- PR #6928¹⁸¹⁸ - Replace scan implementation with explicit functions to avoid triggering concept checking
- PR #6927¹⁸¹⁹ - Attempt to work around Github API limitations
- PR #6926¹⁸²⁰ - Disable async_cuda test as nvcc fails
- PR #6925¹⁸²¹ - implement c++20 modules for core libraries
- PR #6924¹⁸²² - shared_mutex : add ignore_while_checking around upgrade_cond notify in unlock_shared()
- PR #6923¹⁸²³ - Convert enum message_buffer_append_state to enum class
- PR #6921¹⁸²⁴ - Add workflow_dispatch for local testing and fix PR triggers
- PR #6920¹⁸²⁵ - Fixing various compilation regressions
- PR #6919¹⁸²⁶ - Fix performance regression in fork_join_executor by implementing missing traits
- PR #6918¹⁸²⁷ - Bump actions/checkout from 4 to 6
- PR #6917¹⁸²⁸ - Bump actions/upload-artifact from 4 to 6
- PR #6916¹⁸²⁹ - Add pull_request triggers to GHA workflows and fixed check-formatting jobs
- PR #6915¹⁸³⁰ - Adding missing module dependencies to the HPX algorithm module
- PR #6914¹⁸³¹ - Cleaning up recently added debug suffix configuration
- PR #6913¹⁸³² - Add comprehensive subtraction unit tests for gid_type
- PR #6912¹⁸³³ - Add comprehensive subtraction unit tests for gid_type
- PR #6911¹⁸³⁴ - Fix split fast-path to preserve completion scheduler semantics
- PR #6910¹⁸³⁵ - Implement C++23 Algorithms: fold_left, fold_right.

HPX V1.11.0 (Jun 30, 2025)

This release is the last version of HPX that supports C++17. Future versions of HPX will require compilation using C++20 or above.

General changes

- Added synchronous versions of all collective operations. Added global predefined communicator objects that are accessible through new APIs: `hpx::collectives::get_world_communicator()` refers to all localities and `hpx::collectives::get_local_communicator()` refers to all threads on the calling locality. We unified the interfaces of the different communicator objects.
- Added `hpx::experimental::run_on_all` allowing to run a given function (possibly concurrently) using a given execution policy.
- Added a helper object `hpx::runtime_manager` that simplifies the initialization of HPX without needing to modify the `main` function of the application.
- We improved the compatibility with various accelerator frameworks (SYCL, OneAPI).
- Applied build system changes that allow building HPX without any prerequisites. This requires to pass `-DHPX_WITH_FETCH_HWLOC=On` and `-DHPX_WITH_FETCH_BOOST=On` to the [CMake](https://cmake.org)²⁰⁰⁹ configuration.
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- Added the `hpx::contains` and `hpx::contains_subrange` parallel algorithms.
- Adapted many of HPX' parallel algorithms to be usable with senders/receivers.

Breaking changes

- We have moved most of the APIs that were defined in the namespace `hpx::parallel::execution` to the namespace `hpx::experimental::experimental`. It was not possible to add compatibility facilities that will allow to continue using the old APIs, applications will have to be changed in order to continue functioning correctly.
- The CMake configuration parameter `HPX_WITH_RUN_MAIN_EVERYWHERE` is now deprecated and will be removed in the future. Use the preprocessor macro `HPX_HAVE_RUN_MAIN_EVERYWHERE` on a target-by-target case instead.
- Removed the dysfunctional `libfabric` `parcelport`.
- Removed features that were long deprecated (starting V1.8):
 - `hpx::flush`, `hpx::endl`, `hpx::async_flush`, `hpx::async_endl` - Various enumerator types are now only available as `class enum` requiring explicit scoped use of the enumerator values
 - Various non-conforming overloads of parallel algorithms
 - `hpx::for_loop` and friends (now only available as `hpx::experimental::for_loop`)
- `hpx::parallel::induction` is now only available as `hpx::experimental::induction`

²⁰⁰⁹ <https://www.cmake.org>

- `hpx::parallel::reduction` and friends are now only available as `hpx::experimental::reduction`
- `hpx::assertion::source_location` is now only available as `hpx::source_location`
- `hpx::lcos::split_future` is now only available as `hpx::split_future`
- `hpx::lcos::wait` and friends have been removed altogether
- `hpx::lcos::wait_any` and friends are now only available as `hpx::wait_any`
- `hpx::lcos::wait_some` and friends are now only available as `hpx::wait_some`
- `hpx::lcos::wait_each` and friends are now only available as `hpx::wait_each`
- `hpx::lcos::wait_all` and friends are now only available as `hpx::wait_all`
- `hpx::lcos::when_all` and friends are now only available as `hpx::when_all`
- `hpx::lcos::when_any` and friends are now only available as `hpx::when_any`
- `hpx::lcos::when_each` and friends are now only available as `hpx::when_each`
- `hpx::lcos::when_some` and friends are now only available as `hpx::when_some`
- `hpx::util::optional` and related facilities are now only available as `hpx::optional`
- `hpx::util::bind` and related facilities are now only available as `hpx::bind`
- `hpx::util::function` and friends are now only available as `hpx::function`
- `hpx::traits::is_bound_action` and related facilities are now only available as `hpx::is_bound_action`
- `hpx::traits::is_bind_expression` and related facilities are now only available as `hpx::is_bind_expression`
- `hpx::traits::is_placeholder` and related facilities are now only available as `hpx::is_placeholder`
- `hpx::lcos::future` and related facilities are now only available as `hpx::future`
- `hpx::memory::intrusive_ptr` is now only available as `hpx::intrusive_ptr`
- `hpx::lcos::local::barrier` is now only available as `hpx::barrier`
- `hpx::lcos::barrier` is now only available as `hpx::distributed::barrier`
- `hpx::lcos::local::cpp20_binary_semaphore` is now only available as `hpx::detail::binary_semaphore`
- `hpx::lcos::local::condition_variable` and friends are now only available as `hpx::condition_variable`
- `hpx::lcos::local::counting_semaphore` and friends are now only available as `hpx::counting_semaphore`
- `hpx::lcos::local::cpp20_latch` and is now only available as `hpx::latch`
- `hpx::lcos::latch` and is now only available as `hpx::distributed::latch`
- `hpx::lcos::local::upgrade_lock` and friends are now only available as `hpx::upgrade_lock`
- `hpx::lcos::local::mutex` and friends are now only available as `hpx::mutex`

- `hpx::lcos::local::spinlock` and friends are now only available as `hpx::spinlock`
- `hpx::lcos::local::call_once` and friends are now only available as `hpx::call_once`
- `hpx::util::annotated_function` and is now only available as `hpx::annotated_function`
- `hpx::components::abstract_simple_component_base` and is now only available as `hpx::components::abstract_component_base`
- `hpx::naming::id_type` and is now only available as `hpx::id_type`

- PR #6089²¹⁵⁸ - Implementing p2079

2.11.2 List of older releases

HPX V1.10.0 (May 29, 2024)

General changes

- The HPX documentation has seen a major overhaul for this release. We finished documenting the public local HPX API, we have added migration guides from widely used parallelization platforms to HPX (OpenMP, TBB, and MPI).
- We have added facilities enabling optimizations for trivially-relocatable types (see P1144²¹⁵⁹ for more details).
- We have added (and use) the `scope_xxx` helper facilities as specified by the C++ library fundamentals TS v3 (see: N4948²¹⁶⁰).
- We have added configuration options that allow to build HPX without pre-installing any prerequisites. Use `HPX_WITH_FETCH_HWLOC=On` to have [Portable Hardware Locality \(HWLOC\)](#)²¹⁶¹ installed for you. Similarly, setting `HPX_WITH_FETCH_BOOST=On` during configuration time will install the necessary [Boost](#)²¹⁶² libraries (currently V1.84.0).
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- The collective operations APIs have seen an unification, we have fixed issues and performance problems for the collectives.
- The HPX executors have seen a streamlining and some consistency changes. We have applied many performance improvements to the executor implementations that directly positively impact the performance of our parallel algorithms.
- We have added a new parcelport allowing to use Gasnet as a communication platform.
- We have added optimizations to various parcelports improving overall communication performance. This includes - amongst other things - send immediate optimizations and receiver-side zero-copy optimizations.
- Futures will now execute the associated task eagerly and inline on any wait operation if the task has not started running yet. This feature can be enabled using the `HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=On` configuration setting (which is *Off* by default).
- We have enabled using json files to supply configuration information through the command line. This feature can be enabled with the configuration option `HPX_COMMAND_LINE_HANDLING_WITH_JSON_CONFIGURATION_FILES=On`. This functionality depends on the external [JSoN library](#)²¹⁶³, which can be built at configuration time by supplying `HPX_WITH_FETCH_JSON=On` to [CMake](#)²¹⁶⁴.
- We have applied many fixes to our CUDA, ROCm, and SYCL build environments.

²¹⁶⁴ <https://www.cmake.org>

Breaking changes

- The `CMake`²¹⁶⁵ configuration keys `SOMELIB_ROOT` (e.g., `BOOST_ROOT`) have been renamed to `Somelib_ROOT` (e.g., `Boost_ROOT`) to avoid warnings when using newer versions of `CMake`²¹⁶⁶. Please update your scripts accordingly. For now, the old variable names are re-assigned to the new names and unset in the `CMake`²¹⁶⁷ cache.

Closed issues

- Issue #6466²¹⁶⁸ - No access limitations to Wiki
- Issue #6461²¹⁶⁹ - `handle_received_parcel`s may never return

HPX V1.9.1 (August 4, 2023)

General changes

This point release fixes a couple of problems reported for the V1.9.0 release. Most importantly, we fixed various occasional hanging during startup and shutdown in distributed scenarios. We also added support for zero-copy serialization on the receiving side to the TCP, MPI, and LCI parcelports. Last but not least, we have added support for Visual Studio 2019 and gcc using MINGW on Windows, and also support for gcc V13 and clang V15.

HPX headers are now made consistently named the same as their standard library counterparts, e.g. `#include <thread>` now corresponds to `#include <hpx/thread.hpp>`. This significantly simplifies porting existing standards conforming codes to HPX.

A lot of work has been done to improve and optimize our network communication layers. Primary focus of this work was on the LCI parcelport, but we have also cleaned up and improved the MPI parcelport.

Additionally, we have continued working on our documentation. The main focus here was on completing the API documentation of the most important API functions. We have started adding migration guides for people interested in moving their codes away from other, commonplace parallelization frameworks like OpenMP.

Breaking changes

None

- PR #6283²³⁹⁸ - Consistently #include unistd.h for _POSIX_VERSION

HPX V1.9.0 (May 2, 2023)

General changes

- Added RISC-V 64bit support. HPX is now compatible with RISC-V architectures which have revolutionized the HPC world.
- LCI parcelport has been optimized to transfer parcels with fewer messages and use the HPX resource partitioner for its progress thread allocation. It should generally provide better performance than before. It also removes its dependency on the MPI library.
- HPX dependency on Boost was further relaxed by replacing headers from Boost.Range, Boost.Tokenizer and Boost.Lockfree.
- Improvements took place on our parallel algorithms implementation.
- Our Senders/Receivers (P2300) integration was extended:
- Coroutines were integrated with senders/receivers.

`get_completion_signatures` now works with awaitable senders. - `with_awaitable_senders` allows the passed senders to retrieve the value i.e. senders are transparently awaitable from within a coroutine. - `when_all_vector` was added.

- `sync_wait` and `sync_wait_with_variant` sender consumers were added. The user can now initiate the execution of their asynchronous pipeline by blocking the current thread that executes the `main()` function until the result is retrieved.
- The combinators for futures (a.k.a. `async_combinators`) `when_*`, `wait_*`, `wait_*_nothrow` were turned into CPOs allowing for end-user customization. For more information on the `async_combinators` refer to the documentation, https://hpx-docs.stellar-group.org/latest/html/libs/core/async_combinators/docs/index.html?highlight=combinators.
- The new datapar backend SVE allows `simd` and `par_simd` execution policies to exploit dataparallelism in the processors that have SVE vector registers like A64FX and Neoverse V1.
- The documentation for parallel algorithms, container algorithms was further improved. The Public API page was vastly enriched.

²³⁹² <https://github.com/TheHPXProject/hpx/pull/6262>

²³⁹³ <https://github.com/TheHPXProject/hpx/pull/6266>

²³⁹⁴ <https://github.com/TheHPXProject/hpx/pull/6267>

²³⁹⁵ <https://github.com/TheHPXProject/hpx/pull/6278>

²³⁹⁶ <https://github.com/TheHPXProject/hpx/pull/6279>

²³⁹⁷ <https://github.com/TheHPXProject/hpx/pull/6281>

²³⁹⁸ <https://github.com/TheHPXProject/hpx/pull/6283>

- Copy button shortcut was added at the top-right of code-blocks.
- Pragma directive that reports warnings as errors on MSVC was fixed.
- Command line argument `--hpx:loopback_network` was added to facilitate debugging with networks.
- We added an HPX-SYCL integration, allowing users to obtain HPX futures for SYCL events. This effectively enables the integration of arbitrary asynchronous SYCL operations into the HPX task graph. Bolted on top of this integration, we further added an HPX-SYCL executor for ease of use.

Breaking changes

- Stopped supporting Clang V8, the minimal version supported is now Clang V10.
- Stopped supporting gcc V8, the minimal version supported is now gcc V9.
- Stopped supporting Visual Studio 2015, the minimal version supported is now Visual Studio 2019.
- `tag_policy_tag` et.al. were re-added after HPX V1.8.1 deprecation.
- `get_chunk_size` and `processing_units_count` API is now expecting the time for one iteration as an argument.
- The list of all the namespace changes can be found here: [HPX V1.9.0 Namespace changes](#).

General changes

This patch release adds a number of small new features and fixes a handful of problems discovered since the last release, in particular:

- A lot of work has been done to improve vectorization support for our parallel algorithms. HPX now supports using EVE - the Expressive Vector Engine as a vectorization backend.
- Added a simple average power consumption performance counter.
- Added performance counters related to the use of zero-copy chunks in the networking layer.
- More work was done towards full compatibility with the sender/receivers proposal P2300.
- Fixing `sync_wait` to decay the result types
- Fixed collective operations to properly avoid overlapping consecutive operations on the same communicator.
- Simplified the implementation of our execution policies and added mapping functions between those.
- Fixed performance issues with our implementation of *small_vector*.
- Serialization now works with buffers of unsigned characters.
- Fixing dangling reference in serialization of non-default constructible types
- Fixed static linking on Windows.
- Fixed support for M1/MacOS based architectures.
- Fixed support for gentoo/musl.
- Fixed `hpx::counting_semaphore_var`.
- Properly check start and end bounds for `hpx::for_loop`
- A lot of changes and fixes to the documentation (see <https://hpx-docs.stellar-group.org>).

Breaking changes

- No breaking changes have been introduced.

Closed issues

- PR #5890²⁶⁸⁴ - Adding simple average power consumption performance counter
- PR #5889²⁶⁸⁵ - Par unseq/unseq adding
- PR #5888²⁶⁸⁶ - Support for data-parallelism for reduce, transform reduce, transform_binary_reduce algorithms
- PR #5887²⁶⁸⁷ - Fixing dangling reference in serialization of non-default constructible types
- PR #5879²⁶⁸⁸ - New performance counters related to zero-copy chunks.

HPX V1.8.0 (May 18, 2022)

With HPX parallel algorithms been fully adapted to C++20 the new release achieves full conformance with C++20 concurrency and parallelism facilities. HPX now supports all of the algorithms as specified by C++20. We have added support for vectorization to more of our algorithms. Much work has been done towards implementing P2300 (`std::execution`) and implementing the underlying senders/receivers facilities. Finally, The new release comes with a brand new documentation interface!

General changes

- The new documentation can now be found on our webpage: <https://hpx-docs.stellar-group.org>. This includes a completely new and user-friendly interface environment along with restructuring of certain components. The content in the “Quick start”, “Manual” and “Examples” was improved, while the “Build system” page was adapted to include necessary information for newcomers.
- With the vectorization support available in modern hardware architectures HPX now provides new data-parallel vector execution policies `hpx::execution::simd` and `hpx::execution::par_simd` that enable significant speed-up of our parallel algorithm implementations. The following algorithms now support SIMD execution:
 - `copy`, `copy_n`
 - `generate`
 - `adjacent_difference`, `adjacent_find`
 - `all_of`, `any_of`, `none_of`
 - `equal`, `mismatch`,
 - `inner_product`
 - `count`, `count_if`
 - `fill`, `fill_n`
 - `find`, `find_end`, `find_first_of`, `find_if`, `find_if_not`
 - `for_each`, `for_each_n`
 - `generate`, `generate_n`.
- Based on top of P2300 the HPX parallel algorithms now support the pipeline syntax towards an effort to unify their usage along with senders/receivers. The HPX parallel algorithms can now bind with senders/receivers using the pipeline operator.
- Several changes took place on the executors provided by HPX:
 - The executors now support the `num_cores` options in order for the user to be able to specify the desired number of cores to be used in the corresponding execution.
 - The `scheduler` executor was implemented on top of senders/receivers and can be used with all HPX facilities that schedule new work, such as parallel algorithms, `hpx::async`, `hpx::dataflow`, etc.
 - The performance of `fork_join_executor` was improved.
 - The following algorithms have been added/adapted to be C++20 conformant:
 - `min_element`
 - `max_element`
 - `minmax_element`
 - `starts_with`
 - `ends_with`
 - `swap_ranges`
 - `unique`
 - `unique_copy`

- rotate
- rotate_copy
- sort
- shift_left
- shift_right
- stable_sort
- partition
- partition_copy
- stable_partition
- adjacent_difference
- nth_element
- partial_sort
- partial_sort_copy.
- HPX_FORWARD/HPX_MOVE macros were introduced that replaced the `std::move` and `std::forward` facilities that in the library code.
- Hangs on distributed barrier were fixed.
- The performance of `scan_partitioner` was improved.
- Support was added for `thread_priority` to the `parallel_execution_policy`
- Regarding senders/receivers and the P2300 proposal various actions took place. `stop_token` was adapted to the recent proposal version (`in_place_stop_token` was introduced). Also hint, annotation, priority and stacksize properties were added to the scheduler executor. Stop support was added to `when_all`. Support for completion signatures was added. The following schedulers and algorithms were added:
 - `get_completion_scheduler`
 - `any_sender` and `unique_any_sender`
 - split sender
 - `transform_mpi` sender
 - transfer sender
 - `let_error`, `let_stopped`
 - `get_env` and related environment queries
 - `schedule`, `set_value`, `set_error`, `set_done`, `start` and `connect` are now proper customization points as defined in P2300.
- Several namespaces were altered towards conformance with C++20. Compatibility layers have been added and the old versions will be removed in next releases. The namespace changes are the following:
 - `hpx::parallel::induction/reduction` were moved into namespace `hpx::experimental`
 - `for_loop` and friends were moved into namespace `hpx::experimental`.
 - `hpx::util::optional` and friends were moved into namespace `hpx`.

- `hpx::lcos::barrier` has been moved into the `hpx::distributed` namespace and `hpx::lcos::local::cpp20_barrier` has been renamed to `barrier` and moved into the `hpx` namespace.
- `hpx::lcos::latch` has been moved into the `hpx::distributed` namespace and `lcos::local::latch` has been moved into the `hpx` namespace. The `count_down_and_wait()` functionality of `latch` has been renamed to `arrive_and_wait()`.
- `hpx::util::unique_function_nonsr` has been renamed to `hpx::move_only_function`.
- `hpx::util::unique_function` has been renamed to `hpx::distributed::move_only_function`.
- `hpx::util::function` has been renamed to `hpx::distributed::function`.
- `hpx::util::function_nonsr` has been renamed to `hpx::function`.
- `hpx::util::function_ref` have been moved to namespace `hpx`.
- `hpx::lcos::split_future` changed namespace and is now used as `hpx::split_future`.
- `hpx::lcos::local::counting_semaphore` has been deprecated and `hpx::lcos::local::cpp20_counting_semaphore` has been renamed to `hpx::counting_semaphore`.
- `hpx::lcos::local::cpp20_binary_semaphore` has been renamed to `hpx::binary_semaphore`.
- `hpx::lcos::local::sliding_semaphore` has been renamed to `hpx::sliding_semaphore` and
- `hpx::lcos::local::sliding_semaphore_var` has been renamed to `hpx::sliding_semaphore_var`.
- `hpx::lcos::local::spinlock` has been renamed to `hpx::spinlock`.
- `hpx::lcos::local::mutex` has been renamed to `hpx::mutex`.
- `hpx::lcos::local::timed_mutex` has been renamed to `hpx::timed_mutex`.
- `hpx::lcos::local::no_mutex` has been renamed to `hpx::no_mutex`.
- `hpx::lcos::local::recursive_mutex` has been renamed to `hpx::recursive_mutex`.
- `hpx::lcos::local::shared_mutex` has been renamed to `hpx::shared_mutex`.
- `hpx::lcos::local::upgrade_lock` has been renamed to `hpx::upgrade_lock`.
- `hpx::lcos::local::upgrade_to_unique_lock` has been renamed to `hpx::upgrade_to_unique_lock`.
- `hpx::lcos::local::condition_variable` has been renamed to `hpx::condition_variable`. `hpx::lcos::local::condition_variable_var` has been renamed to `hpx::condition_variable_var`.
- `hpx::lcos::local::once_flag` has been renamed to `hpx::once_flag`, and `hpx::lcos::local::call_once` has been renamed to `hpx::call_once`.
- The new LCI (Lightweight Communication Interface) `parcelport` was added that supports irregular and asynchronous applications like graph analysis, sparse linear algebra, modern parallel architectures etc. Major features include:

- Support for advanced communication primitives like two sided send/recv and one sided remote put.
- Better multi-threaded performance.
- Explicit user control of communication resource.
- Flexible signaling mechanisms (synchronizer, completion queue, active message handler).
- The following CMake flags were added, mostly to support using HPX as a backend for SHAD (<https://github.com/pnnl/SHAD>). Please note that these options enable questionable functionalities, partially they even enable undefined behavior. Please only use any of them if you know what you're doing:
 - HPX_SERIALIZATION_WITH_ALLOW_RAW_POINTER_SERIALIZATION
 - HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE
 - HPX_SERIALIZATION_WITH_ALLOW_CONST_TUPLE_MEMBERS

Breaking changes

- Minimum required C++ standard library is C++17.
- Support for GCC 7 and Clang 8.0.0 and below has been removed.
- CUDA version required updated to 11.4.
- CMake version required updated to 3.18.
- The default version of Asio used was updated to 1.20.0.
- The default version of APEX used was updated to 2.5.1.
- APEX version was updated to 2.5.1.
- `tagged_pair` and `tagged_tuple` were removed.
- `tag_dispatch` was renamed to `tag_invoke`.
- `hpx.max_backgroud_threads` was renamed to `hpx.parcel.max_background_threads`.
- The following CMake flags were removed after being deprecated for at least two releases:
 - HPX_SCHEDULER_MAX_TERMINATED_THREADS
 - HPX_WITH_GOOGLE_PERFTOOLS
 - HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY
 - HPX_HAVE_{COROUTINE,PLUGIN}_GCC_HIDDEN_VISIBILITY
 - HPX_TOP_LEVEL
 - HPX_WITH_COMPUTE_CUDA
 - HPX_WITH_ASYNC_CUDA
- `annotate_function` was renamed to `scoped_annotation`.
- `execution::transform` was renamed to `execution::then`.
- `execution::detach` was renamed to `execution::start_detached`.
- `execution::on_sender` was renamed to `execution::schedule_on`.

