HPX V1.11.0 (Jun 30, 2025)

This release is the last version of HPX that supports C++17. Future versions of HPX will require compilation using C++20 or above.

General changes

- Added synchronous versions of all collective operations. Added global predefined communicator objects that are accessible through new APIs: `hpx::collectives::get_world_communicator()` refers to all localities and `hpx::collectives::get_local_communicator()` refers to all threads on the calling locality. We unified the interfaces of the different communicator objects.
- Added `hpx::experimental::run_on_all` allowing to run a given function (possibly concurrently) using a given execution policy.
- Added a helper object `hpx::runtime_manager` that simplifies the initialization of HPX without needing to modify the main function of the application.
- We improved the compatibility with various accelerator frameworks (SYCL, OneAPI).
- Applied build system changes that allow building HPX without any prerequisites. This requires to pass `-DHPX_WITH_FETCH_HWLOC=On` and `-DHPX_WITH_FETCH_BOOST=On` to the `CMake`²⁰⁰⁵ configuration.
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- Added the `hpx::contains` and `hpx::contains_subrange` parallel algorithms.
- Adapted many of HPX' parallel algorithms to be usable with senders/receivers.

Breaking changes

- We have moved most of the APIs that were defined in the namespace `hpx::parallel::execution` to the namespace `hpx::experimental::execution`. It was not possible to add compatibility facilities that will allow to continue using the old APIs, applications will have to be changed in order to continue functioning correctly.
- The CMake configuration parameter `HPX_WITH_RUN_MAIN_EVERYWHERE` is now deprecated and will be removed in the future. Use the preprocessor macro `HPX_HAVE_RUN_MAIN_EVERYWHERE` on a target-by-target case instead.
- Removed the dysfunctional libfabric parcellport.
- Removed features that were long deprecated (starting V1.8):
 - `hpx::flush`, `hpx::endl`, `hpx::async_flush`, `hpx::async_endl` - Various enumerator types are now only available as `class enum` requiring explicit scoped use of the enumerator values
 - Various non-conforming overloads of parallel algorithms
 - `hpx::for_loop` and friends (now only available as `hpx::experimental::for_loop`)
- `hpx::parallel::induction` is now only available as `hpx::experimental::induction`

²⁰⁰⁵ <https://www.cmake.org>

- `hpx::parallel::reduction` and friends are now only available as `hpx::experimental::reduction`
- `hpx::assertion::source_location` is now only available as `hpx::source_location`
- `hpx::lcos::split_future` is now only available as `hpx::split_future`
- `hpx::lcos::wait` and friends have been removed altogether
- `hpx::lcos::wait_any` and friends are now only available as `hpx::wait_any`
- `hpx::lcos::wait_some` and friends are now only available as `hpx::wait_some`
- `hpx::lcos::wait_each` and friends are now only available as `hpx::wait_each`
- `hpx::lcos::wait_all` and friends are now only available as `hpx::wait_all`
- `hpx::lcos::when_all` and friends are now only available as `hpx::when_all`
- `hpx::lcos::when_any` and friends are now only available as `hpx::when_any`
- `hpx::lcos::when_each` and friends are now only available as `hpx::when_each`
- `hpx::lcos::when_some` and friends are now only available as `hpx::when_some`
- `hpx::util::optional` and related facilities are now only available as `hpx::optional`
- `hpx::util::bind` and related facilities are now only available as `hpx::bind`
- `hpx::util::function` and friends are now only available as `hpx::function`
- `hpx::traits::is_bound_action` and related facilities are now only available as `hpx::is_bound_action`
- `hpx::traits::is_bind_expression` and related facilities are now only available as `hpx::is_bind_expression`
- `hpx::traits::is_placeholder` and related facilities are now only available as `hpx::is_placeholder`
- `hpx::lcos::future` and related facilities are now only available as `hpx::future`
- `hpx::memory::intrusive_ptr` is now only available as `hpx::intrusive_ptr`
- `hpx::lcos::local::barrier` is now only available as `hpx::barrier`
- `hpx::lcos::barrier` is now only available as `hpx::distributed::barrier`
- `hpx::lcos::local::cpp20_binary_semaphore` is now only available as `hpx::detail::binary_semaphore`
- `hpx::lcos::local::condition_variable` and friends are now only available as `hpx::condition_variable`
- `hpx::lcos::local::counting_semaphore` and friends are now only available as `hpx::counting_semaphore`
- `hpx::lcos::local::cpp20_latch` and is now only available as `hpx::latch`
- `hpx::lcos::latch` and is now only available as `hpx::distributed::latch`
- `hpx::lcos::local::upgrade_lock` and friends are now only available as `hpx::upgrade_lock`
- `hpx::lcos::local::mutex` and friends are now only available as `hpx::mutex`

- `hpx::lcos::local::spinlock` and friends are now only available as `hpx::spinlock`
- `hpx::lcos::local::call_once` and friends are now only available as `hpx::call_once`
- `hpx::util::annotated_function` and is now only available as `hpx::annotated_function`
- `hpx::components::abstract_simple_component_base` and is now only available as `hpx::components::abstract_component_base`
- `hpx::naming::id_type` and is now only available as `hpx::id_type`

- [PR #6089](#)²¹⁵⁴ - Implementing p2079

2.11.2 List of older releases

HPX V1.10.0 (May 29, 2024)

General changes

- The HPX documentation has seen a major overhaul for this release. We finished documenting the public local HPX API, we have added migration guides from widely used parallelization platforms to HPX (OpenMP, TBB, and MPI).
- We have added facilities enabling optimizations for trivially-relocatable types (see [P1144](#)²¹⁵⁵ for more details).
- We have added (and use) the `scope_xxx` helper facilities as specified by the C++ library fundamentals TS v3 (see: [N4948](#)²¹⁵⁶).
- We have added configuration options that allow to build HPX without pre-installing any prerequisites. Use `HPX_WITH_FETCH_HWLOC=On` to have [Portable Hardware Locality \(HWLOC\)](#)²¹⁵⁷ installed for you. Similarly, setting `HPX_WITH_FETCH_BOOST=On` during configuration time will install the necessary [Boost](#)²¹⁵⁸ libraries (currently V1.84.0).
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- The collective operations APIs have seen an unification, we have fixed issues and performance problems for the collectives.
- The HPX executors have seen a streamlining and some consistency changes. We have applied many performance improvements to the executor implementations that directly positively impact the performance of our parallel algorithms.
- We have added a new parcelport allowing to use Gasnet as a communication platform.
- We have added optimizations to various parcelports improving overall communication performance. This includes - amongst other things - send immediate optimizations and receiver-side zero-copy optimizations.
- Futures will now execute the associated task eagerly and inline on any wait operation if the task has not started running yet. This feature can be enabled using the `HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=On` configuration setting (which is *Off* by default).
- We have enabled using json files to supply configuration information through the command line. This feature can be enabled with the configuration option `HPX_COMMAND_LINE_HANDLING_WITH_JSON_CONFIGURATION_FILES=On`. This functionality depends on the external [JSoN library](#)²¹⁵⁹, which can be built at configuration time by supplying `HPX_WITH_FETCH_JSON=On` to [CMake](#)²¹⁶⁰.
- We have applied many fixes to our CUDA, ROCm, and SYCL build environments.

Breaking changes

- The `CMake`²¹⁶¹ configuration keys `SOMELIB_ROOT` (e.g., `BOOST_ROOT`) have been renamed to `Somelib_ROOT` (e.g., `Boost_ROOT`) to avoid warnings when using newer versions of `CMake`²¹⁶². Please update your scripts accordingly. For now, the old variable names are re-assigned to the new names and unset in the `CMake`²¹⁶³ cache.

HPX V1.9.1 (August 4, 2023)

General changes

This point release fixes a couple of problems reported for the V1.9.0 release. Most importantly, we fixed various occasional hanging during startup and shutdown in distributed scenarios. We also added support for zero-copy serialization on the receiving side to the TCP, MPI, and LCI parcelports. Last but not least, we have added support for Visual Studio 2019 and gcc using MINGW on Windows, and also support for gcc V13 and clang V15.

HPX headers are now made consistently named the same as their standard library counterparts, e.g. `#include <thread>` now corresponds to `#include <hpx/thread.hpp>`. This significantly simplifies porting existing standards conforming codes to HPX.

A lot of work has been done to improve and optimize our network communication layers. Primary focus of this work was on the LCI parcelport, but we have also cleaned up and improved the MPI parcelport.

Additionally, we have continued working on our documentation. The main focus here was on completing the API documentation of the most important API functions. We have started adding migration guides for people interested in moving their codes away from other, commonplace parallelization frameworks like OpenMP.

HPX V1.9.0 (May 2, 2023)

General changes

- Added RISC-V 64bit support. HPX is now compatible with RISC-V architectures which have revolutionized the HPC world.
- LCI parcelport has been optimized to transfer parcels with fewer messages and use the HPX resource partitioner for its progress thread allocation. It should generally provide better performance than before. It also removes its dependency on the MPI library.
- HPX dependency on Boost was further relaxed by replacing headers from Boost.Range, Boost.Tokenizer and Boost.Lockfree.
- Improvements took place on our parallel algorithms implementation.
- Our Senders/Receivers (P2300) integration was extended:
 - Coroutines were integrated with senders/receivers.
- `get_completion_signatures` now works with awaitable senders. - `with_awaitable_senders` allows the passed senders to retrieve the value i.e. senders are transparently awaitable from within a coroutine. - `when_all_vector` was added.
- `sync_wait` and `sync_wait_with_variant` sender consumers were added. The user can now initiate the execution of their asynchronous pipeline by blocking the current thread that executes the `main()` function until the result is retrieved.
- The combinators for futures (a.k.a. `async_combinators`) `when_*`, `wait_*`, `wait_*_nothrow` were turned into CPOs allowing for end-user customization. For more information on the `async_combinators` refer to the documentation, https://hpx-docs.stellar-group.org/latest/html/libs/core/async_combinators/docs/index.html?highlight=combinators.
- The new datapar backend SVE allows `simd` and `par_simd` execution policies to exploit dataparallelism in the processors that have SVE vector registers like A64FX and Neoverse V1.
- The documentation for parallel algorithms, container algorithms was further improved. The Public API page was vastly enriched.

²³⁹³ <https://github.com/TheHPXProject/hpx/pull/6281>

²³⁹⁴ <https://github.com/TheHPXProject/hpx/pull/6283>

- Copy button shortkey was added at the top-right of code-blocks.
- Pragma directive that reports warnings as errors on MSVC was fixed.
- Command line argument `--hpx:loopback_network` was added to facilitate debugging with networks.
- We added an HPX-SYCL integration, allowing users to obtain HPX futures for SYCL events. This effectively enables the integration of arbitrary asynchronous SYCL operations into the HPX task graph. Bolted on top of this integration, we further added an HPX-SYCL executor for ease of use.

Breaking changes

- Stopped supporting Clang V8, the minimal version supported is now Clang V10.
- Stopped supporting gcc V8, the minimal version supported is now gcc V9.
- Stopped supporting Visual Studio 2015, the minimal version supported is now Visual Studio 2019.
- `tag_policy_tag` et.al. were re-added after HPX V1.8.1 deprecation.
- `get_chunk_size` and `processing_units_count` API is now expecting the time for one iteration as an argument.
- The list of all the namespace changes can be found here: [HPX V1.9.0 Namespace changes](#).

- PR #6170²⁴⁵⁰ - Adding missing fallback for processing_units_count customization point
- PR #6169²⁴⁵¹ - LCI parcelport: bypass the parcel queue and connection cache.
- PR #6167²⁴⁵² - Add create_local_communicator API function
- PR #6166²⁴⁵³ - Add missing header for std::intmax_t
- PR #6165²⁴⁵⁴ - Attempt to work around MSVC problem
- PR #6161²⁴⁵⁵ - Update EVE integration
- PR #6160²⁴⁵⁶ - More cleanup for module levels 0 to 10
- PR #6159²⁴⁵⁷ - Fix minor spelling mistake in generate_issue_pr_list.sh
- PR #6158²⁴⁵⁸ - Update documentation in *writing single-node applications* page
- PR #6157²⁴⁵⁹ - Improve index_queue_spawning
- PR #6154²⁴⁶⁰ - Avoid performing late command line handling twice in distributed run-time
- PR #6152²⁴⁶¹ - The -rd and -mr options didn't work, and they should have been -rd and -mr
- PR #6151²⁴⁶² - Refactoring the Manual page in documentation
- PR #6148²⁴⁶³ - Investigate the failure of the LCI parcelport.
- PR #6147²⁴⁶⁴ - Make posix co-routine stacks non-executable
- PR #6146²⁴⁶⁵ - Avoid ambiguities wrt tag_invoke
- PR #6144²⁴⁶⁶ - General improvements to scheduling and related fixes
- PR #6143²⁴⁶⁷ - Add list of new namespaces for new release
- PR #6140²⁴⁶⁸ - Fixing background scheduler to properly exit in the end
- PR #6139²⁴⁶⁹ - [P2300] execution: Cleanup coroutines integration and improve ADL isolation
- PR #6137²⁴⁷⁰ - Adding example of a simple master/slave distributed application

- PR #6136²⁴⁷¹ - Deprecate `execution::experimental::task_group` in favor of `experimental::task_group`
- PR #6135²⁴⁷² - Fixing warnings reported by MSVC analysis
- PR #6134²⁴⁷³ - Adding notification function for parcelports to be called after early parcel handling
- PR #6132²⁴⁷⁴ - Fixing `to_non_par()` for parallel simd policies
- PR #6131²⁴⁷⁵ - modernize modules from level 25
- PR #6130²⁴⁷⁶ - Remove the mutex lock in the critical path of `get_partitioner`.
- PR #6129²⁴⁷⁷ - Modernize module from levels 22, 23
- PR #6127²⁴⁷⁸ - Working around gccV9 problem that prevent us from storing enum classes in bit fields
- PR #6126²⁴⁷⁹ - Deprecate `hpx::parallel::task_block` in favor of `hpx::experimental::task_block`
- PR #6125²⁴⁸⁰ - Making sure `sync_wait` compiles when used with an lvalue sender involving bulk
- PR #6124²⁴⁸¹ - Fixing use of `any_sender` in combination with `when_all`
- PR #6123²⁴⁸² - Fixed issues found by PVS-Studio
- PR #6121²⁴⁸³ - Modernize modules of level 21, 22
- PR #6120²⁴⁸⁴ - Use `index_queue` for parallel executors `bulk_async_execute`
- PR #6119²⁴⁸⁵ - Update CMakeLists.txt
- PR #6118²⁴⁸⁶ - Modernize modules from level 17, 18, 19, and 20
- PR #6117²⁴⁸⁷ - Initialize `buffer_allocate_time_` to 0
- PR #6116²⁴⁸⁸ - Add new command line argument `-hpx:loopback_network`
- PR #6115²⁴⁸⁹ - Modernize modules of levels 14, 15, and 16
- PR #6114²⁴⁹⁰ - Enhance the formatting of the documentation
- PR #6113²⁴⁹¹ - Modernize modules in module level 11, 12, and 13

General changes

This patch release adds a number of small new features and fixes a handful of problems discovered since the last release, in particular:

- A lot of work has been done to improve vectorization support for our parallel algorithms. HPX now supports using EVE - the Expressive Vector Engine as a vectorization backend.
- Added a simple average power consumption performance counter.
- Added performance counters related to the use of zero-copy chunks in the networking layer.
- More work was done towards full compatibility with the sender/receivers proposal P2300.
- Fixing `sync_wait` to decay the result types
- Fixed collective operations to properly avoid overlapping consecutive operations on the same communicator.
- Simplified the implementation of our execution policies and added mapping functions between those.
- Fixed performance issues with our implementation of *small_vector*.
- Serialization now works with buffers of unsigned characters.
- Fixing dangling reference in serialization of non-default constructible types
- Fixed static linking on Windows.
- Fixed support for M1/MacOS based architectures.
- Fixed support for gentoo/musl.
- Fixed `hpx::counting_semaphore_var`.
- Properly check start and end bounds for `hpx::for_loop`
- A lot of changes and fixes to the documentation (see <https://hpx-docs.stellar-group.org>).

Breaking changes

- No breaking changes have been introduced.

- PR #5879²⁶⁸⁴ - New performance counters related to zero-copy chunks.

HPX V1.8.0 (May 18, 2022)

With HPX parallel algorithms been fully adapted to C++20 the new release achieves full conformance with C++20 concurrency and parallelism facilities. HPX now supports all of the algorithms as specified by C++20. We have added support for vectorization to more of our algorithms. Much work has been done towards implementing P2300 (“`std::execution`”) and implementing the underlying senders/receivers facilities. Finally, The new release comes with a brand new documentation interface!

²⁶⁸⁴ <https://github.com/TheHPXProject/hpx/pull/5879>

General changes

- The new documentation can now be found on our webpage: <https://hpx-docs.stellar-group.org>. This includes a completely new and user-friendly interface environment along with restructuring of certain components. The content in the “Quick start”, “Manual” and “Examples” was improved, while the “Build system” page was adapted to include necessary information for newcomers.
- With the vectorization support available in modern hardware architectures HPX now provides new data-parallel vector execution policies `hpx::execution::simd` and `hpx::execution::par_simd` that enable significant speed-up of our parallel algorithm implementations. The following algorithms now support SIMD execution:
 - `copy`, `copy_n`
 - `generate`
 - `adjacent_difference`, `adjacent_find`
 - `all_of`, `any_of`, `none_of`
 - `equal`, `mismatch`,
 - `inner_product`
 - `count`, `count_if`
 - `fill`, `fill_n`
 - `find`, `find_end`, `find_first_of`, `find_if`, `find_if_not`
 - `for_each`, `for_each_n`
 - `generate`, `generate_n`.
- Based on top of P2300 the HPX parallel algorithms now support the pipeline syntax towards an effort to unify their usage along with senders/receivers. The HPX parallel algorithms can now bind with senders/receivers using the pipeline operator.
- Several changes took place on the executors provided by HPX:
 - The executors now support the `num_cores` options in order for the user to be able to specify the desired number of cores to be used in the corresponding execution.
 - The `scheduler` executor was implemented on top of senders/receivers and can be used with all HPX facilities that schedule new work, such as parallel algorithms, `hpx::async`, `hpx::dataflow`, etc.
 - The performance of `fork_join_executor` was improved.
 - The following algorithms have been added/adapted to be C++20 conformant:
 - `min_element`
 - `max_element`
 - `minmax_element`
 - `starts_with`
 - `ends_with`
 - `swap_ranges`
 - `unique`
 - `unique_copy`

- rotate
- rotate_copy
- sort
- shift_left
- shift_right
- stable_sort
- partition
- partition_copy
- stable_partition
- adjacent_difference
- nth_element
- partial_sort
- partial_sort_copy.
- HPX_FORWARD/HPX_MOVE macros were introduced that replaced the `std::move` and `std::forward` facilities that in the library code.
- Hangs on distributed barrier were fixed.
- The performance of `scan_partitioner` was improved.
- Support was added for `thread_priority` to the `parallel_execution_policy`
- Regarding senders/receivers and the P2300 proposal various actions took place. `stop_token` was adapted to the recent proposal version (`in_place_stop_token` was introduced). Also `hint`, `annotation`, `priority` and `stacksize` properties were added to the scheduler executor. Stop support was added to `when_all`. Support for completion signatures was added. The following schedulers and algorithms were added:
 - `get_completion_scheduler`
 - `any_sender` and `unique_any_sender`
 - `split` sender
 - `transform_mpi` sender
 - `transfer` sender
 - `let_error`, `let_stopped`
 - `get_env` and related environment queries
 - `schedule`, `set_value`, `set_error`, `set_done`, `start` and `connect` are now proper customization points as defined in P2300.
- Several namespaces were altered towards conformance with C++20. Compatibility layers have been added and the old versions will be removed in next releases. The namespace changes are the following:
 - `hpx::parallel::induction/reduction` were moved into namespace `hpx::experimental`
 - `for_loop` and friends were moved into namespace `hpx::experimental`.
 - `hpx::util::optional` and friends were moved into namespace `hpx`.

- `hpx::lcos::barrier` has been moved into the `hpx::distributed` namespace and `hpx::lcos::local::cpp20_barrier` has been renamed to `barrier` and moved into the `hpx` namespace.
- `hpx::lcos::latch` has been moved into the `hpx::distributed` namespace and `lcos::local::latch` has been moved into the `hpx` namespace. The `count_down_and_wait()` functionality of `latch` has been renamed to `arrive_and_wait()`.
- `hpx::util::unique_function_nonsr` has been renamed to `hpx::move_only_function`.
- `hpx::util::unique_function` has been renamed to `hpx::distributed::move_only_function`.
- `hpx::util::function` has been renamed to `hpx::distributed::function`.
- `hpx::util::function_nonsr` has been renamed to `hpx::function`.
- `hpx::util::function_ref` have been moved to namespace `hpx`.
- `hpx::lcos::split_future` changed namespace and is now used as `hpx::split_future`.
- `hpx::lcos::local::counting_semaphore` has been deprecated and `hpx::lcos::local::cpp20_counting_semaphore` has been renamed to `hpx::counting_semaphore`.
- `hpx::lcos::local::cpp20_binary_semaphore` has been renamed to `hpx::binary_semaphore`.
- `hpx::lcos::local::sliding_semaphore` has been renamed to `hpx::sliding_semaphore` and
- `hpx::lcos::local::sliding_semaphore_var` has been renamed to `hpx::sliding_semaphore_var`.
- `hpx::lcos::local::spinlock` has been renamed to `hpx::spinlock`.
- `hpx::lcos::local::mutex` has been renamed to `hpx::mutex`.
- `hpx::lcos::local::timed_mutex` has been renamed to `hpx::timed_mutex`.
- `hpx::lcos::local::no_mutex` has been renamed to `hpx::no_mutex`.
- `hpx::lcos::local::recursive_mutex` has been renamed to `hpx::recursive_mutex`.
- `hpx::lcos::local::shared_mutex` has been renamed to `hpx::shared_mutex`.
- `hpx::lcos::local::upgrade_lock` has been renamed to `hpx::upgrade_lock`.
- `hpx::lcos::local::upgrade_to_unique_lock` has been renamed to `hpx::upgrade_to_unique_lock`.
- `hpx::lcos::local::condition_variable` has been renamed to `hpx::condition_variable`. `hpx::lcos::local::condition_variable_var` has been renamed to `hpx::condition_variable_var`.
- `hpx::lcos::local::once_flag` has been renamed to `hpx::once_flag`, and `hpx::lcos::local::call_once` has been renamed to `hpx::call_once`.
- The new LCI (Lightweight Communication Interface) `parcelpport` was added that supports irregular and asynchronous applications like graph analysis, sparse linear algebra, modern parallel architectures etc. Major features include:

- Support for advanced communication primitives like two sided send/recv and one sided remote put.
- Better multi-threaded performance.
- Explicit user control of communication resource.
- Flexible signaling mechanisms (synchronizer, completion queue, active message handler).
- The following CMake flags were added, mostly to support using HPX as a backend for SHAD (<https://github.com/pnnl/SHAD>). Please note that these options enable questionable functionalities, partially they even enable undefined behavior. Please only use any of them if you know what you're doing:
 - HPX_SERIALIZATION_WITH_ALLOW_RAW_POINTER_SERIALIZATION
 - HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE
 - HPX_SERIALIZATION_WITH_ALLOW_CONST_TUPLE_MEMBERS

Breaking changes

- Minimum required C++ standard library is C++17.
- Support for GCC 7 and Clang 8.0.0 and below has been removed.
- CUDA version required updated to 11.4.
- CMake version required updated to 3.18.
- The default version of Asio used was updated to 1.20.0.
- The default version of APEX used was updated to 2.5.1.
- APEX version was updated to 2.5.1.
- `tagged_pair` and `tagged_tuple` were removed.
- `tag_dispatch` was renamed to `tag_invoke`.
- `hpx.max_backgroud_threads` was renamed to `hpx.parcel.max_background_threads`.
- The following CMake flags were removed after being deprecated for at least two releases:
 - HPX_SCHEDULER_MAX_TERMINATED_THREADS
 - HPX_WITH_GOOGLE_PERFTOOLS
 - HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY
 - HPX_HAVE_{COROUTINE,PLUGIN}_GCC_HIDDEN_VISIBILITY
 - HPX_TOP_LEVEL
 - HPX_WITH_COMPUTE_CUDA
 - HPX_WITH_ASYNC_CUDA
- `annotate_function` was renamed to `scoped_annotation`.
- `execution::transform` was renamed to `execution::then`.
- `execution::detach` was renamed to `execution::start_detached`.
- `execution::on_sender` was renamed to `execution::schedule_on`.

- `execution::just_on` was renamed to `execution::just_transfer`.
- `execution::set_done` was renamed to `execution::set_stopped`.

- PR #5241³⁰⁷³ - Adapt min_element, max_element and minmax_element to C++20

HPX V1.7.1 (Aug 12, 2021)

This is a bugfix release with a few minor fixes.

