemented using managed components.
- User defined components don't have to be default-constructible anymore. Return types from actions don't have to be default-constructible anymore either. Our serialization layer now in general supports non-default-constructible types.
- We have added a new launch policy `hpx::launch::lazy` that allows oneto defer the decision on what launch policy to use to the point of execution. This policy is initialized with a function (object) that – when invoked – is expected to produce the desired launch policy.

Breaking changes

- We have dropped support for the gcc compiler version V4.8. The minimal gcc version we now test on is gcc V4.9. The minimally required version of CMake[5447] is now V3.3.2.
- We have dropped support for the Visual Studio 2013 compiler version. The minimal Visual Studio version we now test on is Visual Studio 2015.5.
- We have dropped support for the Boost V1.51-V1.54. The minimal version of Boost we now test is Boost V1.55.
- We have dropped support for the `hpx::util::unwrapped` API. `hpx::util::unwrapped` will stay functional to some degree, until it finally gets removed in a later version of HPX. The functional usage of `hpx::util::unwrapped` should be changed to the new `hpx::util::unwrapping` function whereas the immediate usage should be replaced to `hpx::util::unwrap`.
- The performance counter names referring to properties as exposed by the threading subsystem have changes as those now additionally have to specify the thread-pool. See the corresponding documentation for more details.
- The overloads of `hpx::async` that invoke an action do not perform implicit unwrapping of the returned future anymore in case the invoked function does return a future in the first place. In this case `hpx::async` now returns a `hpx::future<future<T>>` making its behavior conforming to its local counterpart.
- We have replaced the use of `boost::exception_ptr` in our APIs with the equivalent `std::exception_ptr`. Please change your codes accordingly. No compatibility settings are provided.
- We have removed the compatibility settings for `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` as their life-cycle has reached its end.
- We have removed the experimental thread schedulers hierarchy_scheduler, periodic_priority_scheduler and throttling_scheduler in an effort to clean up and consolidate our thread schedulers.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- PR #3250[5448] - Apex refactoring with guids
- PR #3249[5449] - Updating People.qbk
- PR #3246[5450] - Assorted fixes for CUDA
- PR #3245[5451] - Apex refactoring with guids
- PR #3242[5452] - Modify task counting in thread_queue.hpp
- PR #3240[5453] - Fixed typos
- PR #3238[5454] - Readding accidentally removed std::abort
- PR #3237[5455] - Adding Pipeline example
- PR #3236[5456] - Fixing memory_block

- PR #3233[5457] - Make schedule_thread take suspended threads into account
- Issue #3226[5458] - memory_block is breaking, signaling SIGSEGV on a thread on creation and freeing
- PR #3225[5459] - Applying quick fix for hwloc-2.0
- Issue #3224[5460] - HPX counters crashing the application
- PR #3223[5461] - Fix returns when setting config entries
- Issue #3222[5462] - Errors linking libhpx.so
- Issue #3221[5463] - HPX on Mac OS X with HWLoc 2.0.0 fails to run
- PR #3216[5464] - Reorder a variadic array to satisfy VS 2017 15.6
- PR #3214[5465] - Changed prerequisites.qbk to avoid confusion while building boost
- PR #3213[5466] - Relax locks for thread suspension to avoid holding locks when yielding
- PR #3212[5467] - Fix check in sequenced_executor test
- PR #3211[5468] - Use preinit_array to set argc/argv in init_globally example
- PR #3210[5469] - Adapted parallel::{search | search_n} for Ranges TS (see #1668)
- PR #3209[5470] - Fix locking problems during shutdown
- Issue #3208[5471] - init_globally throwing a run-time error
- PR #3206[5472] - Addition of new arithmetic performance counter "Count"
- PR #3205[5473] - Fixing return type calculation for bulk_then_execute
- PR #3204[5474] - Changing std::rand() to a better inbuilt PRNG generator
- PR #3203[5475] - Resolving problems during shutdown for VS2015
- PR #3202[5476] - Making sure resource partitioner is not accessed if its not valid
- PR #3201[5477] - Fixing optional::swap
- Issue #3200[5478] - hpx::util::optional fails
- PR #3199[5479] - Fix sliding_semaphore test

- PR #3198[5480] - Set pre_main status before launching run_helper
- PR #3197[5481] - Update README.rst
- PR #3194[5482] - parallel::{fill|fill_n} updated for Ranges TS
- PR #3193[5483] - Updating Runtime.cpp by adding correct description of Performance counters during register
- PR #3191[5484] - Fix sliding_semaphore_2338 test
- PR #3190[5485] - Topology improvements
- PR #3189[5486] - Deleting one include of median from BOOST library to arithmetics_counter file
- PR #3188[5487] - Optionally disable printing of diagnostics during terminate
- PR #3187[5488] - Suppressing cmake warning issued by cmake > V3.11
- PR #3185[5489] - Remove unused scoped_unlock, unlock_guard_try
- PR #3184[5490] - Fix nqueen example
- PR #3183[5491] - Add runtime start/stop, resume/suspend and OpenMP benchmarks
- Issue #3182[5492] - bulk_then_execute has unexpected return type/does not compile
- Issue #3181[5493] - hwloc 2.0 breaks topo class and cannot be used
- Issue #3180[5494] - Schedulers that don't support suspend/resume are unusable
- PR #3179[5495] - Various minor changes to support FLeCSI
- PR #3178[5496] - Fix #3124
- PR #3177[5497] - Removed allgather
- PR #3176[5498] - Fixed Documentation for "using_hpx_pkgconfig"
- PR #3174[5499] - Add hpx::iostream::ostream overload to format_to
- PR #3172[5500] - Fix lifo queue backend
- PR #3171[5501] - adding the missing unset() function to cpu_mask() for case of more than 64 threads
- PR #3170[5502] - Add cmake flag -DHPX_WITH_FAULT_TOLERANCE=ON (OFF by default)

- PR #3095[5572] - Add ciso646 header to get _LIBCPP_VERSION for testing inplace merge
- PR #3094[5573] - Relax atomic operations on performance counter values
- PR #3093[5574] - Short-circuit all_of/any_of/none_of instantiations
- PR #3092[5575] - Take advantage of C++14 lambda capture initialization syntax, where possible
- PR #3091[5576] - Remove more references to Boost from logging code
- PR #3090[5577] - Unify use of yield/yield_k
- PR #3089[5578] - Fix a strange thing in parallel::detail::handle_exception. (Fix #2834.)
- Issue #3088[5579] - A strange thing in parallel::sort.
- PR #3087[5580] - Fixing assertion in default_distribution_policy
- PR #3086[5581] - Implement parallel::remove and parallel::remove_if
- PR #3085[5582] - Addressing breaking changes in Boost V1.66
- PR #3084[5583] - Ignore build warnings round 2
- PR #3083[5584] - Fix typo HPX_WITH_MM_PREFECTH
- PR #3081[5585] - Pre-decay template arguments early
- PR #3080[5586] - Suspend thread pool
- PR #3079[5587] - Ignore build warnings
- PR #3078[5588] - Don’t test inplace_merge with libc++
- PR #3076[5589] - Fixing 3075: Part 1
- PR #3074[5590] - Fix more build warnings
- PR #3073[5591] - Suspend thread cleanup
- PR #3072[5592] - Change existing symbol_namespace::iterate to return all data instead of invoking a callback
- PR #3071[5593] - Fixing pack_traversal_async test
- PR #3070[5594] - Fix dynamic_counters_loaded_1508 test by adding dependency to memory_component

- PR #2911[5733] - Fixing CUDA problems
- PR #2910[5734] - Improve error reporting for process component on POSIX systems
- PR #2909[5735] - Fix typo in include path
- PR #2908[5736] - Use proper container according to iterator tag in benchmarks of parallel algorithms
- PR #2907[5737] - Optionally force-delete remaining channel items on close
- PR #2906[5738] - Making sure generated performance counter names are correct
- Issue #2905[5739] - collecting idle-rate performance counters on multiple localities produces an error
- Issue #2904[5740] - build broken for Intel 17 compilers
- PR #2903[5741] - Documentation Updates– Adding New People
- PR #2902[5742] - Fixing service_executor
- PR #2901[5743] - Fixing partitioned_vector creation
- PR #2900[5744] - Add numa-balanced mode to hpx::bind, spread cores over numa domains
- Issue #2899[5745] - hpx::bind does not have a mode that balances cores over numa domains
- PR #2898[5746] - Adding missing #include and missing guard for optional code section
- PR #2897[5747] - Removing dependency on Boost.ICL
- Issue #2896[5748] - Debug build fails without -fpermissive with GCC 7.1 and Boost 1.65
- PR #2895[5749] - Fixing SLURM environment parsing
- PR #2894[5750] - Fix incorrect handling of compile definition with value 0
- Issue #2893[5751] - Disabling schedulers causes build errors
- PR #2892[5752] - added list serializer
- PR #2891[5753] - Resource Partitioner Fixes
- Issue #2890[5754] - Destroying a non-empty channel causes an assertion failure
- PR #2889[5755] - Add check for libatomic

- PR #2888[5756] - Fix compilation problems if HPX_WITH_ITT_NOTIFY=ON
- PR #2887[5757] - Adapt broadcast() to non-unwrapping async<Action>
- PR #2886[5758] - Replace Boost.Random with C++11 <random>
- Issue #2885[5759] - regression in broadcast?
- Issue #2884[5760] - linking `-latomic` is not portable
- PR #2883[5761] - Explicitly set -pthread flag if available
- PR #2882[5762] - Wrap boost::format uses
- Issue #2881[5763] - hpx not compiling with `HPX_WITH_ITTNOTIFY=On`
- Issue #2880[5764] - hpx::bind scatter/balanced give wrong pu masks
- PR #2878[5765] - Fix incorrect pool usage masks setup in RP/thread manager
- PR #2877[5766] - Require `std::array` by default
- PR #2875[5767] - Deprecate use of BOOST_ASSERT
- PR #2874[5768] - Changed serialization of boost.variant to use variadic templates
- Issue #2873[5769] - building with parcelport_mpi fails on cori
- PR #2871[5770] - Adding missing support for throttling scheduler
- PR #2870[5771] - Disambiguate use of base_lco_with_value macros with channel
- Issue #2869[5772] - Difficulty compiling `HPX_REGISTER_CHANNEL_DECLARATION(double)`
- PR #2868[5773] - Removing unneeded assert
- PR #2867[5774] - Implement parallel::unique
- Issue #2866[5775] - The chunk_size_iterator violates multipass guarantee
- PR #2865[5776] - Only use sched_getcpu on linux machines
- PR #2864[5777] - Create redistribution archive for successful builds
- PR #2863[5778] - Replace casts/assignments with hard-coded memcpy operations

- Issue #2835[5802] - `constexpr` functions with `void` return type break compilation with CUDA 8.0
- Issue #2834[5803] - One suspicion in parallel::detail::handle_exception
- PR #2833[5804] - Implement parallel::merge
- PR #2832[5805] - Fix a strange thing in parallel::util::detail::handle_local_exceptions. (Fix #2818)
- PR #2830[5806] - Break the debugger when a test failed
- Issue #2831[5807] - `parallel/executors/execution_fwd.hpp` causes compilation failure in C++11 mode.
- PR #2829[5808] - Implement an API for asynchronous pack traversal
- PR #2828[5809] - Split unit test builds on CircleCI to avoid timeouts
- Issue #2827[5810] - failure to compile hello_world example with -Werror
- PR #2824[5811] - Making sure promises are marked as started when used as continuations
- PR #2823[5812] - Add documentation for partitioned_vector_view
- Issue #2822[5813] - Yet another issue with wait_for similar to #2796
- PR #2821[5814] - Fix bugs and improve that about HPX_HAVE_CXX11_AUTO_RETURN_VALUE of CMake
- PR #2820[5815] - Support C++11 in benchmark codes of parallel::partition and parallel::partition_copy
- PR #2819[5816] - Fix compile errors in unit test of container version of parallel::partition
- Issue #2818[5817] - A strange thing in parallel::util::detail::handle_local_exceptions
- Issue #2815[5818] - HPX fails to compile with HPX_WITH_CUDA=ON and the new CUDA 9.0 RC
- Issue #2814[5819] - Using 'gmakeN' after 'cmake' produces error in src/CMakeFiles/hpx.dir/runtime/agas/addressing_service.cpp.o
- PR #2813[5820] - Properly support [[noreturn]] attribute if available
- Issue #2812[5821] - Compilation fails with gcc 7.1.1
- PR #2811[5822] - Adding hpx::launch::lazy and support for async, dataflow, and future::then
- PR #2810[5823] - Add option allowing to disable deprecation warning
- PR #2809[5824] - Disable throttling scheduler if HWLOC is not found/used

- Issue #701[6055] - Add RCR performance counter component
- Issue #528[6056] - Add support for known failures and warning count/comparisons to hpx_run_tests.py

HPX V1.0.0 (Apr 24, 2017)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- Added the facility `hpx::split_future` which allows one to convert a `future<tuple<Ts...>>` into a `tuple<future<Ts>...>`. This functionality is not available when compiling *HPX* with VS2012.
- Added a new type of performance counter which allows one to return a list of values for each invocation. We also added a first counter of this type which collects a histogram of the times between parcels being created.
- Added new LCOs: `hpx::lcos::channel` and `hpx::lcos::local::channel` which are very similar to the well known channel constructs used in the Go language.
- Added new performance counters reporting the amount of data handled by the networking layer on a action-by-action basis (please see PR #2289[6057] for more details).
- Added a new facility `hpx::lcos::barrier`, replacing the equally named older one. The new facility has a slightly changed API and is much more efficient. Most notable, the new facility exposes a (global) function `hpx::lcos::barrier::synchronize()` which represents a global barrier across all localities.
- We have started to add support for vectorization to our parallel algorithm implementations. This support depends on using an external library, currently either Vc Library or **|boost_simd|_**. Please see Issue #2333[6058] for a list of currently supported algorithms. This is an experimental feature and its implementation and/or API might change in the future. Please see this blog-post[6059] for more information.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overload can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17. The old inner_product names can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- Added versions of `hpx::get_ptr` taking client side representations for component instances as their parameter (instead of a global id).
- Added the helper utility `hpx::performance_counters::performance_counter_set` helping to encapsulate a set of performance counters to be managed concurrently.
- All execution policies and related classes have been renamed to be consistent with the naming changes applied for C++17. All policies now live in the namespace `hpx::parallel::execution`. The ols names can be still enabled at configure time by specifying `-DHPX_WITH_EXECUTION_POLICY_COMPATIBILITY=On` to CMake.
- The thread scheduling subsystem has undergone a major refactoring which results in significant performance improvements. We have also imroved the performance of creating `hpx::future` and of various facilities handling those.

[6055] https://github.com/TheHPXProject/hpx/issues/701
[6056] https://github.com/TheHPXProject/hpx/issues/528
[6057] https://github.com/TheHPXProject/hpx/pull/2289
[6058] https://github.com/TheHPXProject/hpx/issues/2333
[6059] http://stellar-group.org/2016/09/vectorized-cpp-parallel-algorithms-with-hpx/

- We have consolidated all of the code in HPX.Compute related to the integration of CUDA. `hpx::partitioned_vector` has been enabled to be usable with `hpx::compute::vector` which allows one to place the partitions on one or more GPU devices.
- Added new performance counters exposing various internals of the thread scheduling subsystem, such as the current idle- and busy-loop counters and instantaneous scheduler utilization.
- Extended and improved the use of the ITTNotify hooks allowing to collect performance counter data and function annotation information from within the Intel Amplifier tool.

Breaking changes

- We have dropped support for the gcc compiler versions V4.6 and 4.7. The minimal gcc version we now test on is gcc V4.8.
- We have removed (default) support for `boost::chrono` in interfaces, uses of it have been replaced with `std::chrono`. This facility can be still enabled at configure time by specifying `-DHPX_WITH_BOOST_CHRONO_COMPATIBILITY=On` to CMake.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17.
- the build options `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` are now disabled by default. Please change your code still depending on the deprecated interfaces.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- PR #2596[6060] - Adding apex data
- PR #2595[6061] - Remove obsolete file
- Issue #2594[6062] - FindOpenCL.cmake mismatch with the official cmake module
- PR #2592[6063] - First attempt to introduce spmd_block in hpx
- Issue #2591[6064] - Feature request: continuation (then) which does not require the callable object to take a future<R> as parameter
- PR #2588[6065] - Daint fixes
- PR #2587[6066] - Fixing transfer_(continuation)_action::schedule
- PR #2585[6067] - Work around MSVC having an ICE when compiling with -Ob2
- PR #2583[6068] - changing 7zip command to 7za in roll_release.sh

- PR #2554[6092] - Add more diagnostics to error thrown from find_appropriate_destination
- Issue #2555[6093] - No valid parcelport configured
- PR #2553[6094] - Add cmake cuda_arch option
- PR #2552[6095] - Remove incomplete datapar bindings to libflatarray
- PR #2551[6096] - Rename hwloc_topology to hwloc_topology_info
- PR #2550[6097] - Apex api updates
- PR #2549[6098] - Pre-include defines.hpp to get the macro HPX_HAVE_CUDA value
- PR #2548[6099] - Fixing issue with disconnect
- PR #2546[6100] - Some fixes around cuda clang partitioned_vector example
- PR #2545[6101] - Fix uses of the Vc2 datapar flags; the value, not the type, should be passed to functions
- PR #2542[6102] - Make HPX_WITH_MALLOC easier to use
- PR #2541[6103] - avoid recompiles when enabling/disabling examples
- PR #2540[6104] - Fixing usage of target_link_libraries()
- PR #2539[6105] - fix RPATH behaviour
- Issue #2538[6106] - HPX_WITH_CUDA corrupts compilation flags
- PR #2537[6107] - Add output of a Bazel Skylark extension for paths and compile options
- PR #2536[6108] - Add counter exposing total available memory to Windows as well
- PR #2535[6109] - Remove obsolete support for security
- Issue #2534[6110] - Remove command line option `--hpx:run-agas-server`
- PR #2533[6111] - Pre-cache locality endpoints during bootstrap
- PR #2532[6112] - Fixing handling of GIDs during serialization preprocessing
- PR #2531[6113] - Amend uses of the term “functor”
- PR #2529[6114] - added counter for reading available memory

