HPX V1.11.0 (Jun 30, 2025)

This release is the last version of HPX that supports C++17. Future versions of HPX will require compilation using C++20 or above.

General changes

- Added synchronous versions of all collective operations. Added global predefined communicator objects that are accessible through new APIs: `hpx::collectives::get_world_communicator()` refers to all localities and `hpx::collectives::get_local_communicator()` refers to all threads on the calling locality. We unified the interfaces of the different communicator objects.
- Added `hpx::experimental::run_on_all` allowing to run a given function (possibly concurrently) using a given execution policy.
- Added a helper object `hpx::runtime_manager` that simplifies the initialization of HPX without needing to modify the main function of the application.
- We improved the compatibility with various accelerator frameworks (SYCL, OneAPI).
- Applied build system changes that allow building HPX without any prerequisites. This requires to pass `-DHPX_WITH_FETCH_HWLOC=On` and `-DHPX_WITH_FETCH_BOOST=On` to the `CMake`²⁰⁸⁸ configuration.
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- Added the `hpx::contains` and `hpx::contains_subrange` parallel algorithms.
- Adapted many of HPX' parallel algorithms to be usable with senders/receivers.

²⁰⁸⁷ <https://github.com/TheHPXProject/hpx/pull/6702>

²⁰⁸⁸ <https://www.cmake.org>

Breaking changes

- We have moved most of the APIs that were defined in the namespace `hpx::parallel::execution` to the namespace `hpx::execution::experimental`. It was not possible to add compatibility facilities that will allow to continue using the old APIs, applications will have to be changed in order to continue functioning correctly.
- The CMake configuration parameter `HPX_WITH_RUN_MAIN_EVERYWHERE` is now deprecated and will be removed in the future. Use the preprocessor macro `HPX_HAVE_RUN_MAIN_EVERYWHERE` on a target-by-target case instead.
- Removed the dysfunctional libfabric parcelport.
- Removed features that were long deprecated (starting V1.8):
 - `hpx::flush`, `hpx::endl`, `hpx::async_flush`, `hpx::async_endl` - Various enumerator types are now only available as `class enum` requiring explicit scoped use of the enumerator values
 - Various non-conforming overloads of parallel algorithms - `hpx::for_loop` and friends (now only available as

`hpx::experimental::for_loop`)

- `hpx::parallel::induction` is now only available as `hpx::experimental::induction`
- `hpx::parallel::reduction` and friends are now only available as `hpx::experimental::reduction`
- `hpx::assertion::source_location` is now only available as `hpx::source_location`
- `hpx::lcos::split_future` is now only available as `hpx::split_future`
- `hpx::lcos::wait` and friends have been removed altogether
- `hpx::lcos::wait_any` and friends are now only available as `hpx::wait_any`
- `hpx::lcos::wait_some` and friends are now only available as `hpx::wait_some`
- `hpx::lcos::wait_each` and friends are now only available as `hpx::wait_each`
- `hpx::lcos::wait_all` and friends are now only available as `hpx::wait_all`
- `hpx::lcos::when_all` and friends are now only available as `hpx::when_all`
- `hpx::lcos::when_any` and friends are now only available as `hpx::when_any`
- `hpx::lcos::when_each` and friends are now only available as `hpx::when_each`
- `hpx::lcos::when_some` and friends are now only available as `hpx::when_some`
- `hpx::util::optional` and related facilities are now only available as `hpx::optional`
- `hpx::util::bind` and related facilities are now only available as `hpx::bind`
- `hpx::util::function` and friends are now only available as `hpx::function`
- `hpx::traits::is_bound_action` and related facilities are now only available as `hpx::is_bound_action`
- `hpx::traits::is_bind_expression` and related facilities are now only available as `hpx::is_bind_expression`
- `hpx::traits::is_placeholder` and related facilities are now only available as `hpx::is_placeholder`
- `hpx::lcos::future` and related facilities are now only available as `hpx::future`
- `hpx::memory::intrusive_ptr` is now only available as `hpx::intrusive_ptr`
- `hpx::lcos::local::barrier` is now only available as `hpx::barrier`
- `hpx::lcos::barrier` is now only available as `hpx::distributed::barrier`

- `hpx::lcos::local::cpp20_binary_semaphore` is now only available as `hpx::detail::binary_semaphore`
- `hpx::lcos::local::condition_variable` and friends are now only available as `hpx::condition_variable`
- `hpx::lcos::local::counting_semaphore` and friends are now only available as `hpx::counting_semaphore`
- `hpx::lcos::local::cpp20_latch` and is now only available as `hpx::latch`
- `hpx::lcos::latch` and is now only available as `hpx::distributed::latch`
- `hpx::lcos::local::upgrade_lock` and friends are now only available as `hpx::upgrade_lock`
- `hpx::lcos::local::mutex` and friends are now only available as `hpx::mutex`
- `hpx::lcos::local::spinlock` and friends are now only available as `hpx::spinlock`
- `hpx::lcos::local::call_once` and friends are now only available as `hpx::call_once`
- `hpx::util::annotated_function` and is now only available as `hpx::annotated_function`
- `hpx::components::abstract_simple_component_base` and is now only available as `hpx::components::abstract_component_base`
- `hpx::naming::id_type` and is now only available as `hpx::id_type`

2.11.2 List of older releases

HPX V1.10.0 (May 29, 2024)

General changes

- The HPX documentation has seen a major overhaul for this release. We finished documenting the public local HPX API, we have added migration guides from widely used parallelization platforms to HPX (OpenMP, TBB, and MPI).
- We have added facilities enabling optimizations for trivially-relocatable types (see [P1144](https://wg21.link/p1144)²²³⁸ for more details).
- We have added (and use) the `scope_xxx` helper facilities as specified by the C++ library fundamentals TS v3 (see: [N4948](http://wg21.link/n4948)²²³⁹).
- We have added configuration options that allow to build HPX without pre-installing any prerequisites. Use `HPX_WITH_FETCH_HWLOC=On` to have [Portable Hardware Locality \(HWLOC\)](https://www.open-mpi.org/projects/hwloc/)²²⁴⁰ installed for you. Similarly, setting `HPX_WITH_FETCH_BOOST=On` during configuration time will install the necessary [Boost](https://www.boost.org/)²²⁴¹ libraries (currently V1.84.0).
- We have performed a lot of code cleanup and refactoring to improve the overall code quality and decrease compile times.
- The collective operations APIs have seen an unification, we have fixed issues and performance problems for the collectives.
- The HPX executors have seen a streamlining and some consistency changes. We have applied many performance improvements to the executor implementations that directly positively impact the performance of our parallel algorithms.
- We have added a new `parcelport` allowing to use Gasnet as a communication platform.
- We have added optimizations to various `parcelports` improving overall communication performance. This includes - amongst other things - send immediate optimizations and receiver-side zero-copy optimizations.
- Futures will now execute the associated task eagerly and inline on any wait operation if the task has not started running yet. This feature can be enabled using the `HPX_COROUTINES_WITH_THREAD_SCHEDULE_HINT_RUNS_AS_CHILD=On` configuration setting (which is *Off* by default).
- We have enabled using json files to supply configuration information through the command line. This feature can be enabled with the configuration option `HPX_COMMAND_LINE_HANDLING_WITH_JSON_CONFIGURATION_FILES=On`. This functionality depends on the external [JSON library](https://github.com/nlohmann/json)²²⁴², which can be built at configuration time by supplying `HPX_WITH_FETCH_JSON=On` to [CMake](https://www.cmake.org)²²⁴³.
- We have applied many fixes to our CUDA, ROCm, and SYCL build environments.

²²³⁸ <https://wg21.link/p1144>

²²³⁹ <http://wg21.link/n4948>

²²⁴⁰ <https://www.open-mpi.org/projects/hwloc/>

²²⁴¹ <https://www.boost.org/>

²²⁴² <https://github.com/nlohmann/json>

²²⁴³ <https://www.cmake.org>

Breaking changes

- The `CMake`²²⁴⁴ configuration keys `SOMELIB_ROOT` (e.g., `BOOST_ROOT`) have been renamed to `Somelib_ROOT` (e.g., `Boost_ROOT`) to avoid warnings when using newer versions of `CMake`²²⁴⁵. Please update your scripts accordingly. For now, the old variable names are re-assigned to the new names and unset in the `CMake`²²⁴⁶ cache.

HPX V1.9.1 (August 4, 2023)

General changes

This point release fixes a couple of problems reported for the V1.9.0 release. Most importantly, we fixed various occasional hanging during startup and shutdown in distributed scenarios. We also added support for zero-copy serialization on the receiving side to the TCP, MPI, and LCI parcelports. Last but not least, we have added support for Visual Studio 2019 and gcc using MINGW on Windows, and also support for gcc V13 and clang V15.

HPX headers are now made consistently named the same as their standard library counterparts, e.g. `#include <thread>` now corresponds to `#include <hpx/thread.hpp>`. This significantly simplifies porting existing standards conforming codes to HPX.

A lot of work has been done to improve and optimize our network communication layers. Primary focus of this work was on the LCI parcelport, but we have also cleaned up and improved the MPI parcelport.

Additionally, we have continued working on our documentation. The main focus here was on completing the API documentation of the most important API functions. We have started adding migration guides for people interested in moving their codes away from other, commonplace parallelization frameworks like OpenMP.

HPX V1.9.0 (May 2, 2023)

General changes

- Added RISC-V 64bit support. HPX is now compatible with RISC-V architectures which have revolutionized the HPC world.
- LCI parcelport has been optimized to transfer parcels with fewer messages and use the HPX resource partitioner for its progress thread allocation. It should generally provide better performance than before. It also removes its dependency on the MPI library.
- HPX dependency on Boost was further relaxed by replacing headers from `Boost.Range`, `Boost.Tokenizer` and `Boost.Lockfree`.
- Improvements took place on our parallel algorithms implementation.
- Our Senders/Receivers (P2300) integration was extended:
 - Coroutines were integrated with senders/receivers.
- `get_completion_signatures` now works with awaitable senders. - `with_awaitable_senders` allows the passed senders to retrieve the value i.e. senders are transparently awaitable from within a coroutine. - `when_all_vector` was added.
- `sync_wait` and `sync_wait_with_variant` sender consumers were added. The user can now initiate the execution of their asynchronous pipeline by blocking the current thread that executes the `main()` function until the result is retrieved.
- The combinators for futures (a.k.a. `async_combinators`) `when_*`, `wait_*`, `wait_*_nothrow` were turned into CPOs allowing for end-user customization. For more information on the `async_combinators` refer to the documentation, https://hpx-docs.stellar-group.org/latest/html/libs/core/async_combinators/docs/index.html?highlight=combinators.
- The new datapar backend SVE allows `simd` and `par_simd` execution policies to exploit dataparallelism in the processors that have SVE vector registers like A64FX and Neoverse V1.
- The documentation for parallel algorithms, container algorithms was further improved. The Public API page was vastly enriched.
- Copy button shortkey was added at the top-right of code-blocks.
- Pragma directive that reports warnings as errors on MSVC was fixed.
- Command line argument `--hpx:loopback_network` was added to facilitate debugging with networks.
- We added an HPX-SYCL integration, allowing users to obtain HPX futures for SYCL events. This effectively enables the integration of arbitrary asynchronous SYCL operations into the HPX task graph. Bolted on top of this integration, we further added an HPX-SYCL executor for ease of use.

²⁴⁷⁶ <https://github.com/TheHPXProject/hpx/pull/6281>

²⁴⁷⁷ <https://github.com/TheHPXProject/hpx/pull/6283>

Breaking changes

- Stopped supporting Clang V8, the minimal version supported is now Clang V10.
- Stopped supporting gcc V8, the minimal version supported is now gcc V9.
- Stopped supporting Visual Studio 2015, the minimal version supported is now Visual Studio 2019.
- `tag_policy_tag` et.al. were re-added after HPX V1.8.1 deprecation.
- `get_chunk_size` and `processing_units_count` API is now expecting the time for one iteration as an argument.
- The list of all the namespace changes can be found here: [HPX V1.9.0 Namespace changes](#).