- `execution::just_on` was renamed to `execution::just_transfer`.
- `execution::set_done` was renamed to `execution::set_stopped`.

Closed issues

- Issue #5871²⁶⁸⁹ - `distributed::channel.regisiter_as` terminates the active task.

HPX V1.7.1 (Aug 12, 2021)

This is a bugfix release with a few minor fixes.

General changes

- Added a CMake option to assume that all types are bitwise serializable by default: `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`. The default value `OFF` corresponds to the old behaviour.
- Added a version check for Asio. The minimum Asio version supported by *HPX* is 1.12.0.
- Fixed a bug affecting usage of actions, where the internals of *HPX* relied on function addresses being unique. This was fixed by relying on variable addresses being unique instead.
- Made `hpx::util::bind` more strict in checking the validity of placeholders.
- Small performance improvement to spinlocks.

³⁰⁷⁶ <https://github.com/TheHPXProject/hpx/pull/5283>

³⁰⁷⁷ <https://github.com/TheHPXProject/hpx/pull/5241>

- Adapted the following parallel algorithms to C++20: `inclusive_scan`, `exclusive_scan`, `transform_inclusive_scan`, `transform_exclusive_scan`.

Breaking changes

- The experimental `hpx::execution::simdpair` execution policy (introduced in 1.7.0) was renamed to `hpx::execution::par_simd` for consistency with the other parallel policies.

Closed issues

- Issue #5494³⁰⁷⁸ - Rename *simdpair* execution policy to *par_simd*
- Issue #5488³⁰⁷⁹ - `hpx::util::bind` doesn't bounds-check placeholders
- Issue #5486³⁰⁸⁰ - Possible V1.7.1 release

Closed pull requests

HPX V1.7.0 (Jul 14, 2021)

This release is again focused on C++20 conformance of algorithms. Additionally, many new experimental sender-based algorithms have been added based on the latest proposals.

General changes

- The following algorithms have been adapted to be C++20 conformant:
 - `remove`,
 - `remove_if`,
 - `remove_copy`,
 - `remove_copy_if`,
 - `replace`,
 - `replace_if`,
 - `reverse`, and
 - `lexicographical_compare`.
- When the compiler and standard library support the standard execution policies `std::execution::seq`, `std::execution::par`, and `std::execution::par_unseq` they can now be used in all *HPX* parallel algorithms with equivalent behaviour to the non-task policies `hpx::execution::seq`, `hpx::execution::par`, and `hpx::execution::par_unseq`.
- Vc support has been fixed, after being broken in 1.6.0. In addition, *HPX* now experimentally supports GCC's SIMD implementation, when available. The implementation can be used through the `hpx::execution::simd` and `hpx::execution::simdpair` execution policies.
- The customization points `sync_execute`, `async_execute`, `then_execute`, `post`, `bulk_sync_execute`, `bulk_async_execute`, and `bulk_then_execute` are now implemented using `tag_dispatch` (previously `tag_invoke`). Executors can still be implemented by providing the aforementioned functions as member functions of an executor.
- New functionality, enhancements, and fixes based on P0443r14 (executors proposal) and P1897 (sender-based algorithms) have been added to the `hpx::execution::experimental` namespace. These can be accessed through the `hpx/execution.hpp` and `hpx/local/execution.hpp` headers. In particular, the following sender-based algorithms have been added:
 - `detach`,
 - `ensure_started`,
 - `just`,
 - `just_on`,
 - `let_error`,
 - `let_value`,
 - `on`,

- transform, and
- when_all.

Additionally, futures now implement the sender concept. `make_future` can be used to turn a sender into a future. All functionality is experimental and can change without notice.

- All `hpx::init` and `hpx::start` overloads now take `std::functions` instead of `hpx::util::function_nonser`. No changes should be required in user code to accommodate this change.
- `hpx::util::unwrapping` and other related unwrapping functionality has been moved up into the `hpx` namespace. Names in `hpx::util` are still usable with a deprecation warning. This functionality can now be accessed through the `hpx/unwrap.hpp` and `hpx/local/unwrap.hpp` headers.
- The default tag for APEX has been update from 2.3.1 to 2.4.0. In particular, this fixes a bug which could lead to hangs in distributed runs.
- The dependency on Boost.Asio has been replaced with the standalone Asio available at <https://github.com/chriskohlhoff/asio>. By default, a system-installed Asio will be used. `ASIO_ROOT` can be given as a hint to tell CMake where to find Asio. Alternatively, Asio can be fetched automatically using CMake's `fetchcontent` by setting `HPX_WITH_FETCH_ASIO=ON`. In general, dependencies on Boost have again been reduced.
- Modularization of the library has continued. In this release almost all functionality has been moved into modules. These changes do not generally affect user code. Warnings are still issued for headers that have moved.
- hipBLAS is now optional when compiling with `hipcc`. A warning instead of an error will be printed if hipBLAS is not found during configuration.
- Previously `HPX_COMPUTE_HOST_CODE` was defined in host code only if HPX was configured with CUDA or HIP. In this release `HPX_COMPUTE_HOST_CODE` is always defined in host code.
- An experimental `HPX_WITH_PRECOMPILED_HEADERS` CMake option has been added to use precompiled headers when building *HPX*. This option should not be used on Windows.
- Numerous bug fixes.

Breaking changes

- The minimum required CMake version is now 3.17.
- The minimum required Boost version is now 1.71.0.
- The customization mechanism used to implement and extend sender functionality and algorithms has been renamed from `tag_invoke` to `tag_dispatch`. All customization of sender functionality should be done by overloading `tag_dispatch`.
- The following compatibility options have been removed, along with their compatibility implementations:
 - `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`
 - `HPX_WITH_ACTION_BASE_COMPATIBILITY` - `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`
 - `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY` - `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`
 - `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`

```
HPX_WITH_REGISTER_THREAD_OVERLOADS_COMPATIBILITY
-                               HPX_WITH_THREAD_AWARE_TIMER_COMPATIBILITY
-                               HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY
HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY
```

- The `HPX_WITH_THREAD_SCHEDULERS` CMake option has been removed. All schedulers are now enabled when possible.
- `HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY` has been turned off by default.

HPX V1.6.0 (Feb 17, 2021)

General changes

This release continues the focus on C++20 conformance with multiple new algorithms adapted to be C++20 conformant and becoming customization point objects (CPOs). We have also added experimental support for HIP, allowing previous CUDA features to now be compiled with `hipcc` and run on AMD GPUs.

- The following algorithms have been adapted to be C++20 conformant: `adjacent_find`, `includes`, `inplace_merge`, `is_heap`, `is_heap_until`, `is_partitioned`, `is_sorted`, `is_sorted_until`, `merge`, `set_difference`, `set_intersection`, `set_symmetric_difference`, `set_union`.
- Experimental HIP support can be enabled by compiling *HPX* with `hipcc`. All CUDA functionality in *HPX* can now be used with HIP. The HIP functionality is for the time being exposed through the same API as the CUDA functionality, i.e. no changes are required in user code. The CUDA, and now HIP, functionality is in the `hpx::cuda` namespace.
- We have added `partial_sort` based on Francisco Tapia's implementation.
- `hpx::init` and `hpx::start` gained new overloads taking an `hpx::init_params` struct in 1.5.0. All overloads not taking an `hpx::init_params` are now deprecated.
- We have added an experimental `fork_join_executor`. This executor can be used for OpenMP-style fork-join parallelism, where the latency of a parallel region is important for performance.
- The `parallel_executor` now uses a hierarchical spawning scheme for bulk execution, which improves data locality and performance.
- `hpx::dataflow` can now be used with executors that inject additional parameters into the call of the user-provided function.
- We have added experimental support for properties as proposed in P2220³³³⁸. Currently the only supported property is the scheduling hint on `parallel_executor`.

³³³¹ <https://github.com/TheHPXProject/hpx/pull/5144>

³³³² <https://github.com/TheHPXProject/hpx/pull/5125>

³³³³ <https://github.com/TheHPXProject/hpx/pull/5117>

³³³⁴ <https://github.com/TheHPXProject/hpx/pull/5099>

³³³⁵ <https://github.com/TheHPXProject/hpx/pull/5092>

³³³⁶ <https://github.com/TheHPXProject/hpx/pull/5053>

³³³⁷ <https://github.com/TheHPXProject/hpx/pull/5044>

³³³⁸ <https://wg21.link/p2220>

- `hpx::util::annotated_function` can now be passed a dynamically generated `std::string`.
- In moving functionality to new namespaces, old names have been deprecated. A deprecation warning will be issued if you are using deprecated functionality, with instructions on how to correct or ignore the warning.
- We have removed all support for C and Fortran from our build system.
- We have further reduced the use of Boost types within *HPX* (`boost::system::error_code` and `boost::detail::spinlock`).
- We have enabled more warnings in our CI builds (unused variables and unused typedefs).

Breaking changes

- hpxMP support has been completely removed.
- The verbs `parcelport` has been removed.
- The following compatibility options have been disabled by default: `HPX_WITH_ACTION_BASE_COMPATIBILITY`, `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`, `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`, `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`, `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`, `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`, `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`, `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY`, `HPX_THREAD_AWARE_TIMER_COMPATIBILITY`, `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`. Unless noted here, the above functionalities do not come with replacements. Unscoped enumerations have been replaced by scoped enumerations. Previously deprecated unscoped enumerations are disabled by `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`. Newly deprecated unscoped enumerations have been given deprecation warnings and replaced by scoped enumerations. `hpx::promise` has been replaced with `hpx::distributed::promise`. `hpx::program_options` is a drop-in replacement for `boost::program_options`. `hpx::execution::parallel_executor` now has constructors which take a thread pool, covering the use case of `hpx::threads::executors::pool_executor`. A pool can be supplied with `hpx::resource::get_thread_pool`.

³³⁴⁴ <https://github.com/TheHPXProject/hpx/issues/5113>

³³⁴⁵ <https://github.com/TheHPXProject/hpx/issues/5112>

- Issue #5089³³⁴⁶ - Remove non-BSL files
- Issue #5088³³⁴⁷ - Unwrapping problem
- Issue #5087³³⁴⁸ - Remove hpxMP support
- Issue #5077³³⁴⁹ - PAPI counters are not accessible when HPX is installed
- Issue #5075³³⁵⁰ - Make the structs in all `iter_sent.hpp` lower case
- Issue #5067³³⁵¹ - Bug `string_util/split.hpp`
- Issue #5049³³⁵² - Change back the hipcc jenkins config to the fury partition on rostan
- Issue #5038³³⁵³ - Not all examples link in the latest HPX master
- Issue #5035³³⁵⁴ - Build with `HPX_WITH_EXAMPLES` fails
- Issue #5019³³⁵⁵ - Broken help string for hpx
- Issue #5016³³⁵⁶ - `hpx::parallel::fill` fails compiling
- Issue #5014³³⁵⁷ - Rename all `.cc` to `.cpp` and `.hh` to `.hpp`
- Issue #4988³³⁵⁸ - MPI is not finalized if running with only one locality
- Issue #4978³³⁵⁹ - Change feature test macros to expand to zero/one
- Issue #4949³³⁶⁰ - Crash when not enabling TCP parcelport
- Issue #4933³³⁶¹ - Improve test coverage for unused variable warnings etc.
- Issue #4878³³⁶² - HPX mpi async might call `MPI_FINALIZE` before app calls it
- Issue #4127³³⁶³ - Local runtime entry-points

Closed pull requests

- PR #5178³³⁶⁴ - Fix `parallel remove/remove_copy/transform` namespace references in docs
- PR #5169³³⁶⁵ - Attempt to get Piz Daint jenkins setup running after maintenance
- PR #5168³³⁶⁶ - Remove include of itself

- PR #5116³³⁸⁹ - Fix compilation with timer pool off
- PR #5114³³⁹⁰ - Fix 5112 - make sure libatomic is used when needed
- PR #5109³³⁹¹ - Remove default runtime mode argument from init overload, again
- PR #5108³³⁹² - Refactor `iter_sent.hpp` to make structs lowercase
- PR #5107³³⁹³ - Relax `dataflow` internals
- PR #5106³³⁹⁴ - Change initialization of property CPOs to satisfy older nvcc versions
- PR #5104³³⁹⁵ - Fix regeneration of two files that trigger unnecessary rebuilds
- PR #5103³³⁹⁶ - Remove default runtime mode argument from start/init overloads
- PR #5102³³⁹⁷ - Untie deprecated thread enums from the CMake option
- PR #5101³³⁹⁸ - Update APEX tag for 1.6.0
- PR #5100³³⁹⁹ - Bump minimum required Boost version to 1.66 and update CI configurations
- PR #5098³⁴⁰⁰ - Minor fixes to public API listing
- PR #5097³⁴⁰¹ - Remove `hpxMP` support
- PR #5096³⁴⁰² - Remove fractals examples
- PR #5095³⁴⁰³ - Use all AMD nodes again on rostam
- PR #5094³⁴⁰⁴ - Attempt to remove macOS workaround for GH actions environment
- PR #5093³⁴⁰⁵ - Remove verbs parcellport
- PR #5091³⁴⁰⁶ - Avoid moving from `lvalues`
- PR #5090³⁴⁰⁷ - Adopt C++20 `std::endian`
- PR #5085³⁴⁰⁸ - Update daint CI to use Boost 1.75.0
- PR #5084³⁴⁰⁹ - Disable compatibility options for 1.6.0 release
- PR #5083³⁴¹⁰ - Remove duplicated call to the `limiting_executor` in `future_overhead` test

- PR #5051³⁴³² - Adapt transform to C++20
- PR #5050³⁴³³ - Replace old init overloads in tests and examples
- PR #5048³⁴³⁴ - Limit jenkins hipcc to the reno node
- PR #5047³⁴³⁵ - Limit cuda jenkins run to nodes with exclusively Nvidia GPUs
- PR #5046³⁴³⁶ - Convert thread and future enums to class enums
- PR #5043³⁴³⁷ - Improve hpxrun.py for Phylanx
- PR #5042³⁴³⁸ - Add missing header to partial sort test
- PR #5041³⁴³⁹ - Adding Francisco Tapia's implementation of `partial_sort`
- PR #5040³⁴⁴⁰ - Remove generated headers left behind from a previous configuration
- PR #5039³⁴⁴¹ - Fix GCC 10 release builds
- PR #5037³⁴⁴² - Add `is_invocable` typedefs to top-level hpx namespace and public API list
- PR #5036³⁴⁴³ - Deprecate `hpx::util::decay` in favor of `std::decay`
- PR #5034³⁴⁴⁴ - Use versioned container image on CircleCI
- PR #5033³⁴⁴⁵ - Implement P2220 properties module
- PR #5032³⁴⁴⁶ - Do codespell comparison only on files changed from common ancestor
- PR #5031³⁴⁴⁷ - Moving traits files to `actions_base`
- PR #5030³⁴⁴⁸ - Add codespell version print in circleci
- PR #5029³⁴⁴⁹ - Work around problems in GitHub actions macOS builder
- PR #5028³⁴⁵⁰ - Moving move files to `naming` and `naming_base`
- PR #5027³⁴⁵¹ - Lessen constraints on certain algorithm arguments
- PR #5025³⁴⁵² - Adapt `is_sorted` and `is_sorted_until` to C++20
- PR #5024³⁴⁵³ - Moving `naming_base` to full modules
- PR #5022³⁴⁵⁴ - Remove C language from `CMakeLists.txt`

³⁴⁷⁶ <https://github.com/TheHPXProject/hpx/pull/4991>

- PR #4990³⁴⁷⁷ - Fixing some warnings from HPX complaining about use of obsolete types
- PR #4989³⁴⁷⁸ - add a `*destroy*` trait for `ParcelPort` plugins
- PR #4986³⁴⁷⁹ - Remove serialization to functional module dependency
- PR #4985³⁴⁸⁰ - Compatibility header generation
- PR #4980³⁴⁸¹ - Add ranges overloads to `for_loop` (and variants)
- PR #4979³⁴⁸² - Actually enable unity builds on Jenkins
- PR #4977³⁴⁸³ - Cleaning up `debug::print` functionalities
- PR #4976³⁴⁸⁴ - Remove indirection layer in `at_index_impl`
- PR #4975³⁴⁸⁵ - Remove indirection layer in `at_index_impl`
- PR #4973³⁴⁸⁶ - Avoid warnings/errors for older gcc complaining about multi-line comments
- PR #4970³⁴⁸⁷ - Making set algorithms conform to C++20
- PR #4969³⁴⁸⁸ - Moving `is_execution_policy` and friends into namespace `hpx`
- PR #4968³⁴⁸⁹ - Enable deprecation warnings for 1.6.0 and move any functionality to `hpx` namespace
- PR #4967³⁴⁹⁰ - Define deprecation macros conditionally
- PR #4966³⁴⁹¹ - Add `clang-format` and `cmake-format` version prints
- PR #4965³⁴⁹² - Making `is_heap` and `is_heap_until` conforming to C++20
- PR #4964³⁴⁹³ - Adding parallel `make_heap`
- PR #4962³⁴⁹⁴ - Fix external timer function pointer exports
- PR #4960³⁴⁹⁵ - Fixing folder names for module tests and examples
- PR #4959³⁴⁹⁶ - Adding communications set
- PR #4958³⁴⁹⁷ - Deprecate tuple and timing functionality in `hpx::util`
- PR #4957³⁴⁹⁸ - Fixing unity build option for `parcelports`

HPX V1.5.1 (Sep 30, 2020)

General changes

This is a patch release. It contains the following changes:

- Remove restriction on suspending runtime with multiple localities, users are now responsible for synchronizing work between localities before suspending.
- Fixes several compilation problems and warnings.
- Adds notes in the documentation explaining how to cite HPX.

HPX V1.5.0 (Sep 02, 2020)

General changes

The main focus of this release is on APIs and C++20 conformance. We have added many new C++20 features and adapted multiple algorithms to be fully C++20 conformant. As part of the modularization we have begun specifying the public API of *HPX* in terms of headers and functionality, and aligning it more closely to the C++ standard. All non-distributed modules are now in place, along with an experimental option to completely disable distributed features in *HPX*. We have also added experimental asynchronous MPI and CUDA executors. Lastly this release introduces CMake targets for depending projects, performance improvements, and many bug fixes.

³⁵²⁵ <https://github.com/TheHPXProject/hpx/pull/4941>

³⁵²⁶ <https://github.com/TheHPXProject/hpx/pull/4939>

- We have added the C++20 features `hpx::jthread` and `hpx::stop_token`. `hpx::condition_variable_any` now exposes new functions supporting `hpx::stop_token`.
- We have added `hpx::stable_sort` based on Francisco Tapia's implementation.
- We have adapted existing synchronization primitives to be fully conformant C++20: `hpx::barrier`, `hpx::latch`, `hpx::counting_semaphore`, and `hpx::binary_semaphore`.
- We have started using customization point objects (CPOs) to make the corresponding algorithms fully conformant to C++20 as well as to make algorithm extension easier for the user. `all_of/any_of/none_of`, `copy`, `count`, `destroy`, `equal`, `fill`, `find`, `for_each`, `generate`, `mismatch`, `move`, `reduce`, `transform_reduce` are using those CPOs (all in namespace `hpx`). We also have adapted their corresponding `hpx::ranges` versions to be conforming to C++20 in this release.
- We have adapted support for `co_await` to C++20, in addition to `hpx::future` it now also supports `hpx::shared_future`. We have also added allocator support for futures returned by `co_return`. It is no longer in the `experimental` namespace.
- We added serialization support for `std::variant` and `std::tuple`.
- `result_of` and `is_callable` are now deprecated and replaced by `invoke_result` and `is_invocable` to conform to C++20.
- We continued with the modularization, making it easier for us to add the new experimental `HPX_WITH_DISTRIBUTED_RUNTIME` CMake option (see below). A significant amount of headers have been deprecated. We adapted the namespaces and headers we could to be closer to the standard ones (*Public API*). Depending code should still compile, however warnings are now generated instructing to change the include statements accordingly.
- It is now possible to have a basic CUDA support including a helper function to get a future from a CUDA stream and target handling. They are available under the `hpx::cuda::experimental` namespace and they can be enabled with the `-DHPX_WITH_ASYNC_CUDA=ON` CMake option.
- We added a new `hpx::mpi::experimental` namespace for getting futures from an asynchronous MPI call and a new minimal MPI executor `hpx::mpi::experimental::executor`. These can be enabled with the `-DHPX_WITH_ASYNC_MPI=On` CMake option.
- A polymorphic executor has been implemented to reduce compile times as a function accepting executors can potentially be instantiated only once instead of multiple times with different executors. It accepts the function signature as a template argument. It needs to be constructed from any other executor. Please note, that the function signatures that can be scheduled using `then_execute`, `bulk_sync_execute`, `bulk_async_execute` and `bulk_then_execute` are slightly different (See the comment in [PR #4514](https://github.com/TheHPXProject/hpx/pull/4514)³⁵²⁷ for more details).
- The underlying executor of `block_executor` has been updated to a newer one.
- We have added a parameter to `auto_chunk_size` to control the amount of iterations to measure.
- All executor parameter hooks can now be exposed through the executor itself. This will allow to deprecate the `.with()` functionality on execution policies in the future. This is

³⁵²⁷ <https://github.com/TheHPXProject/hpx/pull/4514>

also a first step towards simplifying our executor APIs in preparation for the upcoming C++23 executors (senders/receivers).

- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`. Please note this is a breaking change without backwards-compatibility option. We have converted all of those APIs to be based on customization point objects. Two new executors have been added to enable easy integration of the existing resiliency features with other facilities (like the parallel algorithms): `replay_executor` and `replicate_executor`.
- We have added performance counters type information (aggregating, monotonically increasing, average count, average timer, etc.).
- HPX threads are now re-scheduled on the same worker thread they were suspended on to avoid cache misses from moving from one thread to the other. This behavior doesn't prevent the thread from being stolen, however.
- We have added a new configuration option `hpx.exception_verbosity` to allow to control the level of verbosity of the exceptions (3 levels available).
- `broadcast_to`, `broadcast_from`, `scatter_to` and `scatter_from` have been added to the collectives, modernization of `gather_here` and `gather_there` with futures taken by rvalue references. See the breaking change on `all_to_all` in the next section. None of the collectives need supporting macros anymore (e.g. specifying the data types used for a collective operation using `HPX_REGISTER_ALLGATHER` and similar is not needed anymore).
- New API functions have been added: a) to get the number of cores which are idle (`hpx::get_idle_core_count`) and b) returning a bitmask representing the currently idle cores (`hpx::get_idle_core_mask`).
- We have added an experimental option to only enable the local runtime, you can disable the distributed runtime with `HPX_WITH_DISTRIBUTED_RUNTIME=OFF`. You can also enable the local runtime by using the `--hpx:local` runtime option.
- We fixed task annotations for actions.
- The alias `hpx::promise` to `hpx::lcos::promise` is now deprecated. You can use `hpx::lcos::promise` directly instead. `hpx::promise` will refer to the local-only promise in the future.
- We have added a `prepare_checkpoint` API function that calculates the amount of necessary buffer space for a particular set of arguments checkpointed.
- We have added `hpx::upgrade_lock` and `hpx::upgrade_to_unique_lock`, which make `hpx::shared_mutex` (and similar) usable in more flexible ways.
- We have changed the CMake targets exposed to the user, it now includes `HPX:hpx`, `HPX:wrap_main` (int main as the first *HPX* thread of the application, see [Starting the HPX runtime](#)), `HPX:plugin`, `HPX:component`. The CMake variables `HPX_INCLUDE_DIRS` and `HPX_LIBRARIES` are deprecated and will be removed in a future release, you should now link directly to the `HPX:hpx` CMake target.
- A new example is demonstrating how to create and use a wrapping executor (`quickstart/executor_with_thread_hooks.cpp`)
- A new example is demonstrating how to disable thread stealing during the execution of parallel algorithms (`quickstart/disable_thread_stealing_executor.cpp`)
- We now require for our CMake build system configuration files to be formatted using `cmake-format`.