General changes

- Added a CMake option to assume that all types are bitwise serializable by default: `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`. The default value OFF corresponds to the old behaviour.
- Added a version check for Asio. The minimum Asio version supported by *HPX* is 1.12.0.
- Fixed a bug affecting usage of actions, where the internals of *HPX* relied on function addresses being unique. This was fixed by relying on variable addresses being unique instead.
- Made `hpx::util::bind` more strict in checking the validity of placeholders.
- Small performance improvement to spinlocks.

HPX V1.7.0 (Jul 14, 2021)

This release is again focused on C++20 conformance of algorithms. Additionally, many new experimental sender-based algorithms have been added based on the latest proposals.

General changes

- The following algorithms have been adapted to be C++20 conformant:
 - `remove`,
 - `remove_if`,
 - `remove_copy`,
 - `remove_copy_if`,
 - `replace`,
 - `replace_if`,
 - `reverse`, and
 - `lexicographical_compare`.
- When the compiler and standard library support the standard execution policies `std::execution::seq`, `std::execution::par`, and `std::execution::par_unseq` they can now be used in all *HPX* parallel algorithms with equivalent behaviour to the non-task policies `hpx::execution::seq`, `hpx::execution::par`, and `hpx::execution::par_unseq`.
- Vc support has been fixed, after being broken in 1.6.0. In addition, *HPX* now experimentally supports GCC's SIMD implementation, when available. The implementation can be used through the `hpx::execution::simd` and `hpx::execution::simdpair` execution policies.
- The customization points `sync_execute`, `async_execute`, `then_execute`, `post`, `bulk_sync_execute`, `bulk_async_execute`, and `bulk_then_execute` are now implemented using `tag_dispatch` (previously `tag_invoke`). Executors can still be implemented by providing the aforementioned functions as member functions of an executor.
- New functionality, enhancements, and fixes based on P0443r14 (executors proposal) and P1897 (sender-based algorithms) have been added to the `hpx::execution::experimental` namespace. These can be accessed through the `hpx/execution.hpp` and `hpx/local/execution.hpp` headers. In particular, the following sender-based algorithms have been added:
 - `detach`,
 - `ensure_started`,
 - `just`,
 - `just_on`,
 - `let_error`,
 - `let_value`,
 - `on`,

- transform, and
- when_all.

Additionally, futures now implement the sender concept. `make_future` can be used to turn a sender into a future. All functionality is experimental and can change without notice.

- All `hpx::init` and `hpx::start` overloads now take `std::functions` instead of `hpx::util::function_nonser`. No changes should be required in user code to accommodate this change.
- `hpx::util::unwrapping` and other related unwrapping functionality has been moved up into the `hpx` namespace. Names in `hpx::util` are still usable with a deprecation warning. This functionality can now be accessed through the `hpx/unwrap.hpp` and `hpx/local/unwrap.hpp` headers.
- The default tag for APEX has been update from 2.3.1 to 2.4.0. In particular, this fixes a bug which could lead to hangs in distributed runs.
- The dependency on Boost.Asio has been replaced with the standalone Asio available at <https://github.com/chriskohlhoff/asio>. By default, a system-installed Asio will be used. `ASIO_ROOT` can be given as a hint to tell CMake where to find Asio. Alternatively, Asio can be fetched automatically using CMake's `fetchcontent` by setting `HPX_WITH_FETCH_ASIO=ON`. In general, dependencies on Boost have again been reduced.
- Modularization of the library has continued. In this release almost all functionality has been moved into modules. These changes do not generally affect user code. Warnings are still issued for headers that have moved.
- hipBLAS is now optional when compiling with `hipcc`. A warning instead of an error will be printed if hipBLAS is not found during configuration.
- Previously `HPX_COMPUTE_HOST_CODE` was defined in host code only if HPX was configured with CUDA or HIP. In this release `HPX_COMPUTE_HOST_CODE` is always defined in host code.
- An experimental `HPX_WITH_PRECOMPILED_HEADERS` CMake option has been added to use precompiled headers when building *HPX*. This option should not be used on Windows.
- Numerous bug fixes.

Breaking changes

- The minimum required CMake version is now 3.17.
- The minimum required Boost version is now 1.71.0.
- The customization mechanism used to implement and extend sender functionality and algorithms has been renamed from `tag_invoke` to `tag_dispatch`. All customization of sender functionality should be done by overloading `tag_dispatch`.
- The following compatibility options have been removed, along with their compatibility implementations:
 - `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`
 - `HPX_WITH_ACTION_BASE_COMPATIBILITY` - `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`
 - `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY` - `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`
 - `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`

```
HPX_WITH_REGISTER_THREAD_OVERLOADS_COMPATIBILITY
-                               HPX_WITH_THREAD_AWARE_TIMER_COMPATIBILITY
-                               HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY
HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY
```

- The `HPX_WITH_THREAD_SCHEDULERS` CMake option has been removed. All schedulers are now enabled when possible.
- `HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY` has been turned off by default.

³¹²⁵ <https://github.com/TheHPXProject/hpx/pull/5420>

- PR #5418³¹²⁶ - Reduce max size and number of files in ccache cache
- PR #5417³¹²⁷ - Final release notes for 1.7.0
- PR #5416³¹²⁸ - Adapt `uninitialized_value_construct` and `uninitialized_value_construct_n` to C++ 20
- PR #5415³¹²⁹ - Adapt `uninitialized_default_construct` and `uninitialized_default_construct_n` to C++ 20
- PR #5414³¹³⁰ - Improve integration of futures and senders
- PR #5413³¹³¹ - Fixing sender/receiver code base to compile with MSVC
- PR #5407³¹³² - Handle exceptions thrown during initialization of parcel handler
- PR #5406³¹³³ - Simplify dispatching to annotation handlers
- PR #5405³¹³⁴ - Fetch Asio automatically in perf tests CI
- PR #5403³¹³⁵ - Create generic executor that adds annotations to any other executor
- PR #5402³¹³⁶ - Adapt `uninitialized_fill` and `uninitialized_fill_n` to C++ 20
- PR #5401³¹³⁷ - Modernize a variety of facilities related to parallel algorithms
- PR #5400³¹³⁸ - Fix sliding semaphore test
- PR #5399³¹³⁹ - Rename leftover `tag_fallback_invoke` to `tag_fallback_dispatch`
- PR #5398³¹⁴⁰ - Improve logging in AGAS symbol namespace
- PR #5396³¹⁴¹ - Introduce compatibility layer for collective operations
- PR #5394³¹⁴² - Enable OTF2 in APEX CI configuration
- PR #5393³¹⁴³ - Update APEX tag
- PR #5392³¹⁴⁴ - Fixing wrong usage of `std::forward`
- PR #5391³¹⁴⁵ - Fix forwarding in `transform_receiver` constructor
- PR #5390³¹⁴⁶ - Make sure shared priority scheduler steals tasks on the current NUMA domain when (core) stealing is enabled
- PR #5389³¹⁴⁷ - Adapt `uninitialized_move` and `uninitialized_move_n` to C++ 20

³¹⁴⁶ <https://github.com/TheHPXProject/hpx/pull/5390>

³¹⁴⁷ <https://github.com/TheHPXProject/hpx/pull/5389>

- PR #5388³¹⁴⁸ - Fixing `gather_there` for used with lvalue reference argument
- PR #5387³¹⁴⁹ - Extend thread state logging and change default stealing parameters
- PR #5386³¹⁵⁰ - Attempt to fix the startup hang with nodes > 32
- PR #5384³¹⁵¹ - Remove HPX 1.5.0 deprecations
- PR #5382³¹⁵² - Prefer installed Asio before considering FetchContent
- PR #5379³¹⁵³ - Allow using pre-downloaded (not installed) versions of Asio and/or Apex
- PR #5376³¹⁵⁴ - Remove unnecessary explicit listing of library modules.rst files in CMakeLists.txt
- PR #5375³¹⁵⁵ - Slight performance improvement for `hpx::copy` and `hpx::move` et.al.
- PR #5374³¹⁵⁶ - Remove unnecessary moves from future sender implementations
- PR #5373³¹⁵⁷ - More changes to clang-cuda Jenkins configuration
- PR #5372³¹⁵⁸ - Slight improvements to `min/max/minmax_element` algorithms
- PR #5371³¹⁵⁹ - Adapt `uninitialized_copy` and `uninitialized_copy_n` to C++ 20
- PR #5370³¹⁶⁰ - Decay types in `just_sender` `value_types` to match stored types
- PR #5367³¹⁶¹ - Disable `pkgconfig` by default again on macOS
- PR #5365³¹⁶² - Use `ccache` for Jenkins builds on Piz Daint
- PR #5363³¹⁶³ - Update `cuda toolkit` module name in clang-cuda Jenkins configuration
- PR #5362³¹⁶⁴ - Adding `channel_communicator`
- PR #5361³¹⁶⁵ - Fix compilation with MPI enabled
- PR #5360³¹⁶⁶ - Update APEX and asio tags
- PR #5359³¹⁶⁷ - Fix check for `pu-step` in single-core case
- PR #5357³¹⁶⁸ - Making sure collective operations can be reused by preallocating communicator
- PR #5356³¹⁶⁹ - Update API documentation

³¹⁶⁹ <https://github.com/TheHPXProject/hpx/pull/5356>

- PR #5355³¹⁷⁰ - Make the `sequenced_executor processing_units_count` member function const
- PR #5354³¹⁷¹ - Making sure `default_stack_size` is defined whenever declared
- PR #5353³¹⁷² - Add CUDA timestamp support to HPX Hardware Clock
- PR #5352³¹⁷³ - Adding missing includes
- PR #5351³¹⁷⁴ - Adding `enable_logging/disable_logging` API functions
- PR #5350³¹⁷⁵ - Adapt `lexicographical_compare` to C++20
- PR #5349³¹⁷⁶ - Update minimum boost version needed on the docs
- PR #5348³¹⁷⁷ - Rename `tag_invoke` and related facilities to `tag_dispatch`
- PR #5347³¹⁷⁸ - Remove `make_` prefix for executor properties
- PR #5346³¹⁷⁹ - Remove and disable compatibility options for 1.7.0
- PR #5343³¹⁸⁰ - Fix `timed_executor` static cast conversion
- PR #5342³¹⁸¹ - Refactor CUDA event polling
- PR #5341³¹⁸² - Adding `make_with_annotation` and `get_annotation` properties
- PR #5339³¹⁸³ - Making sure `hpx::util::hardware::timestamp()` is always defined
- PR #5338³¹⁸⁴ - Fixing `timed_executor` specializations of customization points
- PR #5335³¹⁸⁵ - Make `partial_algorithm` work with any number of arguments
- PR #5334³¹⁸⁶ - Follow up `iter_sent` include on #5225
- PR #5332³¹⁸⁷ - Simplify `tag_invoke` and friends
- PR #5331³¹⁸⁸ - More work on cleaning up executor CPOs
- PR #5330³¹⁸⁹ - Add option to disable `pkgconfig` generation
- PR #5328³¹⁹⁰ - Adapt data parallel support using `std-simd`
- PR #5327³¹⁹¹ - Fix missing `ifdef HPX_SMT_PAUSE`
- PR #5326³¹⁹² - Adding `resize()` to `serialize_buffer` allowing to shrink its size

³¹⁹² <https://github.com/TheHPXProject/hpx/pull/5326>

- [PR #5324](#)³¹⁹³ - Add get member functions to `async_rw_mutex` proxy objects for explicitly getting the wrapped value
- [PR #5323](#)³¹⁹⁴ - Add `keep_future` algorithm
- [PR #5322](#)³¹⁹⁵ - Replace executor customization point implementations with `tag_invoke`
- [PR #5321](#)³¹⁹⁶ - Seperate segmented algorithms for `reduce`
- [PR #5320](#)³¹⁹⁷ - Fix `is_sender` trait and other small fixes to p0443 traits
- [PR #5319](#)³¹⁹⁸ - gcc 11.1 c++20 build fixes
- [PR #5318](#)³¹⁹⁹ - Make `hipblas` dependency optional as not always available
- [PR #5316](#)³²⁰⁰ - Attempt to fix checking for `libatomic`
- [PR #5315](#)³²⁰¹ - Add explicit keyword to fixture constructor
- [PR #5314](#)³²⁰² - Fix a race condition in `async mpi` affecting limiting executor
- [PR #5312](#)³²⁰³ - Use local runtime and local headers in local-only modules and tests
- [PR #5311](#)³²⁰⁴ - Add GCC 11 builder to jenkins
- [PR #5310](#)³²⁰⁵ - Adding `hpx::execution::experimental::task_group`
- [PR #5309](#)³²⁰⁶ - Seperate `datapar`
- [PR #5308](#)³²⁰⁷ - Seperate segmented algorithms for `find`, `find_if`, `find_if_not`
- [PR #5307](#)³²⁰⁸ - Seperate segmented algorithms for `fill` and `generate`
- [PR #5304](#)³²⁰⁹ - Fix compilation of sender CPOs with `nvcc`
- [PR #5300](#)³²¹⁰ - Remove `PRIVATE` flag that was propagated into the `LANGUAGES`
- [PR #5298](#)³²¹¹ - Seperate `datapar`
- [PR #5297](#)³²¹² - Specify exact `cmake` and `ninja` versions when loading them in jenkins jobs
- [PR #5295](#)³²¹³ - Update `clang-newest` configuration to use `clang 12` and `Boost 1.76.0`
- [PR #5293](#)³²¹⁴ - Fix `Clang 11` `cuda_future` test bug

- PR #5292³²¹⁵ - Add `async_rw_mutex` based on senders
- PR #5291³²¹⁶ - “Fix” termination detection
- PR #5290³²¹⁷ - Fixed source file line statements in examples documentation
- PR #5289³²¹⁸ - Allow splitting of futures holding `std::tuple`
- PR #5288³²¹⁹ - Move algorithms to `tag_fallback_invoke`
- PR #5287³²²⁰ - Move algorithms to `tag_fallback_invoke`
- PR #5285³²²¹ - Fix clang-format failure on master
- PR #5284³²²² - Replacing `util::function_nonsr` on `std::function` in `hpx_init`
- PR #5282³²²³ - Update Boost for daint 20.11 after update
- PR #5281³²²⁴ - Fix Segmentation fault on `foreach_datapar_zipiter`
- PR #5280³²²⁵ - Avoid modulo by zero in `counting_iterator` test
- PR #5279³²²⁶ - Fix more GCC 10 deprecation warnings
- PR #5277³²²⁷ - Small fixes and improvements to CUDA/MPI polling
- PR #5276³²²⁸ - Fix typo in docs
- PR #5274³²²⁹ - More P1897 algorithms
- PR #5273³²³⁰ - Retry CDash submissions on failure
- PR #5272³²³¹ - Fix bogus deprecation warnings with GCC 10
- PR #5271³²³² - Correcting target ids for `symbol_namespace::iterate`
- PR #5268³²³³ - Adding generic `require`, `require_concept`, and query properties
- PR #5267³²³⁴ - Support annotations in `hpx::transform_reduce`
- PR #5266³²³⁵ - Making late command line options available for local runtime
- PR #5265³²³⁶ - Leverage `no_unique_address` for `member_pack`
- PR #5264³²³⁷ - Adopt format in more places

HPX V1.6.0 (Feb 17, 2021)

General changes

This release continues the focus on C++20 conformance with multiple new algorithms adapted to be C++20 conformant and becoming customization point objects (CPOs). We have also added experimental support for HIP, allowing previous CUDA features to now be compiled with `hipcc` and run on AMD GPUs.

- The following algorithms have been adapted to be C++20 conformant: `adjacent_find`, `includes`, `inplace_merge`, `is_heap`, `is_heap_until`, `is_partitioned`, `is_sorted`, `is_sorted_until`, `merge`, `set_difference`, `set_intersection`, `set_symmetric_difference`, `set_union`.
- Experimental HIP support can be enabled by compiling *HPX* with `hipcc`. All CUDA functionality in *HPX* can now be used with HIP. The HIP functionality is for the time being exposed through the same API as the CUDA functionality, i.e. no changes are required in user code. The CUDA, and now HIP, functionality is in the `hpx::cuda` namespace.
- We have added `partial_sort` based on Francisco Tapia's implementation.
- `hpx::init` and `hpx::start` gained new overloads taking an `hpx::init_params` struct in 1.5.0. All overloads not taking an `hpx::init_params` are now deprecated.
- We have added an experimental `fork_join_executor`. This executor can be used for OpenMP-style fork-join parallelism, where the latency of a parallel region is important for performance.
- The `parallel_executor` now uses a hierarchical spawning scheme for bulk execution, which improves data locality and performance.
- `hpx::dataflow` can now be used with executors that inject additional parameters into the call of the user-provided function.
- We have added experimental support for properties as proposed in [P2220](#)³³³⁴. Currently the only supported property is the scheduling hint on `parallel_executor`.

³³²⁷ <https://github.com/TheHPXProject/hpx/pull/5144>

³³²⁸ <https://github.com/TheHPXProject/hpx/pull/5125>

³³²⁹ <https://github.com/TheHPXProject/hpx/pull/5117>

³³³⁰ <https://github.com/TheHPXProject/hpx/pull/5099>

³³³¹ <https://github.com/TheHPXProject/hpx/pull/5092>

³³³² <https://github.com/TheHPXProject/hpx/pull/5053>

³³³³ <https://github.com/TheHPXProject/hpx/pull/5044>

³³³⁴ <https://wg21.link/p2220>

- `hpx::util::annotated_function` can now be passed a dynamically generated `std::string`.
- In moving functionality to new namespaces, old names have been deprecated. A deprecation warning will be issued if you are using deprecated functionality, with instructions on how to correct or ignore the warning.
- We have removed all support for C and Fortran from our build system.
- We have further reduced the use of Boost types within *HPX* (`boost::system::error_code` and `boost::detail::spinlock`).
- We have enabled more warnings in our CI builds (unused variables and unused typedefs).

Breaking changes

- hpxMP support has been completely removed.
- The verbs `parcelport` has been removed.
- The following compatibility options have been disabled by default: `HPX_WITH_ACTION_BASE_COMPATIBILITY`, `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`, `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`, `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`, `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`, `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`, `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`, `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY`, `HPX_THREAD_AWARE_TIMER_COMPATIBILITY`, `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`. Unless noted here, the above functionalities do not come with replacements. Unscoped enumerations have been replaced by scoped enumerations. Previously deprecated unscoped enumerations are disabled by `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`. Newly deprecated unscoped enumerations have been given deprecation warnings and replaced by scoped enumerations. `hpx::promise` has been replaced with `hpx::distributed::promise`. `hpx::program_options` is a drop-in replacement for `boost::program_options`. `hpx::execution::parallel_executor` now has constructors which take a thread pool, covering the use case of `hpx::threads::executors::pool_executor`. A pool can be supplied with `hpx::resource::get_thread_pool`.

HPX V1.5.1 (Sep 30, 2020)

General changes

This is a patch release. It contains the following changes:

- Remove restriction on suspending runtime with multiple localities, users are now responsible for synchronizing work between localities before suspending.
- Fixes several compilation problems and warnings.
- Adds notes in the documentation explaining how to cite HPX.

HPX V1.5.0 (Sep 02, 2020)

General changes

The main focus of this release is on APIs and C++20 conformance. We have added many new C++20 features and adapted multiple algorithms to be fully C++20 conformant. As part of the modularization we have begun specifying the public API of *HPX* in terms of headers and functionality, and aligning it more closely to the C++ standard. All non-distributed modules are now in place, along with an experimental option to completely disable distributed features in *HPX*. We have also added experimental asynchronous MPI and CUDA executors. Lastly this release introduces CMake targets for depending projects, performance improvements, and many bug fixes.

³⁵²⁰ <https://github.com/TheHPXProject/hpx/pull/4944>

³⁵²¹ <https://github.com/TheHPXProject/hpx/pull/4941>

³⁵²² <https://github.com/TheHPXProject/hpx/pull/4939>

- We have added the C++20 features `hpx::jthread` and `hpx::stop_token`. `hpx::condition_variable_any` now exposes new functions supporting `hpx::stop_token`.
- We have added `hpx::stable_sort` based on Francisco Tapia's implementation.
- We have adapted existing synchronization primitives to be fully conformant C++20: `hpx::barrier`, `hpx::latch`, `hpx::counting_semaphore`, and `hpx::binary_semaphore`.
- We have started using customization point objects (CPOs) to make the corresponding algorithms fully conformant to C++20 as well as to make algorithm extension easier for the user. `all_of/any_of/none_of`, `copy`, `count`, `destroy`, `equal`, `fill`, `find`, `for_each`, `generate`, `mismatch`, `move`, `reduce`, `transform_reduce` are using those CPOs (all in namespace `hpx`). We also have adapted their corresponding `hpx::ranges` versions to be conforming to C++20 in this release.
- We have adapted support for `co_await` to C++20, in addition to `hpx::future` it now also supports `hpx::shared_future`. We have also added allocator support for futures returned by `co_return`. It is no longer in the `experimental` namespace.
- We added serialization support for `std::variant` and `std::tuple`.
- `result_of` and `is_callable` are now deprecated and replaced by `invoke_result` and `is_invocable` to conform to C++20.
- We continued with the modularization, making it easier for us to add the new experimental `HPX_WITH_DISTRIBUTED_RUNTIME` CMake option (see below). A significant amount of headers have been deprecated. We adapted the namespaces and headers we could to be closer to the standard ones (*Public API*). Depending code should still compile, however warnings are now generated instructing to change the include statements accordingly.
- It is now possible to have a basic CUDA support including a helper function to get a future from a CUDA stream and target handling. They are available under the `hpx::cuda::experimental` namespace and they can be enabled with the `-DHPX_WITH_ASYNC_CUDA=ON` CMake option.
- We added a new `hpx::mpi::experimental` namespace for getting futures from an asynchronous MPI call and a new minimal MPI executor `hpx::mpi::experimental::executor`. These can be enabled with the `-DHPX_WITH_ASYNC_MPI=On` CMake option.
- A polymorphic executor has been implemented to reduce compile times as a function accepting executors can potentially be instantiated only once instead of multiple times with different executors. It accepts the function signature as a template argument. It needs to be constructed from any other executor. Please note, that the function signatures that can be scheduled using `then_execute`, `bulk_sync_execute`, `bulk_async_execute` and `bulk_then_execute` are slightly different (See the comment in [PR #4514](https://github.com/TheHPXProject/hpx/pull/4514)³⁵²³ for more details).
- The underlying executor of `block_executor` has been updated to a newer one.
- We have added a parameter to `auto_chunk_size` to control the amount of iterations to measure.
- All executor parameter hooks can now be exposed through the executor itself. This will allow to deprecate the `.with()` functionality on execution policies in the future. This is

³⁵²³ <https://github.com/TheHPXProject/hpx/pull/4514>

also a first step towards simplifying our executor APIs in preparation for the upcoming C++23 executors (senders/receivers).

- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`. Please note this is a breaking change without backwards-compatibility option. We have converted all of those APIs to be based on customization point objects. Two new executors have been added to enable easy integration of the existing resiliency features with other facilities (like the parallel algorithms): `replay_executor` and `replicate_executor`.
- We have added performance counters type information (aggregating, monotonically increasing, average count, average timer, etc.).
- HPX threads are now re-scheduled on the same worker thread they were suspended on to avoid cache misses from moving from one thread to the other. This behavior doesn't prevent the thread from being stolen, however.
- We have added a new configuration option `hpx.exception_verbosity` to allow to control the level of verbosity of the exceptions (3 levels available).
- `broadcast_to`, `broadcast_from`, `scatter_to` and `scatter_from` have been added to the collectives, modernization of `gather_here` and `gather_there` with futures taken by rvalue references. See the breaking change on `all_to_all` in the next section. None of the collectives need supporting macros anymore (e.g. specifying the data types used for a collective operation using `HPX_REGISTER_ALLGATHER` and similar is not needed anymore).
- New API functions have been added: a) to get the number of cores which are idle (`hpx::get_idle_core_count`) and b) returning a bitmask representing the currently idle cores (`hpx::get_idle_core_mask`).
- We have added an experimental option to only enable the local runtime, you can disable the distributed runtime with `HPX_WITH_DISTRIBUTED_RUNTIME=OFF`. You can also enable the local runtime by using the `--hpx:local` runtime option.
- We fixed task annotations for actions.
- The alias `hpx::promise` to `hpx::lcos::promise` is now deprecated. You can use `hpx::lcos::promise` directly instead. `hpx::promise` will refer to the local-only promise in the future.
- We have added a `prepare_checkpoint` API function that calculates the amount of necessary buffer space for a particular set of arguments checkpointed.
- We have added `hpx::upgrade_lock` and `hpx::upgrade_to_unique_lock`, which make `hpx::shared_mutex` (and similar) usable in more flexible ways.
- We have changed the CMake targets exposed to the user, it now includes `HPX:hpx`, `HPX:wrap_main` (int main as the first *HPX* thread of the application, see [Starting the HPX runtime](#)), `HPX:plugin`, `HPX:component`. The CMake variables `HPX_INCLUDE_DIRS` and `HPX_LIBRARIES` are deprecated and will be removed in a future release, you should now link directly to the `HPX:hpx` CMake target.
- A new example is demonstrating how to create and use a wrapping executor (`quickstart/executor_with_thread_hooks.cpp`)
- A new example is demonstrating how to disable thread stealing during the execution of parallel algorithms (`quickstart/disable_thread_stealing_executor.cpp`)
- We now require for our CMake build system configuration files to be formatted using `cmake-format`.