- PR #6125²⁵⁶³ - Making sure `sync_wait` compiles when used with an lvalue sender involving bulk
- PR #6124²⁵⁶⁴ - Fixing use of `any_sender` in combination with `when_all`
- PR #6123²⁵⁶⁵ - Fixed issues found by PVS-Studio
- PR #6121²⁵⁶⁶ - Modernize modules of level 21, 22
- PR #6120²⁵⁶⁷ - Use `index_queue` for parallel executors `bulk_async_execute`
- PR #6119²⁵⁶⁸ - Update `CMakeLists.txt`
- PR #6118²⁵⁶⁹ - Modernize modules from level 17, 18, 19, and 20
- PR #6117²⁵⁷⁰ - Initialize `buffer_allocate_time_` to 0
- PR #6116²⁵⁷¹ - Add new command line argument `-hpx:loopback_network`
- PR #6115²⁵⁷² - Modernize modules of levels 14, 15, and 16
- PR #6114²⁵⁷³ - Enhance the formatting of the documentation
- PR #6113²⁵⁷⁴ - Modernize modules in module level 11, 12, and 13
- PR #6112²⁵⁷⁵ - Modernize modules from levels 9 and 10
- PR #6111²⁵⁷⁶ - Modernize all modules from module level 8
- PR #6110²⁵⁷⁷ - Use pragma error directive to report warnings as errors on msvc
- PR #6109²⁵⁷⁸ - Modernize serialization module
- PR #6107²⁵⁷⁹ - Modernize error module
- PR #6106²⁵⁸⁰ - Modernizing modules of levels 0 to 5
- PR #6105²⁵⁸¹ - Optimizations on LCI parcelport: merge small messages; remove sender mutex lock.
- PR #6104²⁵⁸² - Adding parameters API: `measure_iteration`
- PR #6103²⁵⁸³ - Document `task_group` and include in Public API
- PR #6102²⁵⁸⁴ - Prevent warnings generated by clang-cl

HPX V1.8.1 (Aug 5, 2022)

This is a bugfix release with a few minor additions and resolved problems.

General changes

This patch release adds a number of small new features and fixes a handful of problems discovered since the last release, in particular:

- A lot of work has been done to improve vectorization support for our parallel algorithms. HPX now supports using EVE - the Expressive Vector Engine as a vectorization backend.
- Added a simple average power consumption performance counter.
- Added performance counters related to the use of zero-copy chunks in the networking layer.
- More work was done towards full compatibility with the sender/receivers proposal P2300.
- Fixing `sync_wait` to decay the result types
- Fixed collective operations to properly avoid overalapping consecutive operations on the same communicator.
- Simplified the implementation of our execution policies and added mapping functions between those.
- Fixed performance issues with our implementation of *small_vector*.
- Serialization now works with buffers of unsigned characters.
- Fixing dangling reference in serialization of non-default constructible types
- Fixed static linking on Windows.
- Fixed support for M1/MacOS based architectures.
- Fixed support for gentoo/musl.
- Fixed `hpx::counting_semaphore_var`.
- Properly check start and end bounds for `hpx::for_loop`
- A lot of changes and fixes to the documentation (see <https://hpx-docs.stellar-group.org>).

- PR #5879²⁷⁶⁷ - New performance counters related to zero-copy chunks.

HPX V1.8.0 (May 18, 2022)

With HPX parallel algorithms been fully adapted to C++20 the new release achieves full conformance with C++20 concurrency and parallelism facilities. HPX now supports all of the algorithms as specified by C++20. We have added support for vectorization to more of our algorithms. Much work has been done towards implementing P2300 (“std::execution”) and implementing the underlying senders/receivers facilities. Finally, The new release comes with a brand new documentation interface!

General changes

- The new documentation can now be found on our webpage: <https://hpx-docs.stellar-group.org>. This includes a completely new and user-friendly interface environment along with restructuring of certain components. The content in the “Quick start”, “Manual” and “Examples” was improved, while the “Build system” page was adapted to include necessary information for newcomers.
- With the vectorization support available in modern hardware architectures HPX now provides new data-parallel vector execution policies `hpx::execution::simd` and `hpx::execution::par_simd` that enable significant speed-up of our parallel algorithm implementations. The following algorithms now support SIMD execution:
 - `copy`, `copy_n`
 - `generate`
 - `adjacent_difference`, `adjacent_find`
 - `all_of`, `any_of`, `none_of`
 - `equal`, `mismatch`,
 - `inner_product`
 - `count`, `count_if`
 - `fill`, `fill_n`
 - `find`, `find_end`, `find_first_of`, `find_if`, `find_if_not`
 - `for_each`, `for_each_n`
 - `generate`, `generate_n`.
- Based on top of P2300 the HPX parallel algorithms now support the pipeline syntax towards an effort to unify their usage along with senders/receivers. The HPX parallel algorithms can now bind with senders/receivers using the pipeline operator.
- Several changes took place on the executors provided by HPX:
- The executors now support the `num_cores` options in order for the user to be able to specify the desired number of cores to be used in the corresponding execution.
- The `scheduler` executor was implemented on top of senders/receivers and can be used with all HPX facilities that schedule new work, such as parallel algorithms, `hpx::async`, `hpx::dataflow`, etc.
- The performance of `fork_join_executor` was improved.
- The following algorithms have been added/adapted to be C++20 conformant:
 - `min_element`

²⁷⁶⁷ <https://github.com/TheHPXProject/hpx/pull/5879>

- `max_element`
 - `minmax_element`
 - `starts_with`
 - `ends_with`
 - `swap_ranges`
 - `unique`
 - `unique_copy`
 - `rotate`
 - `rotate_copy`
 - `sort`
 - `shift_left`
 - `shift_right`
 - `stable_sort`
 - `partition`
 - `partition_copy`
 - `stable_partition`
 - `adjacent_difference`
 - `nth_element`
 - `partial_sort`
 - `partial_sort_copy`.
- HPX_FORWARD/HPX_MOVE macros were introduced that replaced the `std::move` and `std::forward` facilities that in the library code.
 - Hangs on distributed barrier were fixed.
 - The performance of `scan_partitioner` was improved.
 - Support was added for `thread_priority` to the `parallel_execution_policy`
 - Regarding senders/receivers and the P2300 proposal various actions took place. `stop_token` was adapted to the recent proposal version (`in_place_stop_token` was introduced). Also hint, annotation, priority and stacksize properties were added to the scheduler executor. Stop support was added to `when_all`. Support for completion signatures was added. The following schedulers and algorithms were added:
 - `get_completion_scheduler`
 - `any_sender` and `unique_any_sender`
 - `split` sender
 - `transform_mpi` sender
 - `transfer` sender
 - `let_error`, `let_stopped`
 - `get_env` and related environment queries
 - `schedule`, `set_value`, `set_error`, `set_done`, `start` and `connect` are now proper customization points as defined in P2300.

- Several namespaces were altered towards conformance with C++20. Compatibility layers have been added and the old versions will be removed in next releases. The namespace changes are the following:
 - `hpx::parallel::induction/reduction` were moved into namespace `hpx::experimental`
 - `for_loop` and friends were moved into namespace `hpx::experimental`.
 - `hpx::util::optional` and friends were moved into namespace `hpx`.
 - `hpx::lcos::barrier` has been moved into the `hpx::distributed` namespace and `hpx::lcos::local::cpp20_barrier` has been renamed to `barrier` and moved into the `hpx` namespace.
 - `hpx::lcos::latch` has been moved into the `hpx::distributed` namespace and `lcos::local::latch` has been moved into the `hpx` namespace. The `count_down_and_wait()` functionality of `latch` has been renamed to `arrive_and_wait()`.
 - `hpx::util::unique_function_nonsr` has been renamed to `hpx::move_only_function`.
 - `hpx::util::unique_function` has been renamed to `hpx::distributed::move_only_function`.
 - `hpx::util::function` has been renamed to `hpx::distributed::function`.
 - `hpx::util::function_nonsr` has been renamed to `hpx::function`.
 - `hpx::util::function_ref` have been moved to namespace `hpx`.
 - `hpx::lcos::split_future` changed namespace and is now used as `hpx::split_future`.
 - `hpx::lcos::local::counting_semaphore` has been deprecated and `hpx::lcos::local::cpp20_counting_semaphore` has been renamed to `hpx::counting_semaphore`.
 - `hpx::lcos::local::cpp20_binary_semaphore` has been renamed to `hpx::binary_semaphore`.
 - `hpx::lcos::local::sliding_semaphore` has been renamed to `hpx::sliding_semaphore` and
 - `hpx::lcos::local::sliding_semaphore_var` has been renamed to `hpx::sliding_semaphore_var`.
 - `hpx::lcos::local::spinlock` has been renamed to `hpx::spinlock`.
 - `hpx::lcos::local::mutex` has been renamed to `hpx::mutex`.
 - `hpx::lcos::local::timed_mutex` has been renamed to `hpx::timed_mutex`.
 - `hpx::lcos::local::no_mutex` has been renamed to `hpx::no_mutex`.
 - `hpx::lcos::local::recursive_mutex` has been renamed to `hpx::recursive_mutex`.
 - `hpx::lcos::local::shared_mutex` has been renamed to `hpx::shared_mutex`.
 - `hpx::lcos::local::upgrade_lock` has been renamed to `hpx::upgrade_lock`.
 - `hpx::lcos::local::upgrade_to_unique_lock` has been renamed to `hpx::upgrade_to_unique_lock`.
 - `hpx::lcos::local::condition_variable` has been renamed to `hpx::condition_variable`. `hpx::lcos::local::condition_variable_var` has been renamed to `hpx::condition_variable_var`.
 - `hpx::lcos::local::once_flag` has been renamed to `hpx::once_flag`, and `hpx::lcos::local::call_once` has been renamed to `hpx::call_once`.
- The new LCI (Lightweight Communication Interface) `parcelexport` was added that supports irregular and asynchronous applications like graph analysis, sparse linear algebra, modern parallel architectures etc. Major features include:

- Support for advanced communication primitives like two sided send/recv and one sided remote put.
- Better multi-threaded performance.
- Explicit user control of communication resource.
- Flexible signaling mechanisms (synchronizer, completion queue, active message handler).
- The following CMake flags were added, mostly to support using HPX as a backend for SHAD (<https://github.com/pnnl/SHAD>). Please note that these options enable questionable functionalities, partially they even enable undefined behavior. Please only use any of them if you know what you're doing:
 - HPX_SERIALIZATION_WITH_ALLOW_RAW_POINTER_SERIALIZATION
 - HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE
 - HPX_SERIALIZATION_WITH_ALLOW_CONST_TUPLE_MEMBERS

Breaking changes

- Minimum required C++ standard library is C++17.
- Support for GCC 7 and Clang 8.0.0 and below has been removed.
- CUDA version required updated to 11.4.
- CMake version required updated to 3.18.
- The default version of Asio used was updated to 1.20.0.
- The default version of APEX used was updated to 2.5.1.
- APEX version was updated to 2.5.1.
- `tagged_pair` and `tagged_tuple` were removed.
- `tag_dispatch` was renamed to `tag_invoke`.
- `hpx.max_backgroud_threads` was renamed to `hpx.parcel.max_background_threads`.
- The following CMake flags were removed after being deprecated for at least two releases:
 - HPX_SCHEDULER_MAX_TERMINATED_THREADS
 - HPX_WITH_GOOGLE_PERFTOOLS
 - HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY
 - HPX_HAVE_{COROUTINE,PLUGIN}_GCC_HIDDEN_VISIBILITY
 - HPX_TOP_LEVEL
 - HPX_WITH_COMPUTE_CUDA
 - HPX_WITH_ASYNC_CUDA
- `annotate_function` was renamed to `scoped_annotation`.
- `execution::transform` was renamed to `execution::then`.
- `execution::detach` was renamed to `execution::start_detached`.
- `execution::on_sender` was renamed to `execution::schedule_on`.
- `execution::just_on` was renamed to `execution::just_transfer`.
- `execution::set_done` was renamed to `execution::set_stopped`.