- We have removed more dependencies on various Boost libraries.
- We have added an experimental option enabling unity builds of HPX using the `-DHPX_WITH_UNITY_BUILD=On` CMake option.
- Many bug fixes.

Breaking changes

- *HPX* now requires a C++14 capable compiler. We have set the *HPX* C++ standard automatically to C++14 and if it needs to be set explicitly, it should be specified through the `CMAKE_CXX_STANDARD` setting as mandated by CMake. The `HPX_WITH_CXX*` variables are now deprecated and will be removed in the future.
- Building and using HPX is now supported only when using CMake V3.13 or later, Boost V1.64 or newer, and when compiling with clang V5, gcc V7, or VS2019, or later. Other compilers might still work but have not been tested thoroughly.
- We have added a `hpx::init_params` struct to pass parameters for *HPX* initialization e.g. the resource partitioner callback to initialize thread pools (*Using the resource partitioner*).
- The `all_to_all` algorithm is renamed to `all_gather`, and the new `all_to_all` algorithm is not compatible with the old one.
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`.

- PR #4896³⁶⁴⁷ - Making generate() and generate_n conforming to C++20
- PR #4895³⁶⁴⁸ - Update apex tag
- PR #4894³⁶⁴⁹ - Fix exception handling for tasks
- PR #4893³⁶⁵⁰ - Remove last use of std::result_of, removed in C++20
- PR #4892³⁶⁵¹ - Adding replay_executor and replicate_executor
- PR #4889³⁶⁵² - Restore old behaviour of not requiring linking to hpx_wrap when HPX_WITH_DYNAMIC_HP_X_MAIN=OFF
- PR #4887³⁶⁵³ - Making sure remotely thrown (non-hpx) exceptions are properly marshaled back to invocation site
- PR #4885³⁶⁵⁴ - Adapting hpx::find and friends to C++20
- PR #4884³⁶⁵⁵ - Adapting mismatch to C++20
- PR #4883³⁶⁵⁶ - Adapting hpx::equal to be conforming to C++20
- PR #4882³⁶⁵⁷ - Fixing exception handling for hpx::copy and adding missing tests
- PR #4881³⁶⁵⁸ - Adds different runtime exception when registering thread with the HPX runtime
- PR #4876³⁶⁵⁹ - Adding example demonstrating how to disable thread stealing during the execution of parallel algorithms
- PR #4874³⁶⁶⁰ - Adding non-policy tests to all_of, any_of, and none_of
- PR #4873³⁶⁶¹ - Set CUDA compute capability on rostam Jenkins builds
- PR #4872³⁶⁶² - Force partitioned vector scan tests to run serially
- PR #4870³⁶⁶³ - Making move conforming with C++20
- PR #4869³⁶⁶⁴ - Making destroy and destroy_n conforming to C++20
- PR #4868³⁶⁶⁵ - Fix miscellaneous header problems
- PR #4867³⁶⁶⁶ - Add CPOs for for_each
- PR #4865³⁶⁶⁷ - Adapting count and count_if to be conforming to C++20

- PR #4864³⁶⁶⁸ - Release notes 1.5.0
- PR #4863³⁶⁶⁹ - adding libcds-hpx tag to prepare for hpx1.5 release
- PR #4862³⁶⁷⁰ - Adding version specific deprecation options
- PR #4861³⁶⁷¹ - Limiting executor improvements
- PR #4860³⁶⁷² - Making fill and fill_n compatible with C++20
- PR #4859³⁶⁷³ - Adapting all_of, any_of, and none_of to C++20
- PR #4857³⁶⁷⁴ - Improve libCDS integration
- PR #4856³⁶⁷⁵ - Correct typos in the documentation of the hpx performance counters
- PR #4854³⁶⁷⁶ - Removing obsolete code
- PR #4853³⁶⁷⁷ - Adding test that derives component from two other components
- PR #4852³⁶⁷⁸ - Fix mpi_ring test in distributed mode by ensuring all ranks run hpx_main
- PR #4851³⁶⁷⁹ - Converting resiliency APIs to tag_invoke based CPOs
- PR #4849³⁶⁸⁰ - Enable use of future_overhead test when DISTRIBUTED_RUNTIME is OFF
- PR #4847³⁶⁸¹ - Fixing 'error prone' constructs as reported by Codacy
- PR #4846³⁶⁸² - Disable Boost.Asio concepts support
- PR #4845³⁶⁸³ - Fix PAPI counters
- PR #4843³⁶⁸⁴ - Remove dependency on various Boost headers
- PR #4841³⁶⁸⁵ - Rearrange public API headers
- PR #4840³⁶⁸⁶ - Fixing TSS problems during thread termination
- PR #4839³⁶⁸⁷ - Fix async_cuda build problems when distributed runtime is disabled
- PR #4837³⁶⁸⁸ - Restore compatibility for old (now deprecated) copy algorithms
- PR #4836³⁶⁸⁹ - Adding CPOs for hpx::reduce
- PR #4835³⁶⁹⁰ - Remove using util::result_of from namespace hpx

- [PR #4834³⁶⁹¹](#) - Fixing the calculation of the number of idle cores and the corresponding idle masks
- [PR #4833³⁶⁹²](#) - Allow thread function destructors to yield
- [PR #4832³⁶⁹³](#) - Fixing assertion in `split_gids` and memory leaks in `1d_stencil_7`
- [PR #4831³⁶⁹⁴](#) - Making sure `MPI_CXX_COMPILE_FLAGS` is interpreted as a sequence of options
- [PR #4830³⁶⁹⁵](#) - Update documentation on using `HPX::wrap_main`
- [PR #4827³⁶⁹⁶](#) - Update clang-newest configuration to use clang 10
- [PR #4826³⁶⁹⁷](#) - Add Jenkins configuration for rostam
- [PR #4825³⁶⁹⁸](#) - Move all CUDA functionality to `hpx::cuda::experimental` namespace
- [PR #4824³⁶⁹⁹](#) - Add support for building master/release branches to Jenkins configuration
- [PR #4821³⁷⁰⁰](#) - Implement customization point for `hpx::copy` and `hpx::ranges::copy`
- [PR #4819³⁷⁰¹](#) - Allow finding Boost components before finding HPX
- [PR #4817³⁷⁰²](#) - Adding range version of stable sort
- [PR #4815³⁷⁰³](#) - Fix a wrong `#ifdef` for IO/TIMER pools causing build errors
- [PR #4814³⁷⁰⁴](#) - Replace `hpx::function_nonsr` with `std::function` in error module
- [PR #4809³⁷⁰⁵](#) - Foreach adapt
- [PR #4808³⁷⁰⁶](#) - Make internal algorithms functions const
- [PR #4807³⁷⁰⁷](#) - Add Jenkins configuration for running on Piz Daint
- [PR #4806³⁷⁰⁸](#) - Update documentation links to new domain name
- [PR #4805³⁷⁰⁹](#) - Applying changes that resolve time complexity issues in sort
- [PR #4803³⁷¹⁰](#) - Adding implementation of `stable_sort`
- [PR #4802³⁷¹¹](#) - Fix `datapar` header paths
- [PR #4801³⁷¹²](#) - Replace `boost::shared_array<T>` with `std::shared_ptr<T[]>` if supported

- PR #4799³⁷¹³ - Fixing #include paths in compatibility headers
- PR #4798³⁷¹⁴ - Include the main module header (fixes partially #4488)
- PR #4797³⁷¹⁵ - Change cmake targets
- PR #4794³⁷¹⁶ - Removing 128bit integer emulation
- PR #4793³⁷¹⁷ - Make sure global variable is handled properly
- PR #4792³⁷¹⁸ - Replace enable_if with **HPX_CONCEPT_REQUIRES_** and add is_sentinel_for constraint
- PR #4790³⁷¹⁹ - Move deprecation warnings from base template to template specializations for result_of etc. structs
- PR #4789³⁷²⁰ - Fix hangs during assertion handling and distributed runtime construction
- PR #4788³⁷²¹ - Fixing inclusive transform scan algorithm to properly handle initial value
- PR #4785³⁷²² - Fixing barrier test
- PR #4784³⁷²³ - Fixing deleter argument bindings in serialize_buffer
- PR #4783³⁷²⁴ - Add coveralls badge
- PR #4782³⁷²⁵ - Make header tests parallel again
- PR #4780³⁷²⁶ - Remove outdated comment about hpx::stop in documentation
- PR #4776³⁷²⁷ - debug print improvements
- PR #4775³⁷²⁸ - Checkpoint cleanup
- PR #4771³⁷²⁹ - Fix compilation with HPX_WITH_NETWORKING=OFF
- PR #4767³⁷³⁰ - Remove all force linking leftovers
- PR #4765³⁷³¹ - Fix 1d stencil index calculation
- PR #4764³⁷³² - Force some tests to run serially
- PR #4762³⁷³³ - Update pointees in compatibility headers
- PR #4761³⁷³⁴ - Fix running and building of execution module tests on CircleCI

- PR #4017⁴⁰²⁵ - Require C++14

HPX V1.4.1 (Feb 12, 2020)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation issues on Windows, macOS, FreeBSD, and with gcc 10
- Install missing pdb files on Windows
- Allow running tests using an installed version of HPX
- Skip MPI finalization if HPX has not initialized MPI
- Give a hard error when attempting to use IO counters on Windows

Closed issues

- Issue #4320⁴⁰²⁶ - HPX 1.4.0 does not compile with gcc 10
- Issue #4336⁴⁰²⁷ - Building HPX 1.4.0 with IO Counters breaks (Windows)
- Issue #4334⁴⁰²⁸ - HPX Debug and RelWithDebinfo builds on Windows not installing .pdb files
- Issue #4322⁴⁰²⁹ - Undefine VT1 and VT2 after boost includes
- Issue #4314⁴⁰³⁰ - Compile error on 1.4.0
- Issue #4307⁴⁰³¹ - ld: error: duplicate symbol: freebsd_environ

HPX V1.4.0 (January 15, 2020)

General changes

- We have added the collectives `all_to_all` and `all_reduce`.
- We have added APIs for resiliency, which allows replication and replay for failed tasks. See the [documentation](#) for more details.
- Components can now be checkpointed.
- Performance improvements to schedulers and coroutines. A significant change is the addition of stackless coroutines. These are to be used for tasks that do not need to be suspended and can reduce overheads noticeably in applications with short tasks. A stackless coroutine can be created with the new stack size `thread_stacksize_nostack`.
- We have added an implementation of `unique_any`, which is a non-copyable version of `any`.
- The `shared_priority_queue_scheduler` has been improved. It now has lower overheads than the default scheduler in many situations. Unlike the default scheduler it fully supports NUMA scheduling hints. Enable it with the command line option `--hpx:queuing=shared-priority`. This scheduler should still be considered experimental, but its use is encouraged in real applications to help us make it production ready.
- We have added the performance counters `background-receive-duration` and `background-receive-overhead` for inspecting the time and overhead spent on receiving parcels in the background.
- Compilation time has been further improved when `HPX_WITH_NETWORKING=OFF`.
- We no longer require compiled Boost dependencies in certain configurations. This requires at least Boost 1.70, compiling on x86 with GCC 9, clang (libc++) 9, or VS2019 in C++17 mode. The dependency on `Boost.Filesystem` can explicitly be turned on with `HPX_FILESYSTEM_WITH_BOOST_FILESYSTEM_COMPATIBILITY=ON` (it is off by default if the standard library supports `std::filesystem`). `Boost.ProgramOptions` has been copied into the HPX repository. We have a compatibility layer for users who must explicitly use `Boost.ProgramOptions` instead of the `ProgramOptions` provided by HPX. To remove the dependency `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY` must be explicitly set to `OFF`. This option will be removed in a future release. We have also removed several other header-only dependencies on Boost.
- It is now possible to use the process affinity mask set by tools like `numactl` and various batch environments with the command line option `--hpx:use-process-mask`. Enabling this option implies `--hpx:ignore-batch-env`.
- It is now possible to create standalone thread pools without starting the runtime. See the `standalone_thread_pool_executor.cpp` test in the `execution` module for an example.

⁴⁰³⁸ <https://github.com/TheHPXProject/hpx/pull/4315>

⁴⁰³⁹ <https://github.com/TheHPXProject/hpx/pull/4310>

- Tasks annotated with `hpx::util::annotated_function` now have their correct name when using APEX to generate OTF2 files.
- Cloning of APEX was defective in previous releases (it required manual intervention to check out the correct tag or branch). This has been fixed.
- The option `HPX_WITH_MORE_THAN_64_THREADS` is now ignored and will be removed in a future release. The value is instead derived directly from `HPX_WITH_MAX_CPU_COUNT` option.
- We have deprecated compiling in C++11 mode. The next release will require a C++14 capable compiler.
- We have deprecated support for the Vc library. This option will be replaced with SIMD support from the standard library in a future release.
- We have significantly refactored our CMake setup. This is intended to be a non-breaking change and will allow for using HPX through CMake targets in the future.
- We have continued modularizing the HPX library. In the process we have rearranged many header files into module-specific directories. All moved headers have compatibility headers which forward from the old location to the new location, together with a deprecation warning. The compatibility headers will eventually be removed.
- We now enforce formatting with `clang-format` on the majority of our source files.
- We have added SPDX license tags to all files.
- Many bugfixes.

Breaking changes

- The `HPX_WITH_THREAD_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_UNWRAPPED_COMPATIBILITY` option and the associated compatibility layer has been removed.

HPX V1.3.0 (May 23, 2019)

General changes

- Performance improvements: the schedulers have significantly reduced overheads from removing false sharing and the parallel executor has been updated to create fewer futures.
- HPX now defaults to not turning on networking when running on one locality. This means that you can run multiple instances on the same system without adding command line options.
- Multiple issues reported by Clang sanitizers have been fixed.
- We have added (back) single-page HTML documentation and PDF documentation.
- We have started modularizing the HPX library. This is useful both for developers and users. In the long term users will be able to consume only parts of the HPX libraries if they do not require all the functionality that HPX currently provides.
- We have added an implementation of `function_ref`.
- The `barrier` and `latch` classes have gained a few additional member functions.

Breaking changes

- Executable and library targets are now created without the `_exe` and `_lib` suffix respectively. For example, the target `1d_stencil_1_exe` is now simply called `1d_stencil_1`.
- We have removed the following deprecated functionality: `queue`, `scoped_unlock`, and support for input iterators in algorithms.
- We have turned off the compatibility layer for `unwrapped` by default. The functionality will be removed in the next release. The option can still be turned on using the [CMake](#)⁴⁴⁰⁷ option `HPX_WITH_UNWRAPPED_SUPPORT`. Likewise, `inclusive_scan` compatibility overloads have been turned off by default. They can still be turned on with `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY`.
- The minimum compiler and dependency versions have been updated. We now support GCC from version 5 onwards, Clang from version 4 onwards, and Boost from version 1.61.0 onwards.

⁴⁴⁰² <https://github.com/TheHPXProject/hpx/pull/3799>

⁴⁴⁰³ <https://github.com/TheHPXProject/hpx/pull/3701>

⁴⁴⁰⁴ <https://github.com/TheHPXProject/hpx/pull/3496>

⁴⁴⁰⁵ <https://github.com/TheHPXProject/hpx/pull/3192>

⁴⁴⁰⁶ <https://github.com/TheHPXProject/hpx/pull/3159>

⁴⁴⁰⁷ <https://www.cmake.org>

- The headers for preprocessor macros have moved as a result of the functionality being moved to a separate module. The old headers are deprecated and will be removed in a future version of HPX. You can turn off the warnings by setting `HPX_PREPROCESSOR_WITH_DEPRECATION_WARNINGS=OFF` or turn off the compatibility headers completely with `HPX_PREPROCESSOR_WITH_COMPATIBILITY_HEADERS=OFF`.

- PR #3800⁴⁵¹⁰ - Attempt to fix Posix context switching after lazy init changes
- PR #3798⁴⁵¹¹ - count and count_if accepts different iterator types
- PR #3797⁴⁵¹² - Adding a couple of `override` keywords to overloaded virtual functions
- PR #3796⁴⁵¹³ - Re-enable testing all schedulers in `shutdown_suspended_test`
- PR #3795⁴⁵¹⁴ - Change `std::terminate` to `std::abort` in SIGSEGV handler
- PR #3794⁴⁵¹⁵ - Fixing #3792
- PR #3793⁴⁵¹⁶ - Extending `migrate_polymorphic_component` unit test
- PR #3791⁴⁵¹⁷ - Change `throw()` to `noexcept`
- PR #3790⁴⁵¹⁸ - Remove deprecated options for 1.3.0 release
- PR #3789⁴⁵¹⁹ - Remove Boost filesystem compatibility header
- PR #3788⁴⁵²⁰ - Disabled even more spots that should not execute if networking is disabled
- PR #3787⁴⁵²¹ - Bump minimal boost supported version to 1.61.0
- PR #3786⁴⁵²² - Bump minimum required versions for 1.3.0 release
- PR #3785⁴⁵²³ - Explicitly set number of jobs for all ninja invocations on CircleCI
- PR #3784⁴⁵²⁴ - Fix leak and address sanitizer problems
- PR #3783⁴⁵²⁵ - Disabled even more spots that should not execute is networking is disabled
- PR #3782⁴⁵²⁶ - Cherry-picked tuple and `thread_init_data` fixes from #3701
- PR #3781⁴⁵²⁷ - Fix generic context coroutines after lazy stack allocation changes
- PR #3780⁴⁵²⁸ - Rename hello world examples
- PR #3776⁴⁵²⁹ - Sort algorithms now use the supplied chunker to determine the required minimal chunk size
- PR #3775⁴⁵³⁰ - Disable Boost auto-linking
- PR #3774⁴⁵³¹ - Tag and push stable builds

- PR #3773⁴⁵³² - Enable migration of polymorphic components
- PR #3771⁴⁵³³ - Fix link to stackoverflow in documentation
- PR #3770⁴⁵³⁴ - Replacing constexpr if in brace-serialization code
- PR #3769⁴⁵³⁵ - Fix SIGSEGV handler
- PR #3768⁴⁵³⁶ - Adding flags to scheduler allowing to control thread stealing and idle back-off
- PR #3767⁴⁵³⁷ - Fix help formatting in hpxrun.py
- PR #3765⁴⁵³⁸ - Fix a couple of bugs in the thread test
- PR #3764⁴⁵³⁹ - Workaround for SFINAE regression in msvc14.2
- PR #3762⁴⁵⁴⁰ - Prevent MSVC from prematurely instantiating things
- PR #3761⁴⁵⁴¹ - Update python scripts to work with python 3
- PR #3760⁴⁵⁴² - Fix callable vtable for GCC4.9
- PR #3759⁴⁵⁴³ - Rename PAGE_SIZE to PAGE_SIZE_ because AppleClang
- PR #3755⁴⁵⁴⁴ - Making sure locks are not held during suspension
- PR #3754⁴⁵⁴⁵ - Disable more code if networking is not available/not enabled
- PR #3752⁴⁵⁴⁶ - Move util::format implementation to source file
- PR #3751⁴⁵⁴⁷ - Fixing problems with lcos::barrier and iostreams
- PR #3750⁴⁵⁴⁸ - Change error message to take into account use_guard_page setting
- PR #3749⁴⁵⁴⁹ - Fix lifetime problem in run_as_hpx_thread
- PR #3748⁴⁵⁵⁰ - Fixed unusable behavior of the clang code analyzer.
- PR #3747⁴⁵⁵¹ - Added PMIX_RANK to the defaults of HPX_WITH_PARCELPOR_T_MPI_ENV.
- PR #3745⁴⁵⁵² - Introduced cache_aligned_data and cache_line_data helper structure
- PR #3742⁴⁵⁵³ - Remove more unused functionality from util/logging

HPX V1.2.1 (Feb 19, 2019)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation on ARM, s390x and 32-bit architectures.
- Fix a critical bug in the `future` implementation.
- Fix several problems in the CMake configuration which affects external projects.

HPX V1.2.0 (Nov 12, 2018)

General changes

Here are some of the main highlights and changes for this release:

- Thanks to the work of our Google Summer of Code student, Nikunj Gupta, we now have a new implementation of `hpx_main.hpp` on supported platforms (Linux, BSD and MacOS). This is intended to be a less fragile drop-in replacement for the old implementation relying on preprocessor macros. The new implementation does not require changes if you are using the [CMake](https://www.cmake.org)⁴⁷⁰¹ or `pkg-config`. The old behaviour can be restored by setting `HPX_WITH_DYNAMIC_HPX_MAIN=OFF` during [CMake](https://www.cmake.org)⁴⁷⁰² configuration. The implementation on Windows is unchanged.
- We have added functionality to allow passing scheduling hints to our schedulers. These will allow us to create executors that for example target a specific NUMA domain or allow for *HPX* threads to be pinned to a particular worker thread.
- We have significantly improved the performance of our futures implementation by making the shared state atomic.
- We have replaced Boostbook by Sphinx for our documentation. This means the documentation is easier to navigate with built-in search and table of contents. We have also added a quick start section and restructured the documentation to be easier to follow for new users.
- We have added a new option to the `--hpx:threads` command line option. It is now possible to use `cores` to tell *HPX* to only use one worker thread per core, unlike the existing option `all` which uses one worker thread per processing unit (processing unit can be a hyperthread if hyperthreads are available). The default value of `--hpx:threads` has also been changed to `cores` as this leads to better performance in most cases.
- All command line options can now be passed alongside configuration options when initializing *HPX*. This means that some options that were previously only available on the command line can now be set as configuration options.
- HPXMP is a portable, scalable, and flexible application programming interface using the OpenMP specification that supports multi-platform shared memory multiprocessing programming in C and C++. HPXMP can be enabled within *HPX* by setting `DHPX_WITH_HPXM=ON` during [CMake](https://www.cmake.org)⁴⁷⁰³ configuration.
- Two new performance counters were added for measuring the time spent doing background work. `/threads/time/background-work-duration` returns the time spent doing background on a given thread or locality, while `/threads/time/background-overhead` returns the fraction of time spent doing background work with respect to the overall time spent running the scheduler. The new performance counters are disabled by default and can be turned on by setting `HPX_WITH_BACKGROUND_THREAD_COUNTERS=ON` during [CMake](https://www.cmake.org)⁴⁷⁰⁴ configuration.
- The idling behaviour of *HPX* has been tweaked to allow for faster idling. This is useful in interactive applications where the *HPX* worker threads may not have work all the time. This behaviour can be tweaked and turned off as before with `HPX_WITH_THREAD_MANAGER_IDLE_BACKOFF=OFF` during [CMake](https://www.cmake.org)⁴⁷⁰⁵ configuration.

⁴⁷⁰¹ <https://www.cmake.org>

⁴⁷⁰² <https://www.cmake.org>

⁴⁷⁰³ <https://www.cmake.org>

⁴⁷⁰⁴ <https://www.cmake.org>

⁴⁷⁰⁵ <https://www.cmake.org>

- It is now possible to register callback functions for *HPX* worker thread events. Callbacks can be registered for starting and stopping worker threads, and for when errors occur.