- PR #2502[6138] - Resolve various, minor compiler warnings
- PR #2501[6139] - Some other fixes around cuda examples
- Issue #2500[6140] - nvcc / cuda clang issue due to a missing -DHPX_WITH_CUDA flag
- PR #2499[6141] - Adding support for std::array to wait_all and friends
- PR #2498[6142] - Execute background work as HPX thread
- PR #2497[6143] - Fixing configuration options for spinlock-deadlock detection
- PR #2496[6144] - Accounting for different compilers in CrayKNL toolchain file
- PR #2494[6145] - Adding component base class which ties a component instance to a given executor
- PR #2493[6146] - Enable controlling amount of pending threads which must be available to allow thread stealing
- PR #2492[6147] - Adding new command line option –hpx:print-counter-reset
- PR #2491[6148] - Resolve ambiguities when compiling with APEX
- PR #2490[6149] - Resuming threads waiting on future with higher priority
- Issue #2489[6150] - nvcc issue because -std=c++11 appears twice
- PR #2488[6151] - Adding performance counters exposing the internal idle and busy-loop counters
- PR #2487[6152] - Allowing for plain suspend to reschedule thread right away
- PR #2486[6153] - Only flag HPX code for CUDA if HPX_WITH_CUDA is set
- PR #2485[6154] - Making thread-queue parameters runtime-configurable
- PR #2484[6155] - Added atomic counter for parcel-destinations
- PR #2483[6156] - Added priority-queue lifo scheduler
- PR #2482[6157] - Changing scheduler to steal only if more than a minimal number of tasks are available
- PR #2481[6158] - Extending command line option –hpx:print-counter-destination to support value ‘none’
- PR #2479[6159] - Added option to disable signal handler
- PR #2478[6160] - Making sure the sine performance counter module gets loaded only for the corresponding example

[6160] https://github.com/TheHPXProject/hpx/pull/2478

- Issue #2477[6161] - Breaking at a throw statement
- PR #2476[6162] - Annotated function
- PR #2475[6163] - Ensure that using %osthread% during logging will not throw for non-hpx threads
- PR #2474[6164] - Remove now superficial non_direct actions from base_lco and friends
- PR #2473[6165] - Refining support for ITTNotify
- PR #2472[6166] - Some fixes around hpx compute
- Issue #2470[6167] - redefinition of boost::detail::spinlock
- Issue #2469[6168] - Dataflow performance issue
- PR #2468[6169] - Perf docs update
- PR #2466[6170] - Guarantee to execute remote direct actions on HPX-thread
- PR #2465[6171] - Improve demo : Async copy and fixed device handling
- PR #2464[6172] - Adding performance counter exposing instantaneous scheduler utilization
- PR #2463[6173] - Downcast to future<void>
- PR #2462[6174] - Fixed usage of ITT-Notify API with Intel Amplifier
- PR #2461[6175] - Cublas demo
- PR #2460[6176] - Fixing thread bindings
- PR #2459[6177] - Make -std=c++11 nvcc flag consistent for in-build and installed versions
- Issue #2457[6178] - Segmentation fault when registering a partitioned vector
- PR #2452[6179] - Properly releasing global barrier for unhandled exceptions
- PR #2451[6180] - Fixing long shutdown times
- PR #2450[6181] - Attempting to fix initialization errors on newer platforms (Boost V1.63)
- PR #2449[6182] - Replace BOOST_COMPILER_FENCE with an HPX version
- PR #2448[6183] - This fixes a possible race in the migration code

- Issue #2420[6207] - Returning object of a component client from another component action fails
- PR #2419[6208] - Infiniband parcelport
- Issue #2418[6209] - gcc + nvcc fails to compile code that uses partitioned_vector
- PR #2417[6210] - Fixing context switching
- PR #2416[6211] - Adding fixes and workarounds to allow compilation with nvcc/msvc (VS2015up3)
- PR #2415[6212] - Fix errors coming from hpx compute examples
- PR #2414[6213] - Fixing msvc12
- PR #2413[6214] - Enable cuda/nvcc or cuda/clang when using add_hpx_executable()
- PR #2412[6215] - Fix issue in HPX_SetupTarget.cmake when cuda is used
- PR #2411[6216] - This fixes the core compilation issues with MSVC12
- Issue #2410[6217] - `undefined reference to opal_hwloc191_hwloc_.....`
- PR #2409[6218] - Fixing locking for channel and receive_buffer
- PR #2407[6219] - Solving #2402 and #2403
- PR #2406[6220] - Improve guards
- PR #2405[6221] - Enable parallel::for_each for iterators returning proxy types
- PR #2404[6222] - Forward the explicitly given result_type in the hpx invoke
- Issue #2403[6223] - datapar_execution + zip iterator: lambda arguments aren't references
- Issue #2402[6224] - datapar algorithm instantiated with wrong type #2402
- PR #2401[6225] - Added support for imported libraries to HPX_Libraries.cmake
- PR #2400[6226] - Use CMake policy CMP0060
- Issue #2399[6227] - Error trying to push back vector of futures to vector
- PR #2398[6228] - Allow config #defines to be written out to custom config/defines.hpp
- Issue #2397[6229] - CMake generated config defines can cause tedious rebuilds category

- PR #2345[6276] - Implemented parallel::stable_partition
- PR #2344[6277] - Making hpx::lcos::channel usable with basename registration
- PR #2343[6278] - Fix a couple of examples that failed to compile after recent api changes
- Issue #2342[6279] - Enabling APEX causes link errors
- PR #2341[6280] - Removing cmake "find" files that are in the APEX cmake Modules
- PR #2340[6281] - Implemented all existing datapar algorithms using Boost.SIMD
- PR #2339[6282] - Fixing 2338
- PR #2338[6283] - Possible race in sliding semaphore
- PR #2337[6284] - Adjust osu_latency test to measure window_size parcels in flight at once
- PR #2336[6285] - Allowing remote direct actions to be executed without spawning a task
- PR #2335[6286] - Making sure multiple components are properly initialized from arguments
- Issue #2334[6287] - Cannot construct component with large vector on a remote locality
- PR #2332[6288] - Fixing hpx::lcos::local::barrier
- PR #2331[6289] - Updating APEX support to include OTF2
- PR #2330[6290] - Support for data-parallelism for parallel algorithms
- Issue #2329[6291] - Coordinate settings in cmake
- PR #2328[6292] - fix LibGeoDecomp builds with HPX + GCC 5.3.0 + CUDA 8RC
- PR #2326[6293] - Making scan_partitioner work (for now)
- Issue #2323[6294] - Constructing a vector of components only correctly initializes the first component
- PR #2322[6295] - Fix problems that bubbled up after merging #2278
- PR #2321[6296] - Scalable barrier
- PR #2320[6297] - Std flag fixes
- Issue #2319[6298] - -std=c++14 and -std=c++1y with Intel can't build recent Boost builds due to insufficient C++14 support; don't enable these flags by default for Intel

- Issue #475[6382] - Create a means of combining performance counters into querysets

HPX V0.9.99 (Jul 15, 2016)

General changes

As the version number of this release hints, we consider this release to be a preview for the upcoming *HPX* V1.0. All of the functionalities we set out to implement for V1.0 are in place; all of the features we wanted to have exposed are ready. We are very happy with the stability and performance of *HPX* and we would like to present this release to the community in order for us to gather broad feedback before releasing V1.0. We still expect for some minor details to change, but on the whole this release represents what we would like to have in a V1.0.

Overall, since the last release we have had almost 1600 commits while closing almost 400 tickets. These numbers reflect the incredible development activity we have seen over the last couple of months. We would like to express a big ‘Thank you!’ to all contributors and those who helped to make this release happen.

The most notable addition in terms of new functionality available with this release is the full implementation of object migration (i.e. the ability to transparently move *HPX* components to a different compute node). Additionally, this release of *HPX* cleans up many minor issues and some API inconsistencies.

Here are some of the main highlights and changes for this release (in no particular order):

[6368] https://github.com/TheHPXProject/hpx/pull/2232
[6369] https://github.com/TheHPXProject/hpx/issues/2147
[6370] https://github.com/TheHPXProject/hpx/issues/2109

[6372] https://github.com/TheHPXProject/hpx/issues/1864
[6373] https://github.com/TheHPXProject/hpx/issues/1754
[6374] https://github.com/TheHPXProject/hpx/issues/1655
[6375] https://github.com/TheHPXProject/hpx/issues/1591
[6376] https://github.com/TheHPXProject/hpx/issues/1401
[6377] https://github.com/TheHPXProject/hpx/issues/1125
[6378] https://github.com/TheHPXProject/hpx/issues/839
[6379] https://github.com/TheHPXProject/hpx/issues/702
[6380] https://github.com/TheHPXProject/hpx/issues/668
[6381] https://github.com/TheHPXProject/hpx/issues/533
[6382] https://github.com/TheHPXProject/hpx/issues/475

- We have fixed a couple of issues in AGAS and the parcel layer which have caused hangs, segmentation faults at exit, and a slowdown of applications over time. Fixing those has significantly increased the overall stability and performance of distributed runs.
- We have started to add parallel algorithm overloads based on the C++ Extensions for Ranges (N4560[6383]) proposal. This also includes the addition of projections to the existing algorithms. Please see Issue #1668[6384] for a list of algorithms which have been adapted to N4560[6385].
- We have implemented index-based parallel for-loops based on a corresponding standardization proposal (P0075R1[6386]). Please see Issue #2016[6387] for a list of available algorithms.
- We have added implementations for more parallel algorithms as proposed for the upcoming C++ 17 Standard. See Issue #1141[6388] for an overview of which algorithms are available by now.
- We have started to implement a new prototypical functionality with *HPX.Compute* which uniformly exposes some of the higher level APIs to heterogeneous architectures (currently CUDA). This functionality is an early preview and should not be considered stable. It may change considerably in the future.
- We have pervasively added (optional) executor arguments to all API functions which schedule new work. Executors are now used throughout the code base as the main means of executing tasks.
- Added `hpx::make_future<R>(future<T> &&)` allowing to convert a future of any type `T` into a future of any other type `R`, either based on default conversion rules of the embedded types or using a given explicit conversion function.
- We finally finished the implementation of transparent migration of components to another locality. It is now possible to trigger a migration operation without 'stopping the world' for the object to migrate. *HPX* will make sure that no work is being performed on an object before it is migrated and that all subsequently scheduled work for the migrated object will be transparently forwarded to the new locality. Please note that the global id of the migrated object does not change, thus the application will not have to be changed in any way to support this new functionality. Please note that this feature is currently considered experimental. See Issue #559[6389] and PR #1966[6390] for more details.
- The `hpx::dataflow` facility is now usable with actions. Similarly to `hpx::async`, actions can be specified as an explicit template argument (`hpx::dataflow<Action>(target, ...)`) or as the first argument (`hpx::dataflow(Action(), target, ...)`). We have also enabled the use of distribution policies as the target for dataflow invocations. Please see Issue #1265[6391] and PR #1912[6392] for more information.
- Adding overloads of `gather_here` and `gather_there` to accept the plain values of the data to gather (in addition to the existing overloads expecting futures).
- We have cleaned up and refactored large parts of the code base. This helped reducing compile and link times of *HPX* itself and also of applications depending on it. We have further decreased the dependency of *HPX* on the Boost libraries by replacing part of those with facilities available from the standard libraries.
- Wherever possible we have removed dependencies of our API on Boost by replacing those with the equivalent facility from the C++11 standard library.
- We have added new performance counters for parcel coalescing, file-IO, the AGAS cache, and overall scheduler time. Resetting performance counters has been overhauled and fixed.

[6383] http://wg21.link/n4560
[6384] https://github.com/TheHPXProject/hpx/issues/1668
[6385] http://wg21.link/n4560
[6386] http://wg21.link/p0075r1
[6387] https://github.com/TheHPXProject/hpx/issues/2016
[6388] https://github.com/TheHPXProject/hpx/issues/1141
[6389] https://github.com/TheHPXProject/hpx/issues/559
[6390] https://github.com/TheHPXProject/hpx/pull/1966
[6391] https://github.com/TheHPXProject/hpx/issues/1265
[6392] https://github.com/TheHPXProject/hpx/pull/1912

- We have introduced a generic client type `hpx::components::client<>` and added support for using it with `hpx::async`. This removes the necessity to implement specific client types for every component type without losing type safety. This deemphasizes the need for using the low level `hpx::id_type` for referencing (possibly remote) component instances. The plan is to deprecate the direct use of `hpx::id_type` in user code in the future.
- We have added a special iterator which supports automatic prefetching of one or more arrays for speeding up loop-like code (see `hpx::parallel::util::make_prefetcher_context()`).
- We have extended the interfaces exposed from executors (as proposed by N4406[6393]) to accept an arbitrary number of arguments.

Breaking changes

- In order to move the dataflow facility to `namespace hpx` we added a definition of `hpx::dataflow` which might create ambiguities in existing codes. The previous definition of this facility (`hpx::lcos::local::dataflow`) has been deprecated and is available only if the constant `-DHPX_WITH_LOCAL_DATAFLOW_COMPATIBILITY=On` to CMake[6394] is defined at configuration time. Please explicitly qualify all uses of the dataflow facility if you enable this compatibility setting and encounter ambiguities.
- The adaptation of the C++ Extensions for Ranges (N4560[6395]) proposal imposes some breaking changes related to the return types of some of the parallel algorithms. Please see Issue #1668[6396] for a list of algorithms which have already been adapted.
- The facility `hpx::lcos::make_future_void()` has been replaced by `hpx::make_future<void>()`.
- We have removed support for Intel V13 and gcc 4.4.x.
- We have removed (default) support for the generic `hpx::parallel::execution_poliy` because it was removed from the Parallelism TS (__cpp11_n4104__) while it was being added to the upcoming C++17 Standard. This facility can be still enabled at configure time by specifying `-DHPX_WITH_GENERIC_EXECUTION_POLICY=On` to CMake.
- Uses of `boost::shared_ptr` and related facilities have been replaced with `std::shared_ptr` and friends. Uses of `boost::unique_lock`, `boost::lock_guard` etc. have also been replaced by the equivalent (and equally named) tools available from the C++11 standard library.
- Facilities that used to expect an explicit `boost::unique_lock` now take an `std::unique_lock`. Additionally, `condition_variable` no longer aliases `condition_variable_any`; its interface now only works with `std::unique_lock<local::mutex>`.
- Uses of `boost::function`, `boost::bind`, `boost::tuple` have been replaced by the corresponding facilities in *HPX* (`hpx::util::function`, `hpx::util::bind`, and `hpx::util::tuple`, respectively).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- PR #2250[6397] - change default chunker of parallel executor to static one
- PR #2247[6398] - HPX on ppc64le
- PR #2244[6399] - Fixing MSVC problems
- PR #2238[6400] - Fixing small typos
- PR #2237[6401] - Fixing small typos
- PR #2234[6402] - Fix broken add test macro when extra args are passed in
- PR #2231[6403] - Fixing possible race during future awaiting in serialization
- PR #2230[6404] - Fix stream nvcc
- PR #2229[6405] - Fixed run_as_hpx_thread
- PR #2228[6406] - On prefetching_test branch : adding prefetching_iterator and related tests used for prefetching containers within lambda functions
- PR #2227[6407] - Support for HPXCL's opencl::event
- PR #2226[6408] - Preparing for release of V0.9.99
- PR #2225[6409] - fix issue when compiling components with hpxcxx
- PR #2224[6410] - Compute alloc fix
- PR #2223[6411] - Simplify promise
- PR #2222[6412] - Replace last uses of boost::function by util::function_nonser
- PR #2221[6413] - Fix config tests
- PR #2220[6414] - Fixing gcc 4.6 compilation issues
- PR #2219[6415] - nullptr support for `[unique_]function`
- PR #2218[6416] - Introducing clang tidy
- PR #2216[6417] - Replace NULL with nullptr

- Issue #2214[6418] - Let inspect flag use of NULL, suggest nullptr instead
- PR #2213[6419] - Require support for nullptr
- PR #2212[6420] - Properly find jemalloc through pkg-config
- PR #2211[6421] - Disable a couple of warnings reported by Intel on Windows
- PR #2210[6422] - Fixed host::block_allocator::bulk_construct
- PR #2209[6423] - Started to clean up new sort algorithms, made things compile for sort_by_key
- PR #2208[6424] - A couple of fixes that were exposed by a new sort algorithm
- PR #2207[6425] - Adding missing includes in /hpx/include/serialization.hpp
- PR #2206[6426] - Call package_action::get_future before package_action::apply
- PR #2205[6427] - The indirect_packaged_task::operator() needs to be run on a HPX thread
- PR #2204[6428] - Variadic executor parameters
- PR #2203[6429] - Delay-initialize members of partitioned iterator
- PR #2202[6430] - Added segmented fill for hpx::vector
- Issue #2201[6431] - Null Thread id encountered on partitioned_vector
- PR #2200[6432] - Fix hangs
- PR #2199[6433] - Deprecating hpx/traits.hpp
- PR #2198[6434] - Making explicit inclusion of external libraries into build
- PR #2197[6435] - Fix typo in QT CMakeLists
- PR #2196[6436] - Fixing a gcc warning about attributes being ignored
- PR #2194[6437] - Fixing partitioned_vector_spmd_foreach example
- Issue #2193[6438] - partitioned_vector_spmd_foreach seg faults
- PR #2192[6439] - Support Boost.Thread v4
- PR #2191[6440] - HPX.Compute prototype

- PR #2190[6441] - Spawning operation on new thread if remaining stack space becomes too small
- PR #2189[6442] - Adding callback taking index and future to when_each
- PR #2188[6443] - Adding new example demonstrating receive_buffer
- PR #2187[6444] - Mask 128-bit ints if CUDA is being used
- PR #2186[6445] - Make startup & shutdown functions unique_function
- PR #2185[6446] - Fixing logging output not to cause hang on shutdown
- PR #2184[6447] - Allowing component clients as action return types
- Issue #2183[6448] - Enabling logging output causes hang on shutdown
- Issue #2182[6449] - 1d_stencil seg fault
- Issue #2181[6450] - Setting small stack size does not change default
- PR #2180[6451] - Changing default bind mode to balanced
- PR #2179[6452] - adding prefetching_iterator and related tests used for prefetching containers within lambda functions
- PR #2177[6453] - Fixing 2176
- Issue #2176[6454] - Launch process test fails on OSX
- PR #2175[6455] - Fix unbalanced config/warnings includes, add some new ones
- PR #2174[6456] - Fix test categorization : regression not unit
- Issue #2172[6457] - Different performance results
- Issue #2171[6458] - "negative entry in reference count table" running octotiger on 32 nodes on queenbee
- Issue #2170[6459] - Error while compiling on Mac + boost 1.60
- PR #2168[6460] - Fixing problems with is_bitwise_serializable
- Issue #2167[6461] - startup & shutdown function should accept unique_function
- Issue #2166[6462] - Simple receive_buffer example
- PR #2165[6463] - Fix wait all

- PR #2164[6464] - Fix wait all
- PR #2163[6465] - Fix some typos in config tests
- PR #2162[6466] - Improve #includes
- PR #2160[6467] - Add inspect check for missing #include <list>
- PR #2159[6468] - Add missing finalize call to stop test hanging
- PR #2158[6469] - Algo fixes
- PR #2157[6470] - Stack check
- Issue #2156[6471] - OSX reports stack space incorrectly (generic context coroutines)
- Issue #2155[6472] - Race condition suspected in runtime
- PR #2154[6473] - Replace boost::detail::atomic_count with the new util::atomic_count
- PR #2153[6474] - Fix stack overflow on OSX
- PR #2152[6475] - Define is_bitwise_serializable as is_trivially_copyable when available
- PR #2151[6476] - Adding missing <cstring> for std::mem* functions
- Issue #2150[6477] - Unable to use component clients as action return types
- PR #2149[6478] - std::memmove copies bytes, use bytes*sizeof(type) when copying larger types
- PR #2146[6479] - Adding customization point for parallel copy/move
- PR #2145[6480] - Applying changes to address warnings issued by latest version of PVS Studio
- Issue #2148[6481] - hpx::parallel::copy is broken after trivially copyable changes
- PR #2144[6482] - Some minor tweaks to compute prototype
- PR #2143[6483] - Added Boost version support information over OSX platform
- PR #2142[6484] - Fixing memory leak in example
- PR #2141[6485] - Add missing specializations in execution policies
- PR #2139[6486] - This PR fixes a few problems reported by Clang's Undefined Behavior sanitizer

- Issue #55[6790] - Uniform syntax for enums should be implemented

HPX V0.9.11 (Nov 11, 2015)

Our main focus for this release was the design and development of a coherent set of higher-level APIs exposing various types of parallelism to the application programmer. We introduced the concepts of an `executor`, which can be used to customize the `where` and `when` of execution of tasks in the context of parallelizing codes. We extended all APIs related to managing parallel tasks to support executors which gives the user the choce of either using one of the predefined executor types or to provide its own, possibly application specific, executor. We paid very close attention to align all of these changes with the existing C++ Standards documents or with the ongoing proposals for standardization.