Closed issues

- Issue #5871²⁷⁶⁸ - distributed::channel.regisiter_as terminates the active task.
- Issue #5856²⁷⁶⁹ - Performance counters do not compile
- Issue #5828²⁷⁷⁰ - hpx::distributed:barrier errors

²⁹⁷² <https://github.com/TheHPXProject/hpx/pull/5685>

- PR #5684²⁹⁷³ - Move lock registration to separate module and remove global lock registration
- PR #5683²⁹⁷⁴ - Make `hpx::wait_all` etc. throw exceptions when waited futures hold exceptions and deprecate `hpx::lcos::wait_all[_n]` in favor of `hpx::wait_all[_n]`
- PR #5682²⁹⁷⁵ - Fix macOS test exceptions
- PR #5681²⁹⁷⁶ - docs: add links to hpx recepies
- PR #5680²⁹⁷⁷ - Embed base execution policies to datapar execution policies
- PR #5679²⁹⁷⁸ - Fix *fork_join_executor* with dynamic schedule
- PR #5678²⁹⁷⁹ - Fix compilation of service executors with nvcc
- PR #5677²⁹⁸⁰ - Remove `compute_cuda` module
- PR #5676²⁹⁸¹ - Don't require up-to-date approvals for bors
- PR #5675²⁹⁸² - Add default template type parameters for algorithms
- PR #5674²⁹⁸³ - Allow using *any_sender* in global variables
- PR #5671²⁹⁸⁴ - Making sure `task_group` can be reused
- PR #5670²⁹⁸⁵ - Relax constraints on *execution::when_all*
- PR #5669²⁹⁸⁶ - Use `HPX_WITH_CXX_STANDARD` for controlling C++ version
- PR #5667²⁹⁸⁷ - Attempt to fix compilation issues with Boost V1.76
- PR #5664²⁹⁸⁸ - Change logging errors to warnings in schedulers
- PR #5663²⁹⁸⁹ - Use dynamic bitsets by default for CPU masks
- PR #5662²⁹⁹⁰ - Disambiguate namespace for MSVC
- PR #5660²⁹⁹¹ - Replacing remaining `std::forward` and `std::move` with `HPX_FORWARD` and `HPX_MOVE`
- PR #5659²⁹⁹² - Modernize `hpx::future` and related facilities
- PR #5658²⁹⁹³ - Replace `HPX_INLINE_CONSTEXPR_VARIABLE` with `inline constexpr`
- PR #5657²⁹⁹⁴ - Remove `tagged`, `tagged_pair` and `tagged_tuple`, remove tuple/pair specializations
- PR #5656²⁹⁹⁵ - Rename `on_execution::schedule_from`, rename `just_on` to `just_transfer`, and add `transfer`

²⁹⁹⁵ <https://github.com/TheHPXProject/hpx/pull/5656>

- PR #5655²⁹⁹⁶ - Avoid for module lists to grow indefinitely in cmake cache
- PR #5649²⁹⁹⁷ - build: replace usage of Python's reserved words and functions as variable names
- PR #5648²⁹⁹⁸ - Modernize action modules and related code
- PR #5646²⁹⁹⁹ - Fix ends_with test
- PR #5645³⁰⁰⁰ - Add matrix multiplication example
- PR #5644³⁰⁰¹ - Rename execution::transform to execution::then and execution::detach to execution::start_detached
- PR #5643³⁰⁰² - Update performance test references
- PR #5642³⁰⁰³ - Adapting adjacent_difference to work with proxy iterators
- PR #5641³⁰⁰⁴ - Factorize perftests scripts
- PR #5640³⁰⁰⁵ - Fixed links to sources in Sphinx documentation
- PR #5639³⁰⁰⁶ - Fix generate datapar tests for Vc
- PR #5638³⁰⁰⁷ - Simd all any none
- PR #5637³⁰⁰⁸ - Use bors for merging pull requests
- PR #5636³⁰⁰⁹ - Fix leftover std::holds_alternative usage
- PR #5635³⁰¹⁰ - Update container image tag in GitHub actions HIP configuration
- PR #5633³⁰¹¹ - Moving packaged_task to module futures
- PR #5632³⁰¹² - Tell Asio to use std::aligned_new only if available
- PR #5631³⁰¹³ - Adding tag parameter to channel communicator get/set
- PR #5630³⁰¹⁴ - Add partial_sort_copy and adapt partial sort to c++ 20
- PR #5629³⁰¹⁵ - Set HPX_WITH_FETCH_ASIO to OFF as available in the docker image
- PR #5628³⁰¹⁶ - Add Clang 13 CI configuration
- PR #5627³⁰¹⁷ - Replace alternative keyword
- PR #5626³⁰¹⁸ - docs: add support for BibTeX references in Sphinx docs

- PR #5562³⁰⁶⁵ - More changes to overcome build problems on Windows after recent module rearrangements
- PR #5560³⁰⁶⁶ - Update tests and examples
- PR #5559³⁰⁶⁷ - Fixing cmake folder names after module restructuring
- PR #5558³⁰⁶⁸ - Fixing wrong module dependencies
- PR #5557³⁰⁶⁹ - Adding an example for the new channel_communicator API
- PR #5556³⁰⁷⁰ - Remove leftover thread pool os executor tests
- PR #5555³⁰⁷¹ - Add option enabling serializing raw pointers
- PR #5554³⁰⁷² - Make sure command line aliasing is properly handled
- PR #5552³⁰⁷³ - Modernizing some of the async facilities
- PR #5551³⁰⁷⁴ - Fixing for local executions of actions to properly set task names
- PR #5550³⁰⁷⁵ - Update CUDA module in clang-cuda configuration
- PR #5549³⁰⁷⁶ - Fixing agent_ref::yield_k to actually call yield_k
- PR #5548³⁰⁷⁷ - Making get_action_name() noexcept
- PR #5547³⁰⁷⁸ - Fixing communication set
- PR #5546³⁰⁷⁹ - Fixing shutdown problems caused by missing ref-counting
- PR #5545³⁰⁸⁰ - Remove wrong move in thread_pool_scheduler_bulk.hpp
- PR #5543³⁰⁸¹ - Extend launch policy to carry stack size and scheduling hint in addition to priority
- PR #5542³⁰⁸² - Simplify execution CPOs
- PR #5540³⁰⁸³ - Adapt partition, partition_copy and stable_partition to C++ 20
- PR #5539³⁰⁸⁴ - Adapt mismatch to support sentinels
- PR #5538³⁰⁸⁵ - Document specific sphinx version required for the documentation
- PR #5537³⁰⁸⁶ - Test release and debug builds on Piz Daint
- PR #5536³⁰⁸⁷ - This fixes referencing stale iterators during the execution of binary mismatch

HPX V1.7.1 (Aug 12, 2021)

This is a bugfix release with a few minor fixes.

General changes

- Added a CMake option to assume that all types are bitwise serializable by default: `HPX_SERIALIZATION_WITH_ALL_TYPES_ARE_BITWISE_SERIALIZABLE`. The default value `OFF` corresponds to the old behaviour.
- Added a version check for Asio. The minimum Asio version supported by *HPX* is 1.12.0.
- Fixed a bug affecting usage of actions, where the internals of *HPX* relied on function addresses being unique. This was fixed by relying on variable addresses being unique instead.
- Made `hpx::util::bind` more strict in checking the validity of placeholders.
- Small performance improvement to spinlocks.
- Adapted the following parallel algorithms to C++20: `inclusive_scan`, `exclusive_scan`, `transform_inclusive_scan`, `transform_exclusive_scan`.

Breaking changes

- The experimental `hpx::execution::simdpair` execution policy (introduced in 1.7.0) was renamed to `hpx::execution::par_simd` for consistency with the other parallel policies.

Closed issues

- [Issue #5494](https://github.com/TheHPXProject/hpx/issues/5494)³¹⁵⁷ - Rename *simdpair* execution policy to *par_simd*
- [Issue #5488](https://github.com/TheHPXProject/hpx/issues/5488)³¹⁵⁸ - `hpx::util::bind` doesn't bounds-check placeholders

HPX V1.7.0 (Jul 14, 2021)

This release is again focused on C++20 conformance of algorithms. Additionally, many new experimental sender-based algorithms have been added based on the latest proposals.

General changes

- The following algorithms have been adapted to be C++20 conformant:
 - remove,
 - remove_if,
 - remove_copy,
 - remove_copy_if,
 - replace,
 - replace_if,
 - reverse, and
 - lexicographical_compare.
- When the compiler and standard library support the standard execution policies `std::execution::seq`, `std::execution::par`, and `std::execution::par_unseq` they can now be used in all *HPX* parallel algorithms with equivalent behaviour to the non-task policies `hpx::execution::seq`, `hpx::execution::par`, and `hpx::execution::par_unseq`.
- Vc support has been fixed, after being broken in 1.6.0. In addition, *HPX* now experimentally supports GCC's SIMD implementation, when available. The implementation can be used through the `hpx::execution::simd` and `hpx::execution::simdpair` execution policies.
- The customization points `sync_execute`, `async_execute`, `then_execute`, `post`, `bulk_sync_execute`, `bulk_async_execute`, and `bulk_then_execute` are now implemented using `tag_dispatch` (previously `tag_invoke`). Executors can still be implemented by providing the aforementioned functions as member functions of an executor.
- New functionality, enhancements, and fixes based on P0443r14 (executors proposal) and P1897 (sender-based algorithms) have been added to the `hpx::execution::experimental` namespace. These can be accessed through the `hpx/execution.hpp` and `hpx/local/execution.hpp` headers. In particular, the following sender-based algorithms have been added:
 - detach,

³¹⁶⁶ <https://github.com/TheHPXProject/hpx/pull/5445>

³¹⁶⁷ <https://github.com/TheHPXProject/hpx/pull/5444>

³¹⁶⁸ <https://github.com/TheHPXProject/hpx/pull/5440>

³¹⁶⁹ <https://github.com/TheHPXProject/hpx/pull/5439>

³¹⁷⁰ <https://github.com/TheHPXProject/hpx/pull/5436>

- `ensure_started`,
- `just`,
- `just_on`,
- `let_error`,
- `let_value`,
- `on`,
- `transform`, and
- `when_all`.

Additionally, futures now implement the sender concept. `make_future` can be used to turn a sender into a future. All functionality is experimental and can change without notice.

- All `hpx::init` and `hpx::start` overloads now take `std::functions` instead of `hpx::util::function_nonser`. No changes should be required in user code to accommodate this change.
- `hpx::util::unwrapping` and other related unwrapping functionality has been moved up into the `hpx` namespace. Names in `hpx::util` are still usable with a deprecation warning. This functionality can now be accessed through the `hpx/unwrap.hpp` and `hpx/local/unwrap.hpp` headers.
- The default tag for APEX has been update from 2.3.1 to 2.4.0. In particular, this fixes a bug which could lead to hangs in distributed runs.
- The dependency on Boost.Asio has been replaced with the standalone Asio available at <https://github.com/chriskohlhoff/asio>. By default, a system-installed Asio will be used. `ASIO_ROOT` can be given as a hint to tell CMake where to find Asio. Alternatively, Asio can be fetched automatically using CMake's `fetchcontent` by setting `HPX_WITH_FETCH_ASIO=ON`. In general, dependencies on Boost have again been reduced.
- Modularization of the library has continued. In this release almost all functionality has been moved into modules. These changes do not generally affect user code. Warnings are still issued for headers that have moved.
- `hipBLAS` is now optional when compiling with `hipcc`. A warning instead of an error will be printed if `hipBLAS` is not found during configuration.
- Previously `HPX_COMPUTE_HOST_CODE` was defined in host code only if HPX was configured with CUDA or HIP. In this release `HPX_COMPUTE_HOST_CODE` is always defined in host code.
- An experimental `HPX_WITH_PRECOMPILED_HEADERS` CMake option has been added to use precompiled headers when building *HPX*. This option should not be used on Windows.
- Numerous bug fixes.

Breaking changes

- The minimum required CMake version is now 3.17.
- The minimum required Boost version is now 1.71.0.
- The customization mechanism used to implement and extend sender functionality and algorithms has been re-named from `tag_invoke` to `tag_dispatch`. All customization of sender functionality should be done by overloading `tag_dispatch`.
- The following compatibility options have been removed, along with their compatibility implementations:
 - `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`
 - `HPX_WITH_ACTION_BASE_COMPATIBILITY`
 - `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`
 - `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`
 - `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`

HPX_WITH_REGISTER_THREAD_COMPATIBILITY - HPX_WITH_REGISTER_THREAD_OVERLOADS_COMPATIBILITY
 - HPX_WITH_THREAD_AWARE_TIMER_COMPATIBILITY - HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY -
 HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY

- The HPX_WITH_THREAD_SCHEDULERS CMake option has been removed. All schedulers are now enabled when possible.
- HPX_WITH_INIT_START_OVERLOADS_COMPATIBILITY has been turned off by default.