Breaking changes

- The implementation of `hpx_main.hpp` has changed. If you are using custom Makefiles you will need to make changes. Please see the documentation on *using Makefiles* for more details.
- The default value of `--hpx:threads` has changed from `all` to `cores`. The new option `cores` only starts one worker thread per core.
- We have dropped support for Boost 1.56 and 1.57. The minimal version of Boost we now test is 1.58.
- Our `boost::format`-based formatting implementation has been revised and replaced with a custom implementation. This changes the formatting syntax and requires changes if you are relying on `hpx::util::format` or `hpx::util::format_to`. The pull request for this change contains more information: [PR #3266](#)⁴⁷⁰⁶.
- The following deprecated options have now been completely removed: `HPX_WITH_ASYNC_FUNCTION_COMPATIBILITY`, `HPX_WITH_LOCAL_DATAFLOW`, `HPX_WITH_GENERIC_EXECUTION_POLICY`, `HPX_WITH_BOOST_CHRONO_COMPATIBILITY`, `HPX_WITH_EXECUTOR_COMPATIBILITY`, `HPX_WITH_EXECUTION_POLICY_COMPATIBILITY`, and `HPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY`.

- PR #3492⁴⁷⁸⁶ - Add CUDA_LINK_LIBRARIES_KEYWORD to allow PRIVATE keyword in linkage t...
- PR #3491⁴⁷⁸⁷ - Changing Base docker image
- PR #3490⁴⁷⁸⁸ - Don't create tasks immediately with hpx::apply
- PR #3489⁴⁷⁸⁹ - Remove deprecated options for 1.2.0
- PR #3488⁴⁷⁹⁰ - Revert "Use BUILD_INTERFACE generator expression to fix cmake flag exports"
- PR #3487⁴⁷⁹¹ - Revert "Fixing type attribute warning for transfer_action"
- PR #3485⁴⁷⁹² - Use BUILD_INTERFACE generator expression to fix cmake flag exports
- PR #3483⁴⁷⁹³ - Fixing type attribute warning for transfer_action
- PR #3481⁴⁷⁹⁴ - Remove unused variables
- PR #3480⁴⁷⁹⁵ - Towards a more lightweight transfer action
- PR #3479⁴⁷⁹⁶ - Fix FLAGS - Use correct version of target_compile_options
- PR #3478⁴⁷⁹⁷ - Making sure the application's exit code is properly propagated back to the OS
- PR #3476⁴⁷⁹⁸ - Don't print docker credentials as part of the environment.
- PR #3473⁴⁷⁹⁹ - Fixing invalid cmake code if no jemalloc prefix was given
- PR #3472⁴⁸⁰⁰ - Attempting to work around recent clang test compilation failures
- PR #3471⁴⁸⁰¹ - Enable jemalloc on windows
- PR #3470⁴⁸⁰² - Updates readme
- PR #3468⁴⁸⁰³ - Avoid hang if there is an exception thrown during startup
- PR #3467⁴⁸⁰⁴ - Add compiler specific fallback attributes if C++17 attribute is not available

- PR #3466⁴⁸⁰⁵ - - bugfix : fix compilation with llvm-7.0
- PR #3465⁴⁸⁰⁶ - This patch adds various optimizations extracted from the thread_local_allocator work
- PR #3464⁴⁸⁰⁷ - Check for forked repos in CircleCI docker push step
- PR #3463⁴⁸⁰⁸ - - cmake : create the parent directory before symlinking
- PR #3459⁴⁸⁰⁹ - Remove unused/incomplete functionality from util/logging
- PR #3458⁴⁸¹⁰ - Fix a problem with scope of CMAKE_CXX_FLAGS and hpx_add_compile_flag
- PR #3457⁴⁸¹¹ - Fixing more size_t -> int16_t (and similar) warnings
- PR #3456⁴⁸¹² - Add #ifdefs to topology.cpp to support old hwloc versions again
- PR #3454⁴⁸¹³ - Fixing warnings related to silent conversion of size_t -> int16_t
- PR #3451⁴⁸¹⁴ - Add examples as unit tests
- PR #3450⁴⁸¹⁵ - Constexpr-fying bind and other functional facilities
- PR #3446⁴⁸¹⁶ - Fix some thread suspension timeouts
- PR #3445⁴⁸¹⁷ - Fix various warnings
- PR #3443⁴⁸¹⁸ - Only enable service pool config options if pools are enabled
- PR #3441⁴⁸¹⁹ - Fix missing closing brackets in documentation
- PR #3439⁴⁸²⁰ - Use correct MPI CXX libraries for MPI parcelport
- PR #3436⁴⁸²¹ - Add projection function to find_* (and fix very bad bug)
- PR #3435⁴⁸²² - Fixing 1205
- PR #3434⁴⁸²³ - Fix threads cores
- PR #3433⁴⁸²⁴ - Add Heise Online to release announcement list
- PR #3432⁴⁸²⁵ - Don't track task dependencies for distributed runs
- PR #3431⁴⁸²⁶ - Circle CI setting changes for hpxMP

- PR #3430⁴⁸²⁷ - Fix unused params warning
- PR #3429⁴⁸²⁸ - One thread per core
- PR #3428⁴⁸²⁹ - This suppresses a deprecation warning that is being issued by MSVC 19.15.26726
- PR #3427⁴⁸³⁰ - Fixes #3426
- PR #3425⁴⁸³¹ - Use source cache and workspace between job steps on CircleCI
- PR #3421⁴⁸³² - Add CDash timing output to future overhead test (for graphs)
- PR #3420⁴⁸³³ - Add guided_pool_executor
- PR #3419⁴⁸³⁴ - Fix typo in CircleCI config
- PR #3418⁴⁸³⁵ - Add sphinx documentation
- PR #3415⁴⁸³⁶ - Scheduler NUMA hint and shared priority scheduler
- PR #3414⁴⁸³⁷ - Adding step to synchronize the APEX release
- PR #3413⁴⁸³⁸ - Fixing multiple defines of APEX_HAVE_HPX
- PR #3412⁴⁸³⁹ - Fixes linking with libhpx_wrap error with BSD and Windows based systems
- PR #3410⁴⁸⁴⁰ - Fix typo in CMakeLists.txt
- PR #3409⁴⁸⁴¹ - Fix brackets and indentation in existing_performance_counters.qbk
- PR #3407⁴⁸⁴² - Fix unused param and extra ; warnings emitted by gcc 8.x
- PR #3406⁴⁸⁴³ - Adding thread local allocator and use it for future shared states
- PR #3405⁴⁸⁴⁴ - Adding DHPX_HAVE_THREAD_LOCAL_STORAGE=ON to builds
- PR #3404⁴⁸⁴⁵ - fixing multiple definition of main() in linux
- PR #3402⁴⁸⁴⁶ - Allow debug option to be enabled only for Linux systems with dynamic main on
- PR #3401⁴⁸⁴⁷ - Fix cuda_future_helper.h when compiling with C++11
- PR #3400⁴⁸⁴⁸ - Fix floating point exception scheduler_base idle backoff

- PR #3398⁴⁸⁴⁹ - Atomic future state
- PR #3397⁴⁸⁵⁰ - Fixing code for older gcc versions
- PR #3396⁴⁸⁵¹ - Allowing to register thread event functions (start/stop/error)
- PR #3394⁴⁸⁵² - Fix small mistake in primary_namespace_server.cpp
- PR #3393⁴⁸⁵³ - Explicitly instantiate configured schedulers
- PR #3392⁴⁸⁵⁴ - Add performance counters background overhead and background work duration
- PR #3391⁴⁸⁵⁵ - Adapt integration of HPXMP to latest build system changes
- PR #3390⁴⁸⁵⁶ - Make AGAS measurements optional
- PR #3389⁴⁸⁵⁷ - Fix deadlock during shutdown
- PR #3388⁴⁸⁵⁸ - Add several functionalities allowing to optimize synchronous action invocation
- PR #3387⁴⁸⁵⁹ - Add cmake option to opt out of fail-compile tests
- PR #3386⁴⁸⁶⁰ - Adding support for boost::container::small_vector to dataflow
- PR #3385⁴⁸⁶¹ - Adds Debug option for hpx initializing from main
- PR #3384⁴⁸⁶² - This hopefully fixes two tests that occasionally fail
- PR #3383⁴⁸⁶³ - Making sure thread local storage is enable for hpxMP
- PR #3382⁴⁸⁶⁴ - Fix usage of HPX_CAPTURE together with default value capture [=]
- PR #3381⁴⁸⁶⁵ - Replace undefined instantiations of uniform_int_distribution
- PR #3380⁴⁸⁶⁶ - Add missing semicolons to uses of HPX_COMPILER_FENCE
- PR #3379⁴⁸⁶⁷ - Fixing #3378
- PR #3377⁴⁸⁶⁸ - Adding build system support to integrate hpxmp into hpx at the user's machine
- PR #3375⁴⁸⁶⁹ - Replacing wrapper for __libc_start_main with main

- [PR #3374⁴⁸⁷⁰](#) - Adds `hpx_wrap` to `HPX_LINK_LIBRARIES` which links only when specified.
- [PR #3373⁴⁸⁷¹](#) - Forcing cache settings in `HPXConfig.cmake` to guarantee updated values
- [PR #3372⁴⁸⁷²](#) - Fix some more c++11 build problems
- [PR #3371⁴⁸⁷³](#) - Adds `HPX_LINKER_FLAGS` to HPX applications without editing their source codes
- [PR #3370⁴⁸⁷⁴](#) - `util::format`: add `type_specifier<>` specializations for `%!s(MISSING)` and `%!(MISSING)s`
- [PR #3369⁴⁸⁷⁵](#) - Adding configuration option to allow explicit disable of the new `hpx_main` feature on Linux
- [PR #3368⁴⁸⁷⁶](#) - Updates doc with recent `hpx_wrap` implementation
- [PR #3367⁴⁸⁷⁷](#) - Adds Mac OS implementation to `hpx_main.hpp`
- [PR #3365⁴⁸⁷⁸](#) - Fix order of `hpx` libs in `HPX_CONF_LIBRARIES`.
- [PR #3363⁴⁸⁷⁹](#) - Apex fixing null wrapper
- [PR #3361⁴⁸⁸⁰](#) - Making sure all parcels get destroyed on an HPX thread (TCP pp)
- [PR #3359⁴⁸⁸¹](#) - Feature/improve error for compiler
- [PR #3357⁴⁸⁸²](#) - Static/dynamic executable implementation
- [PR #3355⁴⁸⁸³](#) - Reverting changes introduced by #3283 as those make applications hang
- [PR #3354⁴⁸⁸⁴](#) - Add external dependencies to `HPX_LIBRARY_DIR`
- [PR #3353⁴⁸⁸⁵](#) - Fix `libfabric tcp`
- [PR #3351⁴⁸⁸⁶](#) - Move obsolete header to tests directory.
- [PR #3350⁴⁸⁸⁷](#) - Renaming two functions to avoid problem described in #3285
- [PR #3349⁴⁸⁸⁸](#) - Make idle backoff exponential with maximum sleep time
- [PR #3347⁴⁸⁸⁹](#) - Replace `simple_component*` with `component*` in the Documentation
- [PR #3346⁴⁸⁹⁰](#) - Fix `CMakeLists.txt` example in quick start

- PR #3345⁴⁸⁹¹ - Fix automatic setting of HPX_MORE_THAN_64_THREADS
- PR #3344⁴⁸⁹² - Reduce amount of information printed for unknown command line options
- PR #3343⁴⁸⁹³ - Safeguard HPX against destruction in global contexts
- PR #3341⁴⁸⁹⁴ - Allowing for all command line options to be used as configuration settings
- PR #3340⁴⁸⁹⁵ - Always convert inspect results to JUnit XML
- PR #3336⁴⁸⁹⁶ - Only run docker push on master on CircleCI
- PR #3335⁴⁸⁹⁷ - Update description of hpx.os_threads config parameter.
- PR #3334⁴⁸⁹⁸ - Making sure early logging settings don't get mixed with others
- PR #3333⁴⁸⁹⁹ - Update CMake links and versions in documentation
- PR #3332⁴⁹⁰⁰ - Add notes on target suffixes to CMake documentation
- PR #3331⁴⁹⁰¹ - Add quickstart section to documentation
- PR #3330⁴⁹⁰² - Rename resource_partitioner test to avoid conflicts with pseudodependencies
- PR #3328⁴⁹⁰³ - Making sure object is pinned while executing actions, even if action returns a future
- PR #3327⁴⁹⁰⁴ - Add missing std::forward to tuple.hpp
- PR #3326⁴⁹⁰⁵ - Make sure logging is up and running while modules are being discovered.
- PR #3324⁴⁹⁰⁶ - Replace C++14 overload of std::equal with C++11 code.
- PR #3323⁴⁹⁰⁷ - Fix a missing apex thread data (wrapper) initialization
- PR #3320⁴⁹⁰⁸ - Adding support for -std=c++2a (define *HPX_WITH_CXX2A=On*)
- PR #3319⁴⁹⁰⁹ - Replacing C++14 feature with equivalent C++11 code
- PR #3317⁴⁹¹⁰ - Fix compilation with VS 15.7.1 and /std:c++latest
- PR #3316⁴⁹¹¹ - Fix includes for 1d_stencil_*_omp examples

⁴⁹¹¹ <https://github.com/TheHPXProject/hpx/pull/3316>

- PR #3314⁴⁹¹² - Remove some unused parameter warnings
- PR #3313⁴⁹¹³ - Fix pu-step and pu-offset command line options
- PR #3312⁴⁹¹⁴ - Add conversion of inspect reports to JUnit XML
- PR #3311⁴⁹¹⁵ - Fix escaping of closing braces in format specification syntax
- PR #3310⁴⁹¹⁶ - Don't overwrite user settings with defaults in registration database
- PR #3309⁴⁹¹⁷ - Fixing potential stack overflow for dataflow
- PR #3308⁴⁹¹⁸ - This updates the .clang-format configuration file to utilize newer features
- PR #3306⁴⁹¹⁹ - Marking migratable objects in their gid to allow not handling migration in AGAS
- PR #3305⁴⁹²⁰ - Add proper exception handling to run_as_hpx_thread
- PR #3303⁴⁹²¹ - Changed std::rand to a better inbuilt PRNG Generator
- PR #3302⁴⁹²² - All non-migratable (simple) components now encode their lva and component type in their gid
- PR #3301⁴⁹²³ - Add nullptr_t overloads to resource partitioner
- PR #3298⁴⁹²⁴ - Apex task wrapper memory bug
- PR #3295⁴⁹²⁵ - Fix mistakes after merge of CircleCI config
- PR #3294⁴⁹²⁶ - Fix partitioned vector include in partitioned_vector_find tests
- PR #3293⁴⁹²⁷ - Adding emplace support to promise and make_ready_future
- PR #3292⁴⁹²⁸ - Add new cuda kernel synchronization with hpx::future demo
- PR #3291⁴⁹²⁹ - Fixes #3290
- PR #3289⁴⁹³⁰ - Fixing Docker image creation
- PR #3288⁴⁹³¹ - Avoid allocating shared state for wait_all
- PR #3287⁴⁹³² - Fixing /scheduler/utilization/instantaneous performance counter
- PR #3286⁴⁹³³ - dataflow() and future::then() use sync policy where possible

HPX V1.1.0 (Mar 24, 2018)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- We have changed the way *HPX* manages the processing units on a node. We do not longer implicitly bind all available cores to a single thread pool. The user has now full control over what processing units are bound to what thread pool, each with a separate scheduler. It is now also possible to create your own scheduler implementation and control what processing units this scheduler should use. We added the `hpx::resource::partitioner` that manages all available processing units and assigns resources to the used thread pools. Thread pools can now be suspended/resumed independently. This functionality helps in running *HPX* concurrently to code that is directly relying on [OpenMP](#)⁴⁹⁶³ and/or [MPI](#)⁴⁹⁶⁴.
- We have continued to implement various parallel algorithms. *HPX* now almost completely implements all of the parallel algorithms as specified by the [C++17 Standard](#)⁴⁹⁶⁵. We have also continued to implement these algorithms for the distributed use case (for segmented data structures, such as `hpx::partitioned_vector`).
- Added a compatibility layer for `std::thread`, `std::mutex`, and `std::condition_variable` allowing for the code to use those facilities where available and to fall back to the corresponding Boost facilities otherwise. The [CMake](#)⁴⁹⁶⁶ configuration option `-DHPX_WITH_THREAD_COMPATIBILITY=On` can be used to force using the Boost equivalents.
- The parameter sequence for the `hpx::parallel::transform_inclusive_scan` overload taking one iterator range has changed (again) to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to [CMake](#)⁴⁹⁶⁷.

⁴⁹⁶⁵ <http://www.open-std.org/jtc1/sc22/wg21>

⁴⁹⁶⁶ <https://www.cmake.org>

⁴⁹⁶⁷ <https://www.cmake.org>

- The parameter sequence for the `hpx::parallel::inclusive_scan` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY=On` to CMake.
- Added a helper facility `hpx::local_new` which is equivalent to `hpx::new_` except that it creates components locally only. As a consequence, the used component constructor may accept non-serializable argument types and/or non-const references or pointers.
- Removed the (broken) component type `hpx::lcos::queue<T>`. The old type is still available at configure time by passing `-DHPX_WITH_QUEUE_COMPATIBILITY=On` to CMake.
- The parallel algorithms adopted for C++17 restrict the iterator categories usable with those to at least forward iterators. Our implementation of the parallel algorithms was supporting input iterators (and output iterators) as well by simply falling back to sequential execution. We have now made our implementations conforming by requiring at least forward iterators. In order to enable the old behavior use the compatibility option `-DHPX_WITH_ALGORITHM_INPUT_ITERATOR_SUPPORT=On` on the CMake⁴⁹⁶⁸ command line.
- We have added the functionalities allowing for LCOs being implemented using (simple) components. Before LCOs had to always be implemented using managed components.
- User defined components don't have to be default-constructible anymore. Return types from actions don't have to be default-constructible anymore either. Our serialization layer now in general supports non-default-constructible types.
- We have added a new launch policy `hpx::launch::lazy` that allows one to defer the decision on what launch policy to use to the point of execution. This policy is initialized with a function (object) that – when invoked – is expected to produce the desired launch policy.

Breaking changes

- We have dropped support for the gcc compiler version V4.8. The minimal gcc version we now test on is gcc V4.9. The minimally required version of CMake⁴⁹⁶⁹ is now V3.3.2.
- We have dropped support for the Visual Studio 2013 compiler version. The minimal Visual Studio version we now test on is Visual Studio 2015.5.
- We have dropped support for the Boost V1.51-V1.54. The minimal version of Boost we now test is Boost V1.55.
- We have dropped support for the `hpx::util::unwrapped` API. `hpx::util::unwrapped` will stay functional to some degree, until it finally gets removed in a later version of HPX. The functional usage of `hpx::util::unwrapped` should be changed to the new `hpx::util::unwrapping` function whereas the immediate usage should be replaced to `hpx::util::unwrap`.
- The performance counter names referring to properties as exposed by the threading subsystem have changes as those now additionally have to specify the thread-pool. See the corresponding documentation for more details.
- The overloads of `hpx::async` that invoke an action do not perform implicit unwrapping of the returned future anymore in case the invoked function does return a future in the

⁴⁹⁶⁸ <https://www.cmake.org>

⁴⁹⁶⁹ <https://www.cmake.org>

first place. In this case `hpx::async` now returns a `hpx::future<future<T>>` making its behavior conforming to its local counterpart.

- We have replaced the use of `boost::exception_ptr` in our APIs with the equivalent `std::exception_ptr`. Please change your codes accordingly. No compatibility settings are provided.
- We have removed the compatibility settings for `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` as their life-cycle has reached its end.
- We have removed the experimental thread schedulers `hierarchy_scheduler`, `periodic_priority_scheduler` and `throttling_scheduler` in an effort to clean up and consolidate our thread schedulers.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #3250⁴⁹⁷⁰](#) - Apex refactoring with guides
- [PR #3249⁴⁹⁷¹](#) - Updating People.qbk

HPX V1.0.0 (Apr 24, 2017)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- Added the facility `hpx::split_future` which allows one to convert a `future<tuple<Ts...>>` into a `tuple<future<Ts>...>`. This functionality is not available when compiling *HPX* with VS2012.
- Added a new type of performance counter which allows one to return a list of values for each invocation. We also added a first counter of this type which collects a histogram of the times between parcels being created.
- Added new LCOs: `hpx::lcos::channel` and `hpx::lcos::local::channel` which are very similar to the well known channel constructs used in the Go language.
- Added new performance counters reporting the amount of data handled by the networking layer on a action-by-action basis (please see [PR #2289](#)⁵⁵⁷⁹ for more details).
- Added a new facility `hpx::lcos::barrier`, replacing the equally named older one. The new facility has a slightly changed API and is much more efficient. Most notable, the new facility exposes a (global) function `hpx::lcos::barrier::synchronize()` which represents a global barrier across all localities.
- We have started to add support for vectorization to our parallel algorithm implementations. This support depends on using an external library, currently either Vc Library or [|boost_simd|](#). Please see [Issue #2333](#)⁵⁵⁸⁰ for a list of currently supported algorithms. This is an experimental feature and its implementation and/or API might change in the future. Please see this [blog-post](#)⁵⁵⁸¹ for more information.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overload can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17. The old `inner_product` names can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- Added versions of `hpx::get_ptr` taking client side representations for component instances as their parameter (instead of a global id).
- Added the helper utility `hpx::performance_counters::performance_counter_set` helping to encapsulate a set of performance counters to be managed concurrently.
- All execution policies and related classes have been renamed to be consistent with the naming changes applied for C++17. All policies now live in the namespace `hpx::parallel::execution`. The old names can be still enabled at configure time by specifying `-DHPX_WITH_EXECUTION_POLICY_COMPATIBILITY=On` to CMake.
- The thread scheduling subsystem has undergone a major refactoring which results in significant performance improvements. We have also improved the performance of creating `hpx::future` and of various facilities handling those.

⁵⁵⁷⁹ <https://github.com/TheHPXProject/hpx/pull/2289>

⁵⁵⁸⁰ <https://github.com/TheHPXProject/hpx/issues/2333>

⁵⁵⁸¹ <http://stellar-group.org/2016/09/vectorized-cpp-parallel-algorithms-with-hpx/>

- We have consolidated all of the code in `HPX.Compute` related to the integration of CUDA. `hpx::partitioned_vector` has been enabled to be usable with `hpx::compute::vector` which allows one to place the partitions on one or more GPU devices.
- Added new performance counters exposing various internals of the thread scheduling subsystem, such as the current idle- and busy-loop counters and instantaneous scheduler utilization.
- Extended and improved the use of the `ITTNotify` hooks allowing to collect performance counter data and function annotation information from within the Intel Amplifier tool.