This release is the first after our change to a new development policy. We switched all development to be strictly performed on branches only, all direct commits to our main branch (`master`) are prohibited. Any change has to go through a peer review before it will be merged to `master`. As a result the overall stability of our code base has significantly increased, the development process itself has been simplified. This change manifests itself in a large number of pull-requests which have been merged (please see below for a full list of closed issues and pull-requests). All in all for this release, we closed almost 100 issues and merged over 290 pull-requests. There have been over 1600 commits to the master branch since the last release.

General changes

- We are moving into the direction of unifying managed and simple components. As such, the classes *hpx::components::component* and *hpx::components::component_base* have been added which currently just forward to the currently existing simple component facilities. The examples have been converted to only use those two classes.
- Added integration with the CircleCI[6791] hosted continuous integration service. This gives us constant and immediate feedback on the health of our master branch.
- The compiler configuration subsystem in the build system has been reimplemented. Instead of using Boost.Config we now use our own lightweight set of cmake scripts to determine the available language and library features supported by the used compiler.
- The API for creating instances of components has been consolidated. All component instances should be created using the *hpx::new_* only. It allows one to instantiate both, single component instances and multiple component instances. The placement of the created components can be controlled by special distribution policies. Please see the corresponding documentation outlining the use of *hpx::new_*.
- Introduced four new distribution policies which can be used with many API functions which traditionally expected to be used with a locality id. The new distribution policies are:
    - `hpx::components::default_distribution_policy` which tries to place multiple component instances as evenly as possible.

[6786] https://github.com/TheHPXProject/hpx/issues/559
[6787] https://github.com/TheHPXProject/hpx/issues/449
[6788] https://github.com/TheHPXProject/hpx/issues/279
[6789] https://github.com/TheHPXProject/hpx/issues/224
[6790] https://github.com/TheHPXProject/hpx/issues/55
[6791] https://circleci.com/gh/TheHPXProject/hpx

  - *hpx::components::colocating_distribution_policy* which will refer to the locality where a given component instance is currently placed.
  - *hpx::components::binpacking_distribution_policy* which will place multiple component instances as evenly as possible based on any performance counter.
  - *hpx::components::target_distribution_policy* which allows one to represent a given locality in the context of a distrwibution policy.

- The new distribution policies can now be also used with `hpx::async`. This change also deprecates `hpx::async_colocated(id, ...)` which now is replaced by a distribution policy: `hpx::async(hpx::colocated(id), ...)`.
- The `hpx::vector` and `hpx::unordered_map` data structures can now be used with the new distribution policies as well.
- The parallel facility `hpx::parallel::task_region` has been renamed to `hpx::parallel::task_block` based on the changes in the corresponding standardization proposal N4411[6792].
- Added extensions to the parallel facility `hpx::parallel::task_block` allowing to combine a task_block with an execution policy. This implies a minor breaking change as the `hpx::parallel::task_block` is now a template.
- Added new LCOs: `hpx::lcos::latch` and `hpx::lcos::local::latch` which semantically conform to the proposed `std::latch` (see N4399[6793]).
- Added performance counters exposing data related to data transferred by input/output (filesystem) operations (thanks to Maciej Brodowicz).
- Added performance counters allowing to track the number of action invocations (local and remote invocations).
- Added new command line options –hpx:print-counter-at and –hpx:reset-counters.
- The `hpx::vector` component has been renamed to `hpx::partitioned_vector` to make it explicit that the underlying memory is not contiguous.
- Introduced a completely new and uniform higher-level parallelism API which is based on executors. All existing parallelism APIs have been adapted to this. We have added a large number of different executor types, such as a numa-aware executor, a this-thread executor, etc.
- Added support for the MingW toolchain on Windows (thanks to Eric Lemanissier).
- HPX now includes support for APEX, (Autonomic Performance Environment for eXascale). APEX is an instrumentation and software adaptation library that provides an interface to TAU profiling / tracing as well as runtime adaptation of HPX applications through policy definitions. For more information and documentation, please see https://github.com/UO-OACISS/xpress-apex. To enable APEX at configuration time, specify `-DHPX_WITH_APEX=On`. To also include support for TAU profiling, specify `-DHPX_WITH_TAU=On` and specify the `-DTAU_ROOT`, `-DTAU_ARCH` and `-DTAU_OPTIONS` cmake parameters.
- We have implemented many more of the *Using parallel algorithms*. Please see Issue #1141[6794] for the list of all available parallel algorithms (thanks to Daniel Bourgeois and John Biddiscombe for contributing their work).

Breaking changes

- We are moving into the direction of unifying managed and simple components. In order to stop exposing the old facilities, all examples have been converted to use the new classes. The breaking change in this release is that performance counters are now a *hpx::components::component_base* instead of `hpx::components::managed_component_base`.
- We removed the support for stackless threads. It turned out that there was no performance benefit when using stackless threads. As such, we decided to clean up our codebase. This feature was not documented.
- The CMake project name has changed from 'hpx' to 'HPX' for consistency and compatibility with naming conventions and other CMake projects. Generated config files go into <prefix>/lib/cmake/HPX and not <prefix>/lib/cmake/hpx.
- The macro `HPX_REGISTER_MINIMAL_COMPONENT_FACTORY` has been deprecated. Please use `HPX_REGISTER_COMPONENT`. instead. The old macro will be removed in the next release.
- The obsolete distributing_factory and binpacking_factory components have been removed. The corresponding functionality is now provided by the `hpx::new_` API function in conjunction with the `hpx::default_layout` and `hpx::binpacking` distribution policies (`hpx::components::default_distribution_policy` and `hpx::components::binpacking_distribution_policy`)
- The API function `hpx::new_colocated` has been deprecated. Please use the consolidated API *hpx::new_* in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of *HPX* if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The API function `hpx::async_colocated` has been deprecated. Please use the consolidated API `hpx::async` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of *HPX* if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The obsolete remote_object component has been removed.
- Replaced the use of Boost.Serialization with our own solution. While the new version is mostly compatible with Boost.Serialization, this change requires some minor code modifications in user code. For more information, please see the corresponding announcement[6795] on the hpx-users@stellar.cct.lsu.edu mailing list.
- The names used by cmake to influence various configuration options have been unified. The new naming scheme relies on all configuration constants to start with `HPX_WITH_...`, while the preprocessor constant which is used at build time starts with `HPX_HAVE_...`. For instance, the former cmake command line `-DHPX_MALLOC=...` now has to be specified a `-DHPX_WITH_MALLOC=...` and will cause the preprocessor constant `HPX_HAVE_MALLOC` to be defined. The actual name of the constant (i.e. `MALLOC`) has not changed. Please see the corresponding documentation for more details (*CMake options*).
- The `get_gid()` functions exposed by the component base classes `hpx::components::server::simple_component_base`, `hpx::components::server::managed_component_base`, and `hpx::components::server::fixed_component_base` have been replaced by two new functions: `get_unmanaged_id()` and `get_id()`. To enable the old function name for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.
- All functions which were named `get_gid()` but were returning `hpx::id_type` have been renamed to `get_id()`. To enable the old function names for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

- PR #1778[6863] - Removing ability to enable/disable parcel handling
- PR #1777[6864] - Completely removing stackless threads
- PR #1776[6865] - Cleaning up util/plugin
- PR #1775[6866] - Agas fixes
- PR #1774[6867] - Action invocation count
- PR #1773[6868] - replaced MSVC variable with WIN32
- PR #1772[6869] - Fixing Problems in MPI parcelport and future serialization.
- PR #1771[6870] - Fixing intel 13 compiler errors related to variadic template template parameters for `lcos::when_` tests
- PR #1770[6871] - Forwarding decay to `std::`
- PR #1769[6872] - Add more characters with special regex meaning to the existing patch
- PR #1768[6873] - Adding test for receive_buffer
- PR #1767[6874] - Making sure that uptime counter throws exception on any attempt to be reset
- PR #1766[6875] - Cleaning up code related to throttling scheduler
- PR #1765[6876] - Restricting thread_data to creating only with intrusive_pointers
- PR #1764[6877] - Fixing 1763
- Issue #1763[6878] - UB in thread_data::operator delete
- PR #1762[6879] - Making sure all serialization registries/factories are unique
- PR #1761[6880] - Fixed #1751: hpx::future::wait_for fails a simple test
- PR #1758[6881] - Fixing #1757
- Issue #1757[6882] - pinning not correct using –hpx:bind
- Issue #1756[6883] - compilation error with MinGW
- PR #1755[6884] - Making output serialization const-correct
- Issue #1753[6885] - HPX performance degrades with time since execution begins

- Issue #1752[6886] - Error in AGAS
- Issue #1751[6887] - hpx::future::wait_for fails a simple test
- PR #1750[6888] - Removing hpx_fwd.hpp includes
- PR #1749[6889] - Simplify result_of and friends
- PR #1747[6890] - Removed superfluous code from message_buffer.hpp
- PR #1746[6891] - Tuple dependencies
- Issue #1745[6892] - Broken when_some which takes iterators
- PR #1744[6893] - Refining archive interface
- PR #1743[6894] - Fixing when_all when only a single future is passed
- PR #1742[6895] - Config includes
- PR #1741[6896] - Os executors
- Issue #1740[6897] - hpx::promise has some problems
- PR #1739[6898] - Parallel composition with generic containers
- Issue #1738[6899] - After building program and successfully linking to a version of hpx DHPX_DIR seems to be ignored
- Issue #1737[6900] - Uptime problems
- PR #1736[6901] - added convenience c-tor and begin()/end() to serialize_buffer
- PR #1735[6902] - Config includes
- PR #1734[6903] - Fixed #1688: Add timer counters for tfunc_total and exec_total
- Issue #1733[6904] - Add unit test for hpx/lcos/local/receive_buffer.hpp
- PR #1732[6905] - Renaming get_os_thread_count
- PR #1731[6906] - Basename registration
- Issue #1730[6907] - Use after move of thread_init_data
- PR #1729[6908] - Rewriting channel based on new gate component

- PR #1728[6909] - Fixing #1722
- PR #1727[6910] - Fixing compile problems with apply_colocated
- PR #1726[6911] - Apex integration
- PR #1725[6912] - fixed test timeouts
- PR #1724[6913] - Renaming vector
- Issue #1723[6914] - Drop support for intel compilers and gcc 4.4. based standard libs
- Issue #1722[6915] - Add support for detecting non-ready futures before serialization
- PR #1721[6916] - Unifying parallel executors, initializing from launch policy
- PR #1720[6917] - dropped superfluous typedef
- Issue #1718[6918] - Windows 10 x64, VS 2015 - Unknown CMake command "add_hpx_pseudo_target".
- PR #1717[6919] - Timed executor traits for thread-executors
- PR #1716[6920] - serialization of arrays didn't work with non-pod types. fixed
- PR #1715[6921] - List serialization
- PR #1714[6922] - changing misspellings
- PR #1713[6923] - Fixed distribution policy executors
- PR #1712[6924] - Moving library detection to be executed after feature tests
- PR #1711[6925] - Simplify parcel
- PR #1710[6926] - Compile only tests
- PR #1709[6927] - Implemented timed executors
- PR #1708[6928] - Implement parallel::executor_traits for thread-executors
- PR #1707[6929] - Various fixes to threads::executors to make custom schedulers work
- PR #1706[6930] - Command line option –hpx:cores does not work as expected
- Issue #1705[6931] - command line option –hpx:cores does not work as expected

- PR #1680[6955] - Extended Non-intrusive Serialization to Ease Usage for Library Developers
- PR #1679[6956] - Working on 1544: More executor changes
- PR #1678[6957] - Transpose fixes
- PR #1677[6958] - Improve Boost compatibility check
- PR #1676[6959] - 1d stencil fix
- Issue #1675[6960] - hpx project name is not HPX
- PR #1674[6961] - Fixing the MPI parcelport
- PR #1673[6962] - added move semantics to map/vector deserialization
- PR #1672[6963] - Vs2015 await
- PR #1671[6964] - Adapt transform for #1668
- PR #1670[6965] - Started to work on #1668
- PR #1669[6966] - Add this_thread_executors
- Issue #1667[6967] - Apple build instructions in docs are out of date
- PR #1666[6968] - Apex integration
- PR #1665[6969] - Fixes an error with the whitespace check that showed the incorrect location of the error
- Issue #1664[6970] - Inspect tool found incorrect endline whitespace
- PR #1663[6971] - Improve use of locks
- Issue #1662[6972] - Possible exception source in coalescing_message_handler
- PR #1661[6973] - Added support for 128bit number serialization
- PR #1660[6974] - Serialization 128bits
- PR #1659[6975] - Implemented inner_product and adjacent_diff algos
- PR #1658[6976] - Add serialization for std::set (as there is for std::vector and std::map)
- PR #1657[6977] - Use of shared_ptr in io_service_pool changed to unique_ptr

- Issue #1629[7001] - Inspect trailing whitespace checker problem
- PR #1628[7002] - Removed meaningless const qualifiers. Minor icpc fix.
- PR #1627[7003] - Fixing the queue LCO and add example demonstrating its use
- PR #1626[7004] - Deprecating get_gid(), add get_id() and get_unmanaged_id()
- PR #1625[7005] - Allowing to specify whether to send credits along with message
- Issue #1624[7006] - Lifetime issue
- Issue #1623[7007] - hpx::wait_all() invoked with two vector<future<T>> fails
- PR #1622[7008] - Executor partitioners
- PR #1621[7009] - Clean up coroutines implementation
- Issue #1620[7010] - Revert #1535
- PR #1619[7011] - Fix result type calculation for hpx::make_continuation
- PR #1618[7012] - Fixing RDTSC on Xeon/Phi
- Issue #1617[7013] - hpx cmake not working when run as a subproject
- Issue #1616[7014] - cmake problem resulting in RDTSC not working correctly for Xeon Phi creates very strange results for duration counters
- Issue #1615[7015] - hpx::make_continuation requires input and output to be the same
- PR #1614[7016] - Fixed remove copy test
- Issue #1613[7017] - Dataflow causes stack overflow
- PR #1612[7018] - Modified foreach partitioner to use bulk execute
- PR #1611[7019] - Limit recursion-depth in dataflow to a configurable constant
- PR #1610[7020] - Increase timeout for CircleCI
- PR #1609[7021] - Refactoring thread manager, mainly extracting thread pool
- PR #1608[7022] - Fixed running multiple localities without localities parameter
- PR #1607[7023] - More algorithm fixes to adjacentfind

- PR #1555[7070] - Remove the necessity to specify archive flags on the receiving end
- PR #1554[7071] - Removing obsolete Boost.Serialization macros
- PR #1553[7072] - Properly fix HPX_DEFINE_*_ACTION macros
- PR #1552[7073] - Fixed algorithms relying on copy_if implementation
- PR #1551[7074] - Pxfs - Modifying FindOrangeFS.cmake based on OrangeFS 2.9.X
- Issue #1550[7075] - Passing plain identifier inside HPX_DEFINE_PLAIN_ACTION_1
- PR #1549[7076] - Fixing intel14/libstdc++4.4
- PR #1548[7077] - Moving raw_ptr to detail namespace
- PR #1547[7078] - Adding support for executors to future.then
- PR #1546[7079] - Executor traits result types
- PR #1545[7080] - Integrate executors with dataflow
- PR #1543[7081] - Fix potential zero-copy for primarynamespace::bulk_service_async et.al.
- PR #1542[7082] - Merging HPX0.9.10 into pxfs branch
- PR #1541[7083] - Removed stale cmake tests, unused since the great cmake refactoring
- PR #1540[7084] - Fix idle-rate on platforms without TSC
- PR #1539[7085] - Reporting situation if zero-copy-serialization was performed by a parcel generated from a plain apply/async
- PR #1538[7086] - Changed return type of bulk executors and added test
- Issue #1537[7087] - Incorrect cpuid config tests
- PR #1536[7088] - Changed return type of bulk executors and added test
- PR #1535[7089] - Make sure promise::get_gid() can be called more than once
- PR #1534[7090] - Fixed async_callback with bound callback
- PR #1533[7091] - Updated the link in the documentation to a publically- accessible URL
- PR #1532[7092] - Make sure sync primitives are not copyable nor movable

- Issue #524[7199] - Extend scheduler to support threads which can't be stolen

HPX V0.9.10 (Mar 24, 2015)

General changes

This is the 12th official release of *HPX*. It coincides with the 7th anniversary of the first commit to our source code repository. Since then, we have seen over 12300 commits amounting to more than 220000 lines of C++ code.

The major focus of this release was to improve the reliability of large scale runs. We believe to have achieved this goal as we now can reliably run *HPX* applications on up to ~24k cores. We have also shown that HPX can be used with success for symmetric runs (applications using both, host cores and Intel Xeon/Phi coprocessors). This is a huge step forward in terms of the usability of *HPX*. The main focus of this work involved isolating the causes of the segmentation faults at start up and shut down. Many of these issues were discovered to be the result of the suspension of threads which hold locks.