- PR #5353³²⁵⁵ - Add CUDA timestamp support to HPX Hardware Clock
- PR #5352³²⁵⁶ - Adding missing includes
- PR #5351³²⁵⁷ - Adding `enable_logging/disable_logging` API functions
- PR #5350³²⁵⁸ - Adapt `lexicographical_compare` to C++20
- PR #5349³²⁵⁹ - Update minimum boost version needed on the docs
- PR #5348³²⁶⁰ - Rename `tag_invoke` and related facilities to `tag_dispatch`
- PR #5347³²⁶¹ - Remove `make_` prefix for executor properties
- PR #5346³²⁶² - Remove and disable compatibility options for 1.7.0
- PR #5343³²⁶³ - Fix `timed_executor` static cast conversion
- PR #5342³²⁶⁴ - Refactor CUDA event polling
- PR #5341³²⁶⁵ - Adding `make_with_annotation` and `get_annotation` properties
- PR #5339³²⁶⁶ - Making sure `hpx::util::hardware::timestamp()` is always defined
- PR #5338³²⁶⁷ - Fixing `timed_executor` specializations of customization points
- PR #5335³²⁶⁸ - Make `partial_algorithm` work with any number of arguments
- PR #5334³²⁶⁹ - Follow up `iter_sent` include on #5225
- PR #5332³²⁷⁰ - Simplify `tag_invoke` and friends
- PR #5331³²⁷¹ - More work on cleaning up executor CPOs
- PR #5330³²⁷² - Add option to disable `pkgconfig` generation
- PR #5328³²⁷³ - Adapt data parallel support using `std-simd`
- PR #5327³²⁷⁴ - Fix missing `ifdef HPX_SMT_PAUSE`
- PR #5326³²⁷⁵ - Adding `resize()` to `serialize_buffer` allowing to shrink its size
- PR #5324³²⁷⁶ - Add get member functions to `async_rw_mutex` proxy objects for explicitly getting the wrapped value
- PR #5323³²⁷⁷ - Add `keep_future` algorithm

- PR #5322³²⁷⁸ - Replace executor customization point implementations with `tag_invoke`
- PR #5321³²⁷⁹ - Separate segmented algorithms for `reduce`
- PR #5320³²⁸⁰ - Fix `is_sender` trait and other small fixes to p0443 traits
- PR #5319³²⁸¹ - gcc 11.1 c++20 build fixes
- PR #5318³²⁸² - Make hipblas dependency optional as not always available
- PR #5316³²⁸³ - Attempt to fix checking for `libatomic`
- PR #5315³²⁸⁴ - Add `explicit` keyword to fixture constructor
- PR #5314³²⁸⁵ - Fix a race condition in `async_mpi` affecting limiting executor
- PR #5312³²⁸⁶ - Use local runtime and local headers in local-only modules and tests
- PR #5311³²⁸⁷ - Add GCC 11 builder to jenkins
- PR #5310³²⁸⁸ - Adding `hpx::execution::experimental::task_group`
- PR #5309³²⁸⁹ - Separate `datapar`
- PR #5308³²⁹⁰ - Separate segmented algorithms for `find`, `find_if`, `find_if_not`
- PR #5307³²⁹¹ - Separate segmented algorithms for `fill` and `generate`
- PR #5304³²⁹² - Fix compilation of sender CPOs with `nvcc`
- PR #5300³²⁹³ - Remove `PRIVATE` flag that was propagated into the `LANGUAGES`
- PR #5298³²⁹⁴ - Separate `datapar`
- PR #5297³²⁹⁵ - Specify exact `cmake` and `ninja` versions when loading them in jenkins jobs
- PR #5295³²⁹⁶ - Update `clang-newest` configuration to use clang 12 and Boost 1.76.0
- PR #5293³²⁹⁷ - Fix Clang 11 `cuda_future` test bug
- PR #5292³²⁹⁸ - Add `async_rw_mutex` based on senders
- PR #5291³²⁹⁹ - “Fix” termination detection
- PR #5290³³⁰⁰ - Fixed source file line statements in examples documentation

- [PR #5044](#)³⁴¹⁶ - Add performance test in jenkins and reports

HPX V1.6.0 (Feb 17, 2021)

General changes

This release continues the focus on C++20 conformance with multiple new algorithms adapted to be C++20 conformant and becoming customization point objects (CPOs). We have also added experimental support for HIP, allowing previous CUDA features to now be compiled with `hipcc` and run on AMD GPUs.

- The following algorithms have been adapted to be C++20 conformant: `adjacent_find`, `includes`, `inplace_merge`, `is_heap`, `is_heap_until`, `is_partitioned`, `is_sorted`, `is_sorted_until`, `merge`, `set_difference`, `set_intersection`, `set_symmetric_difference`, `set_union`.
- Experimental HIP support can be enabled by compiling *HPX* with `hipcc`. All CUDA functionality in *HPX* can now be used with HIP. The HIP functionality is for the time being exposed through the same API as the CUDA functionality, i.e. no changes are required in user code. The CUDA, and now HIP, functionality is in the `hpx::cuda` namespace.
- We have added `partial_sort` based on Francisco Tapia's implementation.
- `hpx::init` and `hpx::start` gained new overloads taking an `hpx::init_params` struct in 1.5.0. All overloads not taking an `hpx::init_params` are now deprecated.
- We have added an experimental `fork_join_executor`. This executor can be used for OpenMP-style fork-join parallelism, where the latency of a parallel region is important for performance.
- The `parallel_executor` now uses a hierarchical spawning scheme for bulk execution, which improves data locality and performance.
- `hpx::dataflow` can now be used with executors that inject additional parameters into the call of the user-provided function.
- We have added experimental support for properties as proposed in [P2220](#)³⁴¹⁷. Currently the only supported property is the scheduling hint on `parallel_executor`.
- `hpx::util::annotated_function` can now be passed a dynamically generated `std::string`.
- In moving functionality to new namespaces, old names have been deprecated. A deprecation warning will be issued if you are using deprecated functionality, with instructions on how to correct or ignore the warning.
- We have removed all support for C and Fortran from our build system.
- We have further reduced the use of Boost types within *HPX* (`boost::system::error_code` and `boost::detail::spinlock`).
- We have enabled more warnings in our CI builds (unused variables and unused typedefs).

³⁴¹⁶ <https://github.com/TheHPXProject/hpx/pull/5044>

³⁴¹⁷ <https://wg21.link/p2220>

Breaking changes

- hpxMP support has been completely removed.
- The verbs parcellport has been removed.
- The following compatibility options have been disabled by default: `HPX_WITH_ACTION_BASE_COMPATIBILITY`, `HPX_WITH_REGISTER_THREAD_COMPATIBILITY`, `HPX_WITH_PROMISE_ALIAS_COMPATIBILITY`, `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`, `HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY`, `HPX_WITH_EMBEDDED_THREAD_POOLS_COMPATIBILITY`, `HPX_WITH_THREAD_POOL_OS_EXECUTOR_COMPATIBILITY`, `HPX_WITH_THREAD_EXECUTORS_COMPATIBILITY`, `HPX_THREAD_AWARE_TIMER_COMPATIBILITY`, `HPX_WITH_POOL_EXECUTOR_COMPATIBILITY`. Unless noted here, the above functionalities do not come with replacements. Unscoped enumerations have been replaced by scoped enumerations. Previously deprecated unscoped enumerations are disabled by `HPX_WITH_UNSCOPED_ENUM_COMPATIBILITY`. Newly deprecated unscoped enumerations have been given deprecation warnings and replaced by scoped enumerations. `hpx::promise` has been replaced with `hpx::distributed::promise`. `hpx::program_options` is a drop-in replacement for `boost::program_options`. `hpx::execution::parallel_executor` now has constructors which take a thread pool, covering the use case of `hpx::threads::executors::pool_executor`. A pool can be supplied with `hpx::resource::get_thread_pool`.

Closed issues

- Issue #5148³⁴¹⁸ - `runtime_support.hpp` does not work with newer cling
- Issue #5147³⁴¹⁹ - Wrong results with parallel reduce
- Issue #5129³⁴²⁰ - Missing specialization for `std::hash<hpx::thread::id>`
- Issue #5126³⁴²¹ - Use `std::string` for task annotations
- Issue #5115³⁴²² - Don't expect `hwloc` to always report Cores
- Issue #5113³⁴²³ - Handle threadmanager exceptions during startup
- Issue #5112³⁴²⁴ - libatomic problems causing unexpected fails
- Issue #5089³⁴²⁵ - Remove non-BSL files
- Issue #5088³⁴²⁶ - Unwrapping problem
- Issue #5087³⁴²⁷ - Remove hpxMP support
- Issue #5077³⁴²⁸ - PAPI counters are not accessible when HPX is installed
- Issue #5075³⁴²⁹ - Make the structs in all `iter_sent.hpp` lower case
- Issue #5067³⁴³⁰ - Bug `string_util/split.hpp`

HPX V1.5.1 (Sep 30, 2020)

General changes

This is a patch release. It contains the following changes:

- Remove restriction on suspending runtime with multiple localities, users are now responsible for synchronizing work between localities before suspending.
- Fixes several compilation problems and warnings.
- Adds notes in the documentation explaining how to cite HPX.

Closed issues

- [Issue #4971³⁵⁹²](#) - Parallel sort fails to compile with C++20
- [Issue #4950³⁵⁹³](#) - Build with `HPX_WITH_PARCELPORT_ACTION_COUNTERS_ON` fails
- [Issue #4940³⁵⁹⁴](#) - Codespell report for “HPX” (on fossies.org)
- [Issue #4937³⁵⁹⁵](#) - Allow suspension of runtime for multiple localities

HPX V1.5.0 (Sep 02, 2020)

General changes

The main focus of this release is on APIs and C++20 conformance. We have added many new C++20 features and adapted multiple algorithms to be fully C++20 conformant. As part of the modularization we have begun specifying the public API of *HPX* in terms of headers and functionality, and aligning it more closely to the C++ standard. All non-distributed modules are now in place, along with an experimental option to completely disable distributed features in *HPX*. We have also added experimental asynchronous MPI and CUDA executors. Lastly this release introduces CMake targets for depending projects, performance improvements, and many bug fixes.

- We have added the C++20 features `hpx::jthread` and `hpx::stop_token`. `hpx::condition_variable_any` now exposes new functions supporting `hpx::stop_token`.
- We have added `hpx::stable_sort` based on Francisco Tapia's implementation.
- We have adapted existing synchronization primitives to be fully conformant C++20: `hpx::barrier`, `hpx::latch`, `hpx::counting_semaphore`, and `hpx::binary_semaphore`.
- We have started using customization point objects (CPOs) to make the corresponding algorithms fully conformant to C++20 as well as to make algorithm extension easier for the user. `all_of/any_of/none_of`, `copy`, `count`, `destroy`, `equal`, `fill`, `find`, `for_each`, `generate`, `mismatch`, `move`, `reduce`, `transform_reduce` are using those CPOs (all in namespace `hpx`). We also have adapted their corresponding `hpx::ranges` versions to be conforming to C++20 in this release.
- We have adapted support for `co_await` to C++20, in addition to `hpx::future` it now also supports `hpx::shared_future`. We have also added allocator support for futures returned by `co_return`. It is no longer in the `experimental` namespace.
- We added serialization support for `std::variant` and `std::tuple`.
- `result_of` and `is_callable` are now deprecated and replaced by `invoke_result` and `is_invocable` to conform to C++20.
- We continued with the modularization, making it easier for us to add the new experimental `HPX_WITH_DISTRIBUTED_RUNTIME` CMake option (see below) . A significant amount of headers have been deprecated. We adapted the namespaces and headers we could to be closer to the standard ones (*Public API*). Depending code should still compile, however warnings are now generated instructing to change the include statements accordingly.
- It is now possible to have a basic CUDA support including a helper function to get a future from a CUDA stream and target handling. They are available under the `hpx::cuda::experimental` namespace and they can be enabled with the `-DHPX_WITH_ASYNC_CUDA=ON` CMake option.
- We added a new `hpx::mpi::experimental` namespace for getting futures from an asynchronous MPI call and a new minimal MPI executor `hpx::mpi::experimental::executor`. These can be enabled with the `-DHPX_WITH_ASYNC_MPI=On` CMake option.
- A polymorphic executor has been implemented to reduce compile times as a function accepting executors can potentially be instantiated only once instead of multiple times with different executors. It accepts the function signature as a template argument. It needs to be constructed from any other executor. Please note, that the function signatures that can be scheduled using `then_execute`, `bulk_sync_execute`, `bulk_async_execute` and `bulk_then_execute` are slightly different (See the comment in [PR #4514](#)³⁶⁰⁶ for more details).
- The underlying executor of `block_executor` has been updated to a newer one.