Breaking changes

- We have dropped support for the gcc compiler versions V4.6 and 4.7. The minimal gcc version we now test on is gcc V4.8.
- We have removed (default) support for `boost::chrono` in interfaces, uses of it have been replaced with `std::chrono`. This facility can be still enabled at configure time by specifying `-DHPX_WITH_BOOST_CHRONO_COMPATIBILITY=On` to CMake.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17.
- the build options `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` are now disabled by default. Please change your code still depending on the deprecated interfaces.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2596](#)⁵⁵⁸² - Adding apex data
- [PR #2595](#)⁵⁵⁸³ - Remove obsolete file
- [Issue #2594](#)⁵⁵⁸⁴ - FindOpenCL.cmake mismatch with the official cmake module
- [PR #2592](#)⁵⁵⁸⁵ - First attempt to introduce `spmd_block` in `hpx`
- [Issue #2591](#)⁵⁵⁸⁶ - Feature request: continuation (then) which does not require the callable object to take a `future<R>` as parameter
- [PR #2588](#)⁵⁵⁸⁷ - Daint fixes
- [PR #2587](#)⁵⁵⁸⁸ - Fixing `transfer_(continuation)_action::schedule`

- PR #2508⁵⁶⁵⁵ - Added documentation for debugging with core files
- PR #2506⁵⁶⁵⁶ - Fixing background work invocations
- PR #2505⁵⁶⁵⁷ - Fix tuple serialization
- Issue #2504⁵⁶⁵⁸ - Ensure continuations are called in the order they have been attached
- PR #2503⁵⁶⁵⁹ - Adding serialization support for Vc v2 (datapar)
- PR #2502⁵⁶⁶⁰ - Resolve various, minor compiler warnings
- PR #2501⁵⁶⁶¹ - Some other fixes around cuda examples
- Issue #2500⁵⁶⁶² - nvcc / cuda clang issue due to a missing -DHPX_WITH_CUDA flag
- PR #2499⁵⁶⁶³ - Adding support for std::array to wait_all and friends
- PR #2498⁵⁶⁶⁴ - Execute background work as HPX thread
- PR #2497⁵⁶⁶⁵ - Fixing configuration options for spinlock-deadlock detection
- PR #2496⁵⁶⁶⁶ - Accounting for different compilers in CrayKNL toolchain file
- PR #2494⁵⁶⁶⁷ - Adding component base class which ties a component instance to a given executor
- PR #2493⁵⁶⁶⁸ - Enable controlling amount of pending threads which must be available to allow thread stealing
- PR #2492⁵⁶⁶⁹ - Adding new command line option -hpx:print-counter-reset
- PR #2491⁵⁶⁷⁰ - Resolve ambiguities when compiling with APEX
- PR #2490⁵⁶⁷¹ - Resuming threads waiting on future with higher priority
- Issue #2489⁵⁶⁷² - nvcc issue because -std=c++11 appears twice
- PR #2488⁵⁶⁷³ - Adding performance counters exposing the internal idle and busy-loop counters
- PR #2487⁵⁶⁷⁴ - Allowing for plain suspend to reschedule thread right away
- PR #2486⁵⁶⁷⁵ - Only flag HPX code for CUDA if HPX_WITH_CUDA is set
- PR #2485⁵⁶⁷⁶ - Making thread-queue parameters runtime-configurable

HPX V0.9.99 (Jul 15, 2016)

General changes

As the version number of this release hints, we consider this release to be a preview for the upcoming *HPX* V1.0. All of the functionalities we set out to implement for V1.0 are in place; all of the features we wanted to have exposed are ready. We are very happy with the stability and performance of *HPX* and we would like to present this release to the community in order for us to gather broad feedback before releasing V1.0. We still expect for some minor details to change, but on the whole this release represents what we would like to have in a V1.0.

Overall, since the last release we have had almost 1600 commits while closing almost 400 tickets. These numbers reflect the incredible development activity we have seen over the last couple of months. We would like to express a big ‘Thank you!’ to all contributors and those who helped to make this release happen.

The most notable addition in terms of new functionality available with this release is the full implementation of object migration (i.e. the ability to transparently move *HPX* components to a different compute node). Additionally, this release of *HPX* cleans up many minor issues and some API inconsistencies.

Here are some of the main highlights and changes for this release (in no particular order):

- We have fixed a couple of issues in AGAS and the parcel layer which have caused hangs, segmentation faults at exit, and a slowdown of applications over time. Fixing those has significantly increased the overall stability and performance of distributed runs.
- We have started to add parallel algorithm overloads based on the C++ Extensions for Ranges ([N4560⁵⁹⁰⁵](#)) proposal. This also includes the addition of projections to the existing algorithms. Please see [Issue #1668⁵⁹⁰⁶](#) for a list of algorithms which have been adapted to [N4560⁵⁹⁰⁷](#).
- We have implemented index-based parallel for-loops based on a corresponding standardization proposal ([P0075R1⁵⁹⁰⁸](#)). Please see [Issue #2016⁵⁹⁰⁹](#) for a list of available algorithms.

⁵⁹⁰⁷ <http://wg21.link/n4560>

⁵⁹⁰⁸ <http://wg21.link/p0075r1>

⁵⁹⁰⁹ <https://github.com/TheHPXProject/hpx/issues/2016>

- We have added implementations for more parallel algorithms as proposed for the upcoming C++ 17 Standard. See [Issue #1141](#)⁵⁹¹⁰ for an overview of which algorithms are available by now.
- We have started to implement a new prototypical functionality with *HPX.Compute* which uniformly exposes some of the higher level APIs to heterogeneous architectures (currently CUDA). This functionality is an early preview and should not be considered stable. It may change considerably in the future.
- We have pervasively added (optional) executor arguments to all API functions which schedule new work. Executors are now used throughout the code base as the main means of executing tasks.
- Added `hpx::make_future<R>(future<T> &&)` allowing to convert a future of any type `T` into a future of any other type `R`, either based on default conversion rules of the embedded types or using a given explicit conversion function.
- We finally finished the implementation of transparent migration of components to another locality. It is now possible to trigger a migration operation without ‘stopping the world’ for the object to migrate. *HPX* will make sure that no work is being performed on an object before it is migrated and that all subsequently scheduled work for the migrated object will be transparently forwarded to the new locality. Please note that the global id of the migrated object does not change, thus the application will not have to be changed in any way to support this new functionality. Please note that this feature is currently considered experimental. See [Issue #559](#)⁵⁹¹¹ and [PR #1966](#)⁵⁹¹² for more details.
- The `hpx::dataflow` facility is now usable with actions. Similarly to `hpx::async`, actions can be specified as an explicit template argument (`hpx::dataflow<Action>(target, ...)`) or as the first argument (`hpx::dataflow(Action(), target, ...)`). We have also enabled the use of distribution policies as the target for dataflow invocations. Please see [Issue #1265](#)⁵⁹¹³ and [PR #1912](#)⁵⁹¹⁴ for more information.
- Adding overloads of `gather_here` and `gather_there` to accept the plain values of the data to gather (in addition to the existing overloads expecting futures).
- We have cleaned up and refactored large parts of the code base. This helped reducing compile and link times of *HPX* itself and also of applications depending on it. We have further decreased the dependency of *HPX* on the Boost libraries by replacing part of those with facilities available from the standard libraries.
- Wherever possible we have removed dependencies of our API on Boost by replacing those with the equivalent facility from the C++11 standard library.
- We have added new performance counters for parcel coalescing, file-IO, the AGAS cache, and overall scheduler time. Resetting performance counters has been overhauled and fixed.
- We have introduced a generic client type `hpx::components::client<>` and added support for using it with `hpx::async`. This removes the necessity to implement specific client types for every component type without losing type safety. This deemphasizes the need for using the low level `hpx::id_type` for referencing (possibly remote) component instances. The plan is to deprecate the direct use of `hpx::id_type` in user code in the future.

⁵⁹¹⁰ <https://github.com/TheHPXProject/hpx/issues/1141>

⁵⁹¹¹ <https://github.com/TheHPXProject/hpx/issues/559>

⁵⁹¹² <https://github.com/TheHPXProject/hpx/pull/1966>

⁵⁹¹³ <https://github.com/TheHPXProject/hpx/issues/1265>

⁵⁹¹⁴ <https://github.com/TheHPXProject/hpx/pull/1912>

- We have added a special iterator which supports automatic prefetching of one or more arrays for speeding up loop-like code (see `hpx::parallel::util::make_prefetcher_context()`).
- We have extended the interfaces exposed from executors (as proposed by N4406⁵⁹¹⁵) to accept an arbitrary number of arguments.

Breaking changes

- In order to move the dataflow facility to namespace `hpx` we added a definition of `hpx::dataflow` which might create ambiguities in existing codes. The previous definition of this facility (`hpx::lcos::local::dataflow`) has been deprecated and is available only if the constant `-DHPX_WITH_LOCAL_DATAFLOW_COMPATIBILITY=On` to CMake⁵⁹¹⁶ is defined at configuration time. Please explicitly qualify all uses of the dataflow facility if you enable this compatibility setting and encounter ambiguities.
- The adaptation of the C++ Extensions for Ranges (N4560⁵⁹¹⁷) proposal imposes some breaking changes related to the return types of some of the parallel algorithms. Please see Issue #1668⁵⁹¹⁸ for a list of algorithms which have already been adapted.
- The facility `hpx::lcos::make_future_void()` has been replaced by `hpx::make_future<void>()`.
- We have removed support for Intel V13 and gcc 4.4.x.
- We have removed (default) support for the generic `hpx::parallel::execution_policy` because it was removed from the Parallelism TS (`__cpp11_n4104__`) while it was being added to the upcoming C++17 Standard. This facility can be still enabled at configure time by specifying `-DHPX_WITH_GENERIC_EXECUTION_POLICY=On` to CMake.
- Uses of `boost::shared_ptr` and related facilities have been replaced with `std::shared_ptr` and friends. Uses of `boost::unique_lock`, `boost::lock_guard` etc. have also been replaced by the equivalent (and equally named) tools available from the C++11 standard library.
- Facilities that used to expect an explicit `boost::unique_lock` now take an `std::unique_lock`. Additionally, `condition_variable` no longer aliases `condition_variable_any`; its interface now only works with `std::unique_lock<local::mutex>`.
- Uses of `boost::function`, `boost::bind`, `boost::tuple` have been replaced by the corresponding facilities in *HPX* (`hpx::util::function`, `hpx::util::bind`, and `hpx::util::tuple`, respectively).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- PR #2250⁵⁹¹⁹ - change default chunker of parallel executor to static one
- PR #2247⁵⁹²⁰ - HPX on ppc64le
- PR #2244⁵⁹²¹ - Fixing MSVC problems
- PR #2238⁵⁹²² - Fixing small typos
- PR #2237⁵⁹²³ - Fixing small typos
- PR #2234⁵⁹²⁴ - Fix broken add test macro when extra args are passed in
- PR #2231⁵⁹²⁵ - Fixing possible race during future awaiting in serialization
- PR #2230⁵⁹²⁶ - Fix stream nvcc
- PR #2229⁵⁹²⁷ - Fixed run_as_hpx_thread
- PR #2228⁵⁹²⁸ - On prefetching_test branch : adding prefetching_iterator and related tests used for prefetching containers within lambda functions
- PR #2227⁵⁹²⁹ - Support for HPXCL's opencil::event
- PR #2226⁵⁹³⁰ - Preparing for release of V0.9.99
- PR #2225⁵⁹³¹ - fix issue when compiling components with hpxcxx
- PR #2224⁵⁹³² - Compute alloc fix
- PR #2223⁵⁹³³ - Simplify promise
- PR #2222⁵⁹³⁴ - Replace last uses of boost::function by util::function_nonsr
- PR #2221⁵⁹³⁵ - Fix config tests
- PR #2220⁵⁹³⁶ - Fixing gcc 4.6 compilation issues
- PR #2219⁵⁹³⁷ - nullptr support for [unique_]function
- PR #2218⁵⁹³⁸ - Introducing clang tidy
- PR #2216⁵⁹³⁹ - Replace NULL with nullptr

- Issue #2214⁵⁹⁴⁰ - Let inspect flag use of NULL, suggest nullptr instead
- PR #2213⁵⁹⁴¹ - Require support for nullptr
- PR #2212⁵⁹⁴² - Properly find jemalloc through pkg-config
- PR #2211⁵⁹⁴³ - Disable a couple of warnings reported by Intel on Windows
- PR #2210⁵⁹⁴⁴ - Fixed host::block_allocator::bulk_construct
- PR #2209⁵⁹⁴⁵ - Started to clean up new sort algorithms, made things compile for sort_by_key
- PR #2208⁵⁹⁴⁶ - A couple of fixes that were exposed by a new sort algorithm
- PR #2207⁵⁹⁴⁷ - Adding missing includes in /hpx/include/serialization.hpp
- PR #2206⁵⁹⁴⁸ - Call package_action::get_future before package_action::apply
- PR #2205⁵⁹⁴⁹ - The indirect_packaged_task::operator() needs to be run on a HPX thread
- PR #2204⁵⁹⁵⁰ - Variadic executor parameters
- PR #2203⁵⁹⁵¹ - Delay-initialize members of partitioned iterator
- PR #2202⁵⁹⁵² - Added segmented fill for hpx::vector
- Issue #2201⁵⁹⁵³ - Null Thread id encountered on partitioned_vector
- PR #2200⁵⁹⁵⁴ - Fix hangs
- PR #2199⁵⁹⁵⁵ - Deprecating hpx/traits.hpp
- PR #2198⁵⁹⁵⁶ - Making explicit inclusion of external libraries into build
- PR #2197⁵⁹⁵⁷ - Fix typo in QT CMakeLists
- PR #2196⁵⁹⁵⁸ - Fixing a gcc warning about attributes being ignored
- PR #2194⁵⁹⁵⁹ - Fixing partitioned_vector_spmf foreach example
- Issue #2193⁵⁹⁶⁰ - partitioned_vector_spmf foreach seg faults
- PR #2192⁵⁹⁶¹ - Support Boost.Thread v4
- PR #2191⁵⁹⁶² - HPX.Compute prototype

HPX V0.9.11 (Nov 11, 2015)

Our main focus for this release was the design and development of a coherent set of higher-level APIs exposing various types of parallelism to the application programmer. We introduced the concepts of an **executor**, which can be used to customize the **where** and **when** of execution of tasks in the context of parallelizing codes. We extended all APIs related to managing parallel tasks to support executors which gives the user the choice of either using one of the predefined executor types or to provide its own, possibly application specific, executor. We paid very close attention to align all of these changes with the existing C++ Standards documents or with the ongoing proposals for standardization.

This release is the first after our change to a new development policy. We switched all development to be strictly performed on branches only, all direct commits to our main branch (**master**) are prohibited. Any change has to go through a peer review before it will be merged to **master**. As a result the overall stability of our code base has significantly increased, the development process itself has been simplified. This change manifests itself in a large number of pull-requests which have been merged (please see below for a full list of closed issues and pull-requests). All in all for this release, we closed almost 100 issues and merged over 290 pull-requests. There have been over 1600 commits to the master branch since the last release.

General changes

- We are moving into the direction of unifying managed and simple components. As such, the classes `hpx::components::component` and `hpx::components::component_base` have been added which currently just forward to the currently existing simple component facilities. The examples have been converted to only use those two classes.
- Added integration with the [CircleCI](https://circleci.com/gh/TheHPXProject/hpx)⁶³¹³ hosted continuous integration service. This gives us constant and immediate feedback on the health of our master branch.
- The compiler configuration subsystem in the build system has been reimplemented. Instead of using Boost.Config we now use our own lightweight set of cmake scripts to determine the available language and library features supported by the used compiler.
- The API for creating instances of components has been consolidated. All component instances should be created using the `hpx::new_` only. It allows one to instantiate both, single component instances and multiple component instances. The placement of the created components can be controlled by special distribution policies. Please see the corresponding documentation outlining the use of `hpx::new_`.
- Introduced four new distribution policies which can be used with many API functions which traditionally expected to be used with a locality id. The new distribution policies are:
 - `hpx::components::default_distribution_policy` which tries to place multiple component instances as evenly as possible.
 - `hpx::components::colocating_distribution_policy` which will refer to the locality where a given component instance is currently placed.
 - `hpx::components::binpacking_distribution_policy` which will place multiple component instances as evenly as possible based on any performance counter.

⁶³¹³ <https://circleci.com/gh/TheHPXProject/hpx>

- `hpx::components::target_distribution_policy` which allows one to represent a given locality in the context of a distribution policy.
- The new distribution policies can now be also used with `hpx::async`. This change also deprecates `hpx::async_colocated(id, ...)` which now is replaced by a distribution policy: `hpx::async(hpx::colocated(id), ...)`.
- The `hpx::vector` and `hpx::unordered_map` data structures can now be used with the new distribution policies as well.
- The parallel facility `hpx::parallel::task_region` has been renamed to `hpx::parallel::task_block` based on the changes in the corresponding standardization proposal [N4411](#)⁶³¹⁴.
- Added extensions to the parallel facility `hpx::parallel::task_block` allowing to combine a `task_block` with an execution policy. This implies a minor breaking change as the `hpx::parallel::task_block` is now a template.
- Added new LCOs: `hpx::lcos::latch` and `hpx::lcos::local::latch` which semantically conform to the proposed `std::latch` (see [N4399](#)⁶³¹⁵).
- Added performance counters exposing data related to data transferred by input/output (filesystem) operations (thanks to Maciej Brodowicz).
- Added performance counters allowing to track the number of action invocations (local and remote invocations).
- Added new command line options `-hpx:print-counter-at` and `-hpx:reset-counters`.
- The `hpx::vector` component has been renamed to `hpx::partitioned_vector` to make it explicit that the underlying memory is not contiguous.
- Introduced a completely new and uniform higher-level parallelism API which is based on executors. All existing parallelism APIs have been adapted to this. We have added a large number of different executor types, such as a numa-aware executor, a this-thread executor, etc.
- Added support for the MingW toolchain on Windows (thanks to Eric Lemanissier).
- HPX now includes support for APEX, (Autonomic Performance Environment for eXascale). APEX is an instrumentation and software adaptation library that provides an interface to TAU profiling / tracing as well as runtime adaptation of HPX applications through policy definitions. For more information and documentation, please see <https://github.com/UO-OACISS/xpress-apex>. To enable APEX at configuration time, specify `-DHPX_WITH_APEX=On`. To also include support for TAU profiling, specify `-DHPX_WITH_TAU=On` and specify the `-DTAU_ROOT`, `-DTAU_ARCH` and `-DTAU_OPTIONS` cmake parameters.
- We have implemented many more of the *Using parallel algorithms*. Please see [Issue #1141](#)⁶³¹⁶ for the list of all available parallel algorithms (thanks to Daniel Bourgeois and John Biddiscombe for contributing their work).

⁶³¹⁴ <http://wg21.link/n4411>

⁶³¹⁵ <http://wg21.link/n4399>

⁶³¹⁶ <https://github.com/TheHPXProject/hpx/issues/1141>

Breaking changes

- We are moving into the direction of unifying managed and simple components. In order to stop exposing the old facilities, all examples have been converted to use the new classes. The breaking change in this release is that performance counters are now a `hpx::components::component_base` instead of `hpx::components::managed_component_base`.
- We removed the support for stackless threads. It turned out that there was no performance benefit when using stackless threads. As such, we decided to clean up our codebase. This feature was not documented.
- The CMake project name has changed from 'hpx' to 'HPX' for consistency and compatibility with naming conventions and other CMake projects. Generated config files go into `<prefix>/lib/cmake/HPX` and not `<prefix>/lib/cmake/hpx`.
- The macro `HPX_REGISTER_MINIMAL_COMPONENT_FACTORY` has been deprecated. Please use `HPX_REGISTER_COMPONENT` instead. The old macro will be removed in the next release.
- The obsolete `distributing_factory` and `binpacking_factory` components have been removed. The corresponding functionality is now provided by the `hpx::new_` API function in conjunction with the `hpx::default_layout` and `hpx::binpacking` distribution policies (`hpx::components::default_distribution_policy` and `hpx::components::binpacking_distribution_policy`).
- The API function `hpx::new_colocated` has been deprecated. Please use the consolidated API `hpx::new_` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The API function `hpx::async_colocated` has been deprecated. Please use the consolidated API `hpx::async` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The obsolete `remote_object` component has been removed.
- Replaced the use of `Boost.Serialization` with our own solution. While the new version is mostly compatible with `Boost.Serialization`, this change requires some minor code modifications in user code. For more information, please see the corresponding [announcement](#)⁶³¹⁷ on the `hpx-users@stellar.cct.lsu.edu` mailing list.
- The names used by cmake to influence various configuration options have been unified. The new naming scheme relies on all configuration constants to start with `HPX_WITH_...`, while the preprocessor constant which is used at build time starts with `HPX_HAVE_...`. For instance, the former cmake command line `-DHPX_MALLOC=...` now has to be specified as `-DHPX_WITH_MALLOC=...` and will cause the preprocessor constant `HPX_HAVE_MALLOC` to be defined. The actual name of the constant (i.e. `MALLOC`) has not changed. Please see the corresponding documentation for more details (*CMake options*).
- The `get_gid()` functions exposed by the component base classes `hpx::components::server::simple_component_base`, `hpx::components::server::managed_component_base`, and `hpx::components::server::fixed_component_base` have been replaced by

⁶³¹⁷ <http://thread.gmane.org/gmane.comp.lib.hpx.devel/196>

two new functions: `get_unmanaged_id()` and `get_id()`. To enable the old function name for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

- All functions which were named `get_gid()` but were returning `hpx::id_type` have been renamed to `get_id()`. To enable the old function names for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #1855⁶³¹⁸](#) - Completely removing external/endian
- [PR #1854⁶³¹⁹](#) - Don't pollute `CMAKE_CXX_FLAGS` through `find_package()`

- PR #1639⁶⁵¹⁴ - Re-apply remaining changes from limit_dataflow_recursion branch
- PR #1638⁶⁵¹⁵ - This fixes possible deadlock in the test ignore_while_locked_1485
- PR #1637⁶⁵¹⁶ - Fixing hpx::wait_all() invoked with two vector<future<T>>
- PR #1636⁶⁵¹⁷ - Partially re-apply changes from limit_dataflow_recursion branch
- PR #1635⁶⁵¹⁸ - Adding missing test for #1572
- PR #1634⁶⁵¹⁹ - Revert “Limit recursion-depth in dataflow to a configurable constant”
- PR #1633⁶⁵²⁰ - Add command line option to ignore batch environment
- PR #1631⁶⁵²¹ - hpx::lcos::queue exhibits strange behavior
- PR #1630⁶⁵²² - Fixed endline_whitespace_check.cpp to detect lines with only whitespace
- Issue #1629⁶⁵²³ - Inspect trailing whitespace checker problem
- PR #1628⁶⁵²⁴ - Removed meaningless const qualifiers. Minor icpc fix.
- PR #1627⁶⁵²⁵ - Fixing the queue LCO and add example demonstrating its use
- PR #1626⁶⁵²⁶ - Deprecating get_gid(), add get_id() and get_unmanaged_id()
- PR #1625⁶⁵²⁷ - Allowing to specify whether to send credits along with message
- Issue #1624⁶⁵²⁸ - Lifetime issue
- Issue #1623⁶⁵²⁹ - hpx::wait_all() invoked with two vector<future<T>> fails
- PR #1622⁶⁵³⁰ - Executor partitioners
- PR #1621⁶⁵³¹ - Clean up coroutines implementation
- Issue #1620⁶⁵³² - Revert #1535
- PR #1619⁶⁵³³ - Fix result type calculation for hpx::make_continuation
- PR #1618⁶⁵³⁴ - Fixing RDTSC on Xeon/Phi
- Issue #1617⁶⁵³⁵ - hpx cmake not working when run as a subproject
- Issue #1616⁶⁵³⁶ - cmake problem resulting in RDTSC not working correctly for Xeon

HPX V0.9.10 (Mar 24, 2015)

General changes

This is the 12th official release of *HPX*. It coincides with the 7th anniversary of the first commit to our source code repository. Since then, we have seen over 12300 commits amounting to more than 220000 lines of C++ code.

The major focus of this release was to improve the reliability of large scale runs. We believe to have achieved this goal as we now can reliably run *HPX* applications on up to ~24k cores. We have also shown that HPX can be used with success for symmetric runs (applications using both, host cores and Intel Xeon/Phi coprocessors). This is a huge step forward in terms of the usability of *HPX*. The main focus of this work involved isolating the causes of the segmentation faults at start up and shut down. Many of these issues were discovered to be the result of the suspension of threads which hold locks.