- We have removed more dependencies on various Boost libraries.
- We have added an experimental option enabling unity builds of HPX using the `-DHPX_WITH_UNITY_BUILD=On` CMake option.
- Many bug fixes.

Breaking changes

- *HPX* now requires a C++14 capable compiler. We have set the *HPX* C++ standard automatically to C++14 and if it needs to be set explicitly, it should be specified through the `CMAKE_CXX_STANDARD` setting as mandated by CMake. The `HPX_WITH_CXX*` variables are now deprecated and will be removed in the future.
- Building and using HPX is now supported only when using CMake V3.13 or later, Boost V1.64 or newer, and when compiling with clang V5, gcc V7, or VS2019, or later. Other compilers might still work but have not been tested thoroughly.
- We have added a `hpx::init_params` struct to pass parameters for *HPX* initialization e.g. the resource partitioner callback to initialize thread pools (*Using the resource partitioner*).
- The `all_to_all` algorithm is renamed to `all_gather`, and the new `all_to_all` algorithm is not compatible with the old one.
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`.

- [PR #4834³⁶⁸⁷](#) - Fixing the calculation of the number of idle cores and the corresponding idle masks
- [PR #4833³⁶⁸⁸](#) - Allow thread function destructors to yield
- [PR #4832³⁶⁸⁹](#) - Fixing assertion in `split_gids` and memory leaks in `1d_stencil_7`
- [PR #4831³⁶⁹⁰](#) - Making sure `MPI_CXX_COMPILE_FLAGS` is interpreted as a sequence of options
- [PR #4830³⁶⁹¹](#) - Update documentation on using `HPX::wrap_main`
- [PR #4827³⁶⁹²](#) - Update clang-newest configuration to use clang 10
- [PR #4826³⁶⁹³](#) - Add Jenkins configuration for rostam
- [PR #4825³⁶⁹⁴](#) - Move all CUDA functionality to `hpx::cuda::experimental` namespace
- [PR #4824³⁶⁹⁵](#) - Add support for building master/release branches to Jenkins configuration
- [PR #4821³⁶⁹⁶](#) - Implement customization point for `hpx::copy` and `hpx::ranges::copy`
- [PR #4819³⁶⁹⁷](#) - Allow finding Boost components before finding HPX
- [PR #4817³⁶⁹⁸](#) - Adding range version of stable sort
- [PR #4815³⁶⁹⁹](#) - Fix a wrong `#ifdef` for IO/TIMER pools causing build errors
- [PR #4814³⁷⁰⁰](#) - Replace `hpx::function_nonsr` with `std::function` in error module
- [PR #4809³⁷⁰¹](#) - Foreach adapt
- [PR #4808³⁷⁰²](#) - Make internal algorithms functions const
- [PR #4807³⁷⁰³](#) - Add Jenkins configuration for running on Piz Daint
- [PR #4806³⁷⁰⁴](#) - Update documentation links to new domain name
- [PR #4805³⁷⁰⁵](#) - Applying changes that resolve time complexity issues in sort
- [PR #4803³⁷⁰⁶](#) - Adding implementation of `stable_sort`
- [PR #4802³⁷⁰⁷](#) - Fix `datapar` header paths
- [PR #4801³⁷⁰⁸](#) - Replace `boost::shared_array<T>` with `std::shared_ptr<T[]>` if supported

- PR #4799³⁷⁰⁹ - Fixing #include paths in compatibility headers
- PR #4798³⁷¹⁰ - Include the main module header (fixes partially #4488)
- PR #4797³⁷¹¹ - Change cmake targets
- PR #4794³⁷¹² - Removing 128bit integer emulation
- PR #4793³⁷¹³ - Make sure global variable is handled properly
- PR #4792³⁷¹⁴ - Replace enable_if with **HPX_CONCEPT_REQUIRES_** and add is_sentinel_for constraint
- PR #4790³⁷¹⁵ - Move deprecation warnings from base template to template specializations for result_of etc. structs
- PR #4789³⁷¹⁶ - Fix hangs during assertion handling and distributed runtime construction
- PR #4788³⁷¹⁷ - Fixing inclusive transform scan algorithm to properly handle initial value
- PR #4785³⁷¹⁸ - Fixing barrier test
- PR #4784³⁷¹⁹ - Fixing deleter argument bindings in serialize_buffer
- PR #4783³⁷²⁰ - Add coveralls badge
- PR #4782³⁷²¹ - Make header tests parallel again
- PR #4780³⁷²² - Remove outdated comment about hpx::stop in documentation
- PR #4776³⁷²³ - debug print improvements
- PR #4775³⁷²⁴ - Checkpoint cleanup
- PR #4771³⁷²⁵ - Fix compilation with HPX_WITH_NETWORKING=OFF
- PR #4767³⁷²⁶ - Remove all force linking leftovers
- PR #4765³⁷²⁷ - Fix 1d stencil index calculation
- PR #4764³⁷²⁸ - Force some tests to run serially
- PR #4762³⁷²⁹ - Update pointees in compatibility headers
- PR #4761³⁷³⁰ - Fix running and building of execution module tests on CircleCI

- PR #4561³⁸⁴³ - Adding test macros supporting custom output stream
- PR #4560³⁸⁴⁴ - Making sure hash_any::operator() is linked into core library
- PR #4559³⁸⁴⁵ - Fixing compilation if HPX_WITH_THREAD_BACKTRACE_ON_SUSPENSION=On
- PR #4557³⁸⁴⁶ - Improve spinlock implementation to perform better in high-contention situations
- PR #4553³⁸⁴⁷ - Fix a runtime_ptr problem at shutdown when apex is enabled
- PR #4552³⁸⁴⁸ - Add configuration option for making exceptions less noisy
- PR #4551³⁸⁴⁹ - Clean up thread creation parameters
- PR #4549³⁸⁵⁰ - Test FetchContent build on GitHub actions
- PR #4548³⁸⁵¹ - Fix stack size
- PR #4545³⁸⁵² - Fix header tests
- PR #4544³⁸⁵³ - Fix a typo in sanitizer build
- PR #4541³⁸⁵⁴ - Add API to check if a thread pool exists
- PR #4540³⁸⁵⁵ - Making sure MPI support is enabled if MPI futures are used but networking is disabled
- PR #4538³⁸⁵⁶ - Move channel documentation examples to examples directory
- PR #4536³⁸⁵⁷ - Add generic allocator for execution policies
- PR #4534³⁸⁵⁸ - Enable compatibility headers for thread_executors module
- PR #4532³⁸⁵⁹ - Fixing broken url in README.rst
- PR #4531³⁸⁶⁰ - Update scripts
- PR #4530³⁸⁶¹ - Make sure module API docs show up in correct order
- PR #4529³⁸⁶² - Adding missing template code to module creation script
- PR #4528³⁸⁶³ - Make sure version module uses HPX's binary dir, not the parent's
- PR #4527³⁸⁶⁴ - Creating actions_base and actions module

- PR #4455³⁹¹⁰ - Move deadlock_detection and maintain_queue_wait_times source files into schedulers module
- PR #4450³⁹¹¹ - Fixing compilation with std::filesystem enabled
- PR #4449³⁹¹² - Fixing build system to actually build variant test
- PR #4447³⁹¹³ - This fixes an obsolete #include
- PR #4446³⁹¹⁴ - Resume tasks where they were suspended
- PR #4444³⁹¹⁵ - Minor CUDA fixes
- PR #4443³⁹¹⁶ - Add missing tests to CircleCI config
- PR #4442³⁹¹⁷ - Adding a tag to all auto-generated files allowing for tools to visually distinguish those
- PR #4441³⁹¹⁸ - Adding performance counter type information
- PR #4440³⁹¹⁹ - Fixing MSVC build
- PR #4439³⁹²⁰ - Link HPX::plugin and component privately in hpx_setup_target
- PR #4437³⁹²¹ - Adding a test that verifies the problem can be solved using a trait specialization
- PR #4434³⁹²² - Clean up Boost dependencies and copy string algorithms to new module
- PR #4433³⁹²³ - Fixing compilation issues (!) if MPI parselport is enabled
- PR #4431³⁹²⁴ - Ignore warnings about name mangling changing
- PR #4430³⁹²⁵ - Add performance_counters module
- PR #4428³⁹²⁶ - Don't add compatibility headers to module API reference
- PR #4426³⁹²⁷ - Add currently failing tests on GitHub actions to blacklist
- PR #4425³⁹²⁸ - Clean up and correct minimum required versions
- PR #4424³⁹²⁹ - Making sure hpx.lock_detection=0 works as advertized
- PR #4421³⁹³⁰ - Making sure interval time stops underlying timer thread on termination
- PR #4417³⁹³¹ - Adding serialization support for std::variant (if available) and std::tuple

- [PR #4017](#)⁴⁰²¹ - Require C++14

HPX V1.4.1 (Feb 12, 2020)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation issues on Windows, macOS, FreeBSD, and with gcc 10
- Install missing pdb files on Windows
- Allow running tests using an installed version of *HPX*
- Skip MPI finalization if HPX has not initialized MPI
- Give a hard error when attempting to use IO counters on Windows

Closed issues

- [Issue #4320](#)⁴⁰²² - HPX 1.4.0 does not compile with gcc 10

HPX V1.4.0 (January 15, 2020)

General changes

- We have added the collectives `all_to_all` and `all_reduce`.
- We have added APIs for resiliency, which allows replication and replay for failed tasks. See the [documentation](#) for more details.
- Components can now be checkpointed.
- Performance improvements to schedulers and coroutines. A significant change is the addition of stackless coroutines. These are to be used for tasks that do not need to be suspended and can reduce overheads noticeably in applications with short tasks. A stackless coroutine can be created with the new stack size `thread_stacksize_nostack`.
- We have added an implementation of `unique_any`, which is a non-copyable version of `any`.
- The `shared_priority_queue_scheduler` has been improved. It now has lower overheads than the default scheduler in many situations. Unlike the default scheduler it fully supports NUMA scheduling hints. Enable it with the command line option `--hpx:queuing=shared-priority`. This scheduler should still be considered experimental, but its use is encouraged in real applications to help us make it production ready.
- We have added the performance counters `background-receive-duration` and `background-receive-overhead` for inspecting the time and overhead spent on receiving parcels in the background.
- Compilation time has been further improved when `HPX_WITH_NETWORKING=OFF`.
- We no longer require compiled Boost dependencies in certain configurations. This requires at least Boost 1.70, compiling on x86 with GCC 9, clang (libc++) 9, or VS2019 in C++17 mode. The dependency on `Boost.Filesystem` can explicitly be turned on with `HPX_FILESYSTEM_WITH_BOOST_FILESYSTEM_COMPATIBILITY=ON` (it is off by default if the standard library supports `std::filesystem`). `Boost.ProgramOptions` has been copied into the HPX repository. We have a compatibility layer for users who must explicitly use `Boost.ProgramOptions` instead of the `ProgramOptions` provided by HPX. To remove the dependency `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY` must be explicitly set to `OFF`. This option will be removed in a future release. We have also removed several other header-only dependencies on Boost.
- It is now possible to use the process affinity mask set by tools like `numactl` and various batch environments with the command line option `--hpx:use-process-mask`. Enabling this option implies `--hpx:ignore-batch-env`.
- It is now possible to create standalone thread pools without starting the runtime. See the `standalone_thread_pool_executor.cpp` test in the `execution` module for an example.

⁴⁰³⁴ <https://github.com/TheHPXProject/hpx/pull/4315>

⁴⁰³⁵ <https://github.com/TheHPXProject/hpx/pull/4310>

- Tasks annotated with `hpx::util::annotated_function` now have their correct name when using APEX to generate OTF2 files.
- Cloning of APEX was defective in previous releases (it required manual intervention to check out the correct tag or branch). This has been fixed.
- The option `HPX_WITH_MORE_THAN_64_THREADS` is now ignored and will be removed in a future release. The value is instead derived directly from `HPX_WITH_MAX_CPU_COUNT` option.
- We have deprecated compiling in C++11 mode. The next release will require a C++14 capable compiler.
- We have deprecated support for the Vc library. This option will be replaced with SIMD support from the standard library in a future release.
- We have significantly refactored our CMake setup. This is intended to be a non-breaking change and will allow for using HPX through CMake targets in the future.
- We have continued modularizing the HPX library. In the process we have rearranged many header files into module-specific directories. All moved headers have compatibility headers which forward from the old location to the new location, together with a deprecation warning. The compatibility headers will eventually be removed.
- We now enforce formatting with `clang-format` on the majority of our source files.
- We have added SPDX license tags to all files.
- Many bugfixes.

Breaking changes

- The `HPX_WITH_THREAD_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_UNWRAPPED_COMPATIBILITY` option and the associated compatibility layer has been removed.

- PR #4241⁴¹²⁹ - Fix `start_stop_callbacks` test
- PR #4240⁴¹³⁰ - Mostly fix clang CUDA compilation
- PR #4238⁴¹³¹ - Google Season of Docs updates to documentation; grammar edits.
- PR #4237⁴¹³² - fixing annotated task to use the name, not the desc
- PR #4236⁴¹³³ - Move module print summary to modules
- PR #4235⁴¹³⁴ - Don't use `alignas` in `cache_{aligned,line}_data`
- PR #4234⁴¹³⁵ - Add basic overview sentence to all modules
- PR #4230⁴¹³⁶ - Add OS X builds to Travis CI
- PR #4229⁴¹³⁷ - Remove leftover queue compatibility checks
- PR #4226⁴¹³⁸ - Fixing APEX shutdown by explicitly shutting down throttling
- PR #4225⁴¹³⁹ - Allow `CMAKE_INSTALL_PREFIX` to be a relative path
- PR #4224⁴¹⁴⁰ - Deprecate verbs `parcelport`
- PR #4222⁴¹⁴¹ - Update `register_{thread,work}` namespaces
- PR #4221⁴¹⁴² - Changing `HPX_GCC_VERSION` check from `700000` to `70300`
- PR #4218⁴¹⁴³ - Google Season of Docs updates to documentation; grammar edits.
- PR #4217⁴¹⁴⁴ - Google Season of Docs updates to documentation; grammar edits.
- PR #4216⁴¹⁴⁵ - Fixing gcc warning on 32bit platforms (integer truncation)
- PR #4214⁴¹⁴⁶ - Apex callback refactoring
- PR #4213⁴¹⁴⁷ - Clean up allocator checks for dependent projects
- PR #4212⁴¹⁴⁸ - Google Season of Docs updates to documentation; grammar edits.
- PR #4211⁴¹⁴⁹ - Google Season of Docs updates to documentation; contributing to hpx
- PR #4210⁴¹⁵⁰ - Attempting to fix Intel compilation
- PR #4209⁴¹⁵¹ - Fix CUDA 10 build

HPX V1.3.0 (May 23, 2019)

General changes

- Performance improvements: the schedulers have significantly reduced overheads from removing false sharing and the parallel executor has been updated to create fewer futures.
- HPX now defaults to not turning on networking when running on one locality. This means that you can run multiple instances on the same system without adding command line options.
- Multiple issues reported by Clang sanitizers have been fixed.
- We have added (back) single-page HTML documentation and PDF documentation.
- We have started modularizing the HPX library. This is useful both for developers and users. In the long term users will be able to consume only parts of the HPX libraries if they do not require all the functionality that HPX currently provides.
- We have added an implementation of `function_ref`.
- The `barrier` and `latch` classes have gained a few additional member functions.

Breaking changes

- Executable and library targets are now created without the `_exe` and `_lib` suffix respectively. For example, the target `1d_stencil_1_exe` is now simply called `1d_stencil_1`.
- We have removed the following deprecated functionality: `queue`, `scoped_unlock`, and support for input iterators in algorithms.
- We have turned off the compatibility layer for `unwrapped` by default. The functionality will be removed in the next release. The option can still be turned on using the [CMake](#)⁴⁴⁰³ option `HPX_WITH_UNWRAPPED_SUPPORT`. Likewise, `inclusive_scan` compatibility overloads have been turned off by default. They can still be turned on with `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY`.
- The minimum compiler and dependency versions have been updated. We now support GCC from version 5 onwards, Clang from version 4 onwards, and Boost from version 1.61.0 onwards.

⁴³⁹⁸ <https://github.com/TheHPXProject/hpx/pull/3799>

⁴³⁹⁹ <https://github.com/TheHPXProject/hpx/pull/3701>

⁴⁴⁰⁰ <https://github.com/TheHPXProject/hpx/pull/3496>

⁴⁴⁰¹ <https://github.com/TheHPXProject/hpx/pull/3192>

⁴⁴⁰² <https://github.com/TheHPXProject/hpx/pull/3159>

⁴⁴⁰³ <https://www.cmake.org>

- The headers for preprocessor macros have moved as a result of the functionality being moved to a separate module. The old headers are deprecated and will be removed in a future version of HPX. You can turn off the warnings by setting `HPX_PREPROCESSOR_WITH_DEPRECATION_WARNINGS=OFF` or turn off the compatibility headers completely with `HPX_PREPROCESSOR_WITH_COMPATIBILITY_HEADERS=OFF`.

HPX V1.2.1 (Feb 19, 2019)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation on ARM, s390x and 32-bit architectures.
- Fix a critical bug in the `future` implementation.
- Fix several problems in the CMake configuration which affects external projects.

HPX V1.2.0 (Nov 12, 2018)

General changes

Here are some of the main highlights and changes for this release:

- Thanks to the work of our Google Summer of Code student, Nikunj Gupta, we now have a new implementation of `hpx_main.hpp` on supported platforms (Linux, BSD and MacOS). This is intended to be a less fragile drop-in replacement for the old implementation relying on preprocessor macros. The new implementation does not require changes if you are using the [CMake](https://www.cmake.org)⁴⁶⁹⁷ or `pkg-config`. The old behaviour can be restored by setting `HPX_WITH_DYNAMIC_HPX_MAIN=OFF` during [CMake](https://www.cmake.org)⁴⁶⁹⁸ configuration. The implementation on Windows is unchanged.
- We have added functionality to allow passing scheduling hints to our schedulers. These will allow us to create executors that for example target a specific NUMA domain or allow for *HPX* threads to be pinned to a particular worker thread.
- We have significantly improved the performance of our futures implementation by making the shared state atomic.
- We have replaced Boostbook by Sphinx for our documentation. This means the documentation is easier to navigate with built-in search and table of contents. We have also added a quick start section and restructured the documentation to be easier to follow for new users.
- We have added a new option to the `--hpx:threads` command line option. It is now possible to use `cores` to tell *HPX* to only use one worker thread per core, unlike the existing option `all` which uses one worker thread per processing unit (processing unit can be a hyperthread if hyperthreads are available). The default value of `--hpx:threads` has also been changed to `cores` as this leads to better performance in most cases.
- All command line options can now be passed alongside configuration options when initializing *HPX*. This means that some options that were previously only available on the command line can now be set as configuration options.
- HPXMP is a portable, scalable, and flexible application programming interface using the OpenMP specification that supports multi-platform shared memory multiprocessing programming in C and C++. HPXMP can be enabled within *HPX* by setting `DHPX_WITH_HPXM=ON` during [CMake](https://www.cmake.org)⁴⁶⁹⁹ configuration.
- Two new performance counters were added for measuring the time spent doing background work. `/threads/time/background-work-duration` returns the time spent doing background on a given thread or locality, while `/threads/time/background-overhead` returns the fraction of time spent doing background work with respect to the overall time spent running the scheduler. The new performance counters are disabled by default and can be turned on by setting `HPX_WITH_BACKGROUND_THREAD_COUNTERS=ON` during [CMake](https://www.cmake.org)⁴⁷⁰⁰ configuration.
- The idling behaviour of *HPX* has been tweaked to allow for faster idling. This is useful in interactive applications where the *HPX* worker threads may not have work all the time. This behaviour can be tweaked and turned off as before with `HPX_WITH_THREAD_MANAGER_IDLE_BACKOFF=OFF` during [CMake](https://www.cmake.org)⁴⁷⁰¹ configuration.

⁴⁶⁹⁷ <https://www.cmake.org>

⁴⁶⁹⁸ <https://www.cmake.org>

⁴⁶⁹⁹ <https://www.cmake.org>

⁴⁷⁰⁰ <https://www.cmake.org>

⁴⁷⁰¹ <https://www.cmake.org>

- It is now possible to register callback functions for *HPX* worker thread events. Callbacks can be registered for starting and stopping worker threads, and for when errors occur.

Breaking changes

- The implementation of `hpx_main.hpp` has changed. If you are using custom Makefiles you will need to make changes. Please see the documentation on *using Makefiles* for more details.
- The default value of `--hpx:threads` has changed from `all` to `cores`. The new option `cores` only starts one worker thread per core.
- We have dropped support for Boost 1.56 and 1.57. The minimal version of Boost we now test is 1.58.
- Our `boost::format`-based formatting implementation has been revised and replaced with a custom implementation. This changes the formatting syntax and requires changes if you are relying on `hpx::util::format` or `hpx::util::format_to`. The pull request for this change contains more information: [PR #3266](#)⁴⁷⁰².
- The following deprecated options have now been completely removed: `HPX_WITH_ASYNC_FUNCTION_COMPATIBILITY`, `HPX_WITH_LOCAL_DATAFLOW`, `HPX_WITH_GENERIC_EXECUTION_POLICY`, `HPX_WITH_BOOST_CHRONO_COMPATIBILITY`, `HPX_WITH_EXECUTOR_COMPATIBILITY`, `HPX_WITH_EXECUTION_POLICY_COMPATIBILITY`, and `HPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY`.

HPX V1.1.0 (Mar 24, 2018)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- We have changed the way *HPX* manages the processing units on a node. We do not longer implicitly bind all available cores to a single thread pool. The user has now full control over what processing units are bound to what thread pool, each with a separate scheduler. It is now also possible to create your own scheduler implementation and control what processing units this scheduler should use. We added the `hpx::resource::partitioner` that manages all available processing units and assigns resources to the used thread pools. Thread pools can now be suspended/resumed independently. This functionality helps in running *HPX* concurrently to code that is directly relying on [OpenMP](#)⁴⁹⁵⁹ and/or [MPI](#)⁴⁹⁶⁰.
- We have continued to implement various parallel algorithms. *HPX* now almost completely implements all of the parallel algorithms as specified by the [C++17 Standard](#)⁴⁹⁶¹. We have also continued to implement these algorithms for the distributed use case (for segmented data structures, such as `hpx::partitioned_vector`).
- Added a compatibility layer for `std::thread`, `std::mutex`, and `std::condition_variable` allowing for the code to use those facilities where available and to fall back to the corresponding Boost facilities otherwise. The [CMake](#)⁴⁹⁶² configuration option `-DHPX_WITH_THREAD_COMPATIBILITY=On` can be used to force using the Boost equivalents.
- The parameter sequence for the `hpx::parallel::transform_inclusive_scan` overload taking one iterator range has changed (again) to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to [CMake](#)⁴⁹⁶³.

⁴⁹⁶¹ <http://www.open-std.org/jtc1/sc22/wg21>

⁴⁹⁶² <https://www.cmake.org>

⁴⁹⁶³ <https://www.cmake.org>

- The parameter sequence for the `hpx::parallel::inclusive_scan` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY=On` to CMake.
- Added a helper facility `hpx::local_new` which is equivalent to `hpx::new_` except that it creates components locally only. As a consequence, the used component constructor may accept non-serializable argument types and/or non-const references or pointers.
- Removed the (broken) component type `hpx::lcos::queue<T>`. The old type is still available at configure time by passing `-DHPX_WITH_QUEUE_COMPATIBILITY=On` to CMake.
- The parallel algorithms adopted for C++17 restrict the iterator categories usable with those to at least forward iterators. Our implementation of the parallel algorithms was supporting input iterators (and output iterators) as well by simply falling back to sequential execution. We have now made our implementations conforming by requiring at least forward iterators. In order to enable the old behavior use the compatibility option `-DHPX_WITH_ALGORITHM_INPUT_ITERATOR_SUPPORT=On` on the [CMake](https://www.cmake.org)⁴⁹⁶⁴ command line.
- We have added the functionalities allowing for LCOs being implemented using (simple) components. Before LCOs had to always be implemented using managed components.
- User defined components don't have to be default-constructible anymore. Return types from actions don't have to be default-constructible anymore either. Our serialization layer now in general supports non-default-constructible types.
- We have added a new launch policy `hpx::launch::lazy` that allows one to defer the decision on what launch policy to use to the point of execution. This policy is initialized with a function (object) that – when invoked – is expected to produce the desired launch policy.