³⁶⁰⁵ <https://github.com/TheHPXProject/hpx/pull/4939>

³⁶⁰⁶ <https://github.com/TheHPXProject/hpx/pull/4514>

- We have added a parameter to `auto_chunk_size` to control the amount of iterations to measure.
- All executor parameter hooks can now be exposed through the executor itself. This will allow to deprecate the `.with()` functionality on execution policies in the future. This is also a first step towards simplifying our executor APIs in preparation for the upcoming C++23 executors (senders/receivers).
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`. Please note this is a breaking change without backwards-compatibility option. We have converted all of those APIs to be based on customization point objects. Two new executors have been added to enable easy integration of the existing resiliency features with other facilities (like the parallel algorithms): `replay_executor` and `replicate_executor`.
- We have added performance counters type information (aggregating, monotonically increasing, average count, average timer, etc.).
- HPX threads are now re-scheduled on the same worker thread they were suspended on to avoid cache misses from moving from one thread to the other. This behavior doesn't prevent the thread from being stolen, however.
- We have added a new configuration option `hpx.exception_verbosity` to allow to control the level of verbosity of the exceptions (3 levels available).
- `broadcast_to`, `broadcast_from`, `scatter_to` and `scatter_from` have been added to the collectives, modernization of `gather_here` and `gather_there` with futures taken by rvalue references. See the breaking change on `all_to_all` in the next section. None of the collectives need supporting macros anymore (e.g. specifying the data types used for a collective operation using `HPX_REGISTER_ALLGATHER` and similar is not needed anymore).
- New API functions have been added: a) to get the number of cores which are idle (`hpx::get_idle_core_count`) and b) returning a bitmask representing the currently idle cores (`hpx::get_idle_core_mask`).
- We have added an experimental option to only enable the local runtime, you can disable the distributed runtime with `HPX_WITH_DISTRIBUTED_RUNTIME=OFF`. You can also enable the local runtime by using the `--hpx:local` runtime option.
- We fixed task annotations for actions.
- The alias `hpx::promise` to `hpx::lcos::promise` is now deprecated. You can use `hpx::lcos::promise` directly instead. `hpx::promise` will refer to the local-only promise in the future.
- We have added a `prepare_checkpoint` API function that calculates the amount of necessary buffer space for a particular set of arguments checkpointed.
- We have added `hpx::upgrade_lock` and `hpx::upgrade_to_unique_lock`, which make `hpx::shared_mutex` (and similar) usable in more flexible ways.
- We have changed the CMake targets exposed to the user, it now includes `HPX::hpx`, `HPX::wrap_main` (int main as the first HPX thread of the application, see [Starting the HPX runtime](#)), `HPX::plugin`, `HPX::component`. The CMake variables `HPX_INCLUDE_DIRS` and `HPX_LIBRARIES` are deprecated and will be removed in a future release, you should now link directly to the `HPX::hpx` CMake target.
- A new example is demonstrating how to create and use a wrapping executor (`quickstart/executor_with_thread_hooks.cpp`)
- A new example is demonstrating how to disable thread stealing during the execution of parallel algorithms (`quickstart/disable_thread_stealing_executor.cpp`)
- We now require for our CMake build system configuration files to be formatted using `cmake-format`.
- We have removed more dependencies on various Boost libraries.
- We have added an experimental option enabling unity builds of HPX using the `-DHPX_WITH_UNITY_BUILD=On` CMake option.

- Many bug fixes.

Breaking changes

- *HPX* now requires a C++14 capable compiler. We have set the *HPX* C++ standard automatically to C++14 and if it needs to be set explicitly, it should be specified through the `CMAKE_CXX_STANDARD` setting as mandated by CMake. The `HPX_WITH_CXX*` variables are now deprecated and will be removed in the future.
- Building and using *HPX* is now supported only when using CMake V3.13 or later, Boost V1.64 or newer, and when compiling with clang V5, gcc V7, or VS2019, or later. Other compilers might still work but have not been tested thoroughly.
- We have added a `hpx::init_params` struct to pass parameters for *HPX* initialization e.g. the resource partitioner callback to initialize thread pools (*Using the resource partitioner*).
- The `all_to_all` algorithm is renamed to `all_gather`, and the new `all_to_all` algorithm is not compatible with the old one.
- We have moved all of the existing APIs related to resiliency into the namespace `hpx::resiliency::experimental`.

- Issue #4650³⁶⁴⁶ - thread descriptions are broken... again
- Issue #4648³⁶⁴⁷ - Thread stacksize not properly set
- Issue #4647³⁶⁴⁸ - Rename generated collective headers in modules
- Issue #4639³⁶⁴⁹ - Update deprecation warnings in compatibility headers to point to collective headers
- Issue #4628³⁶⁵⁰ - mpi parcellport totally broken
- Issue #4619³⁶⁵¹ - Fully document hpx_wrap behaviour and targets
- Issue #4612³⁶⁵² - Compilation issue with HPX 1.4.1 and 1.4.0
- Issue #4594³⁶⁵³ - Rename modules
- Issue #4578³⁶⁵⁴ - Default value for HPX_WITH_THREAD_BACKTRACE_DEPTH
- Issue #4572³⁶⁵⁵ - Thread manager should be given a runtime_configuration
- Issue #4571³⁶⁵⁶ - Add high-level documentation to new modules
- Issue #4569³⁶⁵⁷ - Annoying warning when compiling - pls suppress or fix it.
- Issue #4555³⁶⁵⁸ - HPX_HAVE_THREAD_BACKTRACE_ON_SUSPENSION compilation error
- Issue #4543³⁶⁵⁹ - Segfaults in Release builds using *sleep_for*
- Issue #4539³⁶⁶⁰ - Compilation Error when HPX_MPI_WITH_FUTURES=ON
- Issue #4537³⁶⁶¹ - Linking issue with libhpx_initd.a
- Issue #4535³⁶⁶² - API for checking if pool with a given name exists
- Issue #4523³⁶⁶³ - Build of PR #4311 (git tag 9955e8e) fails
- Issue #4519³⁶⁶⁴ - Documentation problem

- PR #4824³⁷⁷⁸ - Add support for building master/release branches to Jenkins configuration
- PR #4821³⁷⁷⁹ - Implement customization point for `hpx::copy` and `hpx::ranges::copy`
- PR #4819³⁷⁸⁰ - Allow finding Boost components before finding HPX
- PR #4817³⁷⁸¹ - Adding range version of stable sort
- PR #4815³⁷⁸² - Fix a wrong `#ifdef` for IO/TIMER pools causing build errors
- PR #4814³⁷⁸³ - Replace `hpx::function_nonsr` with `std::function` in error module
- PR #4809³⁷⁸⁴ - Foreach adapt
- PR #4808³⁷⁸⁵ - Make internal algorithms functions const
- PR #4807³⁷⁸⁶ - Add Jenkins configuration for running on Piz Daint
- PR #4806³⁷⁸⁷ - Update documentation links to new domain name
- PR #4805³⁷⁸⁸ - Applying changes that resolve time complexity issues in sort
- PR #4803³⁷⁸⁹ - Adding implementation of `stable_sort`
- PR #4802³⁷⁹⁰ - Fix datapar header paths
- PR #4801³⁷⁹¹ - Replace `boost::shared_array<T>` with `std::shared_ptr<T[]>` if supported
- PR #4799³⁷⁹² - Fixing `#include` paths in compatibility headers
- PR #4798³⁷⁹³ - Include the main module header (fixes partially #4488)
- PR #4797³⁷⁹⁴ - Change cmake targets
- PR #4794³⁷⁹⁵ - Removing 128bit integer emulation
- PR #4793³⁷⁹⁶ - Make sure global variable is handled properly
- PR #4792³⁷⁹⁷ - Replace `enable_if` with **HPX_CONCEPT_REQUIRES_** and add `is_sentinel_for` constraint
- PR #4790³⁷⁹⁸ - Move deprecation warnings from base template to template specializations for `result_of` etc. structs
- PR #4789³⁷⁹⁹ - Fix hangs during assertion handling and distributed runtime construction
- PR #4788³⁸⁰⁰ - Fixing inclusive transform scan algorithm to properly handle initial value

³⁸⁰⁰ <https://github.com/TheHPXProject/hpx/pull/4788>

- PR #4785³⁸⁰¹ - Fixing barrier test
- PR #4784³⁸⁰² - Fixing deleter argument bindings in `serialize_buffer`
- PR #4783³⁸⁰³ - Add coveralls badge
- PR #4782³⁸⁰⁴ - Make header tests parallel again
- PR #4780³⁸⁰⁵ - Remove outdated comment about `hpx::stop` in documentation
- PR #4776³⁸⁰⁶ - debug print improvements
- PR #4775³⁸⁰⁷ - Checkpoint cleanup
- PR #4771³⁸⁰⁸ - Fix compilation with `HPX_WITH_NETWORKING=OFF`
- PR #4767³⁸⁰⁹ - Remove all force linking leftovers
- PR #4765³⁸¹⁰ - Fix 1d stencil index calculation
- PR #4764³⁸¹¹ - Force some tests to run serially
- PR #4762³⁸¹² - Update pointees in compatibility headers
- PR #4761³⁸¹³ - Fix running and building of execution module tests on CircleCI
- PR #4760³⁸¹⁴ - Storing `hpx_options` in global property to speed up summary report
- PR #4759³⁸¹⁵ - Reduce memory requirements for our main shared state
- PR #4757³⁸¹⁶ - Fix `mimalloc` linking on Windows
- PR #4756³⁸¹⁷ - Fix compilation issues
- PR #4753³⁸¹⁸ - Re-adding API functions that were lost during merges
- PR #4751³⁸¹⁹ - Revert “Create coverage reports and upload them to `codecov.io`”
- PR #4750³⁸²⁰ - Fixing possible race condition during termination detection
- PR #4749³⁸²¹ - Deprecate `result_of` and friends
- PR #4748³⁸²² - Create coverage reports and upload them to `codecov.io`
- PR #4747³⁸²³ - Changing `#include` for MPI `parcelpport`

HPX V1.4.1 (Feb 12, 2020)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation issues on Windows, macOS, FreeBSD, and with gcc 10
- Install missing pdb files on Windows
- Allow running tests using an installed version of *HPX*
- Skip MPI finalization if HPX has not initialized MPI
- Give a hard error when attempting to use IO counters on Windows

Closed issues

- Issue #4320⁴¹⁰⁵ - HPX 1.4.0 does not compile with gcc 10
- Issue #4336⁴¹⁰⁶ - Building HPX 1.4.0 with IO Counters breaks (Windows)
- Issue #4334⁴¹⁰⁷ - HPX Debug and RelWithDebinfo builds on Windows not installing .pdb files
- Issue #4322⁴¹⁰⁸ - Undefine VT1 and VT2 after boost includes
- Issue #4314⁴¹⁰⁹ - Compile error on 1.4.0

HPX V1.4.0 (January 15, 2020)

General changes

- We have added the collectives `all_to_all` and `all_reduce`.
- We have added APIs for resiliency, which allows replication and replay for failed tasks. See the [documentation](#) for more details.
- Components can now be checkpointed.
- Performance improvements to schedulers and coroutines. A significant change is the addition of stackless coroutines. These are to be used for tasks that do not need to be suspended and can reduce overheads noticeably in applications with short tasks. A stackless coroutine can be created with the new `stack_size_thread_stacksize_nostack`.
- We have added an implementation of `unique_any`, which is a non-copyable version of `any`.
- The `shared_priority_queue_scheduler` has been improved. It now has lower overheads than the default scheduler in many situations. Unlike the default scheduler it fully supports NUMA scheduling hints. Enable it with the command line option `--hpx:queuing=shared-priority`. This scheduler should still be considered experimental, but its use is encouraged in real applications to help us make it production ready.
- We have added the performance counters `background-receive-duration` and `background-receive-overhead` for inspecting the time and overhead spent on receiving parcels in the background.
- Compilation time has been further improved when `HPX_WITH_NETWORKING=OFF`.
- We no longer require compiled Boost dependencies in certain configurations. This requires at least Boost 1.70, compiling on x86 with GCC 9, clang (libc++) 9, or VS2019 in C++17 mode. The dependency on `Boost.Filesystem` can explicitly be turned on with `HPX_FILESYSTEM_WITH_BOOST_FILESYSTEM_COMPATIBILITY=ON` (it is off by default if the standard library supports `std::filesystem`). `Boost.ProgramOptions` has been copied into the HPX repository. We have a compatibility layer for users who must explicitly use

⁴¹¹⁴ <https://github.com/TheHPXProject/hpx/pull/4343>

⁴¹¹⁵ <https://github.com/TheHPXProject/hpx/pull/4337>

⁴¹¹⁶ <https://github.com/TheHPXProject/hpx/pull/4335>

⁴¹¹⁷ <https://github.com/TheHPXProject/hpx/pull/4315>

⁴¹¹⁸ <https://github.com/TheHPXProject/hpx/pull/4310>

Boost.ProgramOptions instead of the ProgramOptions provided by HPX. To remove the dependency HPX_PROGRAM_OPTIONS_WITH_BOOST_PROGRAM_OPTIONS_COMPATIBILITY must be explicitly set to OFF. This option will be removed in a future release. We have also removed several other header-only dependencies on Boost.