A very important improvement introduced with this release is the refactoring of the code representing our parcel-port implementation. Parcel-ports can now be implemented by 3rd parties as independent plugins which are dynamically loaded at runtime (static linking of parcel-ports is also supported). This refactoring also includes a massive improvement of the performance of our existing parcel-ports. We were able to significantly reduce the networking latencies and to improve the available networking bandwidth. Please note that in this release we disabled the `ibverbs` and `ipc` parcel ports as those have not been ported to the new plugin system yet (see [Issue #839](#)⁶⁷²²).

Another corner stone of this release is our work towards a complete implementation of `__cpp11_n4104__` (Working Draft, Technical Specification for C++ Extensions for Parallelism). This document defines a set of parallel algorithms to be added to the C++ standard library. We now have implemented about 75% of all specified parallel algorithms (see [\[link hpx.manual.parallel.parallel_algorithms Parallel Algorithms\]](#) for more details). We also implemented some extensions to `__cpp11_n4104__` allowing to invoke all of the algorithms asynchronously.

This release adds a first implementation of `hpx::vector` which is a distributed data structure closely aligned to the functionality of `std::vector`. The difference is that `hpx::vector` stores the data in partitions where the partitions can be distributed over different localities. We started to work on allowing to use the parallel algorithms with `hpx::vector`. At this point we have implemented only a few of the parallel algorithms

⁶⁷¹⁶ <https://github.com/TheHPXProject/hpx/pull/1300>

⁶⁷¹⁷ <https://github.com/TheHPXProject/hpx/issues/1251>

⁶⁷¹⁸ <https://github.com/TheHPXProject/hpx/issues/1008>

⁶⁷¹⁹ <https://github.com/TheHPXProject/hpx/issues/1001>

⁶⁷²⁰ <https://github.com/TheHPXProject/hpx/issues/721>

⁶⁷²¹ <https://github.com/TheHPXProject/hpx/issues/524>

⁶⁷²² <https://github.com/TheHPXProject/hpx/issues/839>

to support distributed data structures (like `hpx::vector`) for testing purposes (see [Issue #1338](#)⁶⁷²³ for a documentation of our progress).

Breaking changes

With this release we put a lot of effort into changing the code base to be more compatible to C++11. These changes have caused the following issues for backward compatibility:

- **Move to Variadics**- All of the API now uses variadic templates. However, this change required to modify the argument sequence for some of the exiting API functions (`hpx::async_continue`, `hpx::apply_continue`, `hpx::when_each`, `hpx::wait_each`, synchronous invocation of actions).
- **Changes to Macros**- We also removed the macros `HPX_STD_FUNCTION` and `HPX_STD_TUPLE`. This shouldn't affect any user code as we replaced `HPX_STD_FUNCTION` with `hpx::util::function_nonsr` which was the default expansion used for this macro. All *HPX* API functions which expect a `hpx::util::function_nonsr` (or a `hpx::util::unique_function_nonsr`) can now be transparently called with a compatible `std::function` instead. Similarly, `HPX_STD_TUPLE` was replaced by its default expansion as well: `hpx::util::tuple`.
- **Changes to `hpx::unique_future`**- `hpx::unique_future`, which was deprecated in the previous release for `hpx::future` is now completely removed from *HPX*. This completes the transition to a completely standards conforming implementation of `hpx::future`.
- **Changes to Supported Compilers**. Finally, in order to utilize more C++11 semantics, we have officially dropped support for GCC 4.4 and MSVC 2012. Please see our [Prerequisites](#) page for more details.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1402](#)⁶⁷²⁴ - Internal shared_future serialization copies
- [Issue #1399](#)⁶⁷²⁵ - Build takes unusually long time...
- [Issue #1398](#)⁶⁷²⁶ - Tests using the scan partitioner are broken on at least gcc 4.7 and intel compiler
- [Issue #1397](#)⁶⁷²⁷ - Completely remove `hpx::unique_future`
- [Issue #1396](#)⁶⁷²⁸ - Parallel scan algorithms with different initial values
- [Issue #1395](#)⁶⁷²⁹ - Race Condition - `1d_stencil_8` - SuperMIC
- [Issue #1394](#)⁶⁷³⁰ - "suspending thread while at least one lock is being held" - `1d_stencil_8` - SuperMIC

HPX V0.9.9 (Oct 31, 2014, codename Spooky)

General changes

We have had over 1500 commits since the last release and we have closed over 200 tickets (bugs, feature requests, pull requests, etc.). These are by far the largest numbers of commits and resolved issues for any of the *HPX* releases so far. We are especially happy about the large number of people who contributed for the first time to *HPX*.

- We completed the transition from the older (non-conforming) implementation of `hpx::future` to the new and fully conforming version by removing the old code and by renaming the type `hpx::unique_future` to `hpx::future`. In order to maintain backwards compatibility with existing code which uses the type `hpx::unique_future` we support the configuration variable `HPX_UNIQUE_FUTURE_ALIAS`. If this variable is set to `ON` while running `cmake` it will additionally define a template alias for this type.
- We rewrote and significantly changed our build system. Please have a look at the new (now generated) documentation here: *Building HPX*. Please revisit your build scripts to adapt to the changes. The most notable changes are:
 - `HPX_NO_INSTALL` is no longer necessary.
 - For external builds, you need to set `HPX_DIR` instead of `HPX_ROOT` as described here: *Using HPX with CMake-based projects*.
 - IDEs that support multiple configurations (Visual Studio and XCode) can now be used as intended. that means no build dir.
 - Building *HPX* statically (without dynamic libraries) is now supported (`-DHPX_STATIC_LINKING=On`).
 - Please note that many variables used to configure the build process have been renamed to unify the naming conventions (see the section *CMake options* for more information).
 - This also fixes a long list of issues, for more information see [Issue #1204](#)⁶⁸³⁷.
- We started to implement various proposals to the C++ Standardization committee related to parallelism and concurrency, most notably [N4409](#)⁶⁸³⁸ (Working Draft, Technical Specification for C++ Extensions for Parallelism), [N4411](#)⁶⁸³⁹ (Task Region Rev. 3), and [N4313](#)⁶⁸⁴⁰ (Working Draft, Technical Specification for C++ Extensions for Concurrency).
- We completely remodeled our automatic build system to run builds and unit tests on various systems and compilers. This allows us to find most bugs right as they were introduced and helps to maintain a high level of quality and compatibility. The newest build logs can be found at *HPX Buildbot Website*⁶⁸⁴¹.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1296⁶⁸⁴²](#) - Rename `make_error_future` to `make_exceptional_future`, adjust to N4123
- [Issue #1295⁶⁸⁴³](#) - building issue
- [Issue #1293⁶⁸⁴⁴](#) - Transpose example
- [Issue #1292⁶⁸⁴⁵](#) - Wrong `abs()` function used in example
- [Issue #1291⁶⁸⁴⁶](#) - non-synchronized shift operators have been removed
- [Issue #1290⁶⁸⁴⁷](#) - RDTSCP is defined as true for Xeon Phi build
- [Issue #1289⁶⁸⁴⁸](#) - Fixing 1288
- [Issue #1288⁶⁸⁴⁹](#) - Add new performance counters
- [Issue #1287⁶⁸⁵⁰](#) - Hierarchy scheduler broken performance counters
- [Issue #1286⁶⁸⁵¹](#) - Algorithm cleanup
- [Issue #1285⁶⁸⁵²](#) - Broken Links in Documentation
- [Issue #1284⁶⁸⁵³](#) - Uninitialized copy
- [Issue #1283⁶⁸⁵⁴](#) - missing `boost::scoped_ptr` includes
- [Issue #1282⁶⁸⁵⁵](#) - Update documentation of build options for schedulers
- [Issue #1281⁶⁸⁵⁶](#) - reset idle rate counter
- [Issue #1280⁶⁸⁵⁷](#) - Bug when executing on Intel MIC
- [Issue #1279⁶⁸⁵⁸](#) - Add improved `when_all/wait_all`
- [Issue #1278⁶⁸⁵⁹](#) - Implement improved `when_all/wait_all`
- [Issue #1277⁶⁸⁶⁰](#) - feature request: get access to `argc` `argv` and `variables_map`
- [Issue #1276⁶⁸⁶¹](#) - Remove merging map
- [Issue #1274⁶⁸⁶²](#) - Weird (wrong) string code in `papi.cpp`

⁶⁸⁶² <https://github.com/TheHPXProject/hpx/issues/1274>

- Issue #1273⁶⁸⁶³ - Sequential task execution policy
- Issue #1272⁶⁸⁶⁴ - Avoid CMake name clash for Boost.Thread library
- Issue #1271⁶⁸⁶⁵ - Updates on HPX Test Units
- Issue #1270⁶⁸⁶⁶ - hpx/util/safe_lexical_cast.hpp is added
- Issue #1269⁶⁸⁶⁷ - Added default value for “LIB” cmake variable
- Issue #1268⁶⁸⁶⁸ - Memory Counters not working
- Issue #1266⁶⁸⁶⁹ - FindHPX.cmake is not installed
- Issue #1263⁶⁸⁷⁰ - apply_remote test takes too long
- Issue #1262⁶⁸⁷¹ - Chrono cleanup
- Issue #1261⁶⁸⁷² - Need make install for papi counters and this builds all the examples
- Issue #1260⁶⁸⁷³ - Documentation of Stencil example claims
- Issue #1259⁶⁸⁷⁴ - Avoid double-linking Boost on Windows
- Issue #1257⁶⁸⁷⁵ - Adding additional parameter to create_thread
- Issue #1256⁶⁸⁷⁶ - added buildbot changes to release notes
- Issue #1255⁶⁸⁷⁷ - Cannot build MiniGhost
- Issue #1253⁶⁸⁷⁸ - hpx::thread defects
- Issue #1252⁶⁸⁷⁹ - HPX_PREFIX is too fragile
- Issue #1250⁶⁸⁸⁰ - switch_to_fiber_emulation does not work properly
- Issue #1249⁶⁸⁸¹ - Documentation is generated under Release folder
- Issue #1248⁶⁸⁸² - Fix usage of hpx_generic_coroutine_context and get tests passing on powerpc
- Issue #1247⁶⁸⁸³ - Dynamic linking error
- Issue #1246⁶⁸⁸⁴ - Make cpuid.cpp C++11 compliant
- Issue #1245⁶⁸⁸⁵ - HPX fails on startup (setting thread affinity mask)

- Issue #1244⁶⁸⁸⁶ - HPX_WITH_RDTSC configure test fails, but should succeed
- Issue #1243⁶⁸⁸⁷ - CTest dashboard info for CSCS CDash drop location
- Issue #1242⁶⁸⁸⁸ - Mac fixes
- Issue #1241⁶⁸⁸⁹ - Failure in Distributed with Boost 1.56
- Issue #1240⁶⁸⁹⁰ - fix a race condition in examples.diskperf
- Issue #1239⁶⁸⁹¹ - fix wait_each in examples.diskperf
- Issue #1238⁶⁸⁹² - Fixed #1237: hpx::util::portable_binary_iarchive failed
- Issue #1237⁶⁸⁹³ - hpx::util::portable_binary_iarchive failed
- Issue #1235⁶⁸⁹⁴ - Fixing clang warnings and errors
- Issue #1234⁶⁸⁹⁵ - TCP runs fail: Transport endpoint is not connected
- Issue #1233⁶⁸⁹⁶ - Making sure the correct number of threads is registered with AGAS
- Issue #1232⁶⁸⁹⁷ - Fixing race in wait_xxx
- Issue #1231⁶⁸⁹⁸ - Parallel minmax
- Issue #1230⁶⁸⁹⁹ - Distributed run of 1d_stencil_8 uses less threads than spec. & sometimes gives errors
- Issue #1229⁶⁹⁰⁰ - Unstable number of threads
- Issue #1228⁶⁹⁰¹ - HPX link error (cmake / MPI)
- Issue #1226⁶⁹⁰² - Warning about struct/class thread_counters
- Issue #1225⁶⁹⁰³ - Adding parallel::replace etc
- Issue #1224⁶⁹⁰⁴ - Extending dataflow to pass through non-future arguments
- Issue #1223⁶⁹⁰⁵ - Remaining find algorithms implemented, N4071
- Issue #1222⁶⁹⁰⁶ - Merging all the changes
- Issue #1221⁶⁹⁰⁷ - No error output when using mpirun with hpx
- Issue #1219⁶⁹⁰⁸ - Adding new AGAS cache performance counters

⁶⁹⁰⁸ <https://github.com/TheHPXProject/hpx/issues/1219>

- Issue #1216⁶⁹⁰⁹ - Fixing using futures (clients) as arguments to actions
- Issue #1215⁶⁹¹⁰ - Error compiling simple component
- Issue #1214⁶⁹¹¹ - Stencil docs
- Issue #1213⁶⁹¹² - Using more than a few dozen MPI processes on SuperMike results in a seg fault before getting to hpx_main
- Issue #1212⁶⁹¹³ - Parallel rotate
- Issue #1211⁶⁹¹⁴ - Direct actions cause the future's shared_state to be leaked
- Issue #1210⁶⁹¹⁵ - Refactored local::promise to be standard conformant
- Issue #1209⁶⁹¹⁶ - Improve command line handling
- Issue #1208⁶⁹¹⁷ - Adding parallel::reverse and parallel::reverse_copy
- Issue #1207⁶⁹¹⁸ - Add copy_backward and move_backward
- Issue #1206⁶⁹¹⁹ - N4071 additional algorithms implemented
- Issue #1204⁶⁹²⁰ - Cmake simplification and various other minor changes
- Issue #1203⁶⁹²¹ - Implementing new launch policy for (local) async: `hpx::launch::fork`.
- Issue #1202⁶⁹²² - Failed assertion in connection_cache.hpp
- Issue #1201⁶⁹²³ - pkg-config doesn't add mpi link directories
- Issue #1200⁶⁹²⁴ - Error when querying time performance counters
- Issue #1199⁶⁹²⁵ - library path is now configurable (again)
- Issue #1198⁶⁹²⁶ - Error when querying performance counters
- Issue #1197⁶⁹²⁷ - tests fail with intel compiler
- Issue #1196⁶⁹²⁸ - Silence several warnings
- Issue #1195⁶⁹²⁹ - Rephrase initializers to work with VC++ 2012
- Issue #1194⁶⁹³⁰ - Simplify parallel algorithms

HPX V0.9.8 (Mar 24, 2014)

We have had over 800 commits since the last release and we have closed over 65 tickets (bugs, feature requests, etc.).

With the changes below, *HPX* is once again leading the charge of a whole new era of computation. By intrinsically breaking down and synchronizing the work to be done, *HPX* insures that application developers will no longer have to fret about where a segment of code executes. That allows coders to focus their time and energy to understanding the data dependencies of their algorithms and thereby the core obstacles to an efficient code. Here are some of the advantages of using *HPX*:

- *HPX* is solidly rooted in a sophisticated theoretical execution model – ParalleX
- *HPX* exposes an API fully conforming to the C++11 and the draft C++14 standards, extended and applied to distributed computing. Everything programmers know about the concurrency primitives of the standard C++ library is still valid in the context of *HPX*.
- It provides a competitive, high performance implementation of modern, future-proof ideas which gives an smooth migration path from today's mainstream techniques
- There is no need for the programmer to worry about lower level parallelization paradigms like threads or message passing; no need to understand pthreads, MPI, OpenMP, or Windows threads, etc.
- There is no need to think about different types of parallelism such as tasks, pipelines, or fork-join, task or data parallelism.
- The same source of your program compiles and runs on Linux, BlueGene/Q, Mac OS X, Windows, and Android.
- The same code runs on shared memory multi-core systems and supercomputers, on handheld devices and Intel® Xeon Phi™ accelerators, or a heterogeneous mix of those.

General changes

- A major API breaking change for this release was introduced by implementing `hpx::future` and `hpx::shared_future` fully in conformance with the [C++11 Standard](#)⁷⁰⁶⁶. While `hpx::shared_future` is new and will not create any compatibility problems, we revised the interface and implementation of the existing `hpx::future`. For more details please see the [mailing list archive](#)⁷⁰⁶⁷. To avoid any incompatibilities for existing code we named the type which implements the `std::future` interface as `hpx::unique_future`. For the next release this will be renamed to `hpx::future`, making it full conforming to [C++11 Standard](#)⁷⁰⁶⁸.

⁷⁰⁶⁵ <https://github.com/TheHPXProject/hpx/issues/44>

⁷⁰⁶⁶ <http://www.open-std.org/jtc1/sc22/wg21>

⁷⁰⁶⁷ <http://mail.cct.lsu.edu/pipermail/hpx-users/2014-January/000141.html>

⁷⁰⁶⁸ <http://www.open-std.org/jtc1/sc22/wg21>

- A large part of the code base of *HPX* has been refactored and partially re-implemented. The main changes were related to
 - The threading subsystem: these changes significantly reduce the amount of overheads caused by the schedulers, improve the modularity of the code base, and extend the variety of available scheduling algorithms.
 - The parcel subsystem: these changes improve the performance of the *HPX* networking layer, modularize the structure of the parcelports, and simplify the creation of new parcelports for other underlying networking libraries.
 - The API subsystem: these changes improved the conformance of the API to C++11 Standard, extend and unify the available API functionality, and decrease the overheads created by various elements of the API.
 - The robustness of the component loading subsystem has been improved significantly, allowing to more portably and more reliably register the components needed by an application as startup. This additionally speeds up general application initialization.
- We added new API functionality like `hpx::migrate` and `hpx::copy_component` which are the basic building blocks necessary for implementing higher level abstractions for system-wide load balancing, runtime-adaptive resource management, and object-oriented checkpointing and state-management.
- We removed the use of C++11 move emulation (using `Boost.Move`), replacing it with C++11 rvalue references. This is the first step towards using more and more native C++11 facilities which we plan to introduce in the future.
- We improved the reference counting scheme used by *HPX* which helps managing distributed objects and memory. This improves the overall stability of *HPX* and further simplifies writing real world applications.
- The minimal Boost version required to use *HPX* is now V1.49.0.
- This release coincides with the first release of HPXPI (V0.1.0), the first implementation of the *XPI specification*⁷⁰⁶⁹.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1086](#)⁷⁰⁷⁰ - Expose internal `boost::shared_array` to allow user management of array lifetime
- [Issue #1083](#)⁷⁰⁷¹ - Make shell examples copyable in docs
- [Issue #1080](#)⁷⁰⁷² - `/threads{locality#*/total}/count/cumulative` broken
- [Issue #1079](#)⁷⁰⁷³ - Build problems on OS X
- [Issue #1078](#)⁷⁰⁷⁴ - Improve robustness of component loading
- [Issue #1077](#)⁷⁰⁷⁵ - Fix a missing enum definition for 'take' mode

HPX V0.9.7 (Nov 13, 2013)

We have had over 1000 commits since the last release and we have closed over 180 tickets (bugs, feature requests, etc.).

General changes

- Ported HPX to BlueGene/Q
- Improved HPX support for Xeon/Phi accelerators
- Reimplemented `hpx::bind`, `hpx::tuple`, and `hpx::function` for better performance and better compliance with the C++11 Standard. Added `hpx::mem_fn`.
- Reworked `hpx::when_all` and `hpx::when_any` for better compliance with the ongoing C++ standardization effort, added heterogeneous version for those functions. Added `hpx::when_any_swapped`.
- Added `hpx::copy` as a precursor for a migrate functionality
- Added `hpx::get_ptr` allowing to directly access the memory underlying a given component
- Added the `hpx::lcos::broadcast`, `hpx::lcos::reduce`, and `hpx::lcos::fold` collective operations
- Added `hpx::get_locality_name` allowing to retrieve the name of any of the localities for the application.
- Added support for more flexible thread affinity control from the HPX command line, such as new modes for `--hpx:bind` (`balanced`, `scattered`, `compact`), improved default settings when running multiple localities on the same node.
- Added experimental executors for simpler thread pooling and scheduling. This API may change in the future as it will stay aligned with the ongoing C++ standardization efforts.
- Massively improved the performance of the HPX serialization code. Added partial support for zero copy serialization of array and bitwise-copyable types.
- General performance improvements of the code related to threads and futures.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1005⁷¹⁴⁴](#) - Allow one to disable array optimizations and zero copy optimizations for each parcellport
- [Issue #1004⁷¹⁴⁵](#) - Generate new HPX logo image for the docs
- [Issue #1002⁷¹⁴⁶](#) - If MPI parcellport is not available, running HPX under mpirun should fail
- [Issue #1001⁷¹⁴⁷](#) - Zero copy serialization raises assert
- [Issue #1000⁷¹⁴⁸](#) - Can't connect to a HPX application running with the MPI parcellport from a non MPI parcellport locality
- [Issue #999⁷¹⁴⁹](#) - Optimize `hpx::when_n`
- [Issue #998⁷¹⁵⁰](#) - Fixed const-correctness
- [Issue #997⁷¹⁵¹](#) - Making `serialize_buffer::data()` type save
- [Issue #996⁷¹⁵²](#) - Memory leak in `hpx::lcos::promise`
- [Issue #995⁷¹⁵³](#) - Race while registering pre-shutdown functions
- [Issue #994⁷¹⁵⁴](#) - `thread_rescheduling` regression test does not compile
- [Issue #992⁷¹⁵⁵](#) - Correct comments and messages
- [Issue #991⁷¹⁵⁶](#) - `setcap cap_sys_rawio=ep` for power profiling causes an HPX application to abort
- [Issue #989⁷¹⁵⁷](#) - Jacobi hangs during execution
- [Issue #988⁷¹⁵⁸](#) - `multiple_init` test is failing
- [Issue #986⁷¹⁵⁹](#) - Can't call a function called "init" from "main" when using `<hpx/hpx_main.hpp>`
- [Issue #984⁷¹⁶⁰](#) - Reference counting tests are failing
- [Issue #983⁷¹⁶¹](#) - `thread_suspension_executor` test fails
- [Issue #980⁷¹⁶²](#) - Terminating HPX threads don't leave stack in virgin state

⁷²⁰⁷ <https://github.com/TheHPXProject/hpx/issues/924>

- Issue #923⁷²⁰⁸ - Correct BLAS and RNPL cmake tests
- Issue #922⁷²⁰⁹ - Cannot link against BLAS
- Issue #921⁷²¹⁰ - Implement `hpx::mem_fn`
- Issue #920⁷²¹¹ - Output locality with `--hpx:print-bind`
- Issue #919⁷²¹² - Correct grammar; simplify boolean expressions
- Issue #918⁷²¹³ - Link to `hello_world.cpp` is broken
- Issue #917⁷²¹⁴ - adapt cmake file to new boostbook version
- Issue #916⁷²¹⁵ - fix problem building documentation with `xsltproc >= 1.1.27`
- Issue #915⁷²¹⁶ - Add another TBBMalloc library search path
- Issue #914⁷²¹⁷ - Build problem with Intel compiler on Stampede (TACC)
- Issue #913⁷²¹⁸ - fix error messages in fibonacci examples
- Issue #911⁷²¹⁹ - Update OS X build instructions
- Issue #910⁷²²⁰ - Want like to specify `MPI_ROOT` instead of compiler wrapper script
- Issue #909⁷²²¹ - Warning about `void*` arithmetic
- Issue #908⁷²²² - Buildbot for MIC is broken
- Issue #906⁷²²³ - Can't use `--hpx:bind=balanced` with multiple MPI processes
- Issue #905⁷²²⁴ - `--hpx:bind` documentation should describe full grammar
- Issue #904⁷²²⁵ - Add `hpx::lcos::fold` and `hpx::lcos::inverse_fold` collective operation
- Issue #903⁷²²⁶ - Add `hpx::when_any_swapped()`
- Issue #902⁷²²⁷ - Add `hpx::lcos::reduce` collective operation
- Issue #901⁷²²⁸ - Web documentation is not searchable
- Issue #900⁷²²⁹ - Web documentation for trunk has no index
- Issue #898⁷²³⁰ - Some tests fail with GCC 4.8.1 and MPI parcel port

HPX V0.9.6 (Jul 30, 2013)

We have had over 1200 commits since the last release and we have closed roughly 140 tickets (bugs, feature requests, etc.).