Breaking changes

- We have dropped support for the gcc compiler version V4.8. The minimal gcc version we now test on is gcc V4.9. The minimally required version of [CMake](https://www.cmake.org)⁴⁹⁶⁵ is now V3.3.2.
- We have dropped support for the Visual Studio 2013 compiler version. The minimal Visual Studio version we now test on is Visual Studio 2015.5.
- We have dropped support for the Boost V1.51-V1.54. The minimal version of Boost we now test is Boost V1.55.
- We have dropped support for the `hpx::util::unwrapped` API. `hpx::util::unwrapped` will stay functional to some degree, until it finally gets removed in a later version of HPX. The functional usage of `hpx::util::unwrapped` should be changed to the new `hpx::util::unwrapping` function whereas the immediate usage should be replaced to `hpx::util::unwrap`.
- The performance counter names referring to properties as exposed by the threading subsystem have changes as those now additionally have to specify the thread-pool. See the corresponding documentation for more details.
- The overloads of `hpx::async` that invoke an action do not perform implicit unwrapping of the returned future anymore in case the invoked function does return a future in the

⁴⁹⁶⁴ <https://www.cmake.org>

⁴⁹⁶⁵ <https://www.cmake.org>

first place. In this case `hpx::async` now returns a `hpx::future<future<T>>` making its behavior conforming to its local counterpart.

- We have replaced the use of `boost::exception_ptr` in our APIs with the equivalent `std::exception_ptr`. Please change your codes accordingly. No compatibility settings are provided.
- We have removed the compatibility settings for `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` as their life-cycle has reached its end.
- We have removed the experimental thread schedulers `hierarchy_scheduler`, `periodic_priority_scheduler` and `throttling_scheduler` in an effort to clean up and consolidate our thread schedulers.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #3250⁴⁹⁶⁶](#) - Apex refactoring with guides
- [PR #3249⁴⁹⁶⁷](#) - Updating People.qbk
- [PR #3246⁴⁹⁶⁸](#) - Assorted fixes for CUDA
- [PR #3245⁴⁹⁶⁹](#) - Apex refactoring with guides
- [PR #3242⁴⁹⁷⁰](#) - Modify task counting in `thread_queue.hpp`
- [PR #3240⁴⁹⁷¹](#) - Fixed typos

- Issue #3222⁴⁹⁸⁰ - Errors linking libhpx.so
- Issue #3221⁴⁹⁸¹ - HPX on Mac OS X with HWLoc 2.0.0 fails to run
- PR #3216⁴⁹⁸² - Reorder a variadic array to satisfy VS 2017 15.6
- PR #3214⁴⁹⁸³ - Changed prerequisites.qbk to avoid confusion while building boost
- PR #3213⁴⁹⁸⁴ - Relax locks for thread suspension to avoid holding locks when yielding
- PR #3212⁴⁹⁸⁵ - Fix check in sequenced_executor test
- PR #3211⁴⁹⁸⁶ - Use preinit_array to set argc/argv in init_globally example
- PR #3210⁴⁹⁸⁷ - Adapted parallel::{search | search_n} for Ranges TS (see #1668)
- PR #3209⁴⁹⁸⁸ - Fix locking problems during shutdown
- Issue #3208⁴⁹⁸⁹ - init_globally throwing a run-time error
- PR #3206⁴⁹⁹⁰ - Addition of new arithmetic performance counter “Count”
- PR #3205⁴⁹⁹¹ - Fixing return type calculation for bulk_then_execute
- PR #3204⁴⁹⁹² - Changing std::rand() to a better inbuilt PRNG generator
- PR #3203⁴⁹⁹³ - Resolving problems during shutdown for VS2015
- PR #3202⁴⁹⁹⁴ - Making sure resource partitioner is not accessed if its not valid
- PR #3201⁴⁹⁹⁵ - Fixing optional::swap
- Issue #3200⁴⁹⁹⁶ - hpx::util::optional fails
- PR #3199⁴⁹⁹⁷ - Fix sliding_semaphore test
- PR #3198⁴⁹⁹⁸ - Set pre_main status before launching run_helper
- PR #3197⁴⁹⁹⁹ - Update README.rst
- PR #3194⁵⁰⁰⁰ - parallel::{fill|fill_n} updated for Ranges TS
- PR #3193⁵⁰⁰¹ - Updating Runtime.cpp by adding correct description of Performance counters during register
- PR #3191⁵⁰⁰² - Fix sliding_semaphore_2338 test

- [PR #3041⁵¹³⁴](#) - Fix a problem about asynchronous execution of `parallel::merge` and `parallel::partition`.
- [PR #3040⁵¹³⁵](#) - Fix a mistake about exception handling in asynchronous execution of `scan_partitioner`.
- [PR #3039⁵¹³⁶](#) - Consistently use executors to schedule work
- [PR #3038⁵¹³⁷](#) - Fixing local direct function execution and lambda actions perfect forwarding
- [PR #3035⁵¹³⁸](#) - Make parallel unit test names match build target/folder names
- [PR #3033⁵¹³⁹](#) - Fix setting of default build type
- [Issue #3032⁵¹⁴⁰](#) - Fix partitioner arg copy found in #2982
- [Issue #3031⁵¹⁴¹](#) - Errors linking `libhpx.so` due to missing references (master branch, commit 6679a8882)
- [PR #3030⁵¹⁴²](#) - Revert “implement executor then interface with `&&` forwarding reference”
- [PR #3029⁵¹⁴³](#) - Run CI inspect checks before building
- [PR #3028⁵¹⁴⁴](#) - Added range version of `parallel::move`
- [Issue #3027⁵¹⁴⁵](#) - Implement all scheduling APIs in terms of executors
- [PR #3026⁵¹⁴⁶](#) - implement executor then interface with `&&` forwarding reference
- [PR #3025⁵¹⁴⁷](#) - Fix typo uninitialized to unitialized
- [PR #3024⁵¹⁴⁸](#) - Inspect fixes
- [PR #3023⁵¹⁴⁹](#) - P0356 Simplified partial function application
- [PR #3022⁵¹⁵⁰](#) - Master fixes
- [PR #3021⁵¹⁵¹](#) - Segfault fix
- [PR #3020⁵¹⁵²](#) - Disable command-line aliasing for applications that use `user_main`
- [PR #3019⁵¹⁵³](#) - Adding `enable_elasticity` option to pool configuration
- [PR #3018⁵¹⁵⁴](#) - Fix stack overflow detection configuration in header files

- PR #2716⁵⁴²⁹ - Implement `parallel::partition_copy`
- PR #2715⁵⁴³⁰ - initial import of `icu string serializer`
- PR #2714⁵⁴³¹ - initial import of `valarray serializer`
- PR #2713⁵⁴³² - Remove slashes before `CMAKE_FILES_DIRECTORY` variables
- PR #2712⁵⁴³³ - Fixing wait for 1751
- PR #2711⁵⁴³⁴ - Adjust code for minimal supported GCC having being bumped to 4.9
- PR #2710⁵⁴³⁵ - Adding code of conduct
- PR #2709⁵⁴³⁶ - Fixing UB in destroy tests
- PR #2708⁵⁴³⁷ - Add inline to prevent multiple definition issue
- Issue #2707⁵⁴³⁸ - Multiple defined symbols for `task_block.hpp` in VS2015
- PR #2706⁵⁴³⁹ - Adding `.clang-format` file
- PR #2704⁵⁴⁴⁰ - Add a synchronous mapping API
- Issue #2703⁵⁴⁴¹ - Request: Add the `.clang-format` file to the repository
- Issue #2702⁵⁴⁴² - STELLAR-GROUP/Vc slower than VCv1 possibly due to wrong instructions generated
- Issue #2701⁵⁴⁴³ - Datapar with STELLAR-GROUP/Vc requires obscure flag

⁵⁴⁸⁶ <https://github.com/TheHPXProject/hpx/pull/2655>

- PR #2654⁵⁴⁸⁷ - Implement parallel `is_heap` and `is_heap_until`
- PR #2653⁵⁴⁸⁸ - Drop support for VS2013
- PR #2652⁵⁴⁸⁹ - This patch makes sure that all parcels in a batch are properly handled
- PR #2649⁵⁴⁹⁰ - Update docs (Table 18) - move transform to end
- Issue #2647⁵⁴⁹¹ - `hpx::parcelset::detail::parcel_data::has_continuation_` is uninitialized
- Issue #2644⁵⁴⁹² - Some `.vcxproj` in the `HPX.sln` fail to build
- Issue #2641⁵⁴⁹³ - `hpx::lcos::queue` should be deprecated
- PR #2640⁵⁴⁹⁴ - A new throttling policy with public APIs to suspend/resume
- PR #2639⁵⁴⁹⁵ - Fix a tiny typo in tutorial.
- Issue #2638⁵⁴⁹⁶ - Invalid return type 'void' of `constexpr` function
- PR #2636⁵⁴⁹⁷ - Add and use `HPX_MSVC_WARNING_PRAGMA` for `#pragma` warning
- PR #2633⁵⁴⁹⁸ - Distributed `define_spmid_block`
- PR #2632⁵⁴⁹⁹ - Making sure container serialization uses size-compatible types
- PR #2631⁵⁵⁰⁰ - Add `lcos::local::one_element_channel`
- PR #2629⁵⁵⁰¹ - Move `unordered_map` out of `parcelport` into `hpx/concurrent`
- PR #2628⁵⁵⁰² - Making sure that shutdown does not hang
- PR #2627⁵⁵⁰³ - Fix serialization
- PR #2626⁵⁵⁰⁴ - Generate `cmake_variables.qbk` and `cmake_toolchains.qbk` outside of the source tree
- PR #2625⁵⁵⁰⁵ - Supporting `-std=c++17` flag
- PR #2624⁵⁵⁰⁶ - Fixing a small `cmake` typo
- PR #2622⁵⁵⁰⁷ - Update CMake minimum required version to 3.0.2 (closes #2621)
- Issue #2621⁵⁵⁰⁸ - Compiling `hpx` master fails with `/usr/bin/ld: final link failed: Bad value`
- PR #2620⁵⁵⁰⁹ - Remove warnings due to some captured variables

HPX V1.0.0 (Apr 24, 2017)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- Added the facility `hpx::split_future` which allows one to convert a `future<tuple<Ts...>>` into a `tuple<future<Ts>...>`. This functionality is not available when compiling HPX with VS2012.
- Added a new type of performance counter which allows one to return a list of values for each invocation. We also added a first counter of this type which collects a histogram of the times between parcels being created.
- Added new LCOs: `hpx::lcos::channel` and `hpx::lcos::local::channel` which are very similar to the well known channel constructs used in the Go language.
- Added new performance counters reporting the amount of data handled by the networking layer on a action-by-action basis (please see [PR #2289](#)⁵⁵⁷⁵ for more details).
- Added a new facility `hpx::lcos::barrier`, replacing the equally named older one. The new facility has a slightly changed API and is much more efficient. Most notable, the new facility exposes a (global) function `hpx::lcos::barrier::synchronize()` which represents a global barrier across all localities.
- We have started to add support for vectorization to our parallel algorithm implementations. This support depends on using an external library, currently either Vc Library or [|boost_simd|](#). Please see [Issue #2333](#)⁵⁵⁷⁶ for a list of currently supported algorithms. This is an experimental feature and its implementation and/or API might change in the future. Please see this [blog-post](#)⁵⁵⁷⁷ for more information.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overload can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17. The old `inner_product` names can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- Added versions of `hpx::get_ptr` taking client side representations for component instances as their parameter (instead of a global id).
- Added the helper utility `hpx::performance_counters::performance_counter_set` helping to encapsulate a set of performance counters to be managed concurrently.
- All execution policies and related classes have been renamed to be consistent with the naming changes applied for C++17. All policies now live in the namespace `hpx::parallel::execution`. The old names can be still enabled at configure time by specifying `-DHPX_WITH_EXECUTION_POLICY_COMPATIBILITY=On` to CMake.
- The thread scheduling subsystem has undergone a major refactoring which results in significant performance improvements. We have also improved the performance of creating `hpx::future` and of various facilities handling those.

⁵⁵⁷⁵ <https://github.com/TheHPXProject/hpx/pull/2289>

⁵⁵⁷⁶ <https://github.com/TheHPXProject/hpx/issues/2333>

⁵⁵⁷⁷ <http://stellar-group.org/2016/09/vectorized-cpp-parallel-algorithms-with-hpx/>

- We have consolidated all of the code in `HPX.Compute` related to the integration of CUDA. `hpx::partitioned_vector` has been enabled to be usable with `hpx::compute::vector` which allows one to place the partitions on one or more GPU devices.
- Added new performance counters exposing various internals of the thread scheduling subsystem, such as the current idle- and busy-loop counters and instantaneous scheduler utilization.
- Extended and improved the use of the `ITTNotify` hooks allowing to collect performance counter data and function annotation information from within the Intel Amplifier tool.

Breaking changes

- We have dropped support for the gcc compiler versions V4.6 and 4.7. The minimal gcc version we now test on is gcc V4.8.
- We have removed (default) support for `boost::chrono` in interfaces, uses of it have been replaced with `std::chrono`. This facility can be still enabled at configure time by specifying `-DHPX_WITH_BOOST_CHRONO_COMPATIBILITY=On` to CMake.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17.
- the build options `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` are now disabled by default. Please change your code still depending on the deprecated interfaces.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2596](#)⁵⁵⁷⁸ - Adding apex data
- [PR #2595](#)⁵⁵⁷⁹ - Remove obsolete file
- [Issue #2594](#)⁵⁵⁸⁰ - FindOpenCL.cmake mismatch with the official cmake module
- [PR #2592](#)⁵⁵⁸¹ - First attempt to introduce `spmd_block` in `hpx`
- [Issue #2591](#)⁵⁵⁸² - Feature request: continuation (then) which does not require the callable object to take a `future<R>` as parameter
- [PR #2588](#)⁵⁵⁸³ - Daint fixes
- [PR #2587](#)⁵⁵⁸⁴ - Fixing `transfer_(continuation)_action::schedule`

HPX V0.9.99 (Jul 15, 2016)

General changes

As the version number of this release hints, we consider this release to be a preview for the upcoming *HPX* V1.0. All of the functionalities we set out to implement for V1.0 are in place; all of the features we wanted to have exposed are ready. We are very happy with the stability and performance of *HPX* and we would like to present this release to the community in order for us to gather broad feedback before releasing V1.0. We still expect for some minor details to change, but on the whole this release represents what we would like to have in a V1.0.

Overall, since the last release we have had almost 1600 commits while closing almost 400 tickets. These numbers reflect the incredible development activity we have seen over the last couple of months. We would like to express a big ‘Thank you!’ to all contributors and those who helped to make this release happen.

The most notable addition in terms of new functionality available with this release is the full implementation of object migration (i.e. the ability to transparently move *HPX* components to a different compute node). Additionally, this release of *HPX* cleans up many minor issues and some API inconsistencies.

Here are some of the main highlights and changes for this release (in no particular order):

- We have fixed a couple of issues in AGAS and the parcel layer which have caused hangs, segmentation faults at exit, and a slowdown of applications over time. Fixing those has significantly increased the overall stability and performance of distributed runs.
- We have started to add parallel algorithm overloads based on the C++ Extensions for Ranges ([N4560⁵⁹⁰¹](#)) proposal. This also includes the addition of projections to the existing algorithms. Please see [Issue #1668⁵⁹⁰²](#) for a list of algorithms which have been adapted to [N4560⁵⁹⁰³](#).
- We have implemented index-based parallel for-loops based on a corresponding standardization proposal ([P0075R1⁵⁹⁰⁴](#)). Please see [Issue #2016⁵⁹⁰⁵](#) for a list of available algorithms.

⁵⁹⁰³ <http://wg21.link/n4560>

⁵⁹⁰⁴ <http://wg21.link/p0075r1>

⁵⁹⁰⁵ <https://github.com/TheHPXProject/hpx/issues/2016>

- We have added implementations for more parallel algorithms as proposed for the upcoming C++ 17 Standard. See [Issue #1141](#)⁵⁹⁰⁶ for an overview of which algorithms are available by now.
- We have started to implement a new prototypical functionality with *HPX.Compute* which uniformly exposes some of the higher level APIs to heterogeneous architectures (currently CUDA). This functionality is an early preview and should not be considered stable. It may change considerably in the future.
- We have pervasively added (optional) executor arguments to all API functions which schedule new work. Executors are now used throughout the code base as the main means of executing tasks.
- Added `hpx::make_future<R>(future<T> &&)` allowing to convert a future of any type `T` into a future of any other type `R`, either based on default conversion rules of the embedded types or using a given explicit conversion function.
- We finally finished the implementation of transparent migration of components to another locality. It is now possible to trigger a migration operation without ‘stopping the world’ for the object to migrate. *HPX* will make sure that no work is being performed on an object before it is migrated and that all subsequently scheduled work for the migrated object will be transparently forwarded to the new locality. Please note that the global id of the migrated object does not change, thus the application will not have to be changed in any way to support this new functionality. Please note that this feature is currently considered experimental. See [Issue #559](#)⁵⁹⁰⁷ and [PR #1966](#)⁵⁹⁰⁸ for more details.
- The `hpx::dataflow` facility is now usable with actions. Similarly to `hpx::async`, actions can be specified as an explicit template argument (`hpx::dataflow<Action>(target, ...)`) or as the first argument (`hpx::dataflow(Action(), target, ...)`). We have also enabled the use of distribution policies as the target for dataflow invocations. Please see [Issue #1265](#)⁵⁹⁰⁹ and [PR #1912](#)⁵⁹¹⁰ for more information.
- Adding overloads of `gather_here` and `gather_there` to accept the plain values of the data to gather (in addition to the existing overloads expecting futures).
- We have cleaned up and refactored large parts of the code base. This helped reducing compile and link times of *HPX* itself and also of applications depending on it. We have further decreased the dependency of *HPX* on the Boost libraries by replacing part of those with facilities available from the standard libraries.
- Wherever possible we have removed dependencies of our API on Boost by replacing those with the equivalent facility from the C++11 standard library.
- We have added new performance counters for parcel coalescing, file-IO, the AGAS cache, and overall scheduler time. Resetting performance counters has been overhauled and fixed.
- We have introduced a generic client type `hpx::components::client<>` and added support for using it with `hpx::async`. This removes the necessity to implement specific client types for every component type without losing type safety. This deemphasizes the need for using the low level `hpx::id_type` for referencing (possibly remote) component instances. The plan is to deprecate the direct use of `hpx::id_type` in user code in the future.

⁵⁹⁰⁶ <https://github.com/TheHPXProject/hpx/issues/1141>

⁵⁹⁰⁷ <https://github.com/TheHPXProject/hpx/issues/559>

⁵⁹⁰⁸ <https://github.com/TheHPXProject/hpx/pull/1966>

⁵⁹⁰⁹ <https://github.com/TheHPXProject/hpx/issues/1265>

⁵⁹¹⁰ <https://github.com/TheHPXProject/hpx/pull/1912>

- We have added a special iterator which supports automatic prefetching of one or more arrays for speeding up loop-like code (see `hpx::parallel::util::make_prefetcher_context()`).
- We have extended the interfaces exposed from executors (as proposed by N4406⁵⁹¹¹) to accept an arbitrary number of arguments.

Breaking changes

- In order to move the dataflow facility to namespace `hpx` we added a definition of `hpx::dataflow` which might create ambiguities in existing codes. The previous definition of this facility (`hpx::lcos::local::dataflow`) has been deprecated and is available only if the constant `-DHPX_WITH_LOCAL_DATAFLOW_COMPATIBILITY=On` to CMake⁵⁹¹² is defined at configuration time. Please explicitly qualify all uses of the dataflow facility if you enable this compatibility setting and encounter ambiguities.
- The adaptation of the C++ Extensions for Ranges (N4560⁵⁹¹³) proposal imposes some breaking changes related to the return types of some of the parallel algorithms. Please see Issue #1668⁵⁹¹⁴ for a list of algorithms which have already been adapted.
- The facility `hpx::lcos::make_future_void()` has been replaced by `hpx::make_future<void>()`.
- We have removed support for Intel V13 and gcc 4.4.x.
- We have removed (default) support for the generic `hpx::parallel::execution_policy` because it was removed from the Parallelism TS (`__cpp11_n4104__`) while it was being added to the upcoming C++17 Standard. This facility can be still enabled at configure time by specifying `-DHPX_WITH_GENERIC_EXECUTION_POLICY=On` to CMake.
- Uses of `boost::shared_ptr` and related facilities have been replaced with `std::shared_ptr` and friends. Uses of `boost::unique_lock`, `boost::lock_guard` etc. have also been replaced by the equivalent (and equally named) tools available from the C++11 standard library.
- Facilities that used to expect an explicit `boost::unique_lock` now take an `std::unique_lock`. Additionally, `condition_variable` no longer aliases `condition_variable_any`; its interface now only works with `std::unique_lock<local::mutex>`.
- Uses of `boost::function`, `boost::bind`, `boost::tuple` have been replaced by the corresponding facilities in *HPX* (`hpx::util::function`, `hpx::util::bind`, and `hpx::util::tuple`, respectively).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- PR #2250⁵⁹¹⁵ - change default chunker of parallel executor to static one
- PR #2247⁵⁹¹⁶ - HPX on ppc64le
- PR #2244⁵⁹¹⁷ - Fixing MSVC problems
- PR #2238⁵⁹¹⁸ - Fixing small typos
- PR #2237⁵⁹¹⁹ - Fixing small typos
- PR #2234⁵⁹²⁰ - Fix broken add test macro when extra args are passed in
- PR #2231⁵⁹²¹ - Fixing possible race during future awaiting in serialization
- PR #2230⁵⁹²² - Fix stream nvcc
- PR #2229⁵⁹²³ - Fixed run_as_hpx_thread
- PR #2228⁵⁹²⁴ - On prefetching_test branch : adding prefetching_iterator and related tests used for prefetching containers within lambda functions
- PR #2227⁵⁹²⁵ - Support for HPXCL's opencil::event
- PR #2226⁵⁹²⁶ - Preparing for release of V0.9.99
- PR #2225⁵⁹²⁷ - fix issue when compiling components with hpxcxx
- PR #2224⁵⁹²⁸ - Compute alloc fix
- PR #2223⁵⁹²⁹ - Simplify promise
- PR #2222⁵⁹³⁰ - Replace last uses of boost::function by util::function_nonsr
- PR #2221⁵⁹³¹ - Fix config tests
- PR #2220⁵⁹³² - Fixing gcc 4.6 compilation issues
- PR #2219⁵⁹³³ - nullptr support for [unique_]function
- PR #2218⁵⁹³⁴ - Introducing clang tidy
- PR #2216⁵⁹³⁵ - Replace NULL with nullptr

HPX V0.9.11 (Nov 11, 2015)

Our main focus for this release was the design and development of a coherent set of higher-level APIs exposing various types of parallelism to the application programmer. We introduced the concepts of an **executor**, which can be used to customize the **where** and **when** of execution of tasks in the context of parallelizing codes. We extended all APIs related to managing parallel tasks to support executors which gives the user the choice of either using one of the predefined executor types or to provide its own, possibly application specific, executor. We paid very close attention to align all of these changes with the existing C++ Standards documents or with the ongoing proposals for standardization.

This release is the first after our change to a new development policy. We switched all development to be strictly performed on branches only, all direct commits to our main branch (**master**) are prohibited. Any change has to go through a peer review before it will be merged to **master**. As a result the overall stability of our code base has significantly increased, the development process itself has been simplified. This change manifests itself in a large number of pull-requests which have been merged (please see below for a full list of closed issues and pull-requests). All in all for this release, we closed almost 100 issues and merged over 290 pull-requests. There have been over 1600 commits to the master branch since the last release.

General changes

- We are moving into the direction of unifying managed and simple components. As such, the classes `hpx::components::component` and `hpx::components::component_base` have been added which currently just forward to the currently existing simple component facilities. The examples have been converted to only use those two classes.
- Added integration with the [CircleCI](https://circleci.com/gh/TheHPXProject/hpx)⁶³⁰⁹ hosted continuous integration service. This gives us constant and immediate feedback on the health of our master branch.
- The compiler configuration subsystem in the build system has been reimplemented. Instead of using Boost.Config we now use our own lightweight set of cmake scripts to determine the available language and library features supported by the used compiler.
- The API for creating instances of components has been consolidated. All component instances should be created using the `hpx::new_` only. It allows one to instantiate both, single component instances and multiple component instances. The placement of the created components can be controlled by special distribution policies. Please see the corresponding documentation outlining the use of `hpx::new_`.
- Introduced four new distribution policies which can be used with many API functions which traditionally expected to be used with a locality id. The new distribution policies are:
 - `hpx::components::default_distribution_policy` which tries to place multiple component instances as evenly as possible.
 - `hpx::components::colocating_distribution_policy` which will refer to the locality where a given component instance is currently placed.
 - `hpx::components::binpacking_distribution_policy` which will place multiple component instances as evenly as possible based on any performance counter.