A very important improvement introduced with this release is the refactoring of the code representing our parcel-port implementation. Parcel- ports can now be implemented by 3rd parties as independent plugins which are dynamically loaded at runtime (static linking of parcel-ports is also supported). This refactoring also includes a massive improvement of the performance of our existing parcel-ports. We were able to significantly reduce the networking latencies and to improve the available networking bandwidth. Please note that in this release we disabled the ibverbs and ipc parcel ports as those have not been ported to the new plugin system yet (see Issue #839[7200]).

[7199] https://github.com/TheHPXProject/hpx/issues/524

Another corner stone of this release is our work towards a complete implementation of __cpp11_n4104__ (Working Draft, Technical Specification for C++ Extensions for Parallelism). This document defines a set of parallel algorithms to be added to the C++ standard library. We now have implemented about 75% of all specified parallel algorithms (see [link hpx.manual.parallel.parallel_algorithms Parallel Algorithms] for more details). We also implemented some extensions to __cpp11_n4104__ allowing to invoke all of the algorithms asynchronously.

This release adds a first implementation of `hpx::vector` which is a distributed data structure closely aligned to the functionality of `std::vector`. The difference is that `hpx::vector` stores the data in partitions where the partitions can be distributed over different localities. We started to work on allowing to use the parallel algorithms with `hpx::vector`. At this point we have implemented only a few of the parallel algorithms to support distributed data structures (like `hpx::vector`) for testing purposes (see Issue #1338[7201] for a documentation of our progress).

Breaking changes

With this release we put a lot of effort into changing the code base to be more compatible to C++11. These changes have caused the following issues for backward compatibility:

- Move to Variadics- All of the API now uses variadic templates. However, this change required to modify the argument sequence for some of the exiting API functions (`hpx::async_continue`, `hpx::apply_continue`, *hpx::when_each*, *hpx::wait_each*, synchronous invocation of actions).
- Changes to Macros- We also removed the macros `HPX_STD_FUNCTION` and `HPX_STD_TUPLE`. This shouldn't affect any user code as we replaced `HPX_STD_FUNCTION` with `hpx::util::function_nonser` which was the default expansion used for this macro. All *HPX* API functions which expect a `hpx::util::function_nonser` (or a `hpx::util::unique_function_nonser`) can now be transparently called with a compatible `std::function` instead. Similarly, `HPX_STD_TUPLE` was replaced by its default expansion as well: `hpx::util::tuple`.
- Changes to `hpx::unique_future`- `hpx::unique_future`, which was deprecated in the previous release for *hpx::future* is now completely removed from *HPX*. This completes the transition to a completely standards conforming implementation of `hpx::future`.
- Changes to Supported Compilers. Finally, in order to utilize more C++11 semantics, we have officially dropped support for GCC 4.4 and MSVC 2012. Please see our *Prerequisites* page for more details.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- Issue #1402[7202] - Internal shared_future serialization copies
- Issue #1399[7203] - Build takes unusually long time…
- Issue #1398[7204] - Tests using the scan partitioner are broken on at least gcc 4.7 and intel compiler
- Issue #1397[7205] - Completely remove hpx::unique_future
- Issue #1396[7206] - Parallel scan algorithms with different initial values

- Issue #1322[7276] - HPX fails to build aa182cf
- Issue #1321[7277] - Limiting size of outgoing messages while coalescing parcels
- Issue #1320[7278] - passing a future with launch::deferred in remote function call causes hang
- Issue #1319[7279] - An exception when tries to specify number high priority threads with abp-priority
- Issue #1318[7280] - Unable to run program with abp-priority and numa-sensitivity enabled
- Issue #1317[7281] - N4071 Search/Search_n finished, minor changes
- Issue #1316[7282] - Add config option to make -Ihpx.run_hpx_main!=1 the default
- Issue #1314[7283] - Variadic support for async and apply
- Issue #1313[7284] - Adjust when_any/some to the latest proposed interfaces
- Issue #1312[7285] - Fixing #857: hpx::naming::locality leaks parcelport specific information into the public interface
- Issue #1311[7286] - Distributed get'er/set'er_values for distributed vector
- Issue #1310[7287] - Crashing in hpx::parcelset::policies::mpi::connection_handler::handle_messages() on SuperMIC
- Issue #1308[7288] - Unable to execute an application with –hpx:threads
- Issue #1307[7289] - merge_graph linking issue
- Issue #1306[7290] - First batch of variadic templates support
- Issue #1305[7291] - Create a compiler wrapper
- Issue #1304[7292] - Provide a compiler wrapper for hpx
- Issue #1303[7293] - Drop support for GCC44
- Issue #1302[7294] - Fixing #1297
- Issue #1301[7295] - Compilation error when tried to use boost range iterators with wait_all
- Issue #1298[7296] - Distributed vector
- Issue #1297[7297] - Unable to invoke component actions recursively

- Issue #1294[7298] - HDF5 build error
- Issue #1275[7299] - The parcelport implementation is non-optimal
- Issue #1267[7300] - Added classes and unit tests for local_file, orangefs_file and pxfs_file
- Issue #1264[7301] - Error "assertion '!m_fun' failed" randomly occurs when using TCP
- Issue #1254[7302] - thread binding seems to not work properly
- Issue #1220[7303] - parallel::copy_if is broken
- Issue #1217[7304] - Find a better way of fixing the issue patched by #1216
- Issue #1168[7305] - Starting HPX on Cray machines using aprun isn't working correctly
- Issue #1085[7306] - Replace startup and shutdown barriers with broadcasts
- Issue #981[7307] - With SLURM, –hpx:threads=8 should not be necessary
- Issue #857[7308] - hpx::naming::locality leaks parcelport specific information into the public interface
- Issue #850[7309] - "flush" not documented
- Issue #763[7310] - Create buildbot instance that uses std::bind as HPX_STD_BIND
- Issue #680[7311] - Convert parcel ports into a plugin system
- Issue #582[7312] - Make exception thrown from HPX threads available from `hpx::init`
- Issue #504[7313] - Refactor Dataflow LCO to work with futures
- Issue #196[7314] - Don't store copies of the locality network metadata in the gva table

HPX V0.9.9 (Oct 31, 2014, codename Spooky)

General changes

We have had over 1500 commits since the last release and we have closed over 200 tickets (bugs, feature requests, pull requests, etc.). These are by far the largest numbers of commits and resolved issues for any of the *HPX* releases so far. We are especially happy about the large number of people who contributed for the first time to *HPX*.

- We completed the transition from the older (non-conforming) implementation of `hpx::future` to the new and fully conforming version by removing the old code and by renaming the type `hpx::unique_future` to `hpx::future`. In order to maintain backwards compatibility with existing code which uses the type `hpx::unique_future` we support the configuration variable `HPX_UNIQUE_FUTURE_ALIAS`. If this variable is set to `ON` while running cmake it will additionally define a template alias for this type.

[7314] https://github.com/TheHPXProject/hpx/issues/196

- We rewrote and significantly changed our build system. Please have a look at the new (now generated) documentation here: *Building HPX*. Please revisit your build scripts to adapt to the changes. The most notable changes are:
    - `HPX_NO_INSTALL` is no longer necessary.
    - For external builds, you need to set `HPX_DIR` instead of `HPX_ROOT` as described here: *Using HPX with CMake-based projects*.
    - IDEs that support multiple configurations (Visual Studio and XCode) can now be used as intended. that means no build dir.
    - Building HPX statically (without dynamic libraries) is now supported (`-DHPX_STATIC_LINKING=On`).
    - Please note that many variables used to configure the build process have been renamed to unify the naming conventions (see the section *CMake options* for more information).
    - This also fixes a long list of issues, for more information see Issue #1204[7315].
- We started to implement various proposals to the C++ Standardization committee related to parallelism and concurrency, most notably N4409[7316] (Working Draft, Technical Specification for C++ Extensions for Parallelism), N4411[7317] (Task Region Rev. 3), and N4313[7318] (Working Draft, Technical Specification for C++ Extensions for Concurrency).
- We completely remodeled our automatic build system to run builds and unit tests on various systems and compilers. This allows us to find most bugs right as they were introduced and helps to maintain a high level of quality and compatibility. The newest build logs can be found at *HPX* Buildbot Website[7319].

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- Issue #1296[7320] - Rename make_error_future to make_exceptional_future, adjust to N4123
- Issue #1295[7321] - building issue
- Issue #1293[7322] - Transpose example
- Issue #1292[7323] - Wrong abs() function used in example
- Issue #1291[7324] - non-synchronized shift operators have been removed
- Issue #1290[7325] - RDTSCP is defined as true for Xeon Phi build
- Issue #1289[7326] - Fixing 1288
- Issue #1288[7327] - Add new performance counters
- Issue #1287[7328] - Hierarchy scheduler broken performance counters

[7328] https://github.com/TheHPXProject/hpx/issues/1287

- Issue #1286[7329] - Algorithm cleanup
- Issue #1285[7330] - Broken Links in Documentation
- Issue #1284[7331] - Uninitialized copy
- Issue #1283[7332] - missing boost::scoped_ptr includes
- Issue #1282[7333] - Update documentation of build options for schedulers
- Issue #1281[7334] - reset idle rate counter
- Issue #1280[7335] - Bug when executing on Intel MIC
- Issue #1279[7336] - Add improved when_all/wait_all
- Issue #1278[7337] - Implement improved when_all/wait_all
- Issue #1277[7338] - feature request: get access to argc argv and variables_map
- Issue #1276[7339] - Remove merging map
- Issue #1274[7340] - Weird (wrong) string code in papi.cpp
- Issue #1273[7341] - Sequential task execution policy
- Issue #1272[7342] - Avoid CMake name clash for Boost.Thread library
- Issue #1271[7343] - Updates on HPX Test Units
- Issue #1270[7344] - hpx/util/safe_lexical_cast.hpp is added
- Issue #1269[7345] - Added default value for “LIB” cmake variable
- Issue #1268[7346] - Memory Counters not working
- Issue #1266[7347] - FindHPX.cmake is not installed
- Issue #1263[7348] - apply_remote test takes too long
- Issue #1262[7349] - Chrono cleanup
- Issue #1261[7350] - Need make install for papi counters and this builds all the examples
- Issue #1260[7351] - Documentation of Stencil example claims

[7351] https://github.com/TheHPXProject/hpx/issues/1260

- Issue #1259[7352] - Avoid double-linking Boost on Windows
- Issue #1257[7353] - Adding additional parameter to create_thread
- Issue #1256[7354] - added buildbot changes to release notes
- Issue #1255[7355] - Cannot build MiniGhost
- Issue #1253[7356] - hpx::thread defects
- Issue #1252[7357] - HPX_PREFIX is too fragile
- Issue #1250[7358] - switch_to_fiber_emulation does not work properly
- Issue #1249[7359] - Documentation is generated under Release folder
- Issue #1248[7360] - Fix usage of hpx_generic_coroutine_context and get tests passing on powerpc
- Issue #1247[7361] - Dynamic linking error
- Issue #1246[7362] - Make cpuid.cpp C++11 compliant
- Issue #1245[7363] - HPX fails on startup (setting thread affinity mask)
- Issue #1244[7364] - HPX_WITH_RDTSC configure test fails, but should succeed
- Issue #1243[7365] - CTest dashboard info for CSCS CDash drop location
- Issue #1242[7366] - Mac fixes
- Issue #1241[7367] - Failure in Distributed with Boost 1.56
- Issue #1240[7368] - fix a race condition in examples.diskperf
- Issue #1239[7369] - fix wait_each in examples.diskperf
- Issue #1238[7370] - Fixed #1237: hpx::util::portable_binary_iarchive failed
- Issue #1237[7371] - hpx::util::portable_binary_iarchive faileds
- Issue #1235[7372] - Fixing clang warnings and errors
- Issue #1234[7373] - TCP runs fail: Transport endpoint is not connected
- Issue #1233[7374] - Making sure the correct number of threads is registered with AGAS

[7374] https://github.com/TheHPXProject/hpx/issues/1233

- Issue #1232[7375] - Fixing race in wait_xxx
- Issue #1231[7376] - Parallel minmax
- Issue #1230[7377] - Distributed run of 1d_stencil_8 uses less threads than spec. & sometimes gives errors
- Issue #1229[7378] - Unstable number of threads
- Issue #1228[7379] - HPX link error (cmake / MPI)
- Issue #1226[7380] - Warning about struct/class thread_counters
- Issue #1225[7381] - Adding parallel::replace etc
- Issue #1224[7382] - Extending dataflow to pass through non-future arguments
- Issue #1223[7383] - Remaining find algorithms implemented, N4071
- Issue #1222[7384] - Merging all the changes
- Issue #1221[7385] - No error output when using mpirun with hpx
- Issue #1219[7386] - Adding new AGAS cache performance counters
- Issue #1216[7387] - Fixing using futures (clients) as arguments to actions
- Issue #1215[7388] - Error compiling simple component
- Issue #1214[7389] - Stencil docs
- Issue #1213[7390] - Using more than a few dozen MPI processes on SuperMike results in a seg fault before getting to hpx_main
- Issue #1212[7391] - Parallel rotate
- Issue #1211[7392] - Direct actions cause the future's shared_state to be leaked
- Issue #1210[7393] - Refactored local::promise to be standard conformant
- Issue #1209[7394] - Improve command line handling
- Issue #1208[7395] - Adding parallel::reverse and parallel::reverse_copy
- Issue #1207[7396] - Add copy_backward and move_backward
- Issue #1206[7397] - N4071 additional algorithms implemented

[7397] https://github.com/TheHPXProject/hpx/issues/1206

- Issue #1204[7398] - Cmake simplification and various other minor changes
- Issue #1203[7399] - Implementing new launch policy for (local) async: `hpx::launch::fork`.
- Issue #1202[7400] - Failed assertion in connection_cache.hpp
- Issue #1201[7401] - pkg-config doesn't add mpi link directories
- Issue #1200[7402] - Error when querying time performance counters
- Issue #1199[7403] - library path is now configurable (again)
- Issue #1198[7404] - Error when querying performance counters
- Issue #1197[7405] - tests fail with intel compiler
- Issue #1196[7406] - Silence several warnings
- Issue #1195[7407] - Rephrase initializers to work with VC++ 2012
- Issue #1194[7408] - Simplify parallel algorithms
- Issue #1193[7409] - Adding `parallel::equal`
- Issue #1192[7410] - HPX(out_of_memory) on including <hpx/hpx.hpp>
- Issue #1191[7411] - Fixing #1189
- Issue #1190[7412] - Chrono cleanup
- Issue #1189[7413] - Deadlock .. somewhere? (probably serialization)
- Issue #1188[7414] - Removed `future::get_status()`
- Issue #1186[7415] - Fixed FindOpenCL to find current AMD APP SDK
- Issue #1184[7416] - Tweaking future unwrapping
- Issue #1183[7417] - Extended `parallel::reduce`
- Issue #1182[7418] - `future::unwrap` hangs for `launch::deferred`
- Issue #1181[7419] - Adding `all_of`, `any_of`, and `none_of` and corresponding documentation
- Issue #1180[7420] - `hpx::cout` defect

[7420] https://github.com/TheHPXProject/hpx/issues/1180

- Issue #1179[7421] - `hpx::async` does not work for member function pointers when called on types with self-defined unary `operator*`
- Issue #1178[7422] - Implemented variadic `hpx::util::zip_iterator`
- Issue #1177[7423] - MPI parcelport defect
- Issue #1176[7424] - `HPX_DEFINE_COMPONENT_CONST_ACTION_TPL` does not have a 2-argument version
- Issue #1175[7425] - Create util::zip_iterator working with util::tuple<>
- Issue #1174[7426] - Error Building HPX on linux, root_certificate_authority.cpp
- Issue #1173[7427] - hpx::cout output lost
- Issue #1172[7428] - HPX build error with Clang 3.4.2
- Issue #1171[7429] - `CMAKE_INSTALL_PREFIX` ignored
- Issue #1170[7430] - Close hpx_benchmarks repository on Github
- Issue #1169[7431] - Buildbot emails have syntax error in url
- Issue #1167[7432] - Merge partial implementation of standards proposal N3960
- Issue #1166[7433] - Fixed several compiler warnings
- Issue #1165[7434] - cmake warns: "tests.regressions.actions" does not exist
- Issue #1164[7435] - Want my own serialization of hpx::future
- Issue #1162[7436] - Segfault in hello_world example
- Issue #1161[7437] - Use `HPX_ASSERT` to aid the compiler
- Issue #1160[7438] - Do not put -DNDEBUG into hpx_application.pc
- Issue #1159[7439] - Support Clang 3.4.2
- Issue #1158[7440] - Fixed #1157: Rename when_n/wait_n, add when_xxx_n/wait_xxx_n
- Issue #1157[7441] - Rename when_n/wait_n, add when_xxx_n/wait_xxx_n
- Issue #1156[7442] - Force inlining fails
- Issue #1155[7443] - changed header of printout to be compatible with python csv module

- Issue #44[7543] - Implement real futures

HPX V0.9.8 (Mar 24, 2014)

We have had over 800 commits since the last release and we have closed over 65 tickets (bugs, feature requests, etc.).

With the changes below, *HPX* is once again leading the charge of a whole new era of computation. By intrinsically breaking down and synchronizing the work to be done, *HPX* insures that application developers will no longer have to fret about where a segment of code executes. That allows coders to focus their time and energy to understanding the data dependencies of their algorithms and thereby the core obstacles to an efficient code. Here are some of the advantages of using *HPX*:

- *HPX* is solidly rooted in a sophisticated theoretical execution model – ParalleX
- *HPX* exposes an API fully conforming to the C++11 and the draft C++14 standards, extended and applied to distributed computing. Everything programmers know about the concurrency primitives of the standard C++ library is still valid in the context of *HPX*.
- It provides a competitive, high performance implementation of modern, future-proof ideas which gives an smooth migration path from today's mainstream techniques
- There is no need for the programmer to worry about lower level parallelization paradigms like threads or message passing; no need to understand pthreads, MPI, OpenMP, or Windows threads, etc.
- There is no need to think about different types of parallelism such as tasks, pipelines, or fork-join, task or data parallelism.
- The same source of your program compiles and runs on Linux, BlueGene/Q, Mac OS X, Windows, and Android.
- The same code runs on shared memory multi-core systems and supercomputers, on handheld devices and Intel® Xeon Phi™ accelerators, or a heterogeneous mix of those.