General changes

The major new features in this release are:

- We further consolidated the API exposed by *HPX*. We aligned our APIs as much as possible with the existing [C++11 Standard](#)⁷³³⁰ and related proposals to the C++ standardization committee (such as [N3632](#)⁷³³¹ and [N3857](#)⁷³³²).
- We implemented a first version of a distributed AGAS service which essentially eliminates all explicit AGAS network traffic.
- We created a native `ibverbs` `parcelpoint` allowing to take advantage of the superior latency and bandwidth characteristics of Infiniband networks.
- We successfully ported *HPX* to the Xeon Phi platform.
- Support for the SLURM scheduling system was implemented.

⁷³³⁰ <http://www.open-std.org/jtc1/sc22/wg21>

⁷³³¹ <http://wg21.link/n3632>

⁷³³² <http://wg21.link/n3857>

- Major efforts have been dedicated to improving the performance counter framework, numerous new counters were implemented and new APIs were added.
- We added a modular parcel compression system allowing to improve bandwidth utilization (by reducing the overall size of the transferred data).
- We added a modular parcel coalescing system allowing to combine several parcels into larger messages. This reduces latencies introduced by the communication layer.
- Added an experimental executors API allowing to use different scheduling policies for different parts of the code. This API has been modelled after the Standards proposal N3562⁷³³³. This API is bound to change in the future, though.
- Added minimal security support for localities which is enforced on the parcelport level. This support is preliminary and experimental and might change in the future.
- We created a parcelport using low level MPI functions. This is in support of legacy applications which are to be gradually ported and to support platforms where MPI is the only available portable networking layer.
- We added a preliminary and experimental implementation of a tuple-space object which exposes an interface similar to such systems described in the literature (see for instance [The Linda Coordination Language](#)⁷³³⁴).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is again a very long list of newly implemented features and fixed issues.

- [Issue #806](#)⁷³³⁵ - make (all) in examples folder does nothing
- [Issue #805](#)⁷³³⁶ - Adding the introduction and fixing DOCBOOK dependencies for Windows use
- [Issue #804](#)⁷³³⁷ - Add stackless (non-suspendable) thread type
- [Issue #803](#)⁷³³⁸ - Create proper serialization support functions for util::tuple
- [Issue #800](#)⁷³³⁹ - Add possibility to disable array optimizations during serialization
- [Issue #798](#)⁷³⁴⁰ - HPX_LIMIT does not work for local dataflow
- [Issue #797](#)⁷³⁴¹ - Create a parcelport which uses MPI
- [Issue #796](#)⁷³⁴² - Problem with Large Numbers of Threads
- [Issue #793](#)⁷³⁴³ - Changing dataflow test case to hang consistently
- [Issue #792](#)⁷³⁴⁴ - CMake Error

HPX V0.9.5 (Jan 16, 2013)

We have had over 1000 commits since the last release and we have closed roughly 150 tickets (bugs, feature requests, etc.).

General changes

This release is continuing along the lines of code and API consolidation, and overall usability improvements. We dedicated much attention to performance and we were able to significantly improve the threading and networking subsystems.

We successfully ported *HPX* to the Android platform. *HPX* applications now not only can run on mobile devices, but we support heterogeneous applications running across architecture boundaries. At the Supercomputing Conference 2012 we demonstrated connecting Android tablets to simulations running on a Linux cluster. The Android tablet was used to query performance counters from the Linux simulation and to steer its parameters.

We successfully ported *HPX* to Mac OSX (using the Clang compiler). Thanks to Pyry Jähkola for contributing the corresponding patches. Please see the section `macos_installation` for more details.

We made a special effort to make HPX usable in highly concurrent use cases. Many of the HPX API functions which possibly take longer than 100 microseconds to execute now can be invoked asynchronously. We added uniform support for composing futures which simplifies to write asynchronous code. HPX actions (function objects encapsulating possibly concurrent remote function invocations) are now well integrated with all other API facilities such like `hpx::bind`.

All of the API has been aligned as much as possible with established paradigms. HPX now mirrors many of the facilities as defined in the C++11 Standard, such as `hpx::thread`, `hpx::function`, `hpx::future`, etc.

A lot of work has been put into improving the documentation. Many of the API functions are documented now, concepts are explained in detail, and examples are better described than before. The new documentation index enables finding information with lesser effort.

This is the first release of HPX we perform after the move to [Github](https://github.com/TheHPXProject/hpx/)⁷⁴⁷⁵. This step has enabled a wider participation from the community and further encourages us in our decision to release HPX as a true open source library (HPX is licensed under the very liberal [Boost Software License](https://www.boost.org/LICENSE_1_0.txt)⁷⁴⁷⁶).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is by far the longest list of newly implemented features and fixed issues for any of HPX' releases so far.

- [Issue #666](https://github.com/TheHPXProject/hpx/issues/666)⁷⁴⁷⁷ - Segfault on calling `hpx::finalize` twice
- [Issue #665](https://github.com/TheHPXProject/hpx/issues/665)⁷⁴⁷⁸ - Adding declaration `num_of_cores`

⁷⁴⁷⁵ <https://github.com/TheHPXProject/hpx/>

⁷⁴⁷⁶ https://www.boost.org/LICENSE_1_0.txt

⁷⁴⁷⁷ <https://github.com/TheHPXProject/hpx/issues/666>

⁷⁴⁷⁸ <https://github.com/TheHPXProject/hpx/issues/665>

- Issue #662⁷⁴⁷⁹ - pkgconfig is building wrong
- Issue #660⁷⁴⁸⁰ - Need uninterrupt function
- Issue #659⁷⁴⁸¹ - Move our logging library into a different namespace
- Issue #658⁷⁴⁸² - Dynamic performance counter types are broken
- Issue #657⁷⁴⁸³ - HPX v0.9.5 (RC1) hello_world example segfaulting
- Issue #656⁷⁴⁸⁴ - Define the affinity of parcel-pool, io-pool, and timer-pool threads
- Issue #654⁷⁴⁸⁵ - Integrate the Boost auto_index tool with documentation
- Issue #653⁷⁴⁸⁶ - Make HPX build on OS X + Clang + libc++
- Issue #651⁷⁴⁸⁷ - Add fine-grained control for thread pinning
- Issue #650⁷⁴⁸⁸ - Command line no error message when using -hpx:(anything)
- Issue #645⁷⁴⁸⁹ - Command line aliases don't work in [teletype]``@file``[c++]
- Issue #644⁷⁴⁹⁰ - Terminated threads are not always properly cleaned up
- Issue #640⁷⁴⁹¹ - future_data<T>::set_on_completed_ used without locks
- Issue #638⁷⁴⁹² - hpx build with intel compilers fails on linux
- Issue #637⁷⁴⁹³ - -copy-dt-needed-entries breaks with gold
- Issue #635⁷⁴⁹⁴ - Boost V1.53 will add Boost.Lockfree and Boost.Atomic
- Issue #633⁷⁴⁹⁵ - Re-add examples to final 0.9.5 release
- Issue #632⁷⁴⁹⁶ - Example thread_aware_timer is broken
- Issue #631⁷⁴⁹⁷ - FFT application throws error in parcellayer
- Issue #630⁷⁴⁹⁸ - Event synchronization example is broken
- Issue #629⁷⁴⁹⁹ - Waiting on futures hangs
- Issue #628⁷⁵⁰⁰ - Add an HPX_ALWAYS_ASSERT macro
- Issue #625⁷⁵⁰¹ - Port coroutines context switch benchmark

- [Issue #621⁷⁵⁰²](#) - New INI section for stack sizes
- [Issue #618⁷⁵⁰³](#) - pkg_config support does not work with a HPX debug build
- [Issue #617⁷⁵⁰⁴](#) - hpx/external/logging/boost/logging/detail/cache_before_init.hpp:139:67: error: ‘get_thread_id’ was not declared in this scope
- [Issue #616⁷⁵⁰⁵](#) - Change wait_XXX not to use locking
- [Issue #615⁷⁵⁰⁶](#) - Revert visibility ‘fix’ (fb0b6b8245dad1127b0c25ebafd9386b3945cca9)
- [Issue #614⁷⁵⁰⁷](#) - Fix Dataflow linker error
- [Issue #613⁷⁵⁰⁸](#) - find_here should throw an exception on failure
- [Issue #612⁷⁵⁰⁹](#) - Thread phase doesn’t show up in debug mode
- [Issue #611⁷⁵¹⁰](#) - Make stack guard pages configurable at runtime (initialization time)
- [Issue #610⁷⁵¹¹](#) - Co-Locate Components
- [Issue #609⁷⁵¹²](#) - future_overhead
- [Issue #608⁷⁵¹³](#) - --hpx:list-counter-infos problem
- [Issue #607⁷⁵¹⁴](#) - Update Boost.Context based backend for coroutines
- [Issue #606⁷⁵¹⁵](#) - 1d_wave_equation is not working
- [Issue #605⁷⁵¹⁶](#) - Any C++ function that has serializable arguments and a serializable return type should be remotable
- [Issue #604⁷⁵¹⁷](#) - Connecting localities isn’t working anymore
- [Issue #603⁷⁵¹⁸](#) - Do not verify any ini entries read from a file
- [Issue #602⁷⁵¹⁹](#) - Rename argument_size to type_size/ added implementation to get parcel size
- [Issue #599⁷⁵²⁰](#) - Enable locality specific command line options
- [Issue #598⁷⁵²¹](#) - Need an API that accesses the performance counter reporting the system uptime
- [Issue #597⁷⁵²²](#) - compiling on ranger

- Issue #565⁷⁵⁴⁵ - HPX doesn't shutdown properly
- Issue #564⁷⁵⁴⁶ - Partial preprocessing of new component creation interface
- Issue #563⁷⁵⁴⁷ - Add `hpx::start/hpx::stop` to avoid blocking main thread
- Issue #562⁷⁵⁴⁸ - All command line arguments swallowed by `hpx`
- Issue #561⁷⁵⁴⁹ - `Boost.Tuple` is not move aware
- Issue #558⁷⁵⁵⁰ - `boost::shared_ptr<>` style semantics/syntax for client classes
- Issue #556⁷⁵⁵¹ - Creation of partially preprocessed headers should be enabled for Boost newer than V1.50
- Issue #555⁷⁵⁵² - `BOOST_FORCEINLINE` does not name a type
- Issue #554⁷⁵⁵³ - Possible race condition in thread `get_id()`
- Issue #552⁷⁵⁵⁴ - Move enable `client_base`
- Issue #550⁷⁵⁵⁵ - Add stack size category 'huge'
- Issue #549⁷⁵⁵⁶ - ShenEOS run seg-faults on single or distributed runs
- Issue #545⁷⁵⁵⁷ - `AUTOGLOB` broken for `add_hpx_component`
- Issue #542⁷⁵⁵⁸ - `FindHPX_HDF5` still searches multiple times
- Issue #541⁷⁵⁵⁹ - Quotes around application name in `hpx::init`
- Issue #539⁷⁵⁶⁰ - Race condition occurring with new lightweight threads
- Issue #535⁷⁵⁶¹ - `hpx_run_tests.py` exits with no error code when tests are missing
- Issue #530⁷⁵⁶² - Thread description(<unknown>) in logs
- Issue #523⁷⁵⁶³ - Make thread objects more lightweight
- Issue #521⁷⁵⁶⁴ - `hpx::error_code` is not usable for lightweight error handling
- Issue #520⁷⁵⁶⁵ - Add full user environment to HPX logs
- Issue #519⁷⁵⁶⁶ - Build succeeds, running fails
- Issue #517⁷⁵⁶⁷ - Add a guard page to linux coroutine stacks

HPX V0.9.0 (Jul 5, 2012)

We have had roughly 800 commits since the last release and we have closed approximately 80 tickets (bugs, feature requests, etc.).

General changes

- Significant improvements made to the usability of *HPX* in large-scale, distributed environments.
- Renamed `hpx::lcos::packaged_task` to `hpx::lcos::packaged_action` to reflect the semantic differences to a `packaged_task` as defined by the [C++11 Standard](#)⁷⁶³³.
- *HPX* now exposes `hpx::thread` which is compliant to the C++11 `std::thread` type except that it (purely locally) represents an *HPX* thread. This new type does not expose any of the remote capabilities of the underlying *HPX*-thread implementation.
- The type `hpx::lcos::future` is now compliant to the C++11 `std::future<>` type. This type can be used to synchronize both, local and remote operations. In both cases the control flow will ‘return’ to the future in order to trigger any continuation.
- The types `hpx::lcos::local::promise` and `hpx::lcos::local::packaged_task` are now compliant to the C++11 `std::promise<>` and `std::packaged_task<>` types. These can be used to create a future representing local work only. Use the types `hpx::lcos::promise` and `hpx::lcos::packaged_action` to wrap any (possibly remote) action into a future.
- `hpx::thread` and `hpx::lcos::future` are now cancelable.
- Added support for sequential and logic composition of `hpx::lcos::futures`. The member function `hpx::lcos::future::when` permits futures to be sequentially composed. The helper functions `hpx::wait_all`, `hpx::wait_any`, and `hpx::wait_n` can be used to wait for more than one future at a time.
- *HPX* now exposes `hpx::apply` and `hpx::async` as the preferred way of creating (or invoking) any deferred work. These functions are usable with various types of functions, function objects, and actions and provide a uniform way to spawn deferred tasks.
- *HPX* now utilizes `hpx::util::bind` to (partially) bind local functions and function objects, and also actions. Remote bound actions can have placeholders as well.
- *HPX* continuations are now fully polymorphic. The class `hpx::actions::forwarding_continuation` is an example of how the user can write its own types of continuations. It can be used to execute any function as an continuation of a particular action.
- Reworked the action invocation API to be fully conformant to normal functions. Actions can now be invoked using `hpx::apply`, `hpx::async`, or using the `operator()` implemented on actions. Actions themselves can now be cheaply instantiated as they do not have any members anymore.
- Reworked the lazy action invocation API. Actions can now be directly bound using `hpx::util::bind` by passing an action instance as the first argument.
- A minimal *HPX* program now looks like this:

⁷⁶³³ <http://www.open-std.org/jtc1/sc22/wg21>

```
#include <hpx/hpx_init.hpp>

int hpx_main()
{
    return hpx::finalize();
}

int main()
{
    return hpx::init();
}
```

This removes the immediate dependency on the `Boost.Program_options`⁷⁶³⁴ library.

Note

This minimal version of an *HPX* program does not support any of the default command line arguments (such as `-help`, or command line options related to PBS). It is suggested to always pass `argc` and `argv` to *HPX* as shown in the example below.

- In order to support those, but still not to depend on `Boost.Program_options`⁷⁶³⁵, the minimal program can be written as:

```
#include <hpx/hpx_init.hpp>

// The arguments
↪ for hpx_main can be left off, which very similar to the
// behavior of ``main()`` as defined by C++.
int hpx_main(int argc, char* argv[])
{
    return hpx::finalize();
}

int main(int argc, char* argv[])
{
    return hpx::init(argc, argv);
}
```

- Added performance counters exposing the number of component instances which are alive on a given locality.
- Added performance counters exposing then number of messages sent and received, the number of parcels sent and received, the number of bytes sent and received, the overall time required to send and receive data, and the overall time required to serialize and deserialize the data.
- Added a new component: `hpx::components::binpacking_factory` which is equivalent to the existing `hpx::components::distributing_factory` component, except that it equalizes the overall population of the components to create. It exposes two factory methods, one based on the number of existing instances of the component type to

⁷⁶³⁴ https://www.boost.org/doc/html/program_options.html

⁷⁶³⁵ https://www.boost.org/doc/html/program_options.html

create, and one based on an arbitrary performance counter which will be queried for all relevant localities.

- Added API functions allowing to access elements of the diagnostic information embedded in the given exception: `hpx::get_locality_id`, `hpx::get_host_name`, `hpx::get_process_id`, `hpx::get_function_name`, `hpx::get_file_name`, `hpx::get_line_number`, `hpx::get_os_thread`, `hpx::get_thread_id`, and `hpx::get_thread_description`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #71](#)⁷⁶³⁶ - GIDs that are not serialized via `handle_gid<>` should raise an exception
- [Issue #105](#)⁷⁶³⁷ - Allow for `hpx::util::functions` to be registered in the AGAS symbolic namespace
- [Issue #107](#)⁷⁶³⁸ - Nasty threadmanger race condition (reproducible in `sheneos_test`)
- [Issue #108](#)⁷⁶³⁹ - Add millisecond resolution to *HPX* logs on Linux
- [Issue #110](#)⁷⁶⁴⁰ - Shutdown hang in distributed with release build
- [Issue #116](#)⁷⁶⁴¹ - Don't use TSS for the applier and runtime pointers
- [Issue #162](#)⁷⁶⁴² - Move local synchronous execution shortcut from `hpx::function` to the applier
- [Issue #172](#)⁷⁶⁴³ - Cache sources in CMake and check if they change manually
- [Issue #178](#)⁷⁶⁴⁴ - Add an INI option to turn off ranged-based AGAS caching
- [Issue #187](#)⁷⁶⁴⁵ - Support for disabling performance counter deployment
- [Issue #202](#)⁷⁶⁴⁶ - Support for sending performance counter data to a specific file
- [Issue #218](#)⁷⁶⁴⁷ - `boost.coroutines` allows different stack sizes, but stack pool is unaware of this
- [Issue #231](#)⁷⁶⁴⁸ - Implement movable `boost::bind`
- [Issue #232](#)⁷⁶⁴⁹ - Implement movable `boost::function`
- [Issue #236](#)⁷⁶⁵⁰ - Allow binding `hpx::util::function` to actions
- [Issue #239](#)⁷⁶⁵¹ - Replace `hpx::function` with `hpx::util::function`

HPX V0.8.1 (Apr 21, 2012)

This is a point release including important bug fixes for *HPX V0.8.0 (Mar 23, 2012)*.

General changes

- HPX does not need to be installed anymore to be functional.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this point release:

- [Issue #295](#)⁷⁶⁹⁸ - Don't require install path to be known at compile time.
- [Issue #371](#)⁷⁶⁹⁹ - Add `hpx iostreams` to standard build.
- [Issue #384](#)⁷⁷⁰⁰ - Fix compilation with GCC 4.7.
- [Issue #390](#)⁷⁷⁰¹ - Remove `keep_factory_alive` startup call from ShenEOS; add shutdown call to `H5close`.
- [Issue #393](#)⁷⁷⁰² - Thread affinity control is broken.

Bug fixes (commits)

Here is a list of the important commits included in this point release:

- `r7642` - External: Fix backtrace memory violation.
- **`r7775` - Components: Fix symbol visibility bug with component startup providers.** This prevents one components providers from overriding another components.
- `r7778` - Components: Fix startup/shutdown provider shadowing issues.

HPX V0.8.0 (Mar 23, 2012)

We have had roughly 1000 commits since the last release and we have closed approximately 70 tickets (bugs, feature requests, etc.).

General changes

- Improved PBS support, allowing for arbitrary naming schemes of node-hostnames.
- Finished verification of the reference counting framework.
- Implemented decrement merging logic to optimize the distributed reference counting system.
- Restructured the LCO framework. Renamed `hpx::lcos::eager_future<>` and `hpx::lcos::lazy_future<>` into `hpx::lcos::packaged_task` and `hpx::lcos::deferred_packaged_task`. Split `hpx::lcos::promise` into `hpx::lcos::packaged_task` and `hpx::lcos::future`. Added ‘local’ futures (in namespace `hpx::lcos::local`).
- Improved the general performance of local and remote action invocations. This (under certain circumstances) drastically reduces the number of copies created for each of the parameters and return values.
- Reworked the performance counter framework. Performance counters are now created only when needed, which reduces the overall resource requirements. The new framework allows for much more flexible creation and management of performance counters. The new sine example application demonstrates some of the capabilities of the new infrastructure.
- Added a buildbot-based continuous build system which gives instant, automated feedback on each commit to SVN.
- Added more automated tests to verify proper functioning of *HPX*.
- Started to create documentation for *HPX* and its API.
- Added documentation toolchain to the build system.
- Added dataflow LCO.
- Changed default *HPX* command line options to have `hpx:` prefix. For instance, the former option `--threads` is now `--hpx:threads`. This has been done to make ambiguities with possible application specific command line options as unlikely as possible. See the section *HPX Command Line Options* for a full list of available options.
- Added the possibility to define command line aliases. The former short (one-letter) command line options have been predefined as aliases for backwards compatibility. See the section *HPX Command Line Options* for a detailed description of command line option aliasing.
- Network connections are now cached based on the connected host. The number of simultaneous connections to a particular host is now limited. Parcels are buffered and bundled if all connections are in use.
- Added more refined thread affinity control. This is based on the external library Portable Hardware Locality (HWLOC).
- Improved support for Windows builds with CMake.
- Added support for components to register their own command line options.

- Added the possibility to register custom startup/shutdown functions for any component. These functions are guaranteed to be executed by an *HPX* thread.
- Added two new experimental thread schedulers: `hierarchy_scheduler` and `periodic_priority_scheduler`. These can be activated by using the command line options `--hpx:queuing=hierarchy` or `--hpx:queuing=periodic`.

Example applications

- [Graph500 performance benchmark](#)⁷⁷⁰³ (thanks to Matthew Anderson for contributing this application).
- [GTC \(Gyrokinetic Toroidal Code\)](#)⁷⁷⁰⁴: a skeleton for particle in cell type codes.
- Random Memory Access: an example demonstrating random memory accesses in a large array
- [ShenEOS example](#)⁷⁷⁰⁵, demonstrating partitioning of large read-only data structures and exposing an interpolation API.
- Sine performance counter demo.
- Accumulator examples demonstrating how to write and use *HPX* components.
- Quickstart examples (like `hello_world`, `fibonacci`, `quicksort`, `factorial`, etc.) demonstrating simple *HPX* concepts which introduce some of the concepts in *HPX*.
- Load balancing and work stealing demos.

API changes

- Moved all local LCOs into a separate namespace `hpx::lcos::local` (for instance, `hpx::lcos::local_mutex` is now `hpx::lcos::local::mutex`).
- Replaced `hpx::actions::function` with `hpx::util::function`. Cleaned up related code.
- Removed `hpx::traits::handle_gid` and moved handling of global reference counts into the corresponding serialization code.
- Changed terminology: `prefix` is now called `locality_id`, renamed the corresponding API functions (such as `hpx::get_prefix`, which is now called `hpx::get_locality_id`).
- Adding `hpx::find_remote_localities`, and `hpx::get_num_localities`.
- Changed performance counter naming scheme to make it more bash friendly. The new performance counter naming scheme is now

```
/object{parentname#parentindex/instance#index}/counter#parameters
```

- Added `hpx::get_worker_thread_num` replacing `hpx::threadmanager_base::get_thread_num`.
- Renamed `hpx::get_num_os_threads` to `hpx::get_os_threads_count`.
- Added `hpx::threads::get_thread_count`.