⁶³⁰⁹ <https://circleci.com/gh/TheHPXProject/hpx>

- `hpx::components::target_distribution_policy` which allows one to represent a given locality in the context of a distribution policy.
- The new distribution policies can now be also used with `hpx::async`. This change also deprecates `hpx::async_colocated(id, ...)` which now is replaced by a distribution policy: `hpx::async(hpx::colocated(id), ...)`.
- The `hpx::vector` and `hpx::unordered_map` data structures can now be used with the new distribution policies as well.
- The parallel facility `hpx::parallel::task_region` has been renamed to `hpx::parallel::task_block` based on the changes in the corresponding standardization proposal [N4411](#)⁶³¹⁰.
- Added extensions to the parallel facility `hpx::parallel::task_block` allowing to combine a `task_block` with an execution policy. This implies a minor breaking change as the `hpx::parallel::task_block` is now a template.
- Added new LCOs: `hpx::lcos::latch` and `hpx::lcos::local::latch` which semantically conform to the proposed `std::latch` (see [N4399](#)⁶³¹¹).
- Added performance counters exposing data related to data transferred by input/output (filesystem) operations (thanks to Maciej Brodowicz).
- Added performance counters allowing to track the number of action invocations (local and remote invocations).
- Added new command line options `-hpx:print-counter-at` and `-hpx:reset-counters`.
- The `hpx::vector` component has been renamed to `hpx::partitioned_vector` to make it explicit that the underlying memory is not contiguous.
- Introduced a completely new and uniform higher-level parallelism API which is based on executors. All existing parallelism APIs have been adapted to this. We have added a large number of different executor types, such as a numa-aware executor, a this-thread executor, etc.
- Added support for the MingW toolchain on Windows (thanks to Eric Lemanissier).
- HPX now includes support for APEX, (Autonomic Performance Environment for eXascale). APEX is an instrumentation and software adaptation library that provides an interface to TAU profiling / tracing as well as runtime adaptation of HPX applications through policy definitions. For more information and documentation, please see <https://github.com/UO-OACISS/xpress-apex>. To enable APEX at configuration time, specify `-DHPX_WITH_APEX=On`. To also include support for TAU profiling, specify `-DHPX_WITH_TAU=On` and specify the `-DTAU_ROOT`, `-DTAU_ARCH` and `-DTAU_OPTIONS` cmake parameters.
- We have implemented many more of the *Using parallel algorithms*. Please see [Issue #1141](#)⁶³¹² for the list of all available parallel algorithms (thanks to Daniel Bourgeois and John Biddiscombe for contributing their work).

⁶³¹² <https://github.com/TheHPXProject/hpx/issues/1141>

Breaking changes

- We are moving into the direction of unifying managed and simple components. In order to stop exposing the old facilities, all examples have been converted to use the new classes. The breaking change in this release is that performance counters are now a `hpx::components::component_base` instead of `hpx::components::managed_component_base`.
- We removed the support for stackless threads. It turned out that there was no performance benefit when using stackless threads. As such, we decided to clean up our codebase. This feature was not documented.
- The CMake project name has changed from 'hpx' to 'HPX' for consistency and compatibility with naming conventions and other CMake projects. Generated config files go into `<prefix>/lib/cmake/HPX` and not `<prefix>/lib/cmake/hpx`.
- The macro `HPX_REGISTER_MINIMAL_COMPONENT_FACTORY` has been deprecated. Please use `HPX_REGISTER_COMPONENT` instead. The old macro will be removed in the next release.
- The obsolete `distributing_factory` and `binpacking_factory` components have been removed. The corresponding functionality is now provided by the `hpx::new_` API function in conjunction with the `hpx::default_layout` and `hpx::binpacking` distribution policies (`hpx::components::default_distribution_policy` and `hpx::components::binpacking_distribution_policy`).
- The API function `hpx::new_colocated` has been deprecated. Please use the consolidated API `hpx::new_` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of *HPX* if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The API function `hpx::async_colocated` has been deprecated. Please use the consolidated API `hpx::async` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of *HPX* if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The obsolete `remote_object` component has been removed.
- Replaced the use of `Boost.Serialization` with our own solution. While the new version is mostly compatible with `Boost.Serialization`, this change requires some minor code modifications in user code. For more information, please see the corresponding [announcement](#)⁶³¹³ on the `hpx-users@stellar.cct.lsu.edu` mailing list.
- The names used by cmake to influence various configuration options have been unified. The new naming scheme relies on all configuration constants to start with `HPX_WITH_...`, while the preprocessor constant which is used at build time starts with `HPX_HAVE_...`. For instance, the former cmake command line `-DHPX_MALLOC=...` now has to be specified a `-DHPX_WITH_MALLOC=...` and will cause the preprocessor constant `HPX_HAVE_MALLOC` to be defined. The actual name of the constant (i.e. `MALLOC`) has not changed. Please see the corresponding documentation for more details (*CMake options*).
- The `get_gid()` functions exposed by the component base classes `hpx::components::server::simple_component_base`, `hpx::components::server::managed_component_base`, and `hpx::components::server::fixed_component_base` have been replaced by

⁶³¹³ <http://thread.gmane.org/gmane.comp.lib.hpx.devel/196>

two new functions: `get_unmanaged_id()` and `get_id()`. To enable the old function name for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

- All functions which were named `get_gid()` but were returning `hpx::id_type` have been renamed to `get_id()`. To enable the old function names for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #1855⁶³¹⁴](#) - Completely removing external/endian
- [PR #1854⁶³¹⁵](#) - Don't pollute `CMAKE_CXX_FLAGS` through `find_package()`
- [PR #1853⁶³¹⁶](#) - Updating CMake configuration to get correct version of TAU library
- [PR #1852⁶³¹⁷](#) - Fixing Performance Problems with MPI Parcelport
- [PR #1851⁶³¹⁸](#) - Fixing `hpx_add_link_flag()` and `hpx_remove_link_flag()`

- PR #1736⁶⁴¹⁹ - added convenience c-tor and begin()/end() to serialize_buffer
- PR #1735⁶⁴²⁰ - Config includes
- PR #1734⁶⁴²¹ - Fixed #1688: Add timer counters for tfunc_total and exec_total
- Issue #1733⁶⁴²² - Add unit test for hpx/lcos/local/receive_buffer.hpp
- PR #1732⁶⁴²³ - Renaming get_os_thread_count
- PR #1731⁶⁴²⁴ - Basename registration
- Issue #1730⁶⁴²⁵ - Use after move of thread_init_data
- PR #1729⁶⁴²⁶ - Rewriting channel based on new gate component
- PR #1728⁶⁴²⁷ - Fixing #1722
- PR #1727⁶⁴²⁸ - Fixing compile problems with apply_collocated
- PR #1726⁶⁴²⁹ - Apex integration
- PR #1725⁶⁴³⁰ - fixed test timeouts
- PR #1724⁶⁴³¹ - Renaming vector
- Issue #1723⁶⁴³² - Drop support for intel compilers and gcc 4.4. based standard libs
- Issue #1722⁶⁴³³ - Add support for detecting non-ready futures before serialization
- PR #1721⁶⁴³⁴ - Unifying parallel executors, initializing from launch policy
- PR #1720⁶⁴³⁵ - dropped superfluous typedef
- Issue #1718⁶⁴³⁶ - Windows 10 x64, VS 2015 - Unknown CMake command “add_hpx_pseudo_target”.
- PR #1717⁶⁴³⁷ - Timed executor traits for thread-executors
- PR #1716⁶⁴³⁸ - serialization of arrays didn’t work with non-pod types. fixed
- PR #1715⁶⁴³⁹ - List serialization
- PR #1714⁶⁴⁴⁰ - changing misspellings
- PR #1713⁶⁴⁴¹ - Fixed distribution policy executors

- Issue #1566⁶⁵⁷⁸ - CMAKE Configuration Test Failures for clang 3.5 on debian
- PR #1565⁶⁵⁷⁹ - Dylib support
- PR #1564⁶⁵⁸⁰ - Converted partitioners and some algorithms to use executors
- PR #1563⁶⁵⁸¹ - Fix several #includes for Boost.Preprocessor
- PR #1562⁶⁵⁸² - Adding configuration option disabling/enabling all message handlers
- PR #1561⁶⁵⁸³ - Removed all occurrences of boost::move replacing it with std::move
- Issue #1560⁶⁵⁸⁴ - Leftover HPX_REGISTER_ACTION_DECLARATION_2
- PR #1558⁶⁵⁸⁵ - Revisit async/apply SFINAE conditions
- PR #1557⁶⁵⁸⁶ - Removing type_size trait, replacing it with special archive type
- PR #1556⁶⁵⁸⁷ - Executor algorithms
- PR #1555⁶⁵⁸⁸ - Remove the necessity to specify archive flags on the receiving end
- PR #1554⁶⁵⁸⁹ - Removing obsolete Boost.Serialization macros
- PR #1553⁶⁵⁹⁰ - Properly fix HPX_DEFINE_*_ACTION macros
- PR #1552⁶⁵⁹¹ - Fixed algorithms relying on copy_if implementation
- PR #1551⁶⁵⁹² - Pxfes - Modifying FindOrangeFS.cmake based on OrangeFS 2.9.X
- Issue #1550⁶⁵⁹³ - Passing plain identifier inside HPX_DEFINE_PLAIN_ACTION_1
- PR #1549⁶⁵⁹⁴ - Fixing intel14/libstdc++4.4
- PR #1548⁶⁵⁹⁵ - Moving raw_ptr to detail namespace
- PR #1547⁶⁵⁹⁶ - Adding support for executors to future.then
- PR #1546⁶⁵⁹⁷ - Executor traits result types
- PR #1545⁶⁵⁹⁸ - Integrate executors with dataflow
- PR #1543⁶⁵⁹⁹ - Fix potential zero-copy for primarynamespace::bulk_service_async et.al.
- PR #1542⁶⁶⁰⁰ - Merging HPX0.9.10 into pxfes branch

- PR #1541⁶⁶⁰¹ - Removed stale cmake tests, unused since the great cmake refactoring
- PR #1540⁶⁶⁰² - Fix idle-rate on platforms without TSC
- PR #1539⁶⁶⁰³ - Reporting situation if zero-copy-serialization was performed by a parcel generated from a plain apply/async
- PR #1538⁶⁶⁰⁴ - Changed return type of bulk executors and added test
- Issue #1537⁶⁶⁰⁵ - Incorrect cpuid config tests
- PR #1536⁶⁶⁰⁶ - Changed return type of bulk executors and added test
- PR #1535⁶⁶⁰⁷ - Make sure promise::get_gid() can be called more than once
- PR #1534⁶⁶⁰⁸ - Fixed async_callback with bound callback
- PR #1533⁶⁶⁰⁹ - Updated the link in the documentation to a publically- accessible URL
- PR #1532⁶⁶¹⁰ - Make sure sync primitives are not copyable nor movable
- PR #1531⁶⁶¹¹ - Fix unwrapped issue with future ranges of void type
- PR #1530⁶⁶¹² - Serialization complex
- Issue #1528⁶⁶¹³ - Unwrapped issue with future<void>
- Issue #1527⁶⁶¹⁴ - HPX does not build with Boost 1.58.0
- PR #1526⁶⁶¹⁵ - Added support for boost.multi_array serialization
- PR #1525⁶⁶¹⁶ - Properly handle deferred futures, fixes #1506
- PR #1524⁶⁶¹⁷ - Making sure invalid action argument types generate clear error message
- Issue #1522⁶⁶¹⁸ - Need serialization support for boost multi array
- Issue #1521⁶⁶¹⁹ - Remote async and zero-copy serialization optimizations don't play well together
- PR #1520⁶⁶²⁰ - Fixing UB while registering polymorphic classes for serialization
- PR #1519⁶⁶²¹ - Making detail::condition_variable safe to use
- PR #1518⁶⁶²² - Fix when_some bug missing indices in its result

- Issue #1517⁶⁶²³ - Typo may affect CMake build system tests
- PR #1516⁶⁶²⁴ - Fixing Posix context
- PR #1515⁶⁶²⁵ - Fixing Posix context
- PR #1514⁶⁶²⁶ - Correct problems with loading dynamic components
- PR #1513⁶⁶²⁷ - Fixing intel glibc4 4
- Issue #1508⁶⁶²⁸ - memory and papi counters do not work
- Issue #1507⁶⁶²⁹ - Unrecognized Command Line Option Error causing exit status 0
- Issue #1506⁶⁶³⁰ - Properly handle deferred futures
- PR #1505⁶⁶³¹ - Adding #include - would not compile without this
- Issue #1502⁶⁶³² - boost::filesystem::exists throws unexpected exception
- Issue #1501⁶⁶³³ - hwloc configuration options are wrong for MIC
- PR #1504⁶⁶³⁴ - Making sure boost::filesystem::exists() does not throw
- PR #1500⁶⁶³⁵ - Exit application on --hpx:version/-v and --hpx:info
- PR #1498⁶⁶³⁶ - Extended task block
- PR #1497⁶⁶³⁷ - Unique ptr serialization
- PR #1496⁶⁶³⁸ - Unique ptr serialization (closed)
- PR #1495⁶⁶³⁹ - Switching circleci build type to debug
- Issue #1494⁶⁶⁴⁰ - --hpx:version/-v does not exit after printing version information
- Issue #1493⁶⁶⁴¹ - add an hpx_ prefix to libraries and components to avoid name conflicts
- Issue #1492⁶⁶⁴² - Define and ensure limitations for arguments to async/apply
- PR #1489⁶⁶⁴³ - Enable idle rate counter on demand
- PR #1488⁶⁶⁴⁴ - Made sure detail::condition_variable can be safely destroyed
- PR #1487⁶⁶⁴⁵ - Introduced default (main) template implementation for ignore_while_checking

- [Issue #1008](#)⁶⁷¹⁴ - Decrease in application performance overtime; occasional spikes of major slowdown
- [Issue #1001](#)⁶⁷¹⁵ - Zero copy serialization raises assert
- [Issue #721](#)⁶⁷¹⁶ - Make HPX usable for Xeon Phi
- [Issue #524](#)⁶⁷¹⁷ - Extend scheduler to support threads which can't be stolen

HPX V0.9.10 (Mar 24, 2015)

General changes

This is the 12th official release of *HPX*. It coincides with the 7th anniversary of the first commit to our source code repository. Since then, we have seen over 12300 commits amounting to more than 220000 lines of C++ code.

The major focus of this release was to improve the reliability of large scale runs. We believe to have achieved this goal as we now can reliably run *HPX* applications on up to ~24k cores. We have also shown that HPX can be used with success for symmetric runs (applications using both, host cores and Intel Xeon/Phi coprocessors). This is a huge step forward in terms of the usability of *HPX*. The main focus of this work involved isolating the causes of the segmentation faults at start up and shut down. Many of these issues were discovered to be the result of the suspension of threads which hold locks.

A very important improvement introduced with this release is the refactoring of the code representing our parcel-port implementation. Parcel-ports can now be implemented by 3rd parties as independent plugins which are dynamically loaded at runtime (static linking of parcel-ports is also supported). This refactoring also includes a massive improvement of the performance of our existing parcel-ports. We were able to significantly reduce the networking latencies and to improve the available networking bandwidth. Please note that in this release we disabled the `ibverbs` and `ipc` parcel ports as those have not been ported to the new plugin system yet (see [Issue #839](#)⁶⁷¹⁸).

Another corner stone of this release is our work towards a complete implementation of `__cpp11_n4104__` (Working Draft, Technical Specification for C++ Extensions for Parallelism). This document defines a set of parallel algorithms to be added to the C++ standard library. We now have implemented about 75% of all specified parallel algorithms (see [\[link hpx.manual.parallel.parallel_algorithms Parallel Algorithms\]](#) for more details). We also implemented some extensions to `__cpp11_n4104__` allowing to invoke all of the algorithms asynchronously.

This release adds a first implementation of `hpx::vector` which is a distributed data structure closely aligned to the functionality of `std::vector`. The difference is that `hpx::vector` stores the data in partitions where the partitions can be distributed over different localities. We started to work on allowing to use the parallel algorithms with `hpx::vector`. At this point we have implemented only a few of the parallel algorithms

⁶⁷¹² <https://github.com/TheHPXProject/hpx/pull/1300>

⁶⁷¹³ <https://github.com/TheHPXProject/hpx/issues/1251>

⁶⁷¹⁴ <https://github.com/TheHPXProject/hpx/issues/1008>

⁶⁷¹⁵ <https://github.com/TheHPXProject/hpx/issues/1001>

⁶⁷¹⁶ <https://github.com/TheHPXProject/hpx/issues/721>

⁶⁷¹⁷ <https://github.com/TheHPXProject/hpx/issues/524>

⁶⁷¹⁸ <https://github.com/TheHPXProject/hpx/issues/839>

to support distributed data structures (like `hpx::vector`) for testing purposes (see [Issue #1338](#)⁶⁷¹⁹ for a documentation of our progress).

Breaking changes

With this release we put a lot of effort into changing the code base to be more compatible to C++11. These changes have caused the following issues for backward compatibility:

- **Move to Variadics**- All of the API now uses variadic templates. However, this change required to modify the argument sequence for some of the exiting API functions (`hpx::async_continue`, `hpx::apply_continue`, `hpx::when_each`, `hpx::wait_each`, synchronous invocation of actions).
- **Changes to Macros**- We also removed the macros `HPX_STD_FUNCTION` and `HPX_STD_TUPLE`. This shouldn't affect any user code as we replaced `HPX_STD_FUNCTION` with `hpx::util::function_nonsr` which was the default expansion used for this macro. All *HPX* API functions which expect a `hpx::util::function_nonsr` (or a `hpx::util::unique_function_nonsr`) can now be transparently called with a compatible `std::function` instead. Similarly, `HPX_STD_TUPLE` was replaced by its default expansion as well: `hpx::util::tuple`.
- **Changes to `hpx::unique_future`**- `hpx::unique_future`, which was deprecated in the previous release for `hpx::future` is now completely removed from *HPX*. This completes the transition to a completely standards conforming implementation of `hpx::future`.
- **Changes to Supported Compilers**. Finally, in order to utilize more C++11 semantics, we have officially dropped support for GCC 4.4 and MSVC 2012. Please see our [Prerequisites](#) page for more details.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1402](#)⁶⁷²⁰ - Internal shared_future serialization copies
- [Issue #1399](#)⁶⁷²¹ - Build takes unusually long time...
- [Issue #1398](#)⁶⁷²² - Tests using the scan partitioner are broken on at least gcc 4.7 and intel compiler
- [Issue #1397](#)⁶⁷²³ - Completely remove `hpx::unique_future`
- [Issue #1396](#)⁶⁷²⁴ - Parallel scan algorithms with different initial values
- [Issue #1395](#)⁶⁷²⁵ - Race Condition - `1d_stencil_8` - SuperMIC
- [Issue #1394](#)⁶⁷²⁶ - "suspending thread while at least one lock is being held" - `1d_stencil_8` - SuperMIC

HPX V0.9.9 (Oct 31, 2014, codename Spooky)

General changes

We have had over 1500 commits since the last release and we have closed over 200 tickets (bugs, feature requests, pull requests, etc.). These are by far the largest numbers of commits and resolved issues for any of the *HPX* releases so far. We are especially happy about the large number of people who contributed for the first time to *HPX*.

- We completed the transition from the older (non-conforming) implementation of `hpx::future` to the new and fully conforming version by removing the old code and by renaming the type `hpx::unique_future` to `hpx::future`. In order to maintain backwards compatibility with existing code which uses the type `hpx::unique_future` we support the configuration variable `HPX_UNIQUE_FUTURE_ALIAS`. If this variable is set to `ON` while running `cmake` it will additionally define a template alias for this type.
- We rewrote and significantly changed our build system. Please have a look at the new (now generated) documentation here: *Building HPX*. Please revisit your build scripts to adapt to the changes. The most notable changes are:
 - `HPX_NO_INSTALL` is no longer necessary.
 - For external builds, you need to set `HPX_DIR` instead of `HPX_ROOT` as described here: *Using HPX with CMake-based projects*.
 - IDEs that support multiple configurations (Visual Studio and XCode) can now be used as intended. that means no build dir.
 - Building *HPX* statically (without dynamic libraries) is now supported (`-DHPX_STATIC_LINKING=On`).
 - Please note that many variables used to configure the build process have been renamed to unify the naming conventions (see the section *CMake options* for more information).
 - This also fixes a long list of issues, for more information see [Issue #1204](#)⁶⁸³³.
- We started to implement various proposals to the C++ Standardization committee related to parallelism and concurrency, most notably [N4409](#)⁶⁸³⁴ (Working Draft, Technical Specification for C++ Extensions for Parallelism), [N4411](#)⁶⁸³⁵ (Task Region Rev. 3), and [N4313](#)⁶⁸³⁶ (Working Draft, Technical Specification for C++ Extensions for Concurrency).
- We completely remodeled our automatic build system to run builds and unit tests on various systems and compilers. This allows us to find most bugs right as they were introduced and helps to maintain a high level of quality and compatibility. The newest build logs can be found at *HPX Buildbot Website*⁶⁸³⁷.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1296⁶⁸³⁸](#) - Rename `make_error_future` to `make_exceptional_future`, adjust to N4123
- [Issue #1295⁶⁸³⁹](#) - building issue
- [Issue #1293⁶⁸⁴⁰](#) - Transpose example
- [Issue #1292⁶⁸⁴¹](#) - Wrong `abs()` function used in example
- [Issue #1291⁶⁸⁴²](#) - non-synchronized shift operators have been removed
- [Issue #1290⁶⁸⁴³](#) - RDTSCP is defined as true for Xeon Phi build
- [Issue #1289⁶⁸⁴⁴](#) - Fixing 1288
- [Issue #1288⁶⁸⁴⁵](#) - Add new performance counters
- [Issue #1287⁶⁸⁴⁶](#) - Hierarchy scheduler broken performance counters
- [Issue #1286⁶⁸⁴⁷](#) - Algorithm cleanup
- [Issue #1285⁶⁸⁴⁸](#) - Broken Links in Documentation
- [Issue #1284⁶⁸⁴⁹](#) - Uninitialized copy
- [Issue #1283⁶⁸⁵⁰](#) - missing `boost::scoped_ptr` includes
- [Issue #1282⁶⁸⁵¹](#) - Update documentation of build options for schedulers
- [Issue #1281⁶⁸⁵²](#) - reset idle rate counter
- [Issue #1280⁶⁸⁵³](#) - Bug when executing on Intel MIC
- [Issue #1279⁶⁸⁵⁴](#) - Add improved `when_all/wait_all`
- [Issue #1278⁶⁸⁵⁵](#) - Implement improved `when_all/wait_all`
- [Issue #1277⁶⁸⁵⁶](#) - feature request: get access to `argc argv` and `variables_map`
- [Issue #1276⁶⁸⁵⁷](#) - Remove merging map
- [Issue #1274⁶⁸⁵⁸](#) - Weird (wrong) string code in `papi.cpp`

⁶⁸⁵⁸ <https://github.com/TheHPXProject/hpx/issues/1274>

- Issue #1273⁶⁸⁵⁹ - Sequential task execution policy
- Issue #1272⁶⁸⁶⁰ - Avoid CMake name clash for Boost.Thread library
- Issue #1271⁶⁸⁶¹ - Updates on HPX Test Units
- Issue #1270⁶⁸⁶² - hpx/util/safe_lexical_cast.hpp is added
- Issue #1269⁶⁸⁶³ - Added default value for “LIB” cmake variable
- Issue #1268⁶⁸⁶⁴ - Memory Counters not working
- Issue #1266⁶⁸⁶⁵ - FindHPX.cmake is not installed
- Issue #1263⁶⁸⁶⁶ - apply_remote test takes too long
- Issue #1262⁶⁸⁶⁷ - Chrono cleanup
- Issue #1261⁶⁸⁶⁸ - Need make install for papi counters and this builds all the examples
- Issue #1260⁶⁸⁶⁹ - Documentation of Stencil example claims
- Issue #1259⁶⁸⁷⁰ - Avoid double-linking Boost on Windows
- Issue #1257⁶⁸⁷¹ - Adding additional parameter to create_thread
- Issue #1256⁶⁸⁷² - added buildbot changes to release notes
- Issue #1255⁶⁸⁷³ - Cannot build MiniGhost
- Issue #1253⁶⁸⁷⁴ - hpx::thread defects
- Issue #1252⁶⁸⁷⁵ - HPX_PREFIX is too fragile
- Issue #1250⁶⁸⁷⁶ - switch_to_fiber_emulation does not work properly
- Issue #1249⁶⁸⁷⁷ - Documentation is generated under Release folder
- Issue #1248⁶⁸⁷⁸ - Fix usage of hpx_generic_coroutine_context and get tests passing on powerpc
- Issue #1247⁶⁸⁷⁹ - Dynamic linking error
- Issue #1246⁶⁸⁸⁰ - Make cpuid.cpp C++11 compliant
- Issue #1245⁶⁸⁸¹ - HPX fails on startup (setting thread affinity mask)