- It is now possible to use the process affinity mask set by tools like `numactl` and various batch environments with the command line option `--hpx:use-process-mask`. Enabling this option implies `--hpx:ignore-batch-env`.
- It is now possible to create standalone thread pools without starting the runtime. See the `standalone_thread_pool_executor.cpp` test in the `execution` module for an example.
- Tasks annotated with `hpx::util::annotated_function` now have their correct name when using APEX to generate OTF2 files.
- Cloning of APEX was defective in previous releases (it required manual intervention to check out the correct tag or branch). This has been fixed.
- The option `HPX_WITH_MORE_THAN_64_THREADS` is now ignored and will be removed in a future release. The value is instead derived directly from `HPX_WITH_MAX_CPU_COUNT` option.
- We have deprecated compiling in C++11 mode. The next release will require a C++14 capable compiler.
- We have deprecated support for the Vc library. This option will be replaced with SIMD support from the standard library in a future release.
- We have significantly refactored our CMake setup. This is intended to be a non-breaking change and will allow for using HPX through CMake targets in the future.
- We have continued modularizing the HPX library. In the process we have rearranged many header files into module-specific directories. All moved headers have compatibility headers which forward from the old location to the new location, together with a deprecation warning. The compatibility headers will eventually be removed.
- We now enforce formatting with `clang-format` on the majority of our source files.
- We have added SPDX license tags to all files.
- Many bugfixes.

Breaking changes

- The `HPX_WITH_THREAD_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY` option and the associated compatibility layer has been removed.
- The `HPX_WITH_UNWRAPPED_COMPATIBILITY` option and the associated compatibility layer has been removed.

- [PR #4202](#)⁴²³⁷ - Fix CUDA configuration
- [PR #4200](#)⁴²³⁸ - Making sure `hpx_wrap` is not passed on to linker on non-Linux systems
- [PR #4198](#)⁴²³⁹ - Fix `execution_agent.cpp` compilation with GCC 5
- [PR #4197](#)⁴²⁴⁰ - Remove deprecated options for 1.4.0 release
- [PR #4196](#)⁴²⁴¹ - minor fixes for building on OSX Darwin
- [PR #4195](#)⁴²⁴² - Use full clone on CircleCI for pushing stable tag
- [PR #4193](#)⁴²⁴³ - Add scheduling hints to `hello_world_distributed`
- [PR #4192](#)⁴²⁴⁴ - Set up CUDA in `HPXConfig.cmake`
- [PR #4191](#)⁴²⁴⁵ - Export allocators root variables
- [PR #4190](#)⁴²⁴⁶ - Don't use `constexpr` in `thread_data` with GCC <= 6
- [PR #4189](#)⁴²⁴⁷ - Only use `quick_exit` if available
- [PR #4188](#)⁴²⁴⁸ - Google Season of Docs updates to documentation; writing single node hpx applications
- [PR #4186](#)⁴²⁴⁹ - correct `vc` to `cuda` in `cuda` `cmake`
- [PR #4184](#)⁴²⁵⁰ - Resetting some cached variables to make sure those are re-filled
- [PR #4183](#)⁴²⁵¹ - Fix `hpxcxx` configuration
- [PR #4181](#)⁴²⁵² - Rename base libraries var
- [PR #4180](#)⁴²⁵³ - Move header left behind earlier to plugin module
- [PR #4179](#)⁴²⁵⁴ - Moving `zip_iterator` and `transform_iterator` to `iterator_support` module
- [PR #4178](#)⁴²⁵⁵ - Move checkpointing support to its own module
- [PR #4177](#)⁴²⁵⁶ - Small `const` fix to `basic_execution` module
- [PR #4176](#)⁴²⁵⁷ - Add back `HPX_LIBRARIES` and friends to `HPXConfig.cmake`
- [PR #4175](#)⁴²⁵⁸ - Make `Vc` public and add it to `HPXConfig.cmake`
- [PR #4173](#)⁴²⁵⁹ - Wait for runtime to be running before returning from `hpx::start`

- PR #4172⁴²⁶⁰ - More protection against shutdown problems in error handling scenarios.
- PR #4171⁴²⁶¹ - Ignore lock in `condition_variable::wait`
- PR #4170⁴²⁶² - Adding APEX dependency to MPI parcellport
- PR #4168⁴²⁶³ - Adding utility include
- PR #4167⁴²⁶⁴ - Add a condition to setup the external libraries
- PR #4166⁴²⁶⁵ - Add an `INTERNAL_FLAGS` option to link to `hpx_internal_flags`
- PR #4165⁴²⁶⁶ - Forward `HPX_*` cmake cache variables to external projects
- PR #4164⁴²⁶⁷ - Affinity and batch environment modules
- PR #4162⁴²⁶⁸ - Handle `quick_exit`
- PR #4160⁴²⁶⁹ - Using `target_link_libraries` for cmake versions ≥ 3.12
- PR #4159⁴²⁷⁰ - Make sure `HPX_WITH_NATIVE_TLS` is forwarded to dependent projects
- PR #4158⁴²⁷¹ - Adding allocator imported target as a dependency of allocator module
- PR #4157⁴²⁷² - Add `hpx_memory` as a dependency of parcellport plugins
- PR #4156⁴²⁷³ - Stackless coroutines now can refer to themselves (through `get_self()` and friends)
- PR #4154⁴²⁷⁴ - Added CMake policy CMP0060 for HPX applications.
- PR #4153⁴²⁷⁵ - add header `iomanip` to tests and tool
- PR #4152⁴²⁷⁶ - Casting MPI tag value
- PR #4149⁴²⁷⁷ - Add back private `m_desc` member variable in `program_options` module
- PR #4147⁴²⁷⁸ - Resource partitioner and threadmanager modules
- PR #4146⁴²⁷⁹ - Google Season of Docs updates to documentation; creating hpx projects
- PR #4145⁴²⁸⁰ - Adding basic support for stackless threads
- PR #4143⁴²⁸¹ - Exclude `test_client_1950` from all target
- PR #4142⁴²⁸² - Add a new `thread_pool_executor`

HPX V1.3.0 (May 23, 2019)

General changes

- Performance improvements: the schedulers have significantly reduced overheads from removing false sharing and the parallel executor has been updated to create fewer futures.
- HPX now defaults to not turning on networking when running on one locality. This means that you can run multiple instances on the same system without adding command line options.
- Multiple issues reported by Clang sanitizers have been fixed.
- We have added (back) single-page HTML documentation and PDF documentation.
- We have started modularizing the HPX library. This is useful both for developers and users. In the long term users will be able to consume only parts of the HPX libraries if they do not require all the functionality that HPX currently provides.
- We have added an implementation of `function_ref`.
- The `barrier` and `latch` classes have gained a few additional member functions.

Breaking changes

- Executable and library targets are now created without the `_exe` and `_lib` suffix respectively. For example, the target `1d_stencil_1_exe` is now simply called `1d_stencil_1`.
- We have removed the following deprecated functionality: `queue`, `scoped_unlock`, and support for input iterators in algorithms.
- We have turned off the compatibility layer for `unwrapped` by default. The functionality will be removed in the next release. The option can still be turned on using the [CMake](https://www.cmake.org)⁴⁴⁸⁶ option `HPX_WITH_UNWRAPPED_SUPPORT`. Likewise, `inclusive_scan` compatibility overloads have been turned off by default. They can still be turned on with `HPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY`.
- The minimum compiler and dependency versions have been updated. We now support GCC from version 5 onwards, Clang from version 4 onwards, and Boost from version 1.61.0 onwards.
- The headers for preprocessor macros have moved as a result of the functionality being moved to a separate module. The old headers are deprecated and will be removed in a future version of HPX. You can turn off the warnings by setting `HPX_PREPROCESSOR_WITH_DEPRECATION_WARNINGS=OFF` or turn off the compatibility headers completely with `HPX_PREPROCESSOR_WITH_COMPATIBILITY_HEADERS=OFF`.

- PR #3749⁴⁶²⁸ - Fix lifetime problem in `run_as_hpx_thread`
- PR #3748⁴⁶²⁹ - Fixed unusable behavior of the clang code analyzer.
- PR #3747⁴⁶³⁰ - Added `PMIX_RANK` to the defaults of `HPX_WITH_PARCELPOR_MPI_ENV`.
- PR #3745⁴⁶³¹ - Introduced `cache_aligned_data` and `cache_line_data` helper structure
- PR #3742⁴⁶³² - Remove more unused functionality from `util/logging`
- PR #3740⁴⁶³³ - Fix includes in partitioned vector tests
- PR #3739⁴⁶³⁴ - More fixes to make sure that `std::flush` really flushes all output
- PR #3737⁴⁶³⁵ - Fix potential shutdown problems
- PR #3736⁴⁶³⁶ - Fix `guided_pool_executor` after dataflow changes caused compilation fail
- PR #3734⁴⁶³⁷ - Limiting executor
- PR #3732⁴⁶³⁸ - More constrained bound constructors
- PR #3730⁴⁶³⁹ - Attempt to fix deadlocks during component loading
- PR #3729⁴⁶⁴⁰ - Add latch member function `count_up` and `reset`, requested by `hpxMP`
- PR #3728⁴⁶⁴¹ - Send even empty buffers on `hpx::endl` and `hpx::flush`
- PR #3727⁴⁶⁴² - Adding example demonstrating how to customize the memory management for a component
- PR #3726⁴⁶⁴³ - Adding support for passing command line options through the `HPX_COMMANDLINE_OPTIONS` environment variable
- PR #3722⁴⁶⁴⁴ - Document known broken OpenMPI builds
- PR #3716⁴⁶⁴⁵ - Add barrier reset function, requested by `hpxMP` for reusing barrier
- PR #3715⁴⁶⁴⁶ - More work on functions and `vtables`
- PR #3714⁴⁶⁴⁷ - Generate single-page HTML, PDF, manpage from documentation
- PR #3713⁴⁶⁴⁸ - Updating default APEX version to 2.1.2
- PR #3712⁴⁶⁴⁹ - Update release procedure
- PR #3710⁴⁶⁵⁰ - Fix the C++11 build, after #3704

HPX V1.2.1 (Feb 19, 2019)

General changes

This is a bugfix release. It contains the following changes:

- Fix compilation on ARM, s390x and 32-bit architectures.
- Fix a critical bug in the `future` implementation.
- Fix several problems in the CMake configuration which affects external projects.
- Add support for Boost 1.69.0.

Closed issues

- Issue #3638⁴⁷⁶² - Build HPX 1.2 with boost 1.69
- Issue #3635⁴⁷⁶³ - Non-deterministic crashing on Stampede2
- Issue #3550⁴⁷⁶⁴ - `1>e:000workhpxsrcthrow_exception.cpp(54): error C2440: '<function-style-cast>': cannot convert from 'boost::system::error_code' to 'hpx::exception'`
- Issue #3549⁴⁷⁶⁵ - HPX 1.2.0 does not build on i686, but release candidate did
- Issue #3511⁴⁷⁶⁶ - Build on s390x fails
- Issue #3509⁴⁷⁶⁷ - Build on armv7l fails

HPX V1.2.0 (Nov 12, 2018)

General changes

Here are some of the main highlights and changes for this release:

- Thanks to the work of our Google Summer of Code student, Nikunj Gupta, we now have a new implementation of `hpx_main.hpp` on supported platforms (Linux, BSD and MacOS). This is intended to be a less fragile drop-in replacement for the old implementation relying on preprocessor macros. The new implementation does not require changes if you are using the [CMake⁴⁷⁸⁰](#) or `pkg-config`. The old behaviour can be restored by setting `HPX_WITH_DYNAMIC_HPX_MAIN=OFF` during [CMake⁴⁷⁸¹](#) configuration. The implementation on Windows is unchanged.
- We have added functionality to allow passing scheduling hints to our schedulers. These will allow us to create executors that for example target a specific NUMA domain or allow for *HPX* threads to be pinned to a particular worker thread.
- We have significantly improved the performance of our futures implementation by making the shared state atomic.
- We have replaced Boostbook by Sphinx for our documentation. This means the documentation is easier to navigate with built-in search and table of contents. We have also added a quick start section and restructured the documentation to be easier to follow for new users.
- We have added a new option to the `--hpx:threads` command line option. It is now possible to use `cores` to tell *HPX* to only use one worker thread per core, unlike the existing option `all` which uses one worker thread per processing unit (processing unit can be a hyperthread if hyperthreads are available). The default value of `--hpx:threads` has also been changed to `cores` as this leads to better performance in most cases.
- All command line options can now be passed alongside configuration options when initializing *HPX*. This means that some options that were previously only available on the command line can now be set as configuration options.
- HPXMP is a portable, scalable, and flexible application programming interface using the OpenMP specification that supports multi-platform shared memory multiprocessing programming in C and C++. HPXMP can be enabled within *HPX* by setting `DHPX_WITH_HPXM=ON` during [CMake⁴⁷⁸²](#) configuration.
- Two new performance counters were added for measuring the time spent doing background work. `/threads/time/background-work-duration` returns the time spent doing background on a given thread or locality, while `/threads/time/background-overhead` returns the fraction of time spent doing background work with respect to the overall time spent running the scheduler. The new performance counters are disabled by default and can be turned on by setting `HPX_WITH_BACKGROUND_THREAD_COUNTERS=ON` during [CMake⁴⁷⁸³](#) configuration.