[7543] https://github.com/TheHPXProject/hpx/issues/44

General changes

- A major API breaking change for this release was introduced by implementing `hpx::future` and `hpx::shared_future` fully in conformance with the C++11 Standard[7544]. While `hpx::shared_future` is new and will not create any compatibility problems, we revised the interface and implementation of the existing `hpx::future`. For more details please see the mailing list archive[7545]. To avoid any incompatibilities for existing code we named the type which implements the `std::future` interface as `hpx::unique_future`. For the next release this will be renamed to `hpx::future`, making it full conforming to C++11 Standard[7546].
- A large part of the code base of *HPX* has been refactored and partially re-implemented. The main changes were related to
  - The threading subsystem: these changes significantly reduce the amount of overheads caused by the schedulers, improve the modularity of the code base, and extend the variety of available scheduling algorithms.
  - The parcel subsystem: these changes improve the performance of the *HPX* networking layer, modularize the structure of the parcelports, and simplify the creation of new parcelports for other underlying networking libraries.
  - The API subsystem: these changes improved the conformance of the API to C++11 Standard, extend and unify the available API functionality, and decrease the overheads created by various elements of the API.
  - The robustness of the component loading subsystem has been improved significantly, allowing to more portably and more reliably register the components needed by an application as startup. This additionally speeds up general application initialization.
- We added new API functionality like `hpx::migrate` and `hpx::copy_component` which are the basic building blocks necessary for implementing higher level abstractions for system-wide load balancing, runtime-adaptive resource management, and object-oriented checkpointing and state-management.
- We removed the use of C++11 move emulation (using Boost.Move), replacing it with C++11 rvalue references. This is the first step towards using more and more native C++11 facilities which we plan to introduce in the future.
- We improved the reference counting scheme used by *HPX* which helps managing distributed objects and memory. This improves the overall stability of *HPX* and further simplifies writing real world applications.
- The minimal Boost version required to use *HPX* is now V1.49.0.
- This release coincides with the first release of HPXPI (V0.1.0), the first implementation of the XPI specification[7547].

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- Issue #1086[7548] - Expose internal boost::shared_array to allow user management of array lifetime
- Issue #1083[7549] - Make shell examples copyable in docs
- Issue #1080[7550] - /threads{locality#*/total}/count/cumulative broken
- Issue #1079[7551] - Build problems on OS X

[7551] https://github.com/TheHPXProject/hpx/issues/1079

- Issue #1078[7552] - Improve robustness of component loading
- Issue #1077[7553] - Fix a missing enum definition for 'take' mode
- Issue #1076[7554] - Merge Jb master
- Issue #1075[7555] - Unknown CMake command "add_hpx_pseudo_target"
- Issue #1074[7556] - Implement `apply_continue_callback` and `apply_colocated_callback`
- Issue #1073[7557] - The new `apply_colocated` and `async_colocated` functions lead to automatic registered functions
- Issue #1071[7558] - Remove deferred_packaged_task
- Issue #1069[7559] - serialize_buffer with allocator fails at destruction
- Issue #1068[7560] - Coroutine include and forward declarations missing
- Issue #1067[7561] - Add allocator support to util::serialize_buffer
- Issue #1066[7562] - Allow for MPI_Init being called before HPX launches
- Issue #1065[7563] - AGAS cache isn't used/populated on worker localities
- Issue #1064[7564] - Reorder includes to ensure ws2 includes early
- Issue #1063[7565] - Add `hpx::runtime::suspend` and `hpx::runtime::resume`
- Issue #1062[7566] - Fix `async_continue` to properly handle return types
- Issue #1061[7567] - Implement `async_colocated` and `apply_colocated`
- Issue #1060[7568] - Implement minimal component migration
- Issue #1058[7569] - Remove `HPX_UTIL_TUPLE` from code base
- Issue #1057[7570] - Add performance counters for threading subsystem
- Issue #1055[7571] - Thread allocation uses two memory pools
- Issue #1053[7572] - Work stealing flawed
- Issue #1052[7573] - Fix a number of warnings
- Issue #1049[7574] - Fixes for TLS on OSX and more reliable test running

- Issue #1048[7575] - Fixing after 588 hang
- Issue #1047[7576] - Use port '0' for networking when using one locality
- Issue #1046[7577] - `composable_guard` test is broken when having more than one thread
- Issue #1045[7578] - Security missing headers
- Issue #1044[7579] - Native TLS on FreeBSD via __thread
- Issue #1043[7580] - `async` et.al. compute the wrong result type
- Issue #1042[7581] - `async` et.al. implicitly unwrap reference_wrappers
- Issue #1041[7582] - Remove redundant costly Kleene stars from regex searches
- Issue #1040[7583] - CMake script regex match patterns has unnecessary kleenes
- Issue #1039[7584] - Remove use of Boost.Move and replace with std::move and real rvalue refs
- Issue #1038[7585] - Bump minimal required Boost to 1.49.0
- Issue #1037[7586] - Implicit unwrapping of futures in async broken
- Issue #1036[7587] - Scheduler hangs when user code attempts to "block" OS-threads
- Issue #1035[7588] - Idle-rate counter always reports 100% idle rate
- Issue #1034[7589] - Symbolic name registration causes application hangs
- Issue #1033[7590] - Application options read in from an options file generate an error message
- Issue #1032[7591] - `hpx::id_type` local reference counting is wrong
- Issue #1031[7592] - Negative entry in reference count table
- Issue #1030[7593] - Implement condition_variable
- Issue #1029[7594] - Deadlock in thread scheduling subsystem
- Issue #1028[7595] - HPX-thread cumulative count performance counters report incorrect value
- Issue #1027[7596] - Expose `hpx::thread_interrupted` error code as a separate exception type
- Issue #1026[7597] - Exceptions thrown in asynchronous calls can be lost if the value of the future is never queried

- Issue #175[7621] - Asynchronous AGAS API

HPX V0.9.7 (Nov 13, 2013)

We have had over 1000 commits since the last release and we have closed over 180 tickets (bugs, feature requests, etc.).

General changes

- Ported HPX to BlueGene/Q
- Improved HPX support for Xeon/Phi accelerators
- Reimplemented `hpx::bind`, `hpx::tuple`, and `hpx::function` for better performance and better compliance with the C++11 Standard. Added `hpx::mem_fn`.
- Reworked `hpx::when_all` and `hpx::when_any` for better compliance with the ongoing C++ standardization effort, added heterogeneous version for those functions. Added `hpx::when_any_swapped`.
- Added `hpx::copy` as a precursor for a migrate functionality
- Added `hpx::get_ptr` allowing to directly access the memory underlying a given component
- Added the `hpx::lcos::broadcast`, `hpx::lcos::reduce`, and `hpx::lcos::fold` collective operations
- Added `hpx::get_locality_name` allowing to retrieve the name of any of the localities for the application.
- Added support for more flexible thread affinity control from the HPX command line, such as new modes for `--hpx:bind` (`balanced`, `scattered`, `compact`), improved default settings when running multiple localities on the same node.
- Added experimental executors for simpler thread pooling and scheduling. This API may change in the future as it will stay aligned with the ongoing C++ standardization efforts.
- Massively improved the performance of the HPX serialization code. Added partial support for zero copy serialization of array and bitwise-copyable types.
- General performance improvements of the code related to threads and futures.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- Issue #1005[7622] - Allow one to disable array optimizations and zero copy optimizations for each parcelport
- Issue #1004[7623] - Generate new HPX logo image for the docs
- Issue #1002[7624] - If MPI parcelport is not available, running HPX under mpirun should fail
- Issue #1001[7625] - Zero copy serialization raises assert
- Issue #1000[7626] - Can't connect to a HPX application running with the MPI parcelport from a non MPI parcelport locality
- Issue #999[7627] - Optimize `hpx::when_n`

[7621] https://github.com/TheHPXProject/hpx/issues/175
[7622] https://github.com/TheHPXProject/hpx/issues/1005
[7623] https://github.com/TheHPXProject/hpx/issues/1004
[7624] https://github.com/TheHPXProject/hpx/issues/1002
[7625] https://github.com/TheHPXProject/hpx/issues/1001
[7626] https://github.com/TheHPXProject/hpx/issues/1000
[7627] https://github.com/TheHPXProject/hpx/issues/999

- Issue #998[7628] - Fixed const-correctness
- Issue #997[7629] - Making serialize_buffer::data() type save
- Issue #996[7630] - Memory leak in hpx::lcos::promise
- Issue #995[7631] - Race while registering pre-shutdown functions
- Issue #994[7632] - thread_rescheduling regression test does not compile
- Issue #992[7633] - Correct comments and messages
- Issue #991[7634] - setcap cap_sys_rawio=ep for power profiling causes an HPX application to abort
- Issue #989[7635] - Jacobi hangs during execution
- Issue #988[7636] - multiple_init test is failing
- Issue #986[7637] - Can't call a function called "init" from "main" when using <`hpx/hpx_main.hpp`>
- Issue #984[7638] - Reference counting tests are failing
- Issue #983[7639] - thread_suspension_executor test fails
- Issue #980[7640] - Terminating HPX threads don't leave stack in virgin state
- Issue #979[7641] - Static scheduler not in documents
- Issue #978[7642] - Preprocessing limits are broken
- Issue #977[7643] - Make tests.regressions.lcos.future_hang_on_get shorter
- Issue #976[7644] - Wrong library order in pkgconfig
- Issue #975[7645] - Please reopen #963
- Issue #974[7646] - Option pu-offset ignored in fixing_588 branch
- Issue #972[7647] - Cannot use MKL with HPX
- Issue #969[7648] - Non-existent INI files requested on the command line via `--hpx:config` do not cause warnings or errors.
- Issue #968[7649] - Cannot build examples in fixing_588 branch
- Issue #967[7650] - Command line description of `--hpx:queuing` seems wrong

- Issue #966[7651] - `--hpx:print-bind` physical core numbers are wrong
- Issue #965[7652] - Deadlock when building in Release mode
- Issue #963[7653] - Not all worker threads are working
- Issue #962[7654] - Problem with SLURM integration
- Issue #961[7655] - `--hpx:print-bind` outputs incorrect information
- Issue #960[7656] - Fix cut and paste error in documentation of get_thread_priority
- Issue #959[7657] - Change link to boost.atomic in documentation to point to boost.org
- Issue #958[7658] - Undefined reference to intrusive_ptr_release
- Issue #957[7659] - Make tuple standard compliant
- Issue #956[7660] - Segfault with a3382fb
- Issue #955[7661] - `--hpx:nodes` and `--hpx:nodefiles` do not work with foreign nodes
- Issue #954[7662] - Make order of arguments for hpx::async and hpx::broadcast consistent
- Issue #953[7663] - Cannot use MKL with HPX
- Issue #952[7664] - `register_[pre_]shutdown_function` never throw
- Issue #951[7665] - Assert when number of threads is greater than hardware concurrency
- Issue #948[7666] - `HPX_HAVE_GENERIC_CONTEXT_COROUTINES` conflicts with `HPX_HAVE_FIBER_BASED_COROUTINES`
- Issue #947[7667] - Need MPI_THREAD_MULTIPLE for backward compatibility
- Issue #946[7668] - HPX does not call `MPI_Finalize`
- Issue #945[7669] - Segfault with `hpx::lcos::broadcast`
- Issue #944[7670] - OS X: assertion `pu_offset_ < hardware_concurrency` failed
- Issue #943[7671] - #include <hpx/hpx_main.hpp> does not work
- Issue #942[7672] - Make the BG/Q work with -O3
- Issue #940[7673] - Use separator when concatenating locality name

[7673] https://github.com/TheHPXProject/hpx/issues/940

- Issue #939[7674] - Refactor MPI parcelport to use `MPI_Wait` instead of multiple `MPI_Test` calls
- Issue #938[7675] - Want to officially access `client_base::gid_`
- Issue #937[7676] - `client_base::gid_` should be private``
- Issue #936[7677] - Want doxygen-like source code index
- Issue #935[7678] - Build error with gcc 4.6 and Boost 1.54.0 on hpx trunk and 0.9.6
- Issue #933[7679] - Cannot build HPX with Boost 1.54.0
- Issue #932[7680] - Components are destructed too early
- Issue #931[7681] - Make HPX work on BG/Q
- Issue #930[7682] - make git-docs is broken
- Issue #929[7683] - Generating index in docs broken
- Issue #928[7684] - Optimize `hpx::util::static_` for C++11 compilers supporting magic statics
- Issue #924[7685] - Make kill_process_tree (in process.py) more robust on Mac OSX
- Issue #923[7686] - Correct BLAS and RNPL cmake tests
- Issue #922[7687] - Cannot link against BLAS
- Issue #921[7688] - Implement `hpx::mem_fn`
- Issue #920[7689] - Output locality with `--hpx:print-bind`
- Issue #919[7690] - Correct grammar; simplify boolean expressions
- Issue #918[7691] - Link to hello_world.cpp is broken
- Issue #917[7692] - adapt cmake file to new boostbook version
- Issue #916[7693] - fix problem building documentation with xsltproc >= 1.1.27
- Issue #915[7694] - Add another TBBMalloc library search path
- Issue #914[7695] - Build problem with Intel compiler on Stampede (TACC)
- Issue #913[7696] - fix error messages in fibonacci examples

- Issue #911[7697] - Update OS X build instructions
- Issue #910[7698] - Want like to specify MPI_ROOT instead of compiler wrapper script
- Issue #909[7699] - Warning about void* arithmetic
- Issue #908[7700] - Buildbot for MIC is broken
- Issue #906[7701] - Can't use `--hpx:bind=balanced` with multiple MPI processes
- Issue #905[7702] - `--hpx:bind` documentation should describe full grammar
- Issue #904[7703] - Add hpx::lcos::fold and hpx::lcos::inverse_fold collective operation
- Issue #903[7704] - Add `hpx::when_any_swapped()`
- Issue #902[7705] - Add `hpx::lcos::reduce` collective operation
- Issue #901[7706] - Web documentation is not searchable
- Issue #900[7707] - Web documentation for trunk has no index
- Issue #898[7708] - Some tests fail with GCC 4.8.1 and MPI parcel port
- Issue #897[7709] - HWLOC causes failures on Mac
- Issue #896[7710] - pu-offset leads to startup error
- Issue #895[7711] - `hpx::get_locality_name` not defined
- Issue #894[7712] - Race condition at shutdown
- Issue #893[7713] - `--hpx:print-bind` switches std::cout to hexadecimal mode
- Issue #892[7714] - `hwloc_topology_load` can be expensive – don't call multiple times
- Issue #891[7715] - The documentation for `get_locality_name` is wrong
- Issue #890[7716] - `--hpx:print-bind` should not exit
- Issue #889[7717] - `--hpx:debug-hpx-log=FILE` does not work
- Issue #888[7718] - MPI parcelport does not exit cleanly for –hpx:print-bind
- Issue #887[7719] - Choose thread affinities more cleverly

- Issue #886[7720] - Logging documentation is confusing
- Issue #885[7721] - Two threads are slower than one
- Issue #884[7722] - is_callable failing with member pointers in C++11
- Issue #883[7723] - Need help with is_callable_test
- Issue #882[7724] - tests.regressions.lcos.future_hang_on_get does not terminate
- Issue #881[7725] - tests/regressions/block_matrix/matrix.hh won't compile with GCC 4.8.1
- Issue #880[7726] - HPX does not work on OS X
- Issue #878[7727] - `future::unwrap` triggers assertion
- Issue #877[7728] - "make tests" has build errors on Ubuntu 12.10
- Issue #876[7729] - tcmalloc is used by default, even if it is not present
- Issue #875[7730] - global_fixture is defined in a header file
- Issue #874[7731] - Some tests take very long
- Issue #873[7732] - Add block-matrix code as regression test
- Issue #872[7733] - HPX documentation does not say how to run tests with detailed output
- Issue #871[7734] - All tests fail with "make test"
- Issue #870[7735] - Please explicitly disable serialization in classes that don't support it
- Issue #868[7736] - boost_any test failing
- Issue #867[7737] - Reduce the number of copies of `hpx::function` arguments
- Issue #863[7738] - Futures should not require a default constructor
- Issue #862[7739] - value_or_error shall not default construct its result
- Issue #861[7740] - `HPX_UNUSED` macro
- Issue #860[7741] - Add functionality to copy construct a component
- Issue #859[7742] - `hpx::endl` should flush

- Issue #858[7743] - Create `hpx::get_ptr<>` allowing to access component implementation
- Issue #855[7744] - Implement `hpx::INVOKE`
- Issue #854[7745] - `hpx/hpx.hpp` does not include `hpx/include/iostreams.hpp`
- Issue #853[7746] - Feature request: null future
- Issue #852[7747] - Feature request: Locality names
- Issue #851[7748] - `hpx::cout` output does not appear on screen
- Issue #849[7749] - All tests fail on OS X after installing
- Issue #848[7750] - Update OS X build instructions
- Issue #846[7751] - Update hpx_external_example
- Issue #845[7752] - Issues with having both debug and release modules in the same directory
- Issue #844[7753] - Create configuration header
- Issue #843[7754] - Tests should use CTest
- Issue #842[7755] - Remove buffer_pool from MPI parcelport
- Issue #841[7756] - Add possibility to broadcast an index with hpx::lcos::broadcast
- Issue #838[7757] - Simplify `util::tuple`
- Issue #837[7758] - Adopt boost::tuple tests for `util::tuple`
- Issue #836[7759] - Adopt boost::function tests for `util::function`
- Issue #835[7760] - Tuple interface missing pieces
- Issue #833[7761] - Partially preprocessing files not working
- Issue #832[7762] - Native papi counters do not work with wild cards
- Issue #831[7763] - Arithmetics counter fails if only one parameter is given
- Issue #830[7764] - Convert hpx::util::function to use new scheme for serializing its base pointer
- Issue #829[7765] - Consistently use `decay<T>` instead of `remove_const< remove_reference<T>>`

[7765] https://github.com/TheHPXProject/hpx/issues/829

- Issue #828[7766] - Update future implementation to N3721 and N3722
- Issue #827[7767] - Enable MPI parcelport for bootstrapping whenever application was started using mpirun
- Issue #826[7768] - Support command line option `--hpx:print-bind` even if `--hpx::bind` was not used
- Issue #825[7769] - Memory counters give segfault when attempting to use thread wild cards or numbers only total works
- Issue #824[7770] - Enable lambda functions to be used with hpx::async/hpx::apply
- Issue #823[7771] - Using a hashing filter
- Issue #822[7772] - Silence unused variable warning
- Issue #821[7773] - Detect if a function object is callable with given arguments
- Issue #820[7774] - Allow wildcards to be used for performance counter names
- Issue #819[7775] - Make the AGAS symbolic name registry distributed
- Issue #818[7776] - Add future::then() overload taking an executor
- Issue #817[7777] - Fixed typo
- Issue #815[7778] - Create an lco that is performing an efficient broadcast of actions
- Issue #814[7779] - Papi counters cannot specify thread#* to get the counts for all threads
- Issue #813[7780] - Scoped unlock
- Issue #811[7781] - simple_central_tuplespace_client run error
- Issue #810[7782] - ostream error when << any objects
- Issue #809[7783] - Optimize parcel serialization
- Issue #808[7784] - HPX applications throw exception when executed from the build directory
- Issue #807[7785] - Create performance counters exposing overall AGAS statistics
- Issue #795[7786] - Create timed make_ready_future
- Issue #794[7787] - Create heterogeneous `when_all/when_any`/etc.
- Issue #721[7788] - Make HPX usable for Xeon Phi

- Issue #694[7789] - CMake should complain if you attempt to build an example without its dependencies
- Issue #692[7790] - SLURM support broken
- Issue #683[7791] - python/hpx/process.py imports epoll on all platforms
- Issue #619[7792] - Automate the doc building process
- Issue #600[7793] - GTC performance broken
- Issue #577[7794] - Allow for zero copy serialization/networking
- Issue #551[7795] - Change executable names to have debug postfix in Debug builds
- Issue #544[7796] - Write a custom .lib file on Windows pulling in hpx_init and hpx.dll, phase out hpx_init
- Issue #534[7797] - `hpx::init` should take functions by `std::function` and should accept all forms of hpx_main
- Issue #508[7798] - FindPackage fails to set FOO_LIBRARY_DIR
- Issue #506[7799] - Add cmake support to generate ini files for external applications
- Issue #470[7800] - Changing build-type after configure does not update boost library names
- Issue #453[7801] - Document `hpx_run_tests.py`
- Issue #445[7802] - Significant performance mismatch between MPI and HPX in SMP for allgather example
- Issue #443[7803] - Make docs viewable from build directory
- Issue #421[7804] - Support multiple HPX instances per node in a batch environment like PBS or SLURM
- Issue #316[7805] - Add message size limitation
- Issue #249[7806] - Clean up locking code in big boot barrier
- Issue #136[7807] - Persistent CMake variables need to be marked as cache variables

HPX V0.9.6 (Jul 30, 2013)

We have had over 1200 commits since the last release and we have closed roughly 140 tickets (bugs, feature requests, etc.).