⁶⁸⁸¹ <https://github.com/TheHPXProject/hpx/issues/1245>

- Issue #1244⁶⁸⁸² - HPX_WITH_RDTSC configure test fails, but should succeed
- Issue #1243⁶⁸⁸³ - CTest dashboard info for CSCS CDash drop location
- Issue #1242⁶⁸⁸⁴ - Mac fixes
- Issue #1241⁶⁸⁸⁵ - Failure in Distributed with Boost 1.56
- Issue #1240⁶⁸⁸⁶ - fix a race condition in examples.diskperf
- Issue #1239⁶⁸⁸⁷ - fix wait_each in examples.diskperf
- Issue #1238⁶⁸⁸⁸ - Fixed #1237: hpx::util::portable_binary_iarchive failed
- Issue #1237⁶⁸⁸⁹ - hpx::util::portable_binary_iarchive failed
- Issue #1235⁶⁸⁹⁰ - Fixing clang warnings and errors
- Issue #1234⁶⁸⁹¹ - TCP runs fail: Transport endpoint is not connected
- Issue #1233⁶⁸⁹² - Making sure the correct number of threads is registered with AGAS
- Issue #1232⁶⁸⁹³ - Fixing race in wait_xxx
- Issue #1231⁶⁸⁹⁴ - Parallel minmax
- Issue #1230⁶⁸⁹⁵ - Distributed run of 1d_stencil_8 uses less threads than spec. & sometimes gives errors
- Issue #1229⁶⁸⁹⁶ - Unstable number of threads
- Issue #1228⁶⁸⁹⁷ - HPX link error (cmake / MPI)
- Issue #1226⁶⁸⁹⁸ - Warning about struct/class thread_counters
- Issue #1225⁶⁸⁹⁹ - Adding parallel::replace etc
- Issue #1224⁶⁹⁰⁰ - Extending dataflow to pass through non-future arguments
- Issue #1223⁶⁹⁰¹ - Remaining find algorithms implemented, N4071
- Issue #1222⁶⁹⁰² - Merging all the changes
- Issue #1221⁶⁹⁰³ - No error output when using mpirun with hpx
- Issue #1219⁶⁹⁰⁴ - Adding new AGAS cache performance counters

⁶⁹⁰³ <https://github.com/TheHPXProject/hpx/issues/1221>

⁶⁹⁰⁴ <https://github.com/TheHPXProject/hpx/issues/1219>

- Issue #1216⁶⁹⁰⁵ - Fixing using futures (clients) as arguments to actions
- Issue #1215⁶⁹⁰⁶ - Error compiling simple component
- Issue #1214⁶⁹⁰⁷ - Stencil docs
- Issue #1213⁶⁹⁰⁸ - Using more than a few dozen MPI processes on SuperMike results in a seg fault before getting to hpx_main
- Issue #1212⁶⁹⁰⁹ - Parallel rotate
- Issue #1211⁶⁹¹⁰ - Direct actions cause the future's shared_state to be leaked
- Issue #1210⁶⁹¹¹ - Refactored local::promise to be standard conformant
- Issue #1209⁶⁹¹² - Improve command line handling
- Issue #1208⁶⁹¹³ - Adding parallel::reverse and parallel::reverse_copy
- Issue #1207⁶⁹¹⁴ - Add copy_backward and move_backward
- Issue #1206⁶⁹¹⁵ - N4071 additional algorithms implemented
- Issue #1204⁶⁹¹⁶ - Cmake simplification and various other minor changes
- Issue #1203⁶⁹¹⁷ - Implementing new launch policy for (local) async: hpx::launch::fork.
- Issue #1202⁶⁹¹⁸ - Failed assertion in connection_cache.hpp
- Issue #1201⁶⁹¹⁹ - pkg-config doesn't add mpi link directories
- Issue #1200⁶⁹²⁰ - Error when querying time performance counters
- Issue #1199⁶⁹²¹ - library path is now configurable (again)
- Issue #1198⁶⁹²² - Error when querying performance counters
- Issue #1197⁶⁹²³ - tests fail with intel compiler
- Issue #1196⁶⁹²⁴ - Silence several warnings
- Issue #1195⁶⁹²⁵ - Rephrase initializers to work with VC++ 2012
- Issue #1194⁶⁹²⁶ - Simplify parallel algorithms

⁶⁹²⁶ <https://github.com/TheHPXProject/hpx/issues/1194>

- [Issue #1193](#)⁶⁹²⁷ - Adding `parallel::equal`
- [Issue #1192](#)⁶⁹²⁸ - `HPX(out_of_memory)` on including `<hpx/hpx.hpp>`
- [Issue #1191](#)⁶⁹²⁹ - Fixing #1189
- [Issue #1190](#)⁶⁹³⁰ - Chrono cleanup
- [Issue #1189](#)⁶⁹³¹ - Deadlock .. somewhere? (probably serialization)
- [Issue #1188](#)⁶⁹³² - Removed `future::get_status()`
- [Issue #1186](#)⁶⁹³³ - Fixed `FindOpenCL` to find current AMD APP SDK
- [Issue #1184](#)⁶⁹³⁴ - Tweaking future unwrapping
- [Issue #1183](#)⁶⁹³⁵ - Extended `parallel::reduce`
- [Issue #1182](#)⁶⁹³⁶ - `future::unwrap` hangs for `launch::deferred`
- [Issue #1181](#)⁶⁹³⁷ - Adding `all_of`, `any_of`, and `none_of` and corresponding documentation
- [Issue #1180](#)⁶⁹³⁸ - `hpx::cout` defect
- [Issue #1179](#)⁶⁹³⁹ - `hpx::async` does not work for member function pointers when called on types with self-defined unary operator*
- [Issue #1178](#)⁶⁹⁴⁰ - Implemented variadic `hpx::util::zip_iterator`
- [Issue #1177](#)⁶⁹⁴¹ - MPI parcelport defect
- [Issue #1176](#)⁶⁹⁴² - `HPX_DEFINE_COMPONENT_CONST_ACTION_TPL` does not have a 2-argument version
- [Issue #1175](#)⁶⁹⁴³ - Create `util::zip_iterator` working with `util::tuple<>`
- [Issue #1174](#)⁶⁹⁴⁴ - Error Building HPX on linux, `root_certificate_authority.cpp`
- [Issue #1173](#)⁶⁹⁴⁵ - `hpx::cout` output lost
- [Issue #1172](#)⁶⁹⁴⁶ - HPX build error with Clang 3.4.2
- [Issue #1171](#)⁶⁹⁴⁷ - `CMAKE_INSTALL_PREFIX` ignored
- [Issue #1170](#)⁶⁹⁴⁸ - Close `hpx_benchmarks` repository on Github

- Issue #1169⁶⁹⁴⁹ - Buildbot emails have syntax error in url
- Issue #1167⁶⁹⁵⁰ - Merge partial implementation of standards proposal N3960
- Issue #1166⁶⁹⁵¹ - Fixed several compiler warnings
- Issue #1165⁶⁹⁵² - cmake warns: “tests.regressions.actions” does not exist
- Issue #1164⁶⁹⁵³ - Want my own serialization of `hpx::future`
- Issue #1162⁶⁹⁵⁴ - Segfault in `hello_world` example
- Issue #1161⁶⁹⁵⁵ - Use `HPX_ASSERT` to aid the compiler
- Issue #1160⁶⁹⁵⁶ - Do not put `-DNDEBUG` into `hpx_application.pc`
- Issue #1159⁶⁹⁵⁷ - Support Clang 3.4.2
- Issue #1158⁶⁹⁵⁸ - Fixed #1157: Rename `when_n/wait_n`, add `when_xxx_n/wait_xxx_n`
- Issue #1157⁶⁹⁵⁹ - Rename `when_n/wait_n`, add `when_xxx_n/wait_xxx_n`
- Issue #1156⁶⁹⁶⁰ - Force inlining fails
- Issue #1155⁶⁹⁶¹ - changed header of `printout` to be compatible with python csv module
- Issue #1154⁶⁹⁶² - Fixing `iostreams`
- Issue #1153⁶⁹⁶³ - Standard manipulators (like `std::endl`) do not work with `hpx::ostream`
- Issue #1152⁶⁹⁶⁴ - Functions revamp
- Issue #1151⁶⁹⁶⁵ - Suppressing cmake 3.0 policy warning for CMP0026
- Issue #1150⁶⁹⁶⁶ - Client Serialization error
- Issue #1149⁶⁹⁶⁷ - Segfault on Stampede
- Issue #1148⁶⁹⁶⁸ - Refactoring mini-ghost
- Issue #1147⁶⁹⁶⁹ - N3960 `copy_if` and `copy_n` implemented and tested
- Issue #1146⁶⁹⁷⁰ - Stencil print
- Issue #1145⁶⁹⁷¹ - N3960 `hpx::parallel::copy` implemented and tested

⁶⁹⁷¹ <https://github.com/TheHPXProject/hpx/issues/1145>

- Issue #1144⁶⁹⁷² - OpenMP examples 1d_stencil do not build
- Issue #1143⁶⁹⁷³ - 1d_stencil OpenMP examples do not build
- Issue #1142⁶⁹⁷⁴ - Cannot build HPX with gcc 4.6 on OS X
- Issue #1140⁶⁹⁷⁵ - Fix OpenMP lookup, enable usage of config tests in external CMake projects.
- Issue #1139⁶⁹⁷⁶ - hpx/hpx/config/compiler_specific.hpp
- Issue #1138⁶⁹⁷⁷ - clean up pkg-config files
- Issue #1137⁶⁹⁷⁸ - Improvements to create binary packages
- Issue #1136⁶⁹⁷⁹ - HPX_GCC_VERSION not defined on all compilers
- Issue #1135⁶⁹⁸⁰ - Avoiding collision between winsock2.h and windows.h
- Issue #1134⁶⁹⁸¹ - Making sure, that hpx::finalize can be called from any locality
- Issue #1133⁶⁹⁸² - 1d stencil examples
- Issue #1131⁶⁹⁸³ - Refactor unique_function implementation
- Issue #1130⁶⁹⁸⁴ - Unique function
- Issue #1129⁶⁹⁸⁵ - Some fixes to the Build system on OS X
- Issue #1128⁶⁹⁸⁶ - Action future args
- Issue #1127⁶⁹⁸⁷ - Executor causes segmentation fault
- Issue #1124⁶⁹⁸⁸ - Adding new API functions: register_id_with_basename, unregister_id_with_basename, find_ids_from_basename; adding test
- Issue #1123⁶⁹⁸⁹ - Reduce nesting of try-catch construct in encode_parcels?
- Issue #1122⁶⁹⁹⁰ - Client base fixes
- Issue #1121⁶⁹⁹¹ - Update hpxrun.py.in
- Issue #1120⁶⁹⁹² - HTTS2 tests compile errors on v110 (VS2012)
- Issue #1119⁶⁹⁹³ - Remove references to boost::atomic in accumulator example

HPX V0.9.8 (Mar 24, 2014)

We have had over 800 commits since the last release and we have closed over 65 tickets (bugs, feature requests, etc.).

With the changes below, *HPX* is once again leading the charge of a whole new era of computation. By intrinsically breaking down and synchronizing the work to be done, *HPX* insures that application developers will no longer have to fret about where a segment of code executes. That allows coders to focus their time and energy to understanding the data dependencies of their algorithms and thereby the core obstacles to an efficient code. Here are some of the advantages of using *HPX*:

- *HPX* is solidly rooted in a sophisticated theoretical execution model – ParalleX
- *HPX* exposes an API fully conforming to the C++11 and the draft C++14 standards, extended and applied to distributed computing. Everything programmers know about the concurrency primitives of the standard C++ library is still valid in the context of *HPX*.
- It provides a competitive, high performance implementation of modern, future-proof ideas which gives an smooth migration path from today's mainstream techniques
- There is no need for the programmer to worry about lower level parallelization paradigms like threads or message passing; no need to understand pthreads, MPI, OpenMP, or Windows threads, etc.
- There is no need to think about different types of parallelism such as tasks, pipelines, or fork-join, task or data parallelism.
- The same source of your program compiles and runs on Linux, BlueGene/Q, Mac OS X, Windows, and Android.
- The same code runs on shared memory multi-core systems and supercomputers, on handheld devices and Intel® Xeon Phi™ accelerators, or a heterogeneous mix of those.

General changes

- A major API breaking change for this release was introduced by implementing `hpx::future` and `hpx::shared_future` fully in conformance with the [C++11 Standard](#)⁷⁰⁶². While `hpx::shared_future` is new and will not create any compatibility problems, we revised the interface and implementation of the existing `hpx::future`. For more details please see the [mailing list archive](#)⁷⁰⁶³. To avoid any incompatibilities for existing code we named the type which implements the `std::future` interface as `hpx::unique_future`. For the next release this will be renamed to `hpx::future`, making it full conforming to [C++11 Standard](#)⁷⁰⁶⁴.

⁷⁰⁶¹ <https://github.com/TheHPXProject/hpx/issues/44>

⁷⁰⁶² <http://www.open-std.org/jtc1/sc22/wg21>

⁷⁰⁶³ <http://mail.cct.lsu.edu/pipermail/hpx-users/2014-January/000141.html>

⁷⁰⁶⁴ <http://www.open-std.org/jtc1/sc22/wg21>

- A large part of the code base of *HPX* has been refactored and partially re-implemented. The main changes were related to
 - The threading subsystem: these changes significantly reduce the amount of overheads caused by the schedulers, improve the modularity of the code base, and extend the variety of available scheduling algorithms.
 - The parcel subsystem: these changes improve the performance of the *HPX* networking layer, modularize the structure of the parcelports, and simplify the creation of new parcelports for other underlying networking libraries.
 - The API subsystem: these changes improved the conformance of the API to C++11 Standard, extend and unify the available API functionality, and decrease the overheads created by various elements of the API.
 - The robustness of the component loading subsystem has been improved significantly, allowing to more portably and more reliably register the components needed by an application as startup. This additionally speeds up general application initialization.
- We added new API functionality like `hpx::migrate` and `hpx::copy_component` which are the basic building blocks necessary for implementing higher level abstractions for system-wide load balancing, runtime-adaptive resource management, and object-oriented checkpointing and state-management.
- We removed the use of C++11 move emulation (using `Boost.Move`), replacing it with C++11 rvalue references. This is the first step towards using more and more native C++11 facilities which we plan to introduce in the future.
- We improved the reference counting scheme used by *HPX* which helps managing distributed objects and memory. This improves the overall stability of *HPX* and further simplifies writing real world applications.
- The minimal Boost version required to use *HPX* is now V1.49.0.
- This release coincides with the first release of HPXPI (V0.1.0), the first implementation of the *XPI specification*⁷⁰⁶⁵.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1086](#)⁷⁰⁶⁶ - Expose internal `boost::shared_array` to allow user management of array lifetime
- [Issue #1083](#)⁷⁰⁶⁷ - Make shell examples copyable in docs
- [Issue #1080](#)⁷⁰⁶⁸ - `/threads{locality#*/total}/count/cumulative` broken
- [Issue #1079](#)⁷⁰⁶⁹ - Build problems on OS X
- [Issue #1078](#)⁷⁰⁷⁰ - Improve robustness of component loading
- [Issue #1077](#)⁷⁰⁷¹ - Fix a missing enum definition for 'take' mode

HPX V0.9.7 (Nov 13, 2013)

We have had over 1000 commits since the last release and we have closed over 180 tickets (bugs, feature requests, etc.).

General changes

- Ported HPX to BlueGene/Q
- Improved HPX support for Xeon/Phi accelerators
- Reimplemented `hpx::bind`, `hpx::tuple`, and `hpx::function` for better performance and better compliance with the C++11 Standard. Added `hpx::mem_fn`.
- Reworked `hpx::when_all` and `hpx::when_any` for better compliance with the ongoing C++ standardization effort, added heterogeneous version for those functions. Added `hpx::when_any_swapped`.
- Added `hpx::copy` as a precursor for a migrate functionality
- Added `hpx::get_ptr` allowing to directly access the memory underlying a given component
- Added the `hpx::lcos::broadcast`, `hpx::lcos::reduce`, and `hpx::lcos::fold` collective operations
- Added `hpx::get_locality_name` allowing to retrieve the name of any of the localities for the application.
- Added support for more flexible thread affinity control from the HPX command line, such as new modes for `--hpx:bind` (`balanced`, `scattered`, `compact`), improved default settings when running multiple localities on the same node.
- Added experimental executors for simpler thread pooling and scheduling. This API may change in the future as it will stay aligned with the ongoing C++ standardization efforts.
- Massively improved the performance of the HPX serialization code. Added partial support for zero copy serialization of array and bitwise-copyable types.
- General performance improvements of the code related to threads and futures.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1005⁷¹⁴⁰](#) - Allow one to disable array optimizations and zero copy optimizations for each parcellport
- [Issue #1004⁷¹⁴¹](#) - Generate new HPX logo image for the docs
- [Issue #1002⁷¹⁴²](#) - If MPI parcellport is not available, running HPX under mpirun should fail
- [Issue #1001⁷¹⁴³](#) - Zero copy serialization raises assert
- [Issue #1000⁷¹⁴⁴](#) - Can't connect to a HPX application running with the MPI parcellport from a non MPI parcellport locality
- [Issue #999⁷¹⁴⁵](#) - Optimize `hpx::when_n`
- [Issue #998⁷¹⁴⁶](#) - Fixed const-correctness
- [Issue #997⁷¹⁴⁷](#) - Making `serialize_buffer::data()` type save
- [Issue #996⁷¹⁴⁸](#) - Memory leak in `hpx::lcos::promise`
- [Issue #995⁷¹⁴⁹](#) - Race while registering pre-shutdown functions
- [Issue #994⁷¹⁵⁰](#) - `thread_rescheduling` regression test does not compile
- [Issue #992⁷¹⁵¹](#) - Correct comments and messages
- [Issue #991⁷¹⁵²](#) - `setcap cap_sys_rawio=ep` for power profiling causes an HPX application to abort
- [Issue #989⁷¹⁵³](#) - Jacobi hangs during execution
- [Issue #988⁷¹⁵⁴](#) - `multiple_init` test is failing
- [Issue #986⁷¹⁵⁵](#) - Can't call a function called "init" from "main" when using `<hpx/hpx_main.hpp>`
- [Issue #984⁷¹⁵⁶](#) - Reference counting tests are failing
- [Issue #983⁷¹⁵⁷](#) - `thread_suspension_executor` test fails
- [Issue #980⁷¹⁵⁸](#) - Terminating HPX threads don't leave stack in virgin state

- Issue #979⁷¹⁵⁹ - Static scheduler not in documents
- Issue #978⁷¹⁶⁰ - Preprocessing limits are broken
- Issue #977⁷¹⁶¹ - Make tests.regressions.lcos.future_hang_on_get shorter
- Issue #976⁷¹⁶² - Wrong library order in pkgconfig
- Issue #975⁷¹⁶³ - Please reopen #963
- Issue #974⁷¹⁶⁴ - Option pu-offset ignored in fixing_588 branch
- Issue #972⁷¹⁶⁵ - Cannot use MKL with HPX
- Issue #969⁷¹⁶⁶ - Non-existent INI files requested on the command line via `--hpx:config` do not cause warnings or errors.
- Issue #968⁷¹⁶⁷ - Cannot build examples in fixing_588 branch
- Issue #967⁷¹⁶⁸ - Command line description of `--hpx:queuing` seems wrong
- Issue #966⁷¹⁶⁹ - `--hpx:print-bind` physical core numbers are wrong
- Issue #965⁷¹⁷⁰ - Deadlock when building in Release mode
- Issue #963⁷¹⁷¹ - Not all worker threads are working
- Issue #962⁷¹⁷² - Problem with SLURM integration
- Issue #961⁷¹⁷³ - `--hpx:print-bind` outputs incorrect information
- Issue #960⁷¹⁷⁴ - Fix cut and paste error in documentation of `get_thread_priority`
- Issue #959⁷¹⁷⁵ - Change link to boost.atomic in documentation to point to boost.org
- Issue #958⁷¹⁷⁶ - Undefined reference to `intrusive_ptr_release`
- Issue #957⁷¹⁷⁷ - Make tuple standard compliant
- Issue #956⁷¹⁷⁸ - Segfault with a3382fb
- Issue #955⁷¹⁷⁹ - `--hpx:nodes` and `--hpx:nodefiles` do not work with foreign nodes
- Issue #954⁷¹⁸⁰ - Make order of arguments for `hpx::async` and `hpx::broadcast` consistent
- Issue #953⁷¹⁸¹ - Cannot use MKL with HPX

- Issue #923⁷²⁰⁴ - Correct BLAS and RNPL cmake tests
- Issue #922⁷²⁰⁵ - Cannot link against BLAS
- Issue #921⁷²⁰⁶ - Implement `hpx::mem_fn`
- Issue #920⁷²⁰⁷ - Output locality with `--hpx:print-bind`
- Issue #919⁷²⁰⁸ - Correct grammar; simplify boolean expressions
- Issue #918⁷²⁰⁹ - Link to `hello_world.cpp` is broken
- Issue #917⁷²¹⁰ - adapt cmake file to new boostbook version
- Issue #916⁷²¹¹ - fix problem building documentation with `xsltproc >= 1.1.27`
- Issue #915⁷²¹² - Add another TBBMalloc library search path
- Issue #914⁷²¹³ - Build problem with Intel compiler on Stampede (TACC)
- Issue #913⁷²¹⁴ - fix error messages in fibonacci examples
- Issue #911⁷²¹⁵ - Update OS X build instructions
- Issue #910⁷²¹⁶ - Want like to specify `MPI_ROOT` instead of compiler wrapper script
- Issue #909⁷²¹⁷ - Warning about `void*` arithmetic
- Issue #908⁷²¹⁸ - Buildbot for MIC is broken
- Issue #906⁷²¹⁹ - Can't use `--hpx:bind=balanced` with multiple MPI processes
- Issue #905⁷²²⁰ - `--hpx:bind` documentation should describe full grammar
- Issue #904⁷²²¹ - Add `hpx::lcos::fold` and `hpx::lcos::inverse_fold` collective operation
- Issue #903⁷²²² - Add `hpx::when_any_swapped()`
- Issue #902⁷²²³ - Add `hpx::lcos::reduce` collective operation
- Issue #901⁷²²⁴ - Web documentation is not searchable
- Issue #900⁷²²⁵ - Web documentation for trunk has no index
- Issue #898⁷²²⁶ - Some tests fail with GCC 4.8.1 and MPI parcel port

- [Issue #316](#)⁷³²³ - Add message size limitation
- [Issue #249](#)⁷³²⁴ - Clean up locking code in big boot barrier
- [Issue #136](#)⁷³²⁵ - Persistent CMake variables need to be marked as cache variables

HPX V0.9.6 (Jul 30, 2013)

We have had over 1200 commits since the last release and we have closed roughly 140 tickets (bugs, feature requests, etc.).

General changes

The major new features in this release are:

- We further consolidated the API exposed by *HPX*. We aligned our APIs as much as possible with the existing [C++11 Standard](#)⁷³²⁶ and related proposals to the C++ standardization committee (such as [N3632](#)⁷³²⁷ and [N3857](#)⁷³²⁸).
- We implemented a first version of a distributed AGAS service which essentially eliminates all explicit AGAS network traffic.
- We created a native `ibverbs` `parcelpoint` allowing to take advantage of the superior latency and bandwidth characteristics of Infiniband networks.
- We successfully ported *HPX* to the Xeon Phi platform.
- Support for the SLURM scheduling system was implemented.

⁷³¹⁵ <https://github.com/TheHPXProject/hpx/issues/534>

⁷³¹⁶ <https://github.com/TheHPXProject/hpx/issues/508>

⁷³¹⁷ <https://github.com/TheHPXProject/hpx/issues/506>

⁷³¹⁸ <https://github.com/TheHPXProject/hpx/issues/470>

⁷³¹⁹ <https://github.com/TheHPXProject/hpx/issues/453>

⁷³²⁰ <https://github.com/TheHPXProject/hpx/issues/445>

⁷³²¹ <https://github.com/TheHPXProject/hpx/issues/443>

⁷³²² <https://github.com/TheHPXProject/hpx/issues/421>

⁷³²³ <https://github.com/TheHPXProject/hpx/issues/316>

⁷³²⁴ <https://github.com/TheHPXProject/hpx/issues/249>

⁷³²⁵ <https://github.com/TheHPXProject/hpx/issues/136>

⁷³²⁶ <http://www.open-std.org/jtc1/sc22/wg21>

⁷³²⁷ <http://wg21.link/n3632>

⁷³²⁸ <http://wg21.link/n3857>

- Major efforts have been dedicated to improving the performance counter framework, numerous new counters were implemented and new APIs were added.
- We added a modular parcel compression system allowing to improve bandwidth utilization (by reducing the overall size of the transferred data).
- We added a modular parcel coalescing system allowing to combine several parcels into larger messages. This reduces latencies introduced by the communication layer.
- Added an experimental executors API allowing to use different scheduling policies for different parts of the code. This API has been modelled after the Standards proposal N3562⁷³²⁹. This API is bound to change in the future, though.
- Added minimal security support for localities which is enforced on the parcelport level. This support is preliminary and experimental and might change in the future.
- We created a parcelport using low level MPI functions. This is in support of legacy applications which are to be gradually ported and to support platforms where MPI is the only available portable networking layer.
- We added a preliminary and experimental implementation of a tuple-space object which exposes an interface similar to such systems described in the literature (see for instance *The Linda Coordination Language*⁷³³⁰).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is again a very long list of newly implemented features and fixed issues.