⁴⁷⁷⁶ <https://github.com/TheHPXProject/hpx/pull/3591>

⁴⁷⁷⁷ <https://github.com/TheHPXProject/hpx/pull/3558>

⁴⁷⁷⁸ <https://github.com/TheHPXProject/hpx/pull/3555>

⁴⁷⁷⁹ <https://github.com/TheHPXProject/hpx/pull/3551>

⁴⁷⁸⁰ <https://www.cmake.org>

⁴⁷⁸¹ <https://www.cmake.org>

⁴⁷⁸² <https://www.cmake.org>

⁴⁷⁸³ <https://www.cmake.org>

- The idling behaviour of *HPX* has been tweaked to allow for faster idling. This is useful in interactive applications where the *HPX* worker threads may not have work all the time. This behaviour can be tweaked and turned off as before with `HPX_WITH_THREAD_MANAGER_IDLE_BACKOFF=OFF` during [CMake](#)⁴⁷⁸⁴ configuration.
- It is now possible to register callback functions for *HPX* worker thread events. Callbacks can be registered for starting and stopping worker threads, and for when errors occur.

Breaking changes

- The implementation of `hpx_main.hpp` has changed. If you are using custom Makefiles you will need to make changes. Please see the documentation on [using Makefiles](#) for more details.
- The default value of `--hpx:threads` has changed from `all` to `cores`. The new option `cores` only starts one worker thread per core.
- We have dropped support for Boost 1.56 and 1.57. The minimal version of Boost we now test is 1.58.
- Our `boost::format`-based formatting implementation has been revised and replaced with a custom implementation. This changes the formatting syntax and requires changes if you are relying on `hpx::util::format` or `hpx::util::format_to`. The pull request for this change contains more information: [PR #3266](#)⁴⁷⁸⁵.
- The following deprecated options have now been completely removed:
`HPX_WITH_ASYNC_FUNCTION_COMPATIBILITY`, `HPX_WITH_LOCAL_DATAFLOW`,
`HPX_WITH_GENERIC_EXECUTION_POLICY`, `HPX_WITH_BOOST_CHRONO_COMPATIBILITY`,
`HPX_WITH_EXECUTOR_COMPATIBILITY`, `HPX_WITH_EXECUTION_POLICY_COMPATIBILITY`, and
`HPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY`.

- PR #3036⁵⁰⁴¹ - Switching to CircleCI 2.0

HPX V1.1.0 (Mar 24, 2018)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- We have changed the way *HPX* manages the processing units on a node. We do not longer implicitly bind all available cores to a single thread pool. The user has now full control over what processing units are bound to what thread pool, each with a separate scheduler. It is now also possible to create your own scheduler implementation and control what processing units this scheduler should use. We added the `hpx::resource::partitioner` that manages all available processing units and assigns resources to the used thread pools. Thread pools can be

⁵⁰²⁵ <https://github.com/TheHPXProject/hpx/pull/3268>

⁵⁰²⁸ <https://github.com/TheHPXProject/hpx/pull/3262>

⁵⁰²⁹ <https://github.com/TheHPXProject/hpx/pull/3261>

⁵⁰³⁰ <https://github.com/TheHPXProject/hpx/pull/3260>

⁵⁰³¹ <https://github.com/TheHPXProject/hpx/pull/3256>

⁵⁰³² <https://github.com/TheHPXProject/hpx/pull/3254>

⁵⁰³³ <https://github.com/TheHPXProject/hpx/pull/3253>

⁵⁰³⁴ <https://github.com/TheHPXProject/hpx/pull/3251>

⁵⁰³⁵ <https://github.com/TheHPXProject/hpx/pull/3239>

⁵⁰³⁶ <https://github.com/TheHPXProject/hpx/pull/3234>

⁵⁰³⁷ <https://github.com/TheHPXProject/hpx/pull/3232>

⁵⁰³⁸ <https://github.com/TheHPXProject/hpx/pull/3230>

⁵⁰³⁹ <https://github.com/TheHPXProject/hpx/pull/3228>

⁵⁰⁴⁰ <https://github.com/TheHPXProject/hpx/pull/3163>

⁵⁰⁴¹ <https://github.com/TheHPXProject/hpx/pull/3036>

now be suspended/resumed independently. This functionality helps in running *HPX* concurrently to code that is directly relying on [OpenMP](https://openmp.org/wp/)⁵⁰⁴² and/or [MPI](https://en.wikipedia.org/wiki/Message_Passing_Interface)⁵⁰⁴³.

- We have continued to implement various parallel algorithms. *HPX* now almost completely implements all of the parallel algorithms as specified by the [C++17 Standard](http://www.open-std.org/jtc1/sc22/wg21)⁵⁰⁴⁴. We have also continued to implement these algorithms for the distributed use case (for segmented data structures, such as `hpx::partitioned_vector`).
- Added a compatibility layer for `std::thread`, `std::mutex`, and `std::condition_variable` allowing for the code to use those facilities where available and to fall back to the corresponding Boost facilities otherwise. The [CMake](https://www.cmake.org)⁵⁰⁴⁵ configuration option `-DHPX_WITH_THREAD_COMPATIBILITY=On` can be used to force using the Boost equivalents.
- The parameter sequence for the `hpx::parallel::transform_inclusive_scan` overload taking one iterator range has changed (again) to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to [CMake](https://www.cmake.org)⁵⁰⁴⁶.
- The parameter sequence for the `hpx::parallel::inclusive_scan` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overloads can be still enabled at configure time by passing `-DHPX_WITH_INCLUSIVE_SCAN_COMPATIBILITY=On` to CMake.
- Added a helper facility `hpx::local_new` which is equivalent to `hpx::new_` except that it creates components locally only. As a consequence, the used component constructor may accept non-serializable argument types and/or non-const references or pointers.
- Removed the (broken) component type `hpx::lcos::queue<T>`. The old type is still available at configure time by passing `-DHPX_WITH_QUEUE_COMPATIBILITY=On` to CMake.
- The parallel algorithms adopted for C++17 restrict the iterator categories usable with those to at least forward iterators. Our implementation of the parallel algorithms was supporting input iterators (and output iterators) as well by simply falling back to sequential execution. We have now made our implementations conforming by requiring at least forward iterators. In order to enable the old behavior use the compatibility option `-DHPX_WITH_ALGORITHM_INPUT_ITERATOR_SUPPORT=On` on the [CMake](https://www.cmake.org)⁵⁰⁴⁷ command line.
- We have added the functionalities allowing for LCOs being implemented using (simple) components. Before LCOs had to always be implemented using managed components.
- User defined components don't have to be default-constructible anymore. Return types from actions don't have to be default-constructible anymore either. Our serialization layer now in general supports non-default-constructible types.
- We have added a new launch policy `hpx::launch::lazy` that allows one to defer the decision on what launch policy to use to the point of execution. This policy is initialized with a function (object) that – when invoked – is expected to produce the desired launch policy.

⁵⁰⁴⁶ <https://www.cmake.org>

⁵⁰⁴⁷ <https://www.cmake.org>

Breaking changes

- We have dropped support for the gcc compiler version V4.8. The minimal gcc version we now test on is gcc V4.9. The minimally required version of [CMake](https://www.cmake.org)⁵⁰⁴⁸ is now V3.3.2.
- We have dropped support for the Visual Studio 2013 compiler version. The minimal Visual Studio version we now test on is Visual Studio 2015.5.
- We have dropped support for the Boost V1.51-V1.54. The minimal version of Boost we now test is Boost V1.55.
- We have dropped support for the `hpx::util::unwrapped` API. `hpx::util::unwrapped` will stay functional to some degree, until it finally gets removed in a later version of HPX. The functional usage of `hpx::util::unwrapped` should be changed to the new `hpx::util::unwrapping` function whereas the immediate usage should be replaced to `hpx::util::unwrap`.
- The performance counter names referring to properties as exposed by the threading subsystem have changes as those now additionally have to specify the thread-pool. See the corresponding documentation for more details.
- The overloads of `hpx::async` that invoke an action do not perform implicit unwrapping of the returned future anymore in case the invoked function does return a future in the first place. In this case `hpx::async` now returns a `hpx::future<future<T>>` making its behavior conforming to its local counterpart.
- We have replaced the use of `boost::exception_ptr` in our APIs with the equivalent `std::exception_ptr`. Please change your codes accordingly. No compatibility settings are provided.
- We have removed the compatibility settings for `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` as their life-cycle has reached its end.
- We have removed the experimental thread schedulers `hierarchy_scheduler`, `periodic_priority_scheduler` and `throttling_scheduler` in an effort to clean up and consolidate our thread schedulers.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #3250](#)⁵⁰⁴⁹ - Apex refactoring with guides
- [PR #3249](#)⁵⁰⁵⁰ - Updating People.qbk

- PR #3233⁵⁰⁵⁸ - Make `schedule_thread` take suspended threads into account
- Issue #3226⁵⁰⁵⁹ - `memory_block` is breaking, signaling SIGSEGV on a thread on creation and freeing
- PR #3225⁵⁰⁶⁰ - Applying quick fix for `hwloc-2.0`
- Issue #3224⁵⁰⁶¹ - HPX counters crashing the application
- PR #3223⁵⁰⁶² - Fix returns when setting config entries
- Issue #3222⁵⁰⁶³ - Errors linking `libhpx.so`
- Issue #3221⁵⁰⁶⁴ - HPX on Mac OS X with `HWLoc 2.0.0` fails to run
- PR #3216⁵⁰⁶⁵ - Reorder a variadic array to satisfy VS 2017 15.6
- PR #3214⁵⁰⁶⁶ - Changed `prerequisites.qbk` to avoid confusion while building boost
- PR #3213⁵⁰⁶⁷ - Relax locks for thread suspension to avoid holding locks when yielding
- PR #3212⁵⁰⁶⁸ - Fix check in `sequenced_executor` test
- PR #3211⁵⁰⁶⁹ - Use `preinit_array` to set `argc/argv` in `init_globally` example
- PR #3210⁵⁰⁷⁰ - Adapted `parallel::{search | search_n}` for Ranges TS (see #1668)
- PR #3209⁵⁰⁷¹ - Fix locking problems during shutdown
- Issue #3208⁵⁰⁷² - `init_globally` throwing a run-time error
- PR #3206⁵⁰⁷³ - Addition of new arithmetic performance counter “Count”
- PR #3205⁵⁰⁷⁴ - Fixing return type calculation for `bulk_then_execute`
- PR #3204⁵⁰⁷⁵ - Changing `std::rand()` to a better inbuilt PRNG generator
- PR #3203⁵⁰⁷⁶ - Resolving problems during shutdown for VS2015
- PR #3202⁵⁰⁷⁷ - Making sure resource partitioner is not accessed if its not valid
- PR #3201⁵⁰⁷⁸ - Fixing `optional::swap`
- Issue #3200⁵⁰⁷⁹ - `hpx::util::optional` fails
- PR #3199⁵⁰⁸⁰ - Fix `sliding_semaphore` test