General changes

The major new features in this release are:

- We further consolidated the API exposed by *HPX*. We aligned our APIs as much as possible with the existing C++11 Standard[7808] and related proposals to the C++ standardization committee (such as N3632[7809] and N3857[7810]).
- We implemented a first version of a distributed AGAS service which essentially eliminates all explicit AGAS network traffic.
- We created a native ibverbs parcelport allowing to take advantage of the superior latency and bandwidth characteristics of Infiniband networks.
- We successfully ported *HPX* to the Xeon Phi platform.
- Support for the SLURM scheduling system was implemented.
- Major efforts have been dedicated to improving the performance counter framework, numerous new counters were implemented and new APIs were added.
- We added a modular parcel compression system allowing to improve bandwidth utilization (by reducing the overall size of the transferred data).
- We added a modular parcel coalescing system allowing to combine several parcels into larger messages. This reduces latencies introduced by the communication layer.
- Added an experimental executors API allowing to use different scheduling policies for different parts of the code. This API has been modelled after the Standards proposal N3562[7811]. This API is bound to change in the future, though.
- Added minimal security support for localities which is enforced on the parcelport level. This support is preliminary and experimental and might change in the future.
- We created a parcelport using low level MPI functions. This is in support of legacy applications which are to be gradually ported and to support platforms where MPI is the only available portable networking layer.
- We added a preliminary and experimental implementation of a tuple-space object which exposes an interface similar to such systems described in the literature (see for instance The Linda Coordination Language[7812]).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is again a very long list of newly implemented features and fixed issues.

- Issue #806[7813] - make (all) in examples folder does nothing
- Issue #805[7814] - Adding the introduction and fixing DOCBOOK dependencies for Windows use
- Issue #804[7815] - Add stackless (non-suspendable) thread type
- Issue #803[7816] - Create proper serialization support functions for util::tuple
- Issue #800[7817] - Add possibility to disable array optimizations during serialization
- Issue #798[7818] - HPX_LIMIT does not work for local dataflow
- Issue #797[7819] - Create a parcelport which uses MPI
- Issue #796[7820] - Problem with Large Numbers of Threads
- Issue #793[7821] - Changing dataflow test case to hang consistently
- Issue #792[7822] - CMake Error
- Issue #791[7823] - Problems with local::dataflow
- Issue #790[7824] - wait_for() doesn't compile
- Issue #789[7825] - HPX with Intel compiler segfaults
- Issue #788[7826] - Intel compiler support
- Issue #787[7827] - Fixed SFINAEd specializations
- Issue #786[7828] - Memory issues during benchmarking.
- Issue #785[7829] - Create an API allowing to register external threads with HPX
- Issue #784[7830] - util::plugin is throwing an error when a symbol is not found
- Issue #783[7831] - How does hpx:bind work?
- Issue #782[7832] - Added quotes around STRING REPLACE potentially empty arguments
- Issue #781[7833] - Make sure no exceptions propagate into the thread manager

- Issue #780[7834] - Allow arithmetics performance counters to expand its parameters
- Issue #779[7835] - Test case for 778
- Issue #778[7836] - Swapping futures segfaults
- Issue #777[7837] - hpx::lcos::details::when_xxx don't restore completion handlers
- Issue #776[7838] - Compiler chokes on dataflow overload with launch policy
- Issue #775[7839] - Runtime error with local dataflow (copying futures?)
- Issue #774[7840] - Using local dataflow without explicit namespace
- Issue #773[7841] - Local dataflow with unwrap: functor operators need to be const
- Issue #772[7842] - Allow (remote) actions to return a future
- Issue #771[7843] - Setting HPX_LIMIT gives huge boost MPL errors
- Issue #770[7844] - Add launch policy to (local) dataflow
- Issue #769[7845] - Make compile time configuration information available
- Issue #768[7846] - Const correctness problem in local dataflow
- Issue #767[7847] - Add launch policies to async
- Issue #766[7848] - Mark data structures for optimized (array based) serialization
- Issue #765[7849] - Align hpx::any with N3508: Any Library Proposal (Revision 2)
- Issue #764[7850] - Align hpx::future with newest N3558: A Standardized Representation of Asynchronous Operations
- Issue #762[7851] - added a human readable output for the ping pong example
- Issue #761[7852] - Ambiguous typename when constructing derived component
- Issue #760[7853] - Simple components can not be derived
- Issue #759[7854] - make install doesn't give a complete install
- Issue #758[7855] - Stack overflow when using locking_hook<>
- Issue #757[7856] - copy paste error; unsupported function overloading

- Issue #756[7857] - GTCX runtime issue in Gordon
- Issue #755[7858] - Papi counters don't work with reset and evaluate API's
- Issue #753[7859] - cmake bugfix and improved component action docs
- Issue #752[7860] - hpx simple component docs
- Issue #750[7861] - Add hpx::util::any
- Issue #749[7862] - Thread phase counter is not reset
- Issue #748[7863] - Memory performance counter are not registered
- Issue #747[7864] - Create performance counters exposing arithmetic operations
- Issue #745[7865] - apply_callback needs to invoke callback when applied locally
- Issue #744[7866] - CMake fixes
- Issue #743[7867] - Problem Building github version of HPX
- Issue #742[7868] - Remove HPX_STD_BIND
- Issue #741[7869] - assertion 'px != 0' failed: HPX(assertion_failure) for low numbers of OS threads
- Issue #739[7870] - Performance counters do not count to the end of the program or evaluation
- Issue #738[7871] - Dedicated AGAS server runs don't work; console ignores -a option.
- Issue #737[7872] - Missing bind overloads
- Issue #736[7873] - Performance counter wildcards do not always work
- Issue #735[7874] - Create native ibverbs parcelport based on rdma operations
- Issue #734[7875] - Threads stolen performance counter total is incorrect
- Issue #733[7876] - Test benchmarks need to be checked and fixed
- Issue #732[7877] - Build fails with Mac, using mac ports clang-3.3 on latest git branch
- Issue #731[7878] - Add global start/stop API for performance counters
- Issue #730[7879] - Performance counter values are apparently incorrect

- Issue #341[7949] - Consolidate route code
- Issue #219[7950] - Only copy arguments into actions once
- Issue #177[7951] - Implement distributed AGAS
- Issue #43[7952] - Support for Darwin (Xcode + Clang)

HPX V0.9.5 (Jan 16, 2013)

We have had over 1000 commits since the last release and we have closed roughly 150 tickets (bugs, feature requests, etc.).

General changes

This release is continuing along the lines of code and API consolidation, and overall usability inprovements. We dedicated much attention to performance and we were able to significantly improve the threading and networking subsystems.

We successfully ported *HPX* to the Android platform. *HPX* applications now not only can run on mobile devices, but we support heterogeneous applications running across architecture boundaries. At the Supercomputing Conference 2012 we demonstrated connecting Android tablets to simulations running on a Linux cluster. The Android tablet was used to query performance counters from the Linux simulation and to steer its parameters.

We successfully ported *HPX* to Mac OSX (using the Clang compiler). Thanks to Pyry Jahkola for contributing the corresponding patches. Please see the section macos_installation for more details.

We made a special effort to make HPX usable in highly concurrent use cases. Many of the HPX API functions which possibly take longer than 100 microseconds to execute now can be invoked asynchronously. We added uniform support for composing futures which simplifies to write asynchronous code. HPX actions (function objects encapsulating possibly concurrent remote function invocations) are now well integrated with all other API facilities such like `hpx::bind`.

All of the API has been aligned as much as possible with established paradigms. HPX now mirrors many of the facilities as defined in the C++11 Standard, such as `hpx::thread`, `hpx::function`, `hpx::future`, etc.

A lot of work has been put into improving the documentation. Many of the API functions are documented now, concepts are explained in detail, and examples are better described than before. The new documentation index enables finding information with lesser effort.

This is the first release of HPX we perform after the move to Github[7953] This step has enabled a wider participation from the community and further encourages us in our decision to release HPX as a true open source library (HPX is licensed under the very liberal Boost Software License[7954]).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is by far the longest list of newly implemented features and fixed issues for any of HPX' releases so far.

- Issue #666[7955] - Segfault on calling hpx::finalize twice
- Issue #665[7956] - Adding declaration num_of_cores
- Issue #662[7957] - pkgconfig is building wrong
- Issue #660[7958] - Need uninterrupt function
- Issue #659[7959] - Move our logging library into a different namespace
- Issue #658[7960] - Dynamic performance counter types are broken
- Issue #657[7961] - HPX v0.9.5 (RC1) hello_world example segfaulting
- Issue #656[7962] - Define the affinity of parcel-pool, io-pool, and timer-pool threads
- Issue #654[7963] - Integrate the Boost auto_index tool with documentation
- Issue #653[7964] - Make HPX build on OS X + Clang + libc++
- Issue #651[7965] - Add fine-grained control for thread pinning
- Issue #650[7966] - Command line no error message when using -hpx:(anything)
- Issue #645[7967] - Command line aliases don't work in [teletype]``@file``[c++]
- Issue #644[7968] - Terminated threads are not always properly cleaned up
- Issue #640[7969] - `future_data<T>::set_on_completed_` used without locks
- Issue #638[7970] - hpx build with intel compilers fails on linux
- Issue #637[7971] - –copy-dt-needed-entries breaks with gold
- Issue #635[7972] - Boost V1.53 will add Boost.Lockfree and Boost.Atomic
- Issue #633[7973] - Re-add examples to final 0.9.5 release
- Issue #632[7974] - Example `thread_aware_timer` is broken
- Issue #631[7975] - FFT application throws error in parcellayer

- Issue #630[7976] - Event synchronization example is broken
- Issue #629[7977] - Waiting on futures hangs
- Issue #628[7978] - Add an `HPX_ALWAYS_ASSERT` macro
- Issue #625[7979] - Port coroutines context switch benchmark
- Issue #621[7980] - New INI section for stack sizes
- Issue #618[7981] - pkg_config support does not work with a HPX debug build
- Issue #617[7982] - hpx/external/logging/boost/logging/detail/cache_before_init.hpp:139:67: error: 'get_thread_id' was not declared in this scope
- Issue #616[7983] - Change wait_xxx not to use locking
- Issue #615[7984] - Revert visibility 'fix' (fb0b6b8245dad1127b0c25ebafd9386b3945cca9)
- Issue #614[7985] - Fix Dataflow linker error
- Issue #613[7986] - find_here should throw an exception on failure
- Issue #612[7987] - Thread phase doesn't show up in debug mode
- Issue #611[7988] - Make stack guard pages configurable at runtime (initialization time)
- Issue #610[7989] - Co-Locate Components
- Issue #609[7990] - future_overhead
- Issue #608[7991] - `--hpx:list-counter-infos` problem
- Issue #607[7992] - Update Boost.Context based backend for coroutines
- Issue #606[7993] - 1d_wave_equation is not working
- Issue #605[7994] - Any C++ function that has serializable arguments and a serializable return type should be remotable
- Issue #604[7995] - Connecting localities isn't working anymore
- Issue #603[7996] - Do not verify any ini entries read from a file
- Issue #602[7997] - Rename argument_size to type_size/ added implementation to get parcel size

- Issue #599[7998] - Enable locality specific command line options
- Issue #598[7999] - Need an API that accesses the performance counter reporting the system uptime
- Issue #597[8000] - compiling on ranger
- Issue #595[8001] - I need a place to store data in a thread self pointer
- Issue #594[8002] - 32/64 interoperability
- Issue #593[8003] - Warn if logging is disabled at compile time but requested at runtime
- Issue #592[8004] - Add optional argument value to `--hpx:list-counters` and `--hpx:list-counter-infos`
- Issue #591[8005] - Allow for wildcards in performance counter names specified with `--hpx:print-counter`
- Issue #590[8006] - Local promise semantic differences
- Issue #589[8007] - Create API to query performance counter names
- Issue #587[8008] - Add get_num_localities and get_num_threads to AGAS API
- Issue #586[8009] - Adjust local AGAS cache size based on number of localities
- Issue #585[8010] - Error while using counters in HPX
- Issue #584[8011] - counting argument size of actions, initial pass.
- Issue #581[8012] - Remove `RemoteResult` template parameter for `future<>`
- Issue #580[8013] - Add possibility to hook into actions
- Issue #578[8014] - Use angle brackets in HPX error dumps
- Issue #576[8015] - Exception incorrectly thrown when `--help` is used
- Issue #575[8016] - HPX(bad_component_type) with gcc 4.7.2 and boost 1.51
- Issue #574[8017] - `--hpx:connect` command line parameter not working correctly
- Issue #571[8018] - `hpx::wait()` (callback version) should pass the future to the callback function
- Issue #570[8019] - `hpx::wait` should operate on `boost::arrays` and `std::lists`
- Issue #569[8020] - Add a logging sink for Android

- Issue #568[8021] - 2-argument version of `HPX_DEFINE_COMPONENT_ACTION`
- Issue #567[8022] - Connecting to a running HPX application works only once
- Issue #565[8023] - HPX doesn't shutdown properly
- Issue #564[8024] - Partial preprocessing of new component creation interface
- Issue #563[8025] - Add `hpx::start`/`hpx::stop` to avoid blocking main thread
- Issue #562[8026] - All command line arguments swallowed by hpx
- Issue #561[8027] - Boost.Tuple is not move aware
- Issue #558[8028] - `boost::shared_ptr<>` style semantics/syntax for client classes
- Issue #556[8029] - Creation of partially preprocessed headers should be enabled for Boost newer than V1.50
- Issue #555[8030] - `BOOST_FORCEINLINE` does not name a type
- Issue #554[8031] - Possible race condition in thread `get_id()`
- Issue #552[8032] - Move enable client_base
- Issue #550[8033] - Add stack size category 'huge'
- Issue #549[8034] - ShenEOS run seg-faults on single or distributed runs
- Issue #545[8035] - `AUTOGLOB` broken for add_hpx_component
- Issue #542[8036] - FindHPX_HDF5 still searches multiple times
- Issue #541[8037] - Quotes around application name in hpx::init
- Issue #539[8038] - Race conditition occurring with new lightweight threads
- Issue #535[8039] - hpx_run_tests.py exits with no error code when tests are missing
- Issue #530[8040] - Thread description(<unknown>) in logs
- Issue #523[8041] - Make thread objects more lightweight
- Issue #521[8042] - `hpx::error_code` is not usable for lightweight error handling
- Issue #520[8043] - Add full user environment to HPX logs

- Issue #519[8044] - Build succeeds, running fails
- Issue #517[8045] - Add a guard page to linux coroutine stacks
- Issue #516[8046] - hpx::thread::detach suspends while holding locks, leads to hang in debug
- Issue #514[8047] - Preprocessed headers for <hpx/apply.hpp> don't compile
- Issue #513[8048] - Buildbot configuration problem
- Issue #512[8049] - Implement action based stack size customization
- Issue #511[8050] - Move action priority into a separate type trait
- Issue #510[8051] - trunk broken
- Issue #507[8052] - no matching function for call to `boost::scoped_ptr<hpx::threads::topology>::scoped_ptr(hpx::thre`
- Issue #505[8053] - undefined_symbol regression test currently failing
- Issue #502[8054] - Adding OpenCL and OCLM support to HPX for Windows and Linux
- Issue #501[8055] - find_package(HPX) sets cmake output variables
- Issue #500[8056] - wait_any/wait_all are badly named
- Issue #499[8057] - Add support for disabling pbs support in pbs runs
- Issue #498[8058] - Error during no-cache runs
- Issue #496[8059] - Add partial preprocessing support to cmake
- Issue #495[8060] - Support HPX modules exporting startup/shutdown functions only
- Issue #494[8061] - Allow modules to specify when to run startup/shutdown functions
- Issue #493[8062] - Avoid constructing a string in make_success_code
- Issue #492[8063] - Performance counter creation is no longer synchronized at startup
- Issue #491[8064] - Performance counter creation is no longer synchronized at startup
- Issue #490[8065] - Sheneos on_completed_bulk seg fault in distributed
- Issue #489[8066] - compiling issue with g++44

- Issue #488[8067] - Adding OpenCL and OCLM support to HPX for the MSVC platform
- Issue #487[8068] - FindHPX.cmake problems
- Issue #485[8069] - Change distributing_factory and binpacking_factory to use bulk creation
- Issue #484[8070] - Change `HPX_DONT_USE_PREPROCESSED_FILES` to `HPX_USE_PREPROCESSED_FILES`
- Issue #483[8071] - Memory counter for Windows
- Issue #479[8072] - strange errors appear when requesting performance counters on multiple nodes
- Issue #477[8073] - Create (global) timer for multi-threaded measurements
- Issue #472[8074] - Add partial preprocessing using Wave
- Issue #471[8075] - Segfault stack traces don't show up in release
- Issue #468[8076] - External projects need to link with internal components
- Issue #462[8077] - Startup/shutdown functions are called more than once
- Issue #458[8078] - Consolidate hpx::util::high_resolution_timer and `hpx::util::high_resolution_clock`
- Issue #457[8079] - index out of bounds in `allgather_and_gate` on 4 cores or more
- Issue #448[8080] - Make HPX compile with clang
- Issue #447[8081] - 'make tests' should execute tests on local installation
- Issue #446[8082] - Remove SVN-related code from the codebase
- Issue #444[8083] - race condition in smp
- Issue #441[8084] - Patched Boost.Serialization headers should only be installed if needed
- Issue #439[8085] - Components using `HPX_REGISTER_STARTUP_MODULE` fail to compile with MSVC
- Issue #436[8086] - Verify that no locks are being held while threads are suspended
- Issue #435[8087] - Installing HPX should not clobber existing Boost installation
- Issue #434[8088] - Logging external component failed (Boost 1.50)
- Issue #433[8089] - Runtime crash when building all examples

HPX V0.9.0 (Jul 5, 2012)

We have had roughly 800 commits since the last release and we have closed approximately 80 tickets (bugs, feature requests, etc.).