- [Issue #806](#)⁷³³¹ - make (all) in examples folder does nothing
- [Issue #805](#)⁷³³² - Adding the introduction and fixing DOCBOOK dependencies for Windows use
- [Issue #804](#)⁷³³³ - Add stackless (non-suspendable) thread type
- [Issue #803](#)⁷³³⁴ - Create proper serialization support functions for util::tuple
- [Issue #800](#)⁷³³⁵ - Add possibility to disable array optimizations during serialization
- [Issue #798](#)⁷³³⁶ - HPX_LIMIT does not work for local dataflow
- [Issue #797](#)⁷³³⁷ - Create a parcelport which uses MPI
- [Issue #796](#)⁷³³⁸ - Problem with Large Numbers of Threads
- [Issue #793](#)⁷³³⁹ - Changing dataflow test case to hang consistently
- [Issue #792](#)⁷³⁴⁰ - CMake Error

⁷³²⁹ <http://wg21.link/n3562>

⁷³⁴⁰ <https://github.com/TheHPXProject/hpx/issues/792>

- Issue #791⁷³⁴¹ - Problems with local::dataflow
- Issue #790⁷³⁴² - wait_for() doesn't compile
- Issue #789⁷³⁴³ - HPX with Intel compiler segfaults
- Issue #788⁷³⁴⁴ - Intel compiler support
- Issue #787⁷³⁴⁵ - Fixed SFINAE specializations
- Issue #786⁷³⁴⁶ - Memory issues during benchmarking.
- Issue #785⁷³⁴⁷ - Create an API allowing to register external threads with HPX
- Issue #784⁷³⁴⁸ - util::plugin is throwing an error when a symbol is not found
- Issue #783⁷³⁴⁹ - How does hpx::bind work?
- Issue #782⁷³⁵⁰ - Added quotes around STRING REPLACE potentially empty arguments
- Issue #781⁷³⁵¹ - Make sure no exceptions propagate into the thread manager
- Issue #780⁷³⁵² - Allow arithmetics performance counters to expand its parameters
- Issue #779⁷³⁵³ - Test case for 778
- Issue #778⁷³⁵⁴ - Swapping futures segfaults
- Issue #777⁷³⁵⁵ - hpx::lcos::details::when_xxx don't restore completion handlers
- Issue #776⁷³⁵⁶ - Compiler chokes on dataflow overload with launch policy
- Issue #775⁷³⁵⁷ - Runtime error with local dataflow (copying futures?)
- Issue #774⁷³⁵⁸ - Using local dataflow without explicit namespace
- Issue #773⁷³⁵⁹ - Local dataflow with unwrap: functor operators need to be const
- Issue #772⁷³⁶⁰ - Allow (remote) actions to return a future
- Issue #771⁷³⁶¹ - Setting HPX_LIMIT gives huge boost MPL errors
- Issue #770⁷³⁶² - Add launch policy to (local) dataflow
- Issue #769⁷³⁶³ - Make compile time configuration information available

- Issue #768⁷³⁶⁴ - Const correctness problem in local dataflow
- Issue #767⁷³⁶⁵ - Add launch policies to async
- Issue #766⁷³⁶⁶ - Mark data structures for optimized (array based) serialization
- Issue #765⁷³⁶⁷ - Align hpx::any with N3508: Any Library Proposal (Revision 2)
- Issue #764⁷³⁶⁸ - Align hpx::future with newest N3558: A Standardized Representation of Asynchronous Operations
- Issue #762⁷³⁶⁹ - added a human readable output for the ping pong example
- Issue #761⁷³⁷⁰ - Ambiguous typename when constructing derived component
- Issue #760⁷³⁷¹ - Simple components can not be derived
- Issue #759⁷³⁷² - make install doesn't give a complete install
- Issue #758⁷³⁷³ - Stack overflow when using locking_hook<>
- Issue #757⁷³⁷⁴ - copy paste error; unsupported function overloading
- Issue #756⁷³⁷⁵ - GTCX runtime issue in Gordon
- Issue #755⁷³⁷⁶ - Papi counters don't work with reset and evaluate API's
- Issue #753⁷³⁷⁷ - cmake bugfix and improved component action docs
- Issue #752⁷³⁷⁸ - hpx simple component docs
- Issue #750⁷³⁷⁹ - Add hpx::util::any
- Issue #749⁷³⁸⁰ - Thread phase counter is not reset
- Issue #748⁷³⁸¹ - Memory performance counter are not registered
- Issue #747⁷³⁸² - Create performance counters exposing arithmetic operations
- Issue #745⁷³⁸³ - apply_callback needs to invoke callback when applied locally
- Issue #744⁷³⁸⁴ - CMake fixes
- Issue #743⁷³⁸⁵ - Problem Building github version of HPX
- Issue #742⁷³⁸⁶ - Remove HPX_STD_BIND

HPX V0.9.5 (Jan 16, 2013)

We have had over 1000 commits since the last release and we have closed roughly 150 tickets (bugs, feature requests, etc.).

General changes

This release is continuing along the lines of code and API consolidation, and overall usability improvements. We dedicated much attention to performance and we were able to significantly improve the threading and networking subsystems.

We successfully ported *HPX* to the Android platform. *HPX* applications now not only can run on mobile devices, but we support heterogeneous applications running across architecture boundaries. At the Supercomputing Conference 2012 we demonstrated connecting Android tablets to simulations running on a Linux cluster. The Android tablet was used to query performance counters from the Linux simulation and to steer its parameters.

We successfully ported *HPX* to Mac OSX (using the Clang compiler). Thanks to Pyry Jähkola for contributing the corresponding patches. Please see the section `macos_installation` for more details.

We made a special effort to make *HPX* usable in highly concurrent use cases. Many of the *HPX* API functions which possibly take longer than 100 microseconds to execute now can be invoked asynchronously. We added uniform support for composing futures which simplifies to write asynchronous code. *HPX* actions (function objects encapsulating possibly concurrent remote function invocations) are now well integrated with all other API facilities such like `hpx::bind`.

All of the API has been aligned as much as possible with established paradigms. *HPX* now mirrors many of the facilities as defined in the C++11 Standard, such as `hpx::thread`, `hpx::function`, `hpx::future`, etc.

A lot of work has been put into improving the documentation. Many of the API functions are documented now, concepts are explained in detail, and examples are better described than before. The new documentation index enables finding information with lesser effort.

This is the first release of *HPX* we perform after the move to [Github](https://github.com/TheHPXProject/hpx/)⁷⁴⁷¹. This step has enabled a wider participation from the community and further encourages us in our decision to release *HPX* as a true open source library (*HPX* is licensed under the very liberal [Boost Software License](https://www.boost.org/LICENSE_1_0.txt)⁷⁴⁷²).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is by far the longest list of newly implemented features and fixed issues for any of *HPX*' releases so far.

- [Issue #666](https://github.com/TheHPXProject/hpx/issues/666)⁷⁴⁷³ - Segfault on calling `hpx::finalize` twice
- [Issue #665](https://github.com/TheHPXProject/hpx/issues/665)⁷⁴⁷⁴ - Adding declaration `num_of_cores`

⁷⁴⁷¹ <https://github.com/TheHPXProject/hpx/>

⁷⁴⁷² https://www.boost.org/LICENSE_1_0.txt

⁷⁴⁷³ <https://github.com/TheHPXProject/hpx/issues/666>

⁷⁴⁷⁴ <https://github.com/TheHPXProject/hpx/issues/665>

- Issue #662⁷⁴⁷⁵ - pkgconfig is building wrong
- Issue #660⁷⁴⁷⁶ - Need uninterrupt function
- Issue #659⁷⁴⁷⁷ - Move our logging library into a different namespace
- Issue #658⁷⁴⁷⁸ - Dynamic performance counter types are broken
- Issue #657⁷⁴⁷⁹ - HPX v0.9.5 (RC1) hello_world example segfaulting
- Issue #656⁷⁴⁸⁰ - Define the affinity of parcel-pool, io-pool, and timer-pool threads
- Issue #654⁷⁴⁸¹ - Integrate the Boost auto_index tool with documentation
- Issue #653⁷⁴⁸² - Make HPX build on OS X + Clang + libc++
- Issue #651⁷⁴⁸³ - Add fine-grained control for thread pinning
- Issue #650⁷⁴⁸⁴ - Command line no error message when using -hpx:(anything)
- Issue #645⁷⁴⁸⁵ - Command line aliases don't work in [teletype]``@file``[c++]
- Issue #644⁷⁴⁸⁶ - Terminated threads are not always properly cleaned up
- Issue #640⁷⁴⁸⁷ - future_data<T>::set_on_completed_ used without locks
- Issue #638⁷⁴⁸⁸ - hpx build with intel compilers fails on linux
- Issue #637⁷⁴⁸⁹ - -copy-dt-needed-entries breaks with gold
- Issue #635⁷⁴⁹⁰ - Boost V1.53 will add Boost.Lockfree and Boost.Atomic
- Issue #633⁷⁴⁹¹ - Re-add examples to final 0.9.5 release
- Issue #632⁷⁴⁹² - Example thread_aware_timer is broken
- Issue #631⁷⁴⁹³ - FFT application throws error in parcellayer
- Issue #630⁷⁴⁹⁴ - Event synchronization example is broken
- Issue #629⁷⁴⁹⁵ - Waiting on futures hangs
- Issue #628⁷⁴⁹⁶ - Add an HPX_ALWAYS_ASSERT macro
- Issue #625⁷⁴⁹⁷ - Port coroutines context switch benchmark

- [Issue #595](#)⁷⁵¹⁹ - I need a place to store data in a thread self pointer
- [Issue #594](#)⁷⁵²⁰ - 32/64 interoperability
- [Issue #593](#)⁷⁵²¹ - Warn if logging is disabled at compile time but requested at runtime
- [Issue #592](#)⁷⁵²² - Add optional argument value to `--hpx:list-counters` and `--hpx:list-counter-infos`
- [Issue #591](#)⁷⁵²³ - Allow for wildcards in performance counter names specified with `--hpx:print-counter`
- [Issue #590](#)⁷⁵²⁴ - Local promise semantic differences
- [Issue #589](#)⁷⁵²⁵ - Create API to query performance counter names
- [Issue #587](#)⁷⁵²⁶ - Add `get_num_localities` and `get_num_threads` to AGAS API
- [Issue #586](#)⁷⁵²⁷ - Adjust local AGAS cache size based on number of localities
- [Issue #585](#)⁷⁵²⁸ - Error while using counters in HPX
- [Issue #584](#)⁷⁵²⁹ - counting argument size of actions, initial pass.
- [Issue #581](#)⁷⁵³⁰ - Remove `RemoteResult` template parameter for `future<>`
- [Issue #580](#)⁷⁵³¹ - Add possibility to hook into actions
- [Issue #578](#)⁷⁵³² - Use angle brackets in HPX error dumps
- [Issue #576](#)⁷⁵³³ - Exception incorrectly thrown when `--help` is used
- [Issue #575](#)⁷⁵³⁴ - `HPX(bad_component_type)` with gcc 4.7.2 and boost 1.51
- [Issue #574](#)⁷⁵³⁵ - `--hpx:connect` command line parameter not working correctly
- [Issue #571](#)⁷⁵³⁶ - `hpx::wait()` (callback version) should pass the future to the callback function
- [Issue #570](#)⁷⁵³⁷ - `hpx::wait` should operate on `boost::arrays` and `std::lists`
- [Issue #569](#)⁷⁵³⁸ - Add a logging sink for Android
- [Issue #568](#)⁷⁵³⁹ - 2-argument version of `HPX_DEFINE_COMPONENT_ACTION`
- [Issue #567](#)⁷⁵⁴⁰ - Connecting to a running HPX application works only once

⁷⁵⁴⁰ <https://github.com/TheHPXProject/hpx/issues/567>

- Issue #565⁷⁵⁴¹ - HPX doesn't shutdown properly
- Issue #564⁷⁵⁴² - Partial preprocessing of new component creation interface
- Issue #563⁷⁵⁴³ - Add `hpx::start/hpx::stop` to avoid blocking main thread
- Issue #562⁷⁵⁴⁴ - All command line arguments swallowed by `hpx`
- Issue #561⁷⁵⁴⁵ - `Boost.Tuple` is not move aware
- Issue #558⁷⁵⁴⁶ - `boost::shared_ptr<>` style semantics/syntax for client classes
- Issue #556⁷⁵⁴⁷ - Creation of partially preprocessed headers should be enabled for Boost newer than V1.50
- Issue #555⁷⁵⁴⁸ - `BOOST_FORCEINLINE` does not name a type
- Issue #554⁷⁵⁴⁹ - Possible race condition in thread `get_id()`
- Issue #552⁷⁵⁵⁰ - Move enable `client_base`
- Issue #550⁷⁵⁵¹ - Add stack size category 'huge'
- Issue #549⁷⁵⁵² - ShenEOS run seg-faults on single or distributed runs
- Issue #545⁷⁵⁵³ - `AUTOGLOB` broken for `add_hpx_component`
- Issue #542⁷⁵⁵⁴ - `FindHPX_HDF5` still searches multiple times
- Issue #541⁷⁵⁵⁵ - Quotes around application name in `hpx::init`
- Issue #539⁷⁵⁵⁶ - Race condition occurring with new lightweight threads
- Issue #535⁷⁵⁵⁷ - `hpx_run_tests.py` exits with no error code when tests are missing
- Issue #530⁷⁵⁵⁸ - Thread description(<unknown>) in logs
- Issue #523⁷⁵⁵⁹ - Make thread objects more lightweight
- Issue #521⁷⁵⁶⁰ - `hpx::error_code` is not usable for lightweight error handling
- Issue #520⁷⁵⁶¹ - Add full user environment to HPX logs
- Issue #519⁷⁵⁶² - Build succeeds, running fails
- Issue #517⁷⁵⁶³ - Add a guard page to linux coroutine stacks

HPX V0.9.0 (Jul 5, 2012)

We have had roughly 800 commits since the last release and we have closed approximately 80 tickets (bugs, feature requests, etc.).

General changes

- Significant improvements made to the usability of *HPX* in large-scale, distributed environments.
- Renamed `hpx::lcos::packaged_task` to `hpx::lcos::packaged_action` to reflect the semantic differences to a `packaged_task` as defined by the [C++11 Standard](#)⁷⁶²⁹.
- *HPX* now exposes `hpx::thread` which is compliant to the C++11 `std::thread` type except that it (purely locally) represents an *HPX* thread. This new type does not expose any of the remote capabilities of the underlying *HPX*-thread implementation.
- The type `hpx::lcos::future` is now compliant to the C++11 `std::future<>` type. This type can be used to synchronize both, local and remote operations. In both cases the control flow will ‘return’ to the future in order to trigger any continuation.
- The types `hpx::lcos::local::promise` and `hpx::lcos::local::packaged_task` are now compliant to the C++11 `std::promise<>` and `std::packaged_task<>` types. These can be used to create a future representing local work only. Use the types `hpx::lcos::promise` and `hpx::lcos::packaged_action` to wrap any (possibly remote) action into a future.
- `hpx::thread` and `hpx::lcos::future` are now cancelable.
- Added support for sequential and logic composition of `hpx::lcos::futures`. The member function `hpx::lcos::future::when` permits futures to be sequentially composed. The helper functions `hpx::wait_all`, `hpx::wait_any`, and `hpx::wait_n` can be used to wait for more than one future at a time.
- *HPX* now exposes `hpx::apply` and `hpx::async` as the preferred way of creating (or invoking) any deferred work. These functions are usable with various types of functions, function objects, and actions and provide a uniform way to spawn deferred tasks.
- *HPX* now utilizes `hpx::util::bind` to (partially) bind local functions and function objects, and also actions. Remote bound actions can have placeholders as well.
- *HPX* continuations are now fully polymorphic. The class `hpx::actions::forwarding_continuation` is an example of how the user can write its own types of continuations. It can be used to execute any function as an continuation of a particular action.
- Reworked the action invocation API to be fully conformant to normal functions. Actions can now be invoked using `hpx::apply`, `hpx::async`, or using the `operator()` implemented on actions. Actions themselves can now be cheaply instantiated as they do not have any members anymore.
- Reworked the lazy action invocation API. Actions can now be directly bound using `hpx::util::bind` by passing an action instance as the first argument.
- A minimal *HPX* program now looks like this:

⁷⁶²⁹ <http://www.open-std.org/jtc1/sc22/wg21>

```
#include <hpx/hpx_init.hpp>

int hpx_main()
{
    return hpx::finalize();
}

int main()
{
    return hpx::init();
}
```

This removes the immediate dependency on the `Boost.Program_options`⁷⁶³⁰ library.

Note

This minimal version of an *HPX* program does not support any of the default command line arguments (such as `-help`, or command line options related to PBS). It is suggested to always pass `argc` and `argv` to *HPX* as shown in the example below.

- In order to support those, but still not to depend on `Boost.Program_options`⁷⁶³¹, the minimal program can be written as:

```
#include <hpx/hpx_init.hpp>

// The arguments
↪ for hpx_main can be left off, which very similar to the
// behavior of ``main()`` as defined by C++.
int hpx_main(int argc, char* argv[])
{
    return hpx::finalize();
}

int main(int argc, char* argv[])
{
    return hpx::init(argc, argv);
}
```

- Added performance counters exposing the number of component instances which are alive on a given locality.
- Added performance counters exposing then number of messages sent and received, the number of parcels sent and received, the number of bytes sent and received, the overall time required to send and receive data, and the overall time required to serialize and deserialize the data.
- Added a new component: `hpx::components::binpacking_factory` which is equivalent to the existing `hpx::components::distributing_factory` component, except that it equalizes the overall population of the components to create. It exposes two factory methods, one based on the number of existing instances of the component type to

⁷⁶³⁰ https://www.boost.org/doc/html/program_options.html

⁷⁶³¹ https://www.boost.org/doc/html/program_options.html

create, and one based on an arbitrary performance counter which will be queried for all relevant localities.

- Added API functions allowing to access elements of the diagnostic information embedded in the given exception: `hpx::get_locality_id`, `hpx::get_host_name`, `hpx::get_process_id`, `hpx::get_function_name`, `hpx::get_file_name`, `hpx::get_line_number`, `hpx::get_os_thread`, `hpx::get_thread_id`, and `hpx::get_thread_description`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #71⁷⁶³²](#) - GIDs that are not serialized via `handle_gid<>` should raise an exception
- [Issue #105⁷⁶³³](#) - Allow for `hpx::util::functions` to be registered in the AGAS symbolic namespace
- [Issue #107⁷⁶³⁴](#) - Nasty threadmanger race condition (reproducible in `sheneos_test`)
- [Issue #108⁷⁶³⁵](#) - Add millisecond resolution to *HPX* logs on Linux
- [Issue #110⁷⁶³⁶](#) - Shutdown hang in distributed with release build
- [Issue #116⁷⁶³⁷](#) - Don't use TSS for the applier and runtime pointers
- [Issue #162⁷⁶³⁸](#) - Move local synchronous execution shortcut from `hpx::function` to the applier
- [Issue #172⁷⁶³⁹](#) - Cache sources in CMake and check if they change manually
- [Issue #178⁷⁶⁴⁰](#) - Add an INI option to turn off ranged-based AGAS caching
- [Issue #187⁷⁶⁴¹](#) - Support for disabling performance counter deployment
- [Issue #202⁷⁶⁴²](#) - Support for sending performance counter data to a specific file
- [Issue #218⁷⁶⁴³](#) - `boost.coroutines` allows different stack sizes, but stack pool is unaware of this
- [Issue #231⁷⁶⁴⁴](#) - Implement movable `boost::bind`
- [Issue #232⁷⁶⁴⁵](#) - Implement movable `boost::function`
- [Issue #236⁷⁶⁴⁶](#) - Allow binding `hpx::util::function` to actions
- [Issue #239⁷⁶⁴⁷](#) - Replace `hpx::function` with `hpx::util::function`

⁷⁶⁶⁹ <https://github.com/TheHPXProject/hpx/issues/362>

- Issue #363⁷⁶⁷⁰ - Parcel port serialization error
- Issue #366⁷⁶⁷¹ - Parcel buffering leads to types incompatible exception
- Issue #368⁷⁶⁷² - Scalable alternative to rand() needed for *HPX*
- Issue #369⁷⁶⁷³ - IB over IP is substantially slower than just using standard TCP/IP
- Issue #374⁷⁶⁷⁴ - `hpx::lcos::wait` should work with dataflows and arbitrary classes meeting the future interface
- Issue #375⁷⁶⁷⁵ - Conflicting/ambiguous overloads of `hpx::lcos::wait`
- Issue #376⁷⁶⁷⁶ - Find_HPX.cmake should set CMake variable HPX_FOUND for out of tree builds
- Issue #377⁷⁶⁷⁷ - ShenEOS interpolate bulk and interpolate_one_bulk are broken
- Issue #379⁷⁶⁷⁸ - Add support for distributed runs under SLURM
- Issue #382⁷⁶⁷⁹ - `_Unwind_Word` not declared in boost.backtrace
- Issue #387⁷⁶⁸⁰ - Doxygen should look only at list of specified files
- Issue #388⁷⁶⁸¹ - Running `make install` on an out-of-tree application is broken
- Issue #391⁷⁶⁸² - Out-of-tree application segfaults when running in qsub
- Issue #392⁷⁶⁸³ - Remove HPX_NO_INSTALL option from cmake build system
- Issue #396⁷⁶⁸⁴ - Pragma related warnings when compiling with older gcc versions
- Issue #399⁷⁶⁸⁵ - Out of tree component build problems
- Issue #400⁷⁶⁸⁶ - Out of source builds on Windows: linker should not receive compiler flags
- Issue #401⁷⁶⁸⁷ - Out of source builds on Windows: components need to be linked with `hpx_serialization`
- Issue #404⁷⁶⁸⁸ - gfortran fails to link automatically when fortran files are present
- Issue #405⁷⁶⁸⁹ - Inability to specify linking order for external libraries
- Issue #406⁷⁶⁹⁰ - Adapt action limits such that dataflow applications work without additional defines

HPX V0.8.1 (Apr 21, 2012)

This is a point release including important bug fixes for *HPX V0.8.0 (Mar 23, 2012)*.

General changes

- HPX does not need to be installed anymore to be functional.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this point release:

- [Issue #295](#)⁷⁶⁹⁴ - Don't require install path to be known at compile time.
- [Issue #371](#)⁷⁶⁹⁵ - Add `hpx iostreams` to standard build.
- [Issue #384](#)⁷⁶⁹⁶ - Fix compilation with GCC 4.7.
- [Issue #390](#)⁷⁶⁹⁷ - Remove `keep_factory_alive` startup call from ShenEOS; add shutdown call to `H5close`.
- [Issue #393](#)⁷⁶⁹⁸ - Thread affinity control is broken.

Bug fixes (commits)

Here is a list of the important commits included in this point release:

- `r7642` - External: Fix backtrace memory violation.
- **`r7775` - Components: Fix symbol visibility bug with component startup providers.** This prevents one components providers from overriding another components.
- `r7778` - Components: Fix startup/shutdown provider shadowing issues.

HPX V0.8.0 (Mar 23, 2012)

We have had roughly 1000 commits since the last release and we have closed approximately 70 tickets (bugs, feature requests, etc.).

General changes

- Improved PBS support, allowing for arbitrary naming schemes of node-hostnames.
- Finished verification of the reference counting framework.
- Implemented decrement merging logic to optimize the distributed reference counting system.
- Restructured the LCO framework. Renamed `hpx::lcos::eager_future<>` and `hpx::lcos::lazy_future<>` into `hpx::lcos::packaged_task` and `hpx::lcos::deferred_packaged_task`. Split `hpx::lcos::promise` into `hpx::lcos::packaged_task` and `hpx::lcos::future`. Added ‘local’ futures (in namespace `hpx::lcos::local`).
- Improved the general performance of local and remote action invocations. This (under certain circumstances) drastically reduces the number of copies created for each of the parameters and return values.
- Reworked the performance counter framework. Performance counters are now created only when needed, which reduces the overall resource requirements. The new framework allows for much more flexible creation and management of performance counters. The new sine example application demonstrates some of the capabilities of the new infrastructure.
- Added a buildbot-based continuous build system which gives instant, automated feedback on each commit to SVN.
- Added more automated tests to verify proper functioning of *HPX*.
- Started to create documentation for *HPX* and its API.
- Added documentation toolchain to the build system.
- Added dataflow LCO.
- Changed default *HPX* command line options to have `hpx:` prefix. For instance, the former option `--threads` is now `--hpx:threads`. This has been done to make ambiguities with possible application specific command line options as unlikely as possible. See the section *HPX Command Line Options* for a full list of available options.
- Added the possibility to define command line aliases. The former short (one-letter) command line options have been predefined as aliases for backwards compatibility. See the section *HPX Command Line Options* for a detailed description of command line option aliasing.
- Network connections are now cached based on the connected host. The number of simultaneous connections to a particular host is now limited. Parcels are buffered and bundled if all connections are in use.
- Added more refined thread affinity control. This is based on the external library Portable Hardware Locality (HWLOC).
- Improved support for Windows builds with CMake.
- Added support for components to register their own command line options.