⁷⁷⁰³ <http://www.graph500.org/>

⁷⁷⁰⁴ <http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/>

⁷⁷⁰⁵ <http://stellarcollapse.org/equationofstate>

- Restructured the Futures sub-system, renaming types in accordance with the terminology used by the C++11 ISO standard.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #31⁷⁷⁰⁶](#) - Specialize `handle_gid<>` for examples and tests
- [Issue #72⁷⁷⁰⁷](#) - Fix AGAS reference counting
- [Issue #104⁷⁷⁰⁸](#) - heartbeat throws an exception when decrefing the performance counter it's watching
- [Issue #111⁷⁷⁰⁹](#) - throttle causes an exception on the target application
- [Issue #142⁷⁷¹⁰](#) - One failed component loading causes an unrelated component to fail
- [Issue #165⁷⁷¹¹](#) - Remote exception propagation bug in AGAS reference counting test
- [Issue #186⁷⁷¹²](#) - Test credit exhaustion/splitting (e.g. `prepare_gid` and symbol NS)
- [Issue #188⁷⁷¹³](#) - Implement remaining AGAS reference counting test cases
- [Issue #258⁷⁷¹⁴](#) - No type checking of GIDs in stubs classes
- [Issue #271⁷⁷¹⁵](#) - Seg fault/shared pointer assertion in distributed code
- [Issue #281⁷⁷¹⁶](#) - CMake options need descriptive text
- [Issue #283⁷⁷¹⁷](#) - AGAS caching broken (`gva_cache` needs to be rewritten with ICL)
- [Issue #285⁷⁷¹⁸](#) - `HPX_INSTALL` root directory not the same as `CMAKE_INSTALL_PREFIX`
- [Issue #286⁷⁷¹⁹](#) - New segfault in dataflow applications
- [Issue #289⁷⁷²⁰](#) - Exceptions should only be logged if not handled
- [Issue #290⁷⁷²¹](#) - c++11 tests failure
- [Issue #293⁷⁷²²](#) - Build target for component libraries
- [Issue #296⁷⁷²³](#) - Compilation error with Boost V1.49rc1

- [Issue #364⁷⁷⁵⁴](#) - Installation seriously broken in r7443

HPX V0.7.0 (Dec 12, 2011)

We have had roughly 1000 commits since the last release and we have closed approximately 120 tickets (bugs, feature requests, etc.).

General changes

- Completely removed code related to deprecated AGAS V1, started to work on AGAS V2.1.
- Started to clean up and streamline the exposed APIs (see 'API changes' below for more details).
- Revamped and unified performance counter framework, added a lot of new performance counter instances for monitoring of a diverse set of internal *HPX* parameters (queue lengths, access statistics, etc.).
- Improved general error handling and logging support.
- Fixed several race conditions, improved overall stability, decreased memory footprint, improved overall performance (major optimizations include native TLS support and ranged-based AGAS caching).
- Added support for running *HPX* applications with PBS.
- Many updates to the build system, added support for gcc 4.5.x and 4.6.x, added C++11 support.
- Many updates to default command line options.
- Added many tests, set up buildbot for continuous integration testing.
- Better shutdown handling of distributed applications.

⁷⁷⁴⁷ <https://github.com/TheHPXProject/hpx/issues/343>

⁷⁷⁴⁸ <https://github.com/TheHPXProject/hpx/issues/351>

⁷⁷⁴⁹ <https://github.com/TheHPXProject/hpx/issues/353>

⁷⁷⁵⁰ <https://github.com/TheHPXProject/hpx/issues/355>

⁷⁷⁵¹ <https://github.com/TheHPXProject/hpx/issues/356>

⁷⁷⁵² <https://github.com/TheHPXProject/hpx/issues/359>

⁷⁷⁵³ <https://github.com/TheHPXProject/hpx/issues/361>

⁷⁷⁵⁴ <https://github.com/TheHPXProject/hpx/issues/364>

Example applications

- quickstart/factorial and quickstart/fibonacci, future-recursive parallel algorithms.
- quickstart/hello_world, distributed hello world example.
- quickstart/rma, simple remote memory access example
- quickstart/quicksort, parallel quicksort implementation.
- gtc, gyrokinetic torodial code.
- bfs, breadth-first-search, example code for a graph application.
- sheneos, partitioning of large data sets.
- accumulator, simple component example.
- balancing/os_thread_num, balancing/px_thread_phase, examples demonstrating load balancing and work stealing.

API changes

- Added `hpx::find_all_localities`.
- Added `hpx::terminate` for non-graceful termination of applications.
- Added `hpx::lcos::async` functions for simpler asynchronous programming.
- Added new AGAS interface for handling of symbolic namespace (`hpx::agas::*`).
- Renamed `hpx::components::wait` to `hpx::lcos::wait`.
- Renamed `hpx::lcos::future_value` to `hpx::lcos::promise`.
- Renamed `hpx::lcos::recursive_mutex` to `hpx::lcos::local_recursive_mutex`, `hpx::lcos::mutex` to `hpx::lcos::local_mutex`
- Removed support for Boost versions older than V1.38, recommended Boost version is now V1.47 and newer.
- Removed `hpx::process` (this will be replaced by a real process implementation in the future).
- Removed non-functional LCO code (`hpx::lcos::dataflow`, `hpx::lcos::thunk`, `hpx::lcos::dataflow_variable`).
- Removed deprecated `hpx::naming::full_address`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #28⁷⁷⁵⁵](#) - Integrate Windows/Linux CMake code for *HPX* core
- [Issue #32⁷⁷⁵⁶](#) - `hpx::cout()` should be `hpx::cout`
- [Issue #33⁷⁷⁵⁷](#) - AGAS V2 legacy client does not properly handle `error_code`

⁷⁷⁵⁵ <https://github.com/TheHPXProject/hpx/issues/28>

⁷⁷⁵⁶ <https://github.com/TheHPXProject/hpx/issues/32>

⁷⁷⁵⁷ <https://github.com/TheHPXProject/hpx/issues/33>

- Issue #60⁷⁷⁵⁸ - AGAS: allow for registerid to optionally take ownership of the gid
- Issue #62⁷⁷⁵⁹ - adaptive1d compilation failure in Fusion
- Issue #64⁷⁷⁶⁰ - Parcel subsystem doesn't resolve domain names
- Issue #83⁷⁷⁶¹ - No error handling if no console is available
- Issue #84⁷⁷⁶² - No error handling if a hosted locality is treated as the bootstrap server
- Issue #90⁷⁷⁶³ - Add general commandline option -N
- Issue #91⁷⁷⁶⁴ - Add possibility to read command line arguments from file
- Issue #92⁷⁷⁶⁵ - Always log exceptions/errors to the log file
- Issue #93⁷⁷⁶⁶ - Log the command line/program name
- Issue #95⁷⁷⁶⁷ - Support for distributed launches
- Issue #97⁷⁷⁶⁸ - Attempt to create a bad component type in AMR examples
- Issue #100⁷⁷⁶⁹ - factorial and factorial_get examples trigger AGAS component type assertions
- Issue #101⁷⁷⁷⁰ - Segfault when hpx::process::here() is called in fibonacci2
- Issue #102⁷⁷⁷¹ - unknown_component_address in int_object_semaphore_client
- Issue #114⁷⁷⁷² - marduk raises assertion with default parameters
- Issue #115⁷⁷⁷³ - Logging messages for SMP runs (on the console) shouldn't be buffered

2.11.3 Namespace changes

HPX V1.9.0 Namespace changes

The latest release includes amongst others changes in the namespaces so that *HPX* facilities correspond to the C++ Standard Library. The old namespaces are deprecated. Below is a comprehensive list of the namespace changes.

Table 2.194: Namespace changes in V1.9.0

Old namespace	New namespace
<code>hpx::util::mem_fn</code>	<code>hpx::mem_fn</code>
<code>hpx::util::invoke</code>	<code>hpx::invoke</code>
<code>hpx::util::invoke_r</code>	<code>hpx::invoke_r</code>
<code>hpx::util::invoke_fused</code>	<code>hpx::invoke_fused</code>
<code>hpx::util::invoke_fused_r</code>	<code>hpx::invoke_fused_r</code>
<code>hpx::util::unlock_guard</code>	<code>hpx::unlock_guard</code>
<code>hpx::parallel::v1::reduce_by_key</code>	<code>hpx::experimental::reduce_by_key</code>
<code>hpx::parallel::v1::sort_by_key</code>	<code>hpx::experimental::sort_by_key</code>
<code>hpx::parallel::task_canceled_exception</code>	<code>hpx::experimental::task_canceled_exception</code>
<code>hpx::parallel::task_block</code>	<code>hpx::experimental::task_block</code>
<code>hpx::parallel::define_task_block</code>	<code>hpx::experimental::define_task_block </code>
<code>hpx::parallel::define_task_block_restore_thread</code>	<code>hpx::experimental::define_task_block_restore_thread</code>
<code>hpx::execution::experimental::task_group</code>	<code>hpx::experimental::task_group</code>

2.14 About HPX

2.14.1 History

The development of High Performance ParalleX (*HPX*) began in 2007. At that time, Hartmut Kaiser became interested in the work done by the ParalleX group at the [Center for Computation and Technology \(CCT\)](#)⁷⁸³⁴, a multi-disciplinary research institute at [Louisiana State University \(LSU\)](#)⁷⁸³⁵. The ParalleX group was working to develop a new and experimental execution model for future high performance computing architectures. This model was christened ParalleX. The first implementations of ParalleX were crude, and many of those designs had to be discarded entirely. However, over time the team learned quite a bit about how to design a parallel, distributed runtime system which implements the concepts of ParalleX.

From the very beginning, this endeavour has been a group effort. In addition to a handful of interested researchers, there have always been graduate and undergraduate students participating in the discussions, design, and implementation of *HPX*. In 2011 we decided to formalize our collective research efforts by creating the [STE||AR](#)⁷⁸³⁶ group (Systems Technology, Emergent Parallelism, and Algorithm Research). Over time, the team grew to include researchers around the country and the world. In 2014, the [STE||AR](#)⁷⁸³⁷ Group was reorganized to become the international community it is today. This consortium of researchers aims to develop stable, sustainable, and scalable tools which will enable application developers to exploit the parallelism latent in the machines of today and tomorrow. Our goal of the *HPX* project is to create a high quality, freely available, open source implementation of ParalleX concepts for conventional and future systems by building a modular and standards conforming runtime system for SMP and distributed application environments. The API exposed by *HPX* is conformant to the interfaces defined by the C++ ISO Standard and adheres to the programming guidelines used by the [Boost](#)⁷⁸³⁸ collection of C++ libraries. We steer the development of *HPX* with real world applications and aim to provide a smooth migration path for domain scientists.

To learn more about [STE||AR](#)⁷⁸³⁹ and ParalleX, see [People](#) and [Why HPX?](#).

2.14.2 People

The **STE||AR**⁷⁸⁴⁰ Group (pronounced as stellar) stands for “Systems Technology, Emergent Parallelism, and Algorithm Research”. We are an international group of faculty, researchers, and students working at various institutions around the world. The goal of the **STE||AR**⁷⁸⁴¹ Group is to promote the development of scalable parallel applications by providing a community for ideas, a framework for collaboration, and a platform for communicating these concepts to the broader community.

Our work is focused on building technologies for scalable parallel applications. *HPX*, our general purpose C++ runtime system for parallel and distributed applications, is no exception. We use *HPX* for a broad range of scientific applications, helping scientists and developers to write code which scales better and shows better performance compared to more conventional programming models such as MPI.

HPX is based on *ParalleX* which is a new (and still experimental) parallel execution model aiming to overcome the limitations imposed by the current hardware and the techniques we use to write applications today. Our group focuses on two types of applications - those requiring excellent strong scaling, allowing for a dramatic reduction of execution time for fixed workloads and those needing highest level of sustained performance through massive parallelism. These applications are presently unable (through conventional practices) to effectively exploit a relatively small number of cores in a multi-core system. By extension, these application will not be able to exploit high-end exascale computing systems which are likely to employ hundreds of millions of such cores by the end of this decade.

Critical bottlenecks to the effective use of new generation high performance computing (HPC) systems include:

- *Starvation*: due to lack of usable application parallelism and means of managing it,
- *Overhead*: reduction to permit strong scalability, improve efficiency, and enable dynamic resource management,
- *Latency*: from remote access across system or to local memories,
- *Contention*: due to multicore chip I/O pins, memory banks, and system interconnects.

The *ParalleX* model has been devised to address these challenges by enabling a new computing dynamic through the application of message-driven computation in a global address space context with lightweight synchronization. The work on *HPX* is centered around implementing the concepts as defined by the *ParalleX* model. *HPX* is currently targeted at conventional machines, such as classical Linux based Beowulf clusters and SMP nodes.

We fully understand that the success of *HPX* (and *ParalleX*) is very much the result of the work of many people. To see a list of who is contributing see our tables below.

Acknowledgements

Thanks also to the following people who contributed directly or indirectly to the project through discussions, pull requests, documentation patches, etc.

- Panos Syskakis for benchmarking and optimizing our parallel algorithms.
- Shreyas Atre, for contributing fixes to our implementation of senders/receivers and extending our coroutines integration with senders/receivers.
- Alexander Neumann, for contributing fixes to the cmake build system.
- Dimitra Karatza, for her work on refactoring the documentation and providing a new user-friendly environment during and after Google Season of Docs 2021.
- Srinivas Yadav, for his work on SIMD support in algorithms before and during Google Summer of Code 2021.
- Akhil Nair, for his work on adapting algorithms to C++20 before and during Google Summer of Code 2021.
- Alexander Toktarev, for updating the parallel algorithm customization points to use `tag_fallback_invoke` for the default implementations.
- Brice Goglin, for reporting and helping fix issues related to the integration of hwloc in *HPX*.
- Giannis Gonidelis, for his work on the ranges adaptation during the Google Summer of Code 2020.
- Auriane Reverdell ([Swiss National Supercomputing Centre](https://www.cct.lsu.edu)⁷⁸⁷¹), for her tireless work on refactoring our CMake setup and modularizing *HPX*.
- Christopher Hinz, for his work on refactoring our CMake setup.
- Weile Wei, for fixing *HPX* builds with CUDA on Summit.
- Severin Strobl, for fixing our CMake setup related to linking and adding new entry points to the *HPX* runtime.
- Rebecca Stobaugh, for her major documentation review and contributions during and after the 2019 Google Season of Documentation.
- Jan Melech, for adding automatic serialization of simple structs.
- Austin McCartney, for adding concept emulation of the Ranges TS bidirectional and random access iterator concepts.
- Marco Diers, reporting and fixing issues related PMIx.
- Maximilian Bremer, for reporting multiple issues and extending the component migration tests.

⁷⁸⁷¹ <https://www.cscs.ch>

- Piotr Mikolajczyk, for his improvements and fixes to the set and count algorithms.
- Grant Rostig, for reporting several deficiencies on our web pages.
- Jakub Golinowski, for implementing an *HPX* backend for OpenCV and in the process improving documentation and reporting issues.
- Mikael Simberg ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁸⁷²), for his tireless help cleaning up and maintaining *HPX*.
- Tianyi Zhang, for his work on HPXMP.
- Shahrzad Shirzad, for her contributions related to Phylanx.
- Christopher Ogle, for his contributions to the parallel algorithms.
- Surya Priy, for his work with statistic performance counters.
- Anushi Maheshwari, for her work on random number generation.
- Bruno Pitrus, for his work with parallel algorithms.
- Nikunj Gupta, for rewriting the implementation of `hpx_main.hpp` and for his fixes for tests.
- Christopher Taylor, for his interest in *HPX* and the fixes he provided. Chris also contributed support for RISC-V architectures.
- Shoshana Jakobovits, for her work on the resource partitioner.
- Denis Blank, who re-wrote our unwrapped function to accept plain values arbitrary containers, and properly deal with nested futures.
- Ajai V. George, who implemented several of the parallel algorithms.
- Taeguk Kwon, who worked on implementing parallel algorithms as well as adapting the parallel algorithms to the Ranges TS.
- Zach Byerly ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷³), who in his work developing applications on top of *HPX* opened tickets and contributed to the *HPX* examples.
- Daniel Estermann, for his work porting *HPX* to the Raspberry Pi.
- Alireza Kheirkhahan ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷⁴), who built and administered our local cluster as well as his work in distributed IO.
- Abhimanyu Rawat, who worked on stack overflow detection.
- David Pfander, who improved signal handling in *HPX*, provided his optimization expertise, and worked on incorporating the Vc vectorization into *HPX*.
- Denis Demidov, who contributed his insights with VexCL.
- Khalid Hasanov, who contributed changes which allowed to run *HPX* on 64Bit power-pc architectures.
- Zahra Khatami ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷⁵), who contributed the prefetching iterators and the persistent auto chunking executor parameters implementation.
- Marcin Copik, who worked on implementing GPU support for C++AMP and HCC. He also worked on implementing a HCC backend for *HPX.Compute*.

⁷⁸⁷² <https://www.cscs.ch>

⁷⁸⁷³ <https://www.lsu.edu>

⁷⁸⁷⁴ <https://www.lsu.edu>

⁷⁸⁷⁵ <https://www.lsu.edu>

- Minh-Khanh Do, who contributed the implementation of several segmented algorithms.
- Bibek Wagle ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷⁶), who worked on fixing and analyzing the performance of the *parcel* coalescing plugin in *HPX*.
- Lukas Troska, who reported several problems and contributed various test cases allowing to reproduce the corresponding issues.
- Andreas Schaefer, who worked on integrating his library ([LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁸⁷⁷) with *HPX*. He reported various problems and submitted several patches to fix issues allowing for a better integration with [LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁸⁷⁸.
- Satyaki Upadhyay, who contributed several examples to *HPX*.
- Brandon Cordes, who contributed several improvements to the inspect tool.
- Harris Brakmic, who contributed an extensive build system description for building *HPX* with Visual Studio.
- Parsa Amini ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷⁹), who refactored and simplified the implementation of *AGAS* in *HPX* and who works on its implementation and optimization.
- Luis Martinez de Bartolome who implemented a build system extension for *HPX* integrating it with the [Conan](https://www.conan.io/)⁷⁸⁸⁰ C/C++ package manager.
- Vinay C Amatya ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁸¹), who contributed to the documentation and provided some of the *HPX* examples.
- Kevin Huck and Nick Chaimov ([University of Oregon](https://uoregon.edu/)⁷⁸⁸²), who contributed the integration of APEX (Autonomic Performance Environment for eXascale) with *HPX*.
- Francisco Jose Tapia, who helped with implementing the parallel sort algorithm for *HPX*.
- Patrick Diehl, who worked on implementing CUDA support for our companion library targeting GPGPUs ([HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁸⁸³).
- Eric Lemanissier contributed fixes to allow compilation using the MingW toolchain.
- Nidhi Makhijani who helped cleaning up some enum consistencies in *HPX* and contributed to the resource manager used in the thread scheduling subsystem. She also worked on *HPX* in the context of the Google Summer of Code 2015.
- Larry Xiao, Devang Bacharwar, Marcin Copik, and Konstantin Kronfeldner who worked on *HPX* in the context of the Google Summer of Code program 2015.
- Daniel Bourgeois ([Center for Computation and Technology \(CCT\)](https://www.cct.lsu.edu)⁷⁸⁸⁴) who contributed to *HPX* the implementation of several parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁸⁸⁵).
- Anuj Sharma and Christopher Bross ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁸⁸⁶), who worked on *HPX* in the context of the Google Summer of Code⁷⁸⁸⁷ program 2014.

- Martin Stumpf (Department of Computer Science 3 - Computer Architecture⁷⁸⁸⁸), who rebuilt our contiguous testing infrastructure (see the *HPX Buildbot Website*⁷⁸⁸⁹). Martin is also working on *HPXCL*⁷⁸⁹⁰ (mainly all work related to *OpenCL*⁷⁸⁹¹) and implementing an *HPX* backend for *POCL*⁷⁸⁹², a portable computing language solution based on *OpenCL*⁷⁸⁹³.
- Grant Mercer (University of Nevada, Las Vegas⁷⁸⁹⁴), who helped creating many of the parallel algorithms (as proposed by N4313⁷⁸⁹⁵).
- Damond Howard (Louisiana State University (LSU)⁷⁸⁹⁶), who works on *HPXCL*⁷⁸⁹⁷ (mainly all work related to *CUDA*⁷⁸⁹⁸).
- Christoph Junghans (Los Alamos National Lab), who helped making our buildsystem more portable.
- Antoine Tran Tan (Laboratoire de Recherche en Informatique, Paris), who worked on integrating *HPX* as a backend for *NT2*⁷⁸⁹⁹. He also contributed an implementation of an API similar to Fortran co-arrays on top of *HPX*.
- John Biddiscombe (Swiss National Supercomputing Centre⁷⁹⁰⁰), who helped with the BlueGene/Q port of *HPX*, implemented the parallel sort algorithm, and made several other contributions.
- Erik Schnetter (Perimeter Institute for Theoretical Physics), who greatly helped to make *HPX* more robust by submitting a large amount of problem reports, feature requests, and made several direct contributions.
- Mathias Gaunard (Metascale), who contributed several patches to reduce compile time warnings generated while compiling *HPX*.
- Andreas Buhr, who helped with improving our documentation, especially by suggesting some fixes for inconsistencies.
- Patricia Grubel (New Mexico State University⁷⁹⁰¹), who contributed the description of the different *HPX* thread scheduler policies and is working on the performance analysis of our thread scheduling subsystem.
- Lars Viklund, whose wit, passion for testing, and love of odd architectures has been an amazing contribution to our team. He has also contributed platform specific patches for FreeBSD and MSVC12.
- Agustin Berge, who contributed patches fixing some very nasty hidden template meta-programming issues. He rewrote large parts of the API elements ensuring strict conformance with the C++ ISO Standard.
- Anton Bikineev for contributing changes to make using `boost::lexical_cast` safer, he also contributed a thread safety fix to the `iostreams` module. He also contributed a

complete rewrite of the serialization infrastructure replacing Boost.Serialization inside *HPX*.

- Piry Jahkola, who contributed the Mac OS build system and build documentation on how to build *HPX* using Clang and libc++.
- Mario Mulansky, who created an *HPX* backend for his Boost.Odeint library, and who submitted several test cases allowing us to reproduce and fix problems in *HPX*.
- Rekha Raj, who contributed changes to the description of the Windows build instructions.
- Jeremy Kemp how worked on an *HPX* OpenMP backend and added regression tests.
- Alex Nagelberg for his work on implementing a C wrapper API for *HPX*.
- Chen Guo, helviahartmann, Nicholas Pezolano, and John West who added and improved examples in *HPX*.
- Joseph Kleinhenz, Markus Elfring, Kirill Kropivnyansky, Alexander Neundorf, Bryant Lam, and Alex Hirsch who improved our CMake.
- Tapasweni Pathak, Praveen Velliengiri, Jean-Loup Tastet, Michael Levine, Alekh Nigam, HadrienG2, Prayag Verma, Islada, Alex Myczko, and Avyav Kumar who improved the documentation.
- Jayesh Badwaik, J. F. Bastien, Christoph Garth, Christopher Hinz, Brandon Kohn, Mario Lang, Maikel Nadolski, pierrele, hendrx, Dekken, woodmeister123, xaguilar, Andrew Kemp, Dylan Stark, Matthew Anderson, Jeremy Wilke, Jiazheng Yuan, CyberDrudge, david8dixon, Maxwell Reeser, Raffaele Solca, Marco Ippolito, Jules Penuchot, Weile Wei, Severin Strobl, Kor de Jong, albestro, Jeff Trull, Yuri Victorovich, and Gregor Daiss who contributed to the general improvement of *HPX*.

*HPX Funding Acknowledgements*⁷⁹⁰² lists current and past funding sources for *HPX*. Special thanks to *Google Summer of Code*⁷⁹⁰³ and *Google Season of Docs*⁷⁹⁰⁴ for the continuous support they provide which helps us enhance both our code and our documentation.