General changes

- Significant improvements made to the usability of *HPX* in large-scale, distributed environments.
- Renamed `hpx::lcos::packaged_task` to `hpx::lcos::packaged_action` to reflect the semantic differences to a packaged_task as defined by the C++11 Standard[8111].
- *HPX* now exposes *hpx::thread* which is compliant to the C++11 std::thread type except that it (purely locally) represents an *HPX* thread. This new type does not expose any of the remote capabilities of the underlying *HPX*-thread implementation.
- The type `hpx::lcos::future` is now compliant to the C++11 std::future<> type. This type can be used to synchronize both, local and remote operations. In both cases the control flow will 'return' to the future in order to trigger any continuation.
- The types `hpx::lcos::local::promise` and `hpx::lcos::local::packaged_task` are now compliant to the C++11 `std::promise<>` and `std::packaged_task<>` types. These can be used to create a future representing local work only. Use the types `hpx::lcos::promise` and `hpx::lcos::packaged_action` to wrap any (possibly remote) action into a future.
- *hpx::thread* and `hpx::lcos::future` are now cancelable.
- Added support for sequential and logic composition of `hpx::lcos::futures`. The member function `hpx::lcos::future::when` permits futures to be sequentially composed. The helper functions *hpx::wait_all*, *hpx::wait_any*, and `hpx::wait_n` can be used to wait for more than one future at a time.
- *HPX* now exposes `hpx::apply` and *hpx::async* as the preferred way of creating (or invoking) any deferred work. These functions are usable with various types of functions, function objects, and actions and provide a uniform way to spawn deferred tasks.
- *HPX* now utilizes `hpx::util::bind` to (partially) bind local functions and function objects, and also actions. Remote bound actions can have placeholders as well.
- *HPX* continuations are now fully polymorphic. The class `hpx::actions::forwarding_continuation` is an example of how the user can write is own types of continuations. It can be used to execute any function as an continuation of a particular action.
- Reworked the action invocation API to be fully conformant to normal functions. Actions can now be invoked using `hpx::apply`, *hpx::async*, or using the `operator()` implemented on actions. Actions themselves can now be cheaply instantiated as they do not have any members anymore.
- Reworked the lazy action invocation API. Actions can now be directly bound using `hpx::util::bind` by passing an action instance as the first argument.
- A minimal *HPX* program now looks like this:

  ```
  #include <hpx/hpx_init.hpp>

  int hpx_main()
  {
      return hpx::finalize();
  }
  ```

(continues on next page)

[8111] http://www.open-std.org/jtc1/sc22/wg21

(continued from previous page)

```
int main()
{
    return hpx::init();
}
```

This removes the immediate dependency on the Boost.Program_options[8112] library.

Note

This minimal version of an *HPX* program does not support any of the default command line arguments (such as –help, or command line options related to PBS). It is suggested to always pass `argc` and `argv` to *HPX* as shown in the example below.

- In order to support those, but still not to depend on Boost.Program_options[8113], the minimal program can be written as:

```
#include <hpx/hpx_init.hpp>

// The arguments for hpx_main can be left off, which very similar to the
// behavior of ``main()`` as defined by C++.
int hpx_main(int argc, char* argv[])
{
    return hpx::finalize();
}

int main(int argc, char* argv[])
{
    return hpx::init(argc, argv);
}
```

- Added performance counters exposing the number of component instances which are alive on a given locality.
- Added performance counters exposing then number of messages sent and received, the number of parcels sent and received, the number of bytes sent and received, the overall time required to send and receive data, and the overall time required to serialize and deserialize the data.
- Added a new component: `hpx::components::binpacking_factory` which is equivalent to the existing `hpx::components::distributing_factory` component, except that it equalizes the overall population of the components to create. It exposes two factory methods, one based on the number of existing instances of the component type to create, and one based on an arbitrary performance counter which will be queried for all relevant localities.
- Added API functions allowing to access elements of the diagnostic information embedded in the given exception: *hpx::get_locality_id*, `hpx::get_host_name`, `hpx::get_process_id`, `hpx::get_function_name`, `hpx::get_file_name`, `hpx::get_line_number`, `hpx::get_os_thread`, `hpx::get_thread_id`, and `hpx::get_thread_description`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- Issue #71[8114] - GIDs that are not serialized via `handle_gid<>` should raise an exception
- Issue #105[8115] - Allow for `hpx::util::function`s to be registered in the AGAS symbolic namespace
- Issue #107[8116] - Nasty threadmanger race condition (reproducible in sheneos_test)
- Issue #108[8117] - Add millisecond resolution to *HPX* logs on Linux
- Issue #110[8118] - Shutdown hang in distributed with release build
- Issue #116[8119] - Don't use TSS for the applier and runtime pointers
- Issue #162[8120] - Move local synchronous execution shortcut from hpx::function to the applier
- Issue #172[8121] - Cache sources in CMake and check if they change manually
- Issue #178[8122] - Add an INI option to turn off ranged-based AGAS caching
- Issue #187[8123] - Support for disabling performance counter deployment
- Issue #202[8124] - Support for sending performance counter data to a specific file
- Issue #218[8125] - boost.coroutines allows different stack sizes, but stack pool is unaware of this
- Issue #231[8126] - Implement movable `boost::bind`
- Issue #232[8127] - Implement movable `boost::function`
- Issue #236[8128] - Allow binding `hpx::util::function` to actions
- Issue #239[8129] - Replace `hpx::function` with `hpx::util::function`
- Issue #240[8130] - Can't specify RemoteResult with lcos::async
- Issue #242[8131] - REGISTER_TEMPLATE support for plain actions
- Issue #243[8132] - `handle_gid<>` support for `hpx::util::function`
- Issue #245[8133] - `*_c_cache code` throws an exception if the queried GID is not in the local cache
- Issue #246[8134] - Undefined references in dataflow/adaptive1d example

- Issue #252[8135] - Problems configuring sheneos with CMake
- Issue #254[8136] - Lifetime of components doesn't end when client goes out of scope
- Issue #259[8137] - CMake does not detect that MSVC10 has lambdas
- Issue #260[8138] - io_service_pool segfault
- Issue #261[8139] - Late parcel executed outside of pxthread
- Issue #263[8140] - Cannot select allocator with CMake
- Issue #264[8141] - Fix allocator select
- Issue #267[8142] - Runtime error for hello_world
- Issue #269[8143] - pthread_affinity_np test fails to compile
- Issue #270[8144] - Compiler noise due to -Wcast-qual
- Issue #275[8145] - Problem with configuration tests/include paths on Gentoo
- Issue #325[8146] - Sheneos is 200-400 times slower than the fortran equivalent
- Issue #331[8147] - *hpx::init* and `hpx_main()` should not depend on program_options
- Issue #333[8148] - Add doxygen support to CMake for doc toolchain
- Issue #340[8149] - Performance counters for parcels
- Issue #346[8150] - Component loading error when running hello_world in distributed on MSVC2010
- Issue #362[8151] - Missing initializer error
- Issue #363[8152] - Parcel port serialization error
- Issue #366[8153] - Parcel buffering leads to types incompatible exception
- Issue #368[8154] - Scalable alternative to rand() needed for *HPX*
- Issue #369[8155] - IB over IP is substantially slower than just using standard TCP/IP
- Issue #374[8156] - `hpx::lcos::wait` should work with dataflows and arbitrary classes meeting the future interface
- Issue #375[8157] - Conflicting/ambiguous overloads of `hpx::lcos::wait`

[8174] https://github.com/TheHPXProject/hpx/issues/425
[8175] https://github.com/TheHPXProject/hpx/issues/426

General changes

- *HPX* does not need to be installed anymore to be functional.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this point release:

- Issue #295[8176] - Don't require install path to be known at compile time.
- Issue #371[8177] - Add hpx iostreams to standard build.
- Issue #384[8178] - Fix compilation with GCC 4.7.
- Issue #390[8179] - Remove keep_factory_alive startup call from ShenEOS; add shutdown call to H5close.
- Issue #393[8180] - Thread affinity control is broken.

Bug fixes (commits)

Here is a list of the important commits included in this point release:

- r7642 - External: Fix backtrace memory violation.
- **r7775 - Components: Fix symbol visibility bug with component startup**
  providers. This prevents one components providers from overriding another components.
- r7778 - Components: Fix startup/shutdown provider shadowing issues.

HPX V0.8.0 (Mar 23, 2012)

We have had roughly 1000 commits since the last release and we have closed approximately 70 tickets (bugs, feature requests, etc.).

General changes

- Improved PBS support, allowing for arbitrary naming schemes of node-hostnames.
- Finished verification of the reference counting framework.
- Implemented decrement merging logic to optimize the distributed reference counting system.
- Restructured the LCO framework. Renamed `hpx::lcos::eager_future<>` and `hpx::lcos::lazy_future<>` into `hpx::lcos::packaged_task` and `hpx::lcos::deferred_packaged_task`. Split `hpx::lcos::promise` into `hpx::lcos::packaged_task` and `hpx::lcos::future`. Added 'local' futures (in namespace `hpx::lcos::local`).
- Improved the general performance of local and remote action invocations. This (under certain circumstances) drastically reduces the number of copies created for each of the parameters and return values.

[8176] https://github.com/TheHPXProject/hpx/issues/295
[8177] https://github.com/TheHPXProject/hpx/issues/371
[8178] https://github.com/TheHPXProject/hpx/issues/384
[8179] https://github.com/TheHPXProject/hpx/issues/390
[8180] https://github.com/TheHPXProject/hpx/issues/393

- Reworked the performance counter framework. Performance counters are now created only when needed, which reduces the overall resource requirements. The new framework allows for much more flexible creation and management of performance counters. The new sine example application demonstrates some of the capabilities of the new infrastructure.
- Added a buildbot-based continuous build system which gives instant, automated feedback on each commit to SVN.
- Added more automated tests to verify proper functioning of *HPX*.
- Started to create documentation for *HPX* and its API.
- Added documentation toolchain to the build system.
- Added dataflow LCO.
- Changed default *HPX* command line options to have `hpx:` prefix. For instance, the former option `--threads` is now `--hpx:threads`. This has been done to make ambiguities with possible application specific command line options as unlikely as possible. See the section *HPX Command Line Options* for a full list of available options.
- Added the possibility to define command line aliases. The former short (one-letter) command line options have been predefined as aliases for backwards compatibility. See the section *HPX Command Line Options* for a detailed description of command line option aliasing.
- Network connections are now cached based on the connected host. The number of simultaneous connections to a particular host is now limited. Parcels are buffered and bundled if all connections are in use.
- Added more refined thread affinity control. This is based on the external library Portable Hardware Locality (HWLOC).
- Improved support for Windows builds with CMake.
- Added support for components to register their own command line options.
- Added the possibility to register custom startup/shutdown functions for any component. These functions are guaranteed to be executed by an *HPX* thread.
- Added two new experimental thread schedulers: hierarchy_scheduler and periodic_priority_scheduler. These can be activated by using the command line options `--hpx:queuing=hierarchy` or `--hpx:queuing=periodic`.

Example applications

- Graph500 performance benchmark[8181] (thanks to Matthew Anderson for contributing this application).
- GTC (Gyrokinetic Toroidal Code)[8182]: a skeleton for particle in cell type codes.
- Random Memory Access: an example demonstrating random memory accesses in a large array
- ShenEOS example[8183], demonstrating partitioning of large read-only data structures and exposing an interpolation API.
- Sine performance counter demo.
- Accumulator examples demonstrating how to write and use *HPX* components.
- Quickstart examples (like hello_world, fibonacci, quicksort, factorial, etc.) demonstrating simple *HPX* concepts which introduce some of the concepts in *HPX*.
- Load balancing and work stealing demos.

[8181] http://www.graph500.org/

[8182] http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/

[8183] http://stellarcollapse.org/equationofstate

API changes

- Moved all local LCOs into a separate namespace `hpx::lcos::local` (for instance, `hpx::lcos::local_mutex` is now `hpx::lcos::local::mutex`).
- Replaced `hpx::actions::function` with `hpx::util::function`. Cleaned up related code.
- Removed `hpx::traits::handle_gid` and moved handling of global reference counts into the corresponding serialization code.
- Changed terminology: `prefix` is now called `locality_id`, renamed the corresponding API functions (such as `hpx::get_prefix`, which is now called `hpx::get_locality_id`).
- Adding *hpx::find_remote_localities*, and *hpx::get_num_localities*.
- Changed performance counter naming scheme to make it more bash friendly. The new performance counter naming scheme is now

```
/object{parentname#parentindex/instance#index}/counter#parameters
```

- Added `hpx::get_worker_thread_num` replacing `hpx::threadmanager_base::get_thread_num`.
- Renamed `hpx::get_num_os_threads` to `hpx::get_os_threads_count`.
- Added `hpx::threads::get_thread_count`.
- Restructured the Futures sub-system, renaming types in accordance with the terminology used by the C++11 ISO standard.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- Issue #31[8184] - Specialize handle_gid<> for examples and tests
- Issue #72[8185] - Fix AGAS reference counting
- Issue #104[8186] - heartbeat throws an exception when decrefing the performance counter it's watching
- Issue #111[8187] - throttle causes an exception on the target application
- Issue #142[8188] - One failed component loading causes an unrelated component to fail
- Issue #165[8189] - Remote exception propagation bug in AGAS reference counting test
- Issue #186[8190] - Test credit exhaustion/splitting (e.g. prepare_gid and symbol NS)
- Issue #188[8191] - Implement remaining AGAS reference counting test cases
- Issue #258[8192] - No type checking of GIDs in stubs classes
- Issue #271[8193] - Seg fault/shared pointer assertion in distributed code

- Issue #323[8217] - Credit exhaustion causes object to stay alive
- Issue #324[8218] - Duplicate exception messages
- Issue #326[8219] - Integrate Quickbook with CMake
- Issue #329[8220] - –help and –version should still work
- Issue #330[8221] - Create pkg-config files
- Issue #337[8222] - Improve usability of performance counter timestamps
- Issue #338[8223] - Non-std exceptions deriving from std::exceptions in tfunc may be sliced
- Issue #339[8224] - Decrease the number of send_pending_parcels threads
- Issue #343[8225] - Dynamically setting the stack size doesn't work
- Issue #351[8226] - 'make install' does not update documents
- Issue #353[8227] - Disable FIXMEs in the docs by default; add a doc developer CMake option to enable FIXMEs
- Issue #355[8228] - 'make' doesn't do anything after correct configuration
- Issue #356[8229] - Don't use `hpx::util::static_` in topology code
- Issue #359[8230] - Infinite recursion in hpx::tuple serialization
- Issue #361[8231] - Add compile time option to disable logging completely
- Issue #364[8232] - Installation seriously broken in r7443

HPX V0.7.0 (Dec 12, 2011)

We have had roughly 1000 commits since the last release and we have closed approximately 120 tickets (bugs, feature requests, etc.).

[8230] https://github.com/TheHPXProject/hpx/issues/359
[8231] https://github.com/TheHPXProject/hpx/issues/361
[8232] https://github.com/TheHPXProject/hpx/issues/364

General changes

- Completely removed code related to deprecated AGAS V1, started to work on AGAS V2.1.
- Started to clean up and streamline the exposed APIs (see 'API changes' below for more details).
- Revamped and unified performance counter framework, added a lot of new performance counter instances for monitoring of a diverse set of internal *HPX* parameters (queue lengths, access statistics, etc.).
- Improved general error handling and logging support.
- Fixed several race conditions, improved overall stability, decreased memory footprint, improved overall performance (major optimizations include native TLS support and ranged-based AGAS caching).
- Added support for running *HPX* applications with PBS.
- Many updates to the build system, added support for gcc 4.5.x and 4.6.x, added C++11 support.
- Many updates to default command line options.
- Added many tests, set up buildbot for continuous integration testing.
- Better shutdown handling of distributed applications.

Example applications

- quickstart/factorial and quickstart/fibonacci, future-recursive parallel algorithms.
- quickstart/hello_world, distributed hello world example.
- quickstart/rma, simple remote memory access example
- quickstart/quicksort, parallel quicksort implementation.
- gtc, gyrokinetic torodial code.
- bfs, breadth-first-search, example code for a graph application.
- sheneos, partitioning of large data sets.
- accumulator, simple component example.
- balancing/os_thread_num, balancing/px_thread_phase, examples demonstrating load balancing and work stealing.

API changes

- Added `hpx::find_all_localities`.
- Added `hpx::terminate` for non-graceful termination of applications.
- Added `hpx::lcos::async` functions for simpler asynchronous programming.
- Added new AGAS interface for handling of symbolic namespace (`hpx::agas::*`).
- Renamed `hpx::components::wait` to `hpx::lcos::wait`.
- Renamed `hpx::lcos::future_value` to `hpx::lcos::promise`.
- Renamed `hpx::lcos::recursive_mutex` to `hpx::lcos::local_recursive_mutex`, `hpx::lcos::mutex` to `hpx::lcos::local_mutex`
- Removed support for Boost versions older than V1.38, recommended Boost version is now V1.47 and newer.