- Added the possibility to register custom startup/shutdown functions for any component. These functions are guaranteed to be executed by an *HPX* thread.
- Added two new experimental thread schedulers: `hierarchy_scheduler` and `periodic_priority_scheduler`. These can be activated by using the command line options `--hpx:queuing=hierarchy` or `--hpx:queuing=periodic`.

Example applications

- [Graph500 performance benchmark](#)⁷⁶⁹⁹ (thanks to Matthew Anderson for contributing this application).
- [GTC \(Gyrokinetic Toroidal Code\)](#)⁷⁷⁰⁰: a skeleton for particle in cell type codes.
- Random Memory Access: an example demonstrating random memory accesses in a large array
- [ShenEOS example](#)⁷⁷⁰¹, demonstrating partitioning of large read-only data structures and exposing an interpolation API.
- Sine performance counter demo.
- Accumulator examples demonstrating how to write and use *HPX* components.
- Quickstart examples (like `hello_world`, `fibonacci`, `quicksort`, `factorial`, etc.) demonstrating simple *HPX* concepts which introduce some of the concepts in *HPX*.
- Load balancing and work stealing demos.

API changes

- Moved all local LCOs into a separate namespace `hpx::lcos::local` (for instance, `hpx::lcos::local_mutex` is now `hpx::lcos::local::mutex`).
- Replaced `hpx::actions::function` with `hpx::util::function`. Cleaned up related code.
- Removed `hpx::traits::handle_gid` and moved handling of global reference counts into the corresponding serialization code.
- Changed terminology: `prefix` is now called `locality_id`, renamed the corresponding API functions (such as `hpx::get_prefix`, which is now called `hpx::get_locality_id`).
- Adding `hpx::find_remote_localities`, and `hpx::get_num_localities`.
- Changed performance counter naming scheme to make it more bash friendly. The new performance counter naming scheme is now

```
/object{parentname#parentindex/instance#index}/counter#parameters
```

- Added `hpx::get_worker_thread_num` replacing `hpx::threadmanager_base::get_thread_num`.
- Renamed `hpx::get_num_os_threads` to `hpx::get_os_threads_count`.
- Added `hpx::threads::get_thread_count`.

⁷⁶⁹⁹ <http://www.graph500.org/>

⁷⁷⁰⁰ <http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/>

⁷⁷⁰¹ <http://stellarcollapse.org/equationofstate>

- Restructured the Futures sub-system, renaming types in accordance with the terminology used by the C++11 ISO standard.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #31⁷⁷⁰²](#) - Specialize `handle_gid<>` for examples and tests
- [Issue #72⁷⁷⁰³](#) - Fix AGAS reference counting
- [Issue #104⁷⁷⁰⁴](#) - heartbeat throws an exception when decrefing the performance counter it's watching
- [Issue #111⁷⁷⁰⁵](#) - throttle causes an exception on the target application
- [Issue #142⁷⁷⁰⁶](#) - One failed component loading causes an unrelated component to fail
- [Issue #165⁷⁷⁰⁷](#) - Remote exception propagation bug in AGAS reference counting test
- [Issue #186⁷⁷⁰⁸](#) - Test credit exhaustion/splitting (e.g. `prepare_gid` and symbol NS)
- [Issue #188⁷⁷⁰⁹](#) - Implement remaining AGAS reference counting test cases
- [Issue #258⁷⁷¹⁰](#) - No type checking of GIDs in stubs classes
- [Issue #271⁷⁷¹¹](#) - Seg fault/shared pointer assertion in distributed code
- [Issue #281⁷⁷¹²](#) - CMake options need descriptive text
- [Issue #283⁷⁷¹³](#) - AGAS caching broken (`gva_cache` needs to be rewritten with ICL)
- [Issue #285⁷⁷¹⁴](#) - `HPX_INSTALL` root directory not the same as `CMAKE_INSTALL_PREFIX`
- [Issue #286⁷⁷¹⁵](#) - New segfault in dataflow applications
- [Issue #289⁷⁷¹⁶](#) - Exceptions should only be logged if not handled
- [Issue #290⁷⁷¹⁷](#) - c++11 tests failure
- [Issue #293⁷⁷¹⁸](#) - Build target for component libraries
- [Issue #296⁷⁷¹⁹](#) - Compilation error with Boost V1.49rc1

- [Issue #364⁷⁷⁵⁰](#) - Installation seriously broken in r7443

HPX V0.7.0 (Dec 12, 2011)

We have had roughly 1000 commits since the last release and we have closed approximately 120 tickets (bugs, feature requests, etc.).

General changes

- Completely removed code related to deprecated AGAS V1, started to work on AGAS V2.1.
- Started to clean up and streamline the exposed APIs (see 'API changes' below for more details).
- Revamped and unified performance counter framework, added a lot of new performance counter instances for monitoring of a diverse set of internal *HPX* parameters (queue lengths, access statistics, etc.).
- Improved general error handling and logging support.
- Fixed several race conditions, improved overall stability, decreased memory footprint, improved overall performance (major optimizations include native TLS support and ranged-based AGAS caching).
- Added support for running *HPX* applications with PBS.
- Many updates to the build system, added support for gcc 4.5.x and 4.6.x, added C++11 support.
- Many updates to default command line options.
- Added many tests, set up buildbot for continuous integration testing.
- Better shutdown handling of distributed applications.

⁷⁷⁴³ <https://github.com/TheHPXProject/hpx/issues/343>

⁷⁷⁴⁴ <https://github.com/TheHPXProject/hpx/issues/351>

⁷⁷⁴⁵ <https://github.com/TheHPXProject/hpx/issues/353>

⁷⁷⁴⁶ <https://github.com/TheHPXProject/hpx/issues/355>

⁷⁷⁴⁷ <https://github.com/TheHPXProject/hpx/issues/356>

⁷⁷⁴⁸ <https://github.com/TheHPXProject/hpx/issues/359>

⁷⁷⁴⁹ <https://github.com/TheHPXProject/hpx/issues/361>

⁷⁷⁵⁰ <https://github.com/TheHPXProject/hpx/issues/364>

Example applications

- quickstart/factorial and quickstart/fibonacci, future-recursive parallel algorithms.
- quickstart/hello_world, distributed hello world example.
- quickstart/rma, simple remote memory access example
- quickstart/quicksort, parallel quicksort implementation.
- gtc, gyrokinetic torodial code.
- bfs, breadth-first-search, example code for a graph application.
- sheneos, partitioning of large data sets.
- accumulator, simple component example.
- balancing/os_thread_num, balancing/px_thread_phase, examples demonstrating load balancing and work stealing.

API changes

- Added `hpx::find_all_localities`.
- Added `hpx::terminate` for non-graceful termination of applications.
- Added `hpx::lcos::async` functions for simpler asynchronous programming.
- Added new AGAS interface for handling of symbolic namespace (`hpx::agas::*`).
- Renamed `hpx::components::wait` to `hpx::lcos::wait`.
- Renamed `hpx::lcos::future_value` to `hpx::lcos::promise`.
- Renamed `hpx::lcos::recursive_mutex` to `hpx::lcos::local_recursive_mutex`, `hpx::lcos::mutex` to `hpx::lcos::local_mutex`
- Removed support for Boost versions older than V1.38, recommended Boost version is now V1.47 and newer.
- Removed `hpx::process` (this will be replaced by a real process implementation in the future).
- Removed non-functional LCO code (`hpx::lcos::dataflow`, `hpx::lcos::thunk`, `hpx::lcos::dataflow_variable`).
- Removed deprecated `hpx::naming::full_address`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #28⁷⁷⁵¹](#) - Integrate Windows/Linux CMake code for *HPX* core
- [Issue #32⁷⁷⁵²](#) - `hpx::cout()` should be `hpx::cout`
- [Issue #33⁷⁷⁵³](#) - AGAS V2 legacy client does not properly handle `error_code`

⁷⁷⁵¹ <https://github.com/TheHPXProject/hpx/issues/28>

⁷⁷⁵² <https://github.com/TheHPXProject/hpx/issues/32>

⁷⁷⁵³ <https://github.com/TheHPXProject/hpx/issues/33>

- Issue #60⁷⁷⁵⁴ - AGAS: allow for registerid to optionally take ownership of the gid
- Issue #62⁷⁷⁵⁵ - adaptive1d compilation failure in Fusion
- Issue #64⁷⁷⁵⁶ - Parcel subsystem doesn't resolve domain names
- Issue #83⁷⁷⁵⁷ - No error handling if no console is available
- Issue #84⁷⁷⁵⁸ - No error handling if a hosted locality is treated as the bootstrap server
- Issue #90⁷⁷⁵⁹ - Add general commandline option -N
- Issue #91⁷⁷⁶⁰ - Add possibility to read command line arguments from file
- Issue #92⁷⁷⁶¹ - Always log exceptions/errors to the log file
- Issue #93⁷⁷⁶² - Log the command line/program name
- Issue #95⁷⁷⁶³ - Support for distributed launches
- Issue #97⁷⁷⁶⁴ - Attempt to create a bad component type in AMR examples
- Issue #100⁷⁷⁶⁵ - factorial and factorial_get examples trigger AGAS component type assertions
- Issue #101⁷⁷⁶⁶ - Segfault when hpx::process::here() is called in fibonacci2
- Issue #102⁷⁷⁶⁷ - unknown_component_address in int_object_semaphore_client
- Issue #114⁷⁷⁶⁸ - marduk raises assertion with default parameters
- Issue #115⁷⁷⁶⁹ - Logging messages for SMP runs (on the console) shouldn't be buffered
- Issue #119⁷⁷⁷⁰ - marduk linking strategy breaks other applications
- Issue #121⁷⁷⁷¹ - pbsdsh problem
- Issue #123⁷⁷⁷² - marduk, dataflow and adaptive1d fail to build
- Issue #124⁷⁷⁷³ - Lower default preprocessing arity
- Issue #125⁷⁷⁷⁴ - Move hpx::detail::diagnostic_information out of the detail namespace
- Issue #126⁷⁷⁷⁵ - Test definitions for AGAS reference counting
- Issue #128⁷⁷⁷⁶ - Add averaging performance counter

2.11.3 Namespace changes

HPX V1.9.0 Namespace changes

The latest release includes amongst others changes in the namespaces so that *HPX* facilities correspond to the C++ Standard Library. The old namespaces are deprecated. Below is a comprehensive list of the namespace changes.

Table 2.194: Namespace changes in V1.9.0

Old namespace	New namespace
<code>hpx::util::mem_fn</code>	<code>hpx::mem_fn</code>
<code>hpx::util::invoke</code>	<code>hpx::invoke</code>
<code>hpx::util::invoke_r</code>	<code>hpx::invoke_r</code>
<code>hpx::util::invoke_fused</code>	<code>hpx::invoke_fused</code>
<code>hpx::util::invoke_fused_r</code>	<code>hpx::invoke_fused_r</code>
<code>hpx::util::unlock_guard</code>	<code>hpx::unlock_guard</code>
<code>hpx::parallel::v1::reduce_by_key</code>	<code>hpx::experimental::reduce_by_key</code>
<code>hpx::parallel::v1::sort_by_key</code>	<code>hpx::experimental::sort_by_key</code>
<code>hpx::parallel::task_canceled_exception</code>	<code>hpx::experimental::task_canceled_exception</code>
<code>hpx::parallel::task_block</code>	<code>hpx::experimental::task_block</code>
<code>hpx::parallel::define_task_block</code>	<code>hpx::experimental::define_task_block</code>
<code>hpx::parallel::define_task_block_restore_thread</code>	<code>hpx::experimental::define_task_block_restore_thread</code>

2.14 About HPX

2.14.1 History

The development of High Performance ParalleX (*HPX*) began in 2007. At that time, Hartmut Kaiser became interested in the work done by the ParalleX group at the [Center for Computation and Technology \(CCT\)](#)⁷⁸³⁰, a multi-disciplinary research institute at [Louisiana State University \(LSU\)](#)⁷⁸³¹. The ParalleX group was working to develop a new and experimental execution model for future high performance computing architectures. This model was christened ParalleX. The first implementations of ParalleX were crude, and many of those designs had to be discarded entirely. However, over time the team learned quite a bit about how to design a parallel, distributed runtime system which implements the concepts of ParalleX.

From the very beginning, this endeavour has been a group effort. In addition to a handful of interested researchers, there have always been graduate and undergraduate students participating in the discussions, design, and implementation of *HPX*. In 2011 we decided to formalize our collective research efforts by creating the [STE||AR](#)⁷⁸³² group (Systems Technology, Emergent Parallelism, and Algorithm Research). Over time, the team grew to include researchers around the country and the world. In 2014, the [STE||AR](#)⁷⁸³³ Group was reorganized to become the international community it is today. This consortium of researchers aims to develop stable, sustainable, and scalable tools which will enable application developers to exploit the parallelism latent in the machines of today and tomorrow. Our goal of the *HPX* project is to create a high quality, freely available, open source implementation of ParalleX concepts for conventional and future systems by building a modular and standards conforming runtime system for SMP and distributed application environments. The API exposed by *HPX* is conformant to the interfaces defined by the C++ ISO Standard and adheres to the programming guidelines used by the [Boost](#)⁷⁸³⁴ collection of C++ libraries. We steer the development of *HPX* with real world applications and aim to provide a smooth migration path for domain scientists.

To learn more about [STE||AR](#)⁷⁸³⁵ and ParalleX, see [People](#) and [Why HPX?](#).

2.14.2 People

The **STE||AR**⁷⁸³⁶ Group (pronounced as stellar) stands for “Systems Technology, Emergent Parallelism, and Algorithm Research”. We are an international group of faculty, researchers, and students working at various institutions around the world. The goal of the **STE||AR**⁷⁸³⁷ Group is to promote the development of scalable parallel applications by providing a community for ideas, a framework for collaboration, and a platform for communicating these concepts to the broader community.

Our work is focused on building technologies for scalable parallel applications. *HPX*, our general purpose C++ runtime system for parallel and distributed applications, is no exception. We use *HPX* for a broad range of scientific applications, helping scientists and developers to write code which scales better and shows better performance compared to more conventional programming models such as MPI.

HPX is based on *ParalleX* which is a new (and still experimental) parallel execution model aiming to overcome the limitations imposed by the current hardware and the techniques we use to write applications today. Our group focuses on two types of applications - those requiring excellent strong scaling, allowing for a dramatic reduction of execution time for fixed workloads and those needing highest level of sustained performance through massive parallelism. These applications are presently unable (through conventional practices) to effectively exploit a relatively small number of cores in a multi-core system. By extension, these application will not be able to exploit high-end exascale computing systems which are likely to employ hundreds of millions of such cores by the end of this decade.

Critical bottlenecks to the effective use of new generation high performance computing (HPC) systems include:

- *Starvation*: due to lack of usable application parallelism and means of managing it,
- *Overhead*: reduction to permit strong scalability, improve efficiency, and enable dynamic resource management,
- *Latency*: from remote access across system or to local memories,
- *Contention*: due to multicore chip I/O pins, memory banks, and system interconnects.

The *ParalleX* model has been devised to address these challenges by enabling a new computing dynamic through the application of message-driven computation in a global address space context with lightweight synchronization. The work on *HPX* is centered around implementing the concepts as defined by the *ParalleX* model. *HPX* is currently targeted at conventional machines, such as classical Linux based Beowulf clusters and SMP nodes.

We fully understand that the success of *HPX* (and *ParalleX*) is very much the result of the work of many people. To see a list of who is contributing see our tables below.

Acknowledgements

Thanks also to the following people who contributed directly or indirectly to the project through discussions, pull requests, documentation patches, etc.

- Panos Syskakis for benchmarking and optimizing our parallel algorithms.
- Shreyas Atre, for contributing fixes to our implementation of senders/receivers and extending our coroutines integration with senders/receivers.
- Alexander Neumann, for contributing fixes to the cmake build system.
- Dimitra Karatza, for her work on refactoring the documentation and providing a new user-friendly environment during and after Google Season of Docs 2021.
- Srinivas Yadav, for his work on SIMD support in algorithms before and during Google Summer of Code 2021.
- Akhil Nair, for his work on adapting algorithms to C++20 before and during Google Summer of Code 2021.
- Alexander Toktarev, for updating the parallel algorithm customization points to use `tag_fallback_invoke` for the default implementations.
- Brice Goglin, for reporting and helping fix issues related to the integration of hwloc in *HPX*.
- Giannis Gonidelis, for his work on the ranges adaptation during the Google Summer of Code 2020.
- Auriane Reverdell ([Swiss National Supercomputing Centre](https://www.cct.lsu.edu)⁷⁸⁶⁷), for her tireless work on refactoring our CMake setup and modularizing *HPX*.
- Christopher Hinz, for his work on refactoring our CMake setup.
- Weile Wei, for fixing *HPX* builds with CUDA on Summit.
- Severin Strobl, for fixing our CMake setup related to linking and adding new entry points to the *HPX* runtime.
- Rebecca Stobaugh, for her major documentation review and contributions during and after the 2019 Google Season of Documentation.
- Jan Melech, for adding automatic serialization of simple structs.
- Austin McCartney, for adding concept emulation of the Ranges TS bidirectional and random access iterator concepts.
- Marco Diers, reporting and fixing issues related PMIx.
- Maximilian Bremer, for reporting multiple issues and extending the component migration tests.

- Piotr Mikolajczyk, for his improvements and fixes to the set and count algorithms.
- Grant Rostig, for reporting several deficiencies on our web pages.
- Jakub Golinowski, for implementing an *HPX* backend for OpenCV and in the process improving documentation and reporting issues.
- Mikael Simberg ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁸⁶⁸), for his tireless help cleaning up and maintaining *HPX*.
- Tianyi Zhang, for his work on HPXMP.
- Shahrzad Shirzad, for her contributions related to Phylanx.
- Christopher Ogle, for his contributions to the parallel algorithms.
- Surya Priy, for his work with statistic performance counters.
- Anushi Maheshwari, for her work on random number generation.
- Bruno Pitrus, for his work with parallel algorithms.
- Nikunj Gupta, for rewriting the implementation of `hpx_main.hpp` and for his fixes for tests.
- Christopher Taylor, for his interest in *HPX* and the fixes he provided. Chris also contributed support for RISC-V architectures.
- Shoshana Jakobovits, for her work on the resource partitioner.
- Denis Blank, who re-wrote our unwrapped function to accept plain values arbitrary containers, and properly deal with nested futures.
- Ajai V. George, who implemented several of the parallel algorithms.
- Taeguk Kwon, who worked on implementing parallel algorithms as well as adapting the parallel algorithms to the Ranges TS.
- Zach Byerly ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁶⁹), who in his work developing applications on top of *HPX* opened tickets and contributed to the *HPX* examples.
- Daniel Estermann, for his work porting *HPX* to the Raspberry Pi.
- Alireza Kheirkhahan ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷⁰), who built and administered our local cluster as well as his work in distributed IO.
- Abhimanyu Rawat, who worked on stack overflow detection.
- David Pfander, who improved signal handling in *HPX*, provided his optimization expertise, and worked on incorporating the Vc vectorization into *HPX*.
- Denis Demidov, who contributed his insights with VexCL.
- Khalid Hasanov, who contributed changes which allowed to run *HPX* on 64Bit power-pc architectures.
- Zahra Khatami ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁸⁷¹), who contributed the prefetching iterators and the persistent auto chunking executor parameters implementation.
- Marcin Copik, who worked on implementing GPU support for C++AMP and HCC. He also worked on implementing a HCC backend for *HPX.Compute*.

⁷⁸⁶⁹ <https://www.lsu.edu>

⁷⁸⁷⁰ <https://www.lsu.edu>

⁷⁸⁷¹ <https://www.lsu.edu>

- Minh-Khanh Do, who contributed the implementation of several segmented algorithms.
- Bibek Wagle ([Louisiana State University \(LSU\)](#)⁷⁸⁷²), who worked on fixing and analyzing the performance of the *parcel* coalescing plugin in *HPX*.
- Lukas Troska, who reported several problems and contributed various test cases allowing to reproduce the corresponding issues.
- Andreas Schaefer, who worked on integrating his library ([LibGeoDecomp](#)⁷⁸⁷³) with *HPX*. He reported various problems and submitted several patches to fix issues allowing for a better integration with [LibGeoDecomp](#)⁷⁸⁷⁴.
- Satyaki Upadhyay, who contributed several examples to *HPX*.
- Brandon Cordes, who contributed several improvements to the inspect tool.
- Harris Brakmic, who contributed an extensive build system description for building *HPX* with Visual Studio.
- Parsa Amini ([Louisiana State University \(LSU\)](#)⁷⁸⁷⁵), who refactored and simplified the implementation of *AGAS* in *HPX* and who works on its implementation and optimization.
- Luis Martinez de Bartolome who implemented a build system extension for *HPX* integrating it with the [Conan](#)⁷⁸⁷⁶ C/C++ package manager.
- Vinay C Amatya ([Louisiana State University \(LSU\)](#)⁷⁸⁷⁷), who contributed to the documentation and provided some of the *HPX* examples.
- Kevin Huck and Nick Chaimov ([University of Oregon](#)⁷⁸⁷⁸), who contributed the integration of APEX (Autonomic Performance Environment for eXascale) with *HPX*.
- Francisco Jose Tapia, who helped with implementing the parallel sort algorithm for *HPX*.
- Patrick Diehl, who worked on implementing CUDA support for our companion library targeting GPGPUs ([HPXCL](#)⁷⁸⁷⁹).
- Eric Lemanissier contributed fixes to allow compilation using the MingW toolchain.
- Nidhi Makhijani who helped cleaning up some enum consistencies in *HPX* and contributed to the resource manager used in the thread scheduling subsystem. She also worked on *HPX* in the context of the Google Summer of Code 2015.
- Larry Xiao, Devang Bacharwar, Marcin Copik, and Konstantin Kronfeldner who worked on *HPX* in the context of the Google Summer of Code program 2015.
- Daniel Bourgeois ([Center for Computation and Technology \(CCT\)](#)⁷⁸⁸⁰) who contributed to *HPX* the implementation of several parallel algorithms (as proposed by [N4313](#)⁷⁸⁸¹).
- Anuj Sharma and Christopher Bross ([Department of Computer Science 3 - Computer Architecture](#)⁷⁸⁸²), who worked on *HPX* in the context of the Google Summer of Code⁷⁸⁸³ program 2014.

- Martin Stumpf (Department of Computer Science 3 - Computer Architecture⁷⁸⁸⁴), who rebuilt our contiguous testing infrastructure (see the *HPX Buildbot Website*⁷⁸⁸⁵). Martin is also working on *HPXCL*⁷⁸⁸⁶ (mainly all work related to *OpenCL*⁷⁸⁸⁷) and implementing an *HPX* backend for *POCL*⁷⁸⁸⁸, a portable computing language solution based on *OpenCL*⁷⁸⁸⁹.
- Grant Mercer (University of Nevada, Las Vegas⁷⁸⁹⁰), who helped creating many of the parallel algorithms (as proposed by N4313⁷⁸⁹¹).
- Damond Howard (Louisiana State University (LSU)⁷⁸⁹²), who works on *HPXCL*⁷⁸⁹³ (mainly all work related to *CUDA*⁷⁸⁹⁴).
- Christoph Junghans (Los Alamos National Lab), who helped making our buildsystem more portable.
- Antoine Tran Tan (Laboratoire de Recherche en Informatique, Paris), who worked on integrating *HPX* as a backend for *NT2*⁷⁸⁹⁵. He also contributed an implementation of an API similar to Fortran co-arrays on top of *HPX*.
- John Biddiscombe (Swiss National Supercomputing Centre⁷⁸⁹⁶), who helped with the BlueGene/Q port of *HPX*, implemented the parallel sort algorithm, and made several other contributions.
- Erik Schnetter (Perimeter Institute for Theoretical Physics), who greatly helped to make *HPX* more robust by submitting a large amount of problem reports, feature requests, and made several direct contributions.
- Mathias Gaunard (Metascale), who contributed several patches to reduce compile time warnings generated while compiling *HPX*.
- Andreas Buhr, who helped with improving our documentation, especially by suggesting some fixes for inconsistencies.
- Patricia Grubel (New Mexico State University⁷⁸⁹⁷), who contributed the description of the different *HPX* thread scheduler policies and is working on the performance analysis of our thread scheduling subsystem.
- Lars Viklund, whose wit, passion for testing, and love of odd architectures has been an amazing contribution to our team. He has also contributed platform specific patches for FreeBSD and MSVC12.
- Agustin Berge, who contributed patches fixing some very nasty hidden template meta-programming issues. He rewrote large parts of the API elements ensuring strict conformance with the C++ ISO Standard.
- Anton Bikineev for contributing changes to make using `boost::lexical_cast` safer, he also contributed a thread safety fix to the `iostreams` module. He also contributed a