- Removed `hpx::process` (this will be replaced by a real process implementation in the future).
- Removed non-functional LCO code (`hpx::lcos::dataflow`, `hpx::lcos::thunk`, `hpx::lcos::dataflow_variable`).
- Removed deprecated `hpx::naming::full_address`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- Issue #28[8233] - Integrate Windows/Linux CMake code for *HPX* core
- Issue #32[8234] - hpx::cout() should be hpx::cout
- Issue #33[8235] - AGAS V2 legacy client does not properly handle error_code
- Issue #60[8236] - AGAS: allow for registerid to optionally take ownership of the gid
- Issue #62[8237] - adaptive1d compilation failure in Fusion
- Issue #64[8238] - Parcel subsystem doesn't resolve domain names
- Issue #83[8239] - No error handling if no console is available
- Issue #84[8240] - No error handling if a hosted locality is treated as the bootstrap server
- Issue #90[8241] - Add general commandline option -N
- Issue #91[8242] - Add possibility to read command line arguments from file
- Issue #92[8243] - Always log exceptions/errors to the log file
- Issue #93[8244] - Log the command line/program name
- Issue #95[8245] - Support for distributed launches
- Issue #97[8246] - Attempt to create a bad component type in AMR examples
- Issue #100[8247] - factorial and factorial_get examples trigger AGAS component type assertions
- Issue #101[8248] - Segfault when hpx::process::here() is called in fibonacci2
- Issue #102[8249] - unknown_component_address in int_object_semaphore_client
- Issue #114[8250] - marduk raises assertion with default parameters

- Issue #115[8251] - Logging messages for SMP runs (on the console) shouldn't be buffered
- Issue #119[8252] - marduk linking strategy breaks other applications
- Issue #121[8253] - pbsdsh problem
- Issue #123[8254] - marduk, dataflow and adaptive1d fail to build
- Issue #124[8255] - Lower default preprocessing arity
- Issue #125[8256] - Move hpx::detail::diagnostic_information out of the detail namespace
- Issue #126[8257] - Test definitions for AGAS reference counting
- Issue #128[8258] - Add averaging performance counter
- Issue #129[8259] - Error with endian.hpp while building adaptive1d
- Issue #130[8260] - Bad initialization of performance counters
- Issue #131[8261] - Add global startup/shutdown functions to component modules
- Issue #132[8262] - Avoid using auto_ptr
- Issue #133[8263] - On Windows hpx.dll doesn't get installed
- Issue #134[8264] - HPX_LIBRARY does not reflect real library name (on Windows)
- Issue #135[8265] - Add detection of unique_ptr to build system
- Issue #137[8266] - Add command line option allowing to repeatedly evaluate performance counters
- Issue #139[8267] - Logging is broken
- Issue #140[8268] - CMake problem on windows
- Issue #141[8269] - Move all non-component libraries into $PREFIX/lib/hpx
- Issue #143[8270] - adaptive1d throws an exception with the default command line options
- Issue #146[8271] - Early exception handling is broken
- Issue #147[8272] - Sheneos doesn't link on Linux
- Issue #149[8273] - sheneos_test hangs

2.11.3 Namespace changes

HPX V1.9.0 Namespace changes

The latest release includes amongst others changes in the namespaces so that *HPX* facilities correspond to the C++ Standard Library. The old namespaces are deprecated. Below is a comprehensive list of the namespace changes.

Table 2.195: Namespace changes in V1.9.0

Old namespace	New namespace
`hpx::util::mem_fn`	*hpx::mem_fn*
`hpx::util::invoke`	*hpx::invoke*
`hpx::util::invoke_r`	`hpx::invoke_r`
`hpx::util::invoke_fused`	*hpx::invoke_fused*
`hpx::util::invoke_fused_r`	*hpx::invoke_fused_r*
`hpx::util::unlock_guard`	*hpx::unlock_guard*
`hpx::parallel::v1::reduce_by_key`	`hpx::experimental::reduce_by_key`
`hpx::parallel::v1::sort_by_key`	*hpx::experimental::sort_by_key*
`hpx::parallel::task_canceled_exception`	*hpx::experimental::task_canceled_exception*
`hpx::parallel::task_block`	*hpx::experimental::task_block*
`hpx::parallel::define_task_block`	*hpx::experimental::define_task_block* |
`hpx::parallel::define_task_block_restore_threac`	*hpx::experimental::define_task_block_restore_thread*
`hpx::execution::experimental::task_group`	*hpx::experimental::task_group*

2.12 Citing *HPX*

Please cite *HPX* whenever you use it for publications. Use our paper in the Journal of Open Source Software[8309] as the main citation for *HPX*. Use the Zenodo entry[8310] to cite the latest release or find entries for specific versions of *HPX*.

2.13 *HPX* users

A list of institutions and projects using *HPX* can be found on the *HPX* Users[8311] page.

2.14 About *HPX*

2.14.1 History

The development of High Performance ParalleX (*HPX*) began in 2007. At that time, Hartmut Kaiser became interested in the work done by the ParalleX group at the Center for Computation and Technology (CCT)[8312], a multi-disciplinary research institute at Louisiana State University (LSU)[8313]. The ParalleX group was working to develop a new and experimental execution model for future high performance computing architectures. This model was christened ParalleX. The first implementations of ParalleX were crude, and many of those designs had to be discarded entirely. However, over time the team learned quite a bit about how to design a parallel, distributed runtime system which implements the concepts of ParalleX.

From the very beginning, this endeavour has been a group effort. In addition to a handful of interested researchers, there have always been graduate and undergraduate students participating in the discussions, design, and implementation of *HPX*. In 2011 we decided to formalize our collective research efforts by creating the STE||AR[8314] group (**S**ystems **T**echnology, **E**mergent Para**ll**elism, and **A**lgorithm **R**esearch). Over time, the team grew to include researchers around the country and the world. In 2014, the STE||AR[8315] Group was reorganized to become the international community it is today. This consortium of researchers aims to develop stable, sustainable, and scalable tools which will enable application developers to exploit the parallelism latent in the machines of today and tomorrow. Our goal of the *HPX* project is to create a high quality, freely available, open source implementation of ParalleX concepts for conventional and future systems by building a modular and standards conforming runtime system for SMP and distributed application environments. The API exposed by *HPX* is conformant to the interfaces defined by the C++ ISO Standard and adheres to the programming guidelines used by the Boost[8316] collection of C++ libraries. We steer the development of *HPX* with real world applications and aim to provide a smooth migration path for domain scientists.

To learn more about STE||AR[8317] and ParalleX, see *People* and *Why HPX?*.

2.14.2 People

The STE||AR[8318] Group (pronounced as stellar) stands for "**S**ystems **T**echnology, **E**mergent Para**ll**elism, and **A**lgorithm **R**esearch". We are an international group of faculty, researchers, and students working at various institutions around the world. The goal of the STE||AR[8319] Group is to promote the development of scalable parallel applications by providing a community for ideas, a framework for collaboration, and a platform for communicating these concepts to the broader community.

Our work is focused on building technologies for scalable parallel applications. *HPX*, our general purpose C++ runtime system for parallel and distributed applications, is no exception. We use *HPX* for a broad range of scientific applications, helping scientists and developers to write code which scales better and shows better performance compared to more conventional programming models such as MPI.

HPX is based on *ParalleX* which is a new (and still experimental) parallel execution model aiming to overcome the limitations imposed by the current hardware and the techniques we use to write applications today. Our group focuses on two types of applications - those requiring excellent strong scaling, allowing for a dramatic reduction of execution time for fixed workloads and those needing highest level of sustained performance through massive parallelism. These applications are presently unable (through conventional practices) to effectively exploit a relatively small number of cores in a multi-core system. By extension, these application will not be able to exploit high-end exascale computing systems which are likely to employ hundreds of millions of such cores by the end of this decade.

Critical bottlenecks to the effective use of new generation high performance computing (HPC) systems include:

- *Starvation*: due to lack of usable application parallelism and means of managing it,
- *Overhead*: reduction to permit strong scalability, improve efficiency, and enable dynamic resource management,
- *Latency*: from remote access across system or to local memories,
- *Contention*: due to multicore chip I/O pins, memory banks, and system interconnects.

The ParalleX model has been devised to address these challenges by enabling a new computing dynamic through the application of message-driven computation in a global address space context with lightweight synchronization. The work on *HPX* is centered around implementing the concepts as defined by the ParalleX model. *HPX* is currently targeted at conventional machines, such as classical Linux based Beowulf clusters and SMP nodes.

We fully understand that the success of *HPX* (and ParalleX) is very much the result of the work of many people. To see a list of who is contributing see our tables below.

Acknowledgements

Thanks also to the following people who contributed directly or indirectly to the project through discussions, pull requests, documentation patches, etc.

- Panos Syskakis for benchmarking and optimizing our parallel algorithms.
- Shreyas Atre, for contributing fixes to our implementation of senders/receivers and extending our coroutines integration with senders/receivers.
- Alexander Neumann, for contributing fixes to the cmake build system.
- Dimitra Karatza, for her work on refactoring the documentation and providing a new user-friendly environment during and after Google Season of Docs 2021.
- Srinivas Yadav, for his work on SIMD support in algorithms before and during Google Summer of Code 2021.
- Akhil Nair, for his work on adapting algorithms to C++20 before and during Google Summer of Code 2021.
- Alexander Toktarev, for updating the parallel algorithm customization points to use `tag_fallback_invoke` for the default implementations.
- Brice Goglin, for reporting and helping fix issues related to the integration of hwloc in *HPX*.
- Giannis Gonidelis, for his work on the ranges adaptation during the Google Summer of Code 2020.
- Auriane Reverdell (Swiss National Supercomputing Centre[8349]), for her tireless work on refactoring our CMake setup and modularizing *HPX*.
- Christopher Hinz, for his work on refactoring our CMake setup.
- Weile Wei, for fixing *HPX* builds with CUDA on Summit.
- Severin Strobl, for fixing our CMake setup related to linking and adding new entry points to the *HPX* runtime.
- Rebecca Stobaugh, for her major documentation review and contributions during and after the 2019 Google Season of Documentation.
- Jan Melech, for adding automatic serialization of simple structs.
- Austin McCartney, for adding concept emulation of the Ranges TS bidirectional and random access iterator concepts.
- Marco Diers, reporting and fixing issues related PMIx.
- Maximilian Bremer, for reporting multiple issues and extending the component migration tests.
- Piotr Mikolajczyk, for his improvements and fixes to the set and count algorithms.
- Grant Rostig, for reporting several deficiencies on our web pages.
- Jakub Golinowski, for implementing an *HPX* backend for OpenCV and in the process improving documentation and reporting issues.

- Mikael Simberg (Swiss National Supercomputing Centre[8350]), for his tireless help cleaning up and maintaining *HPX*.
- Tianyi Zhang, for his work on HPXMP.
- Shahrzad Shirzad, for her contributions related to Phylanx.
- Christopher Ogle, for his contributions to the parallel algorithms.
- Surya Priy, for his work with statistic performance counters.
- Anushi Maheshwari, for her work on random number generation.
- Bruno Pitrus, for his work with parallel algorithms.
- Nikunj Gupta, for rewriting the implementation of `hpx_main.hpp` and for his fixes for tests.
- Christopher Taylor, for his interest in *HPX* and the fixes he provided. Chris also contributed support for RISC-V architectures.
- Shoshana Jakobovits, for her work on the resource partitioner.
- Denis Blank, who re-wrote our unwrapped function to accept plain values arbitrary containers, and properly deal with nested futures.
- Ajai V. George, who implemented several of the parallel algorithms.
- Taeguk Kwon, who worked on implementing parallel algorithms as well as adapting the parallel algorithms to the Ranges TS.
- Zach Byerly (Louisiana State University (LSU)[8351]), who in his work developing applications on top of *HPX* opened tickets and contributed to the *HPX* examples.
- Daniel Estermann, for his work porting *HPX* to the Raspberry Pi.
- Alireza Kheirkhahan (Louisiana State University (LSU)[8352]), who built and administered our local cluster as well as his work in distributed IO.
- Abhimanyu Rawat, who worked on stack overflow detection.
- David Pfander, who improved signal handling in *HPX*, provided his optimization expertise, and worked on incorporating the Vc vectorization into *HPX*.
- Denis Demidov, who contributed his insights with VexCL.
- Khalid Hasanov, who contributed changes which allowed to run *HPX* on 64Bit power-pc architectures.
- Zahra Khatami (Louisiana State University (LSU)[8353]), who contributed the prefetching iterators and the persistent auto chunking executor parameters implementation.
- Marcin Copik, who worked on implementing GPU support for C++AMP and HCC. He also worked on implementing a HCC backend for *HPX.Compute*.
- Minh-Khanh Do, who contributed the implementation of several segmented algorithms.
- Bibek Wagle (Louisiana State University (LSU)[8354]), who worked on fixing and analyzing the performance of the *parcel* coalescing plugin in *HPX*.
- Lukas Troska, who reported several problems and contributed various test cases allowing to reproduce the corresponding issues.

- Andreas Schaefer, who worked on integrating his library (LibGeoDecomp[8355]) with *HPX*. He reported various problems and submitted several patches to fix issues allowing for a better integration with LibGeoDecomp[8356].
- Satyaki Upadhyay, who contributed several examples to *HPX*.
- Brandon Cordes, who contributed several improvements to the inspect tool.
- Harris Brakmic, who contributed an extensive build system description for building *HPX* with Visual Studio.
- Parsa Amini (Louisiana State University (LSU)[8357]), who refactored and simplified the implementation of *AGAS* in *HPX* and who works on its implementation and optimization.
- Luis Martinez de Bartolome who implemented a build system extension for *HPX* integrating it with the Conan[8358] C/C++ package manager.
- Vinay C Amatya (Louisiana State University (LSU)[8359]), who contributed to the documentation and provided some of the *HPX* examples.
- Kevin Huck and Nick Chaimov (University of Oregon[8360]), who contributed the integration of APEX (Autonomic Performance Environment for eXascale) with *HPX*.
- Francisco Jose Tapia, who helped with implementing the parallel sort algorithm for *HPX*.
- Patrick Diehl, who worked on implementing CUDA support for our companion library targeting GPGPUs (HPXCL[8361]).
- Eric Lemanissier contributed fixes to allow compilation using the MingW toolchain.
- Nidhi Makhijani who helped cleaning up some enum consistencies in *HPX* and contributed to the resource manager used in the thread scheduling subsystem. She also worked on *HPX* in the context of the Google Summer of Code 2015.
- Larry Xiao, Devang Bacharwar, Marcin Copik, and Konstantin Kronfeldner who worked on *HPX* in the context of the Google Summer of Code program 2015.
- Daniel Bourgeois (Center for Computation and Technology (CCT)[8362]) who contributed to *HPX* the implementation of several parallel algorithms (as proposed by N4313[8363]).
- Anuj Sharma and Christopher Bross (Department of Computer Science 3 - Computer Architecture[8364]), who worked on *HPX* in the context of the Google Summer of Code[8365] program 2014.
- Martin Stumpf (Department of Computer Science 3 - Computer Architecture[8366]), who rebuilt our contiguous testing infrastructure (see the *HPX* Buildbot Website[8367]). Martin is also working on HPXCL[8368] (mainly all work related to OpenCL[8369]) and implementing an *HPX* backend for POCL[8370], a portable computing language solution based on OpenCL[8371].

- Grant Mercer (University of Nevada, Las Vegas[8372]), who helped creating many of the parallel algorithms (as proposed by N4313[8373]).
- Damond Howard (Louisiana State University (LSU)[8374]), who works on HPXCL[8375] (mainly all work related to CUDA[8376]).
- Christoph Junghans (Los Alamos National Lab), who helped making our buildsystem more portable.
- Antoine Tran Tan (Laboratoire de Recherche en Informatique, Paris), who worked on integrating *HPX* as a backend for NT2[8377]. He also contributed an implementation of an API similar to Fortran co-arrays on top of *HPX*.
- John Biddiscombe (Swiss National Supercomputing Centre[8378]), who helped with the BlueGene/Q port of *HPX*, implemented the parallel sort algorithm, and made several other contributions.
- Erik Schnetter (Perimeter Institute for Theoretical Physics), who greatly helped to make *HPX* more robust by submitting a large amount of problem reports, feature requests, and made several direct contributions.
- Mathias Gaunard (Metascale), who contributed several patches to reduce compile time warnings generated while compiling *HPX*.
- Andreas Buhr, who helped with improving our documentation, especially by suggesting some fixes for inconsistencies.
- Patricia Grubel (New Mexico State University[8379]), who contributed the description of the different *HPX* thread scheduler policies and is working on the performance analysis of our thread scheduling subsystem.
- Lars Viklund, whose wit, passion for testing, and love of odd architectures has been an amazing contribution to our team. He has also contributed platform specific patches for FreeBSD and MSVC12.
- Agustin Berge, who contributed patches fixing some very nasty hidden template meta-programming issues. He rewrote large parts of the API elements ensuring strict conformance with the C++ ISO Standard.
- Anton Bikineev for contributing changes to make using `boost::lexical_cast` safer, he also contributed a thread safety fix to the iostreams module. He also contributed a complete rewrite of the serialization infrastructure replacing Boost.Serialization inside *HPX*.
- Pyry Jahkola, who contributed the Mac OS build system and build documentation on how to build *HPX* using Clang and libc++.
- Mario Mulansky, who created an *HPX* backend for his Boost.Odeint library, and who submitted several test cases allowing us to reproduce and fix problems in *HPX*.
- Rekha Raj, who contributed changes to the description of the Windows build instructions.
- Jeremy Kemp how worked on an *HPX* OpenMP backend and added regression tests.
- Alex Nagelberg for his work on implementing a C wrapper API for *HPX*.
- Chen Guo, helvihartmann, Nicholas Pezolano, and John West who added and improved examples in *HPX*.
- Joseph Kleinhenz, Markus Elfring, Kirill Kropivyansky, Alexander Neundorf, Bryant Lam, and Alex Hirsch who improved our CMake.
- Tapasweni Pathak, Praveen Velliengiri, Jean-Loup Tastet, Michael Levine, Aalekh Nigam, HadrienG2, Prayag Verma, lslada, Alex Myczko, and Avyav Kumar who improved the documentation.

- Jayesh Badwaik, J. F. Bastien, Christoph Garth, Christopher Hinz, Brandon Kohn, Mario Lang, Maikel Nadolski, pierrele, hendrx, Dekken, woodmeister123, xaguilar, Andrew Kemp, Dylan Stark, Matthew Anderson, Jeremy Wilke, Jiazheng Yuan, CyberDrudge, david8dixon, Maxwell Reeser, Raffaele Solca, Marco Ippolito, Jules Penuchot, Weile Wei, Severin Strobl, Kor de Jong, albestro, Jeff Trull, Yuri Victorovich, and Gregor Daiss who contributed to the general improvement of *HPX*.

HPX Funding Acknowledgements[8380] lists current and past funding sources for *HPX*. Special thanks to Google Summer of Code[8381] and Google Season of Docs[8382] for the continuous support they provide which helps us enhance both our code and our documentation.