- [Issue #2835](#)⁵⁴⁰³ - `constexpr` functions with void return type break compilation with CUDA 8.0
- [Issue #2834](#)⁵⁴⁰⁴ - One suspicion in `parallel::detail::handle_exception`
- [PR #2833](#)⁵⁴⁰⁵ - Implement `parallel::merge`
- [PR #2832](#)⁵⁴⁰⁶ - Fix a strange thing in `parallel::util::detail::handle_local_exceptions`. (Fix #2818)
- [PR #2830](#)⁵⁴⁰⁷ - Break the debugger when a test failed
- [Issue #2831](#)⁵⁴⁰⁸ - `parallel/executors/execution_fwd.hpp` causes compilation failure in C++11 mode.
- [PR #2829](#)⁵⁴⁰⁹ - Implement an API for asynchronous pack traversal
- [PR #2828](#)⁵⁴¹⁰ - Split unit test builds on CircleCI to avoid timeouts
- [Issue #2827](#)⁵⁴¹¹ - failure to compile `hello_world` example with `-Werror`
- [PR #2824](#)⁵⁴¹² - Making sure promises are marked as started when used as continuations
- [PR #2823](#)⁵⁴¹³ - Add documentation for `partitioned_vector_view`
- [Issue #2822](#)⁵⁴¹⁴ - Yet another issue with `wait_for` similar to #2796
- [PR #2821](#)⁵⁴¹⁵ - Fix bugs and improve that about `HPX_HAVE_CXX11_AUTO_RETURN_VALUE` of CMake
- [PR #2820](#)⁵⁴¹⁶ - Support C++11 in benchmark codes of `parallel::partition` and `parallel::partition_copy`
- [PR #2819](#)⁵⁴¹⁷ - Fix compile errors in unit test of container version of `parallel::partition`
- [Issue #2818](#)⁵⁴¹⁸ - A strange thing in `parallel::util::detail::handle_local_exceptions`
- [Issue #2815](#)⁵⁴¹⁹ - HPX fails to compile with `HPX_WITH_CUDA=ON` and the new CUDA 9.0 RC
- [Issue #2814](#)⁵⁴²⁰ - Using 'gmakeN' after 'cmake' produces error in `src/CMakeFiles/hpx.dir/runtime/agas/addressing_service.cpp.o`
- [PR #2813](#)⁵⁴²¹ - Properly support `[[noreturn]]` attribute if available
- [Issue #2812](#)⁵⁴²² - Compilation fails with gcc 7.1.1
- [PR #2811](#)⁵⁴²³ - Adding `hpx::launch::lazy` and support for `async`, `dataflow`, and `future::then`
- [PR #2810](#)⁵⁴²⁴ - Add option allowing to disable deprecation warning
- [PR #2809](#)⁵⁴²⁵ - Disable throttling scheduler if HWLOC is not found/used

HPX V1.0.0 (Apr 24, 2017)

General changes

Here are some of the main highlights and changes for this release (in no particular order):

- Added the facility `hpx::split_future` which allows one to convert a `future<tuple<Ts...>>` into a `tuple<future<Ts>...>`. This functionality is not available when compiling *HPX* with VS2012.
- Added a new type of performance counter which allows one to return a list of values for each invocation. We also added a first counter of this type which collects a histogram of the times between parcels being created.
- Added new LCOs: `hpx::lcos::channel` and `hpx::lcos::local::channel` which are very similar to the well known channel constructs used in the Go language.
- Added new performance counters reporting the amount of data handled by the networking layer on a action-by-action basis (please see [PR #2289](#)⁵⁶⁵⁸ for more details).
- Added a new facility `hpx::lcos::barrier`, replacing the equally named older one. The new facility has a slightly changed API and is much more efficient. Most notable, the new facility exposes a (global) function `hpx::lcos::barrier::synchronize()` which represents a global barrier across all localities.
- We have started to add support for vectorization to our parallel algorithm implementations. This support depends on using an external library, currently either Vc Library or `|boost_simd|`. Please see [Issue #2333](#)⁵⁶⁵⁹ for a list of currently supported algorithms. This is an experimental feature and its implementation and/or API might change in the future. Please see this [blog-post](#)⁵⁶⁶⁰ for more information.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17. The old overload can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17. The old `inner_product` names can be still enabled at configure time by specifying `-DHPX_WITH_TRANSFORM_REDUCE_COMPATIBILITY=On` to CMake.
- Added versions of `hpx::get_ptr` taking client side representations for component instances as their parameter (instead of a global id).
- Added the helper utility `hpx::performance_counters::performance_counter_set` helping to encapsulate a set of performance counters to be managed concurrently.
- All execution policies and related classes have been renamed to be consistent with the naming changes applied for C++17. All policies now live in the namespace `hpx::parallel::execution`. The old names can be still enabled at configure time by specifying `-DHPX_WITH_EXECUTION_POLICY_COMPATIBILITY=On` to CMake.
- The thread scheduling subsystem has undergone a major refactoring which results in significant performance improvements. We have also improved the performance of creating `hpx::future` and of various facilities handling those.

⁵⁶⁵⁶ <https://github.com/TheHPXProject/hpx/issues/701>

⁵⁶⁵⁷ <https://github.com/TheHPXProject/hpx/issues/528>

⁵⁶⁵⁸ <https://github.com/TheHPXProject/hpx/pull/2289>

⁵⁶⁵⁹ <https://github.com/TheHPXProject/hpx/issues/2333>

⁵⁶⁶⁰ <http://stellar-group.org/2016/09/vectorized-cpp-parallel-algorithms-with-hpx/>

- We have consolidated all of the code in `HPX.Compute` related to the integration of CUDA. `hpx::partitioned_vector` has been enabled to be usable with `hpx::compute::vector` which allows one to place the partitions on one or more GPU devices.
- Added new performance counters exposing various internals of the thread scheduling subsystem, such as the current idle- and busy-loop counters and instantaneous scheduler utilization.
- Extended and improved the use of the ITTNotify hooks allowing to collect performance counter data and function annotation information from within the Intel Amplifier tool.

Breaking changes

- We have dropped support for the gcc compiler versions V4.6 and 4.7. The minimal gcc version we now test on is gcc V4.8.
- We have removed (default) support for `boost::chrono` in interfaces, uses of it have been replaced with `std::chrono`. This facility can be still enabled at configure time by specifying `-DHPX_WITH_BOOST_CHRONO_COMPATIBILITY=On` to CMake.
- The parameter sequence for the `hpx::parallel::transform_reduce` overload taking one iterator range has changed to match the changes this algorithm has undergone while being moved to C++17.
- The algorithm `hpx::parallel::inner_product` has been renamed to `hpx::parallel::transform_reduce` to match the changes this algorithm has undergone while being moved to C++17.
- the build options `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` and `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY` are now disabled by default. Please change your code still depending on the deprecated interfaces.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2596⁵⁶⁶¹](#) - Adding apex data
- [PR #2595⁵⁶⁶²](#) - Remove obsolete file
- [Issue #2594⁵⁶⁶³](#) - FindOpenCL.cmake mismatch with the official cmake module
- [PR #2592⁵⁶⁶⁴](#) - First attempt to introduce `spmd_block` in `hpx`
- [Issue #2591⁵⁶⁶⁵](#) - Feature request: continuation (then) which does not require the callable object to take a future<R> as parameter
- [PR #2588⁵⁶⁶⁶](#) - Daint fixes

- Issue #702⁵⁹⁸⁰ - Add instrumentation of parcel layer
- Issue #668⁵⁹⁸¹ - Implement ispc task interface
- Issue #533⁵⁹⁸² - Thread queue/dequeue internal parameters should be runtime configurable
- Issue #475⁵⁹⁸³ - Create a means of combining performance counters into querysets

HPX V0.9.99 (Jul 15, 2016)

General changes

As the version number of this release hints, we consider this release to be a preview for the upcoming *HPX* V1.0. All of the functionalities we set out to implement for V1.0 are in place; all of the features we wanted to have exposed are ready. We are very happy with the stability and performance of *HPX* and we would like to present this release to the community in order for us to gather broad feedback before releasing V1.0. We still expect for some minor details to change, but on the whole this release represents what we would like to have in a V1.0.

Overall, since the last release we have had almost 1600 commits while closing almost 400 tickets. These numbers reflect the incredible development activity we have seen over the last couple of months. We would like to express a big ‘Thank you!’ to all contributors and those who helped to make this release happen.

The most notable addition in terms of new functionality available with this release is the full implementation of object migration (i.e. the ability to transparently move *HPX* components to a different compute node). Additionally, this release of *HPX* cleans up many minor issues and some API inconsistencies.

Here are some of the main highlights and changes for this release (in no particular order):

- ⁵⁹⁶⁹ <https://github.com/TheHPXProject/hpx/pull/2232>
- ⁵⁹⁷⁰ <https://github.com/TheHPXProject/hpx/issues/2147>
- ⁵⁹⁷¹ <https://github.com/TheHPXProject/hpx/issues/2109>
- ⁵⁹⁷² <https://github.com/TheHPXProject/hpx/issues/1973>
- ⁵⁹⁷³ <https://github.com/TheHPXProject/hpx/issues/1864>
- ⁵⁹⁷⁴ <https://github.com/TheHPXProject/hpx/issues/1754>
- ⁵⁹⁷⁵ <https://github.com/TheHPXProject/hpx/issues/1655>
- ⁵⁹⁷⁶ <https://github.com/TheHPXProject/hpx/issues/1591>
- ⁵⁹⁷⁷ <https://github.com/TheHPXProject/hpx/issues/1401>
- ⁵⁹⁷⁸ <https://github.com/TheHPXProject/hpx/issues/1125>
- ⁵⁹⁷⁹ <https://github.com/TheHPXProject/hpx/issues/839>
- ⁵⁹⁸⁰ <https://github.com/TheHPXProject/hpx/issues/702>
- ⁵⁹⁸¹ <https://github.com/TheHPXProject/hpx/issues/668>
- ⁵⁹⁸² <https://github.com/TheHPXProject/hpx/issues/533>
- ⁵⁹⁸³ <https://github.com/TheHPXProject/hpx/issues/475>

- We have fixed a couple of issues in AGAS and the parcel layer which have caused hangs, segmentation faults at exit, and a slowdown of applications over time. Fixing those has significantly increased the overall stability and performance of distributed runs.
- We have started to add parallel algorithm overloads based on the C++ Extensions for Ranges (N4560⁵⁹⁸⁴) proposal. This also includes the addition of projections to the existing algorithms. Please see [Issue #1668](#)⁵⁹⁸⁵ for a list of algorithms which have been adapted to N4560⁵⁹⁸⁶.
- We have implemented index-based parallel for-loops based on a corresponding standardization proposal (P0075R1⁵⁹⁸⁷). Please see [Issue #2016](#)⁵⁹⁸⁸ for a list of available algorithms.
- We have added implementations for more parallel algorithms as proposed for the upcoming C++ 17 Standard. See [Issue #1141](#)⁵⁹⁸⁹ for an overview of which algorithms are available by now.
- We have started to implement a new prototypical functionality with *HPX.Compute* which uniformly exposes some of the higher level APIs to heterogeneous architectures (currently CUDA). This functionality is an early preview and should not be considered stable. It may change considerably in the future.
- We have pervasively added (optional) executor arguments to all API functions which schedule new work. Executors are now used throughout the code base as the main means of executing tasks.
- Added `hpx::make_future<R>(future<T> &&)` allowing to convert a future of any type T into a future of any other type R, either based on default conversion rules of the embedded types or using a given explicit conversion function.
- We finally finished the implementation of transparent migration of components to another locality. It is now possible to trigger a migration operation without ‘stopping the world’ for the object to migrate. *HPX* will make sure that no work is being performed on an object before it is migrated and that all subsequently scheduled work for the migrated object will be transparently forwarded to the new locality. Please note that the global id of the migrated object does not change, thus the application will not have to be changed in any way to support this new functionality. Please note that this feature is currently considered experimental. See [Issue #559](#)⁵⁹⁹⁰ and [PR #1966](#)⁵⁹⁹¹ for more details.
- The `hpx::dataflow` facility is now usable with actions. Similarly to `hpx::async`, actions can be specified as an explicit template argument (`hpx::dataflow<Action>(target, ...)`) or as the first argument (`hpx::dataflow(Action(), target, ...)`). We have also enabled the use of distribution policies as the target for dataflow invocations. Please see [Issue #1265](#)⁵⁹⁹² and [PR #1912](#)⁵⁹⁹³ for more information.
- Adding overloads of `gather_here` and `gather_there` to accept the plain values of the data to gather (in addition to the existing overloads expecting futures).
- We have cleaned up and refactored large parts of the code base. This helped reducing compile and link times of *HPX* itself and also of applications depending on it. We have further decreased the dependency of *HPX* on the Boost libraries by replacing part of those with facilities available from the standard libraries.
- Wherever possible we have removed dependencies of our API on Boost by replacing those with the equivalent facility from the C++11 standard library.
- We have added new performance counters for parcel coalescing, file-IO, the AGAS cache, and overall scheduler time. Resetting performance counters has been overhauled and fixed.

⁵⁹⁸⁴ <http://wg21.link/n4560>

⁵⁹⁸⁵ <https://github.com/TheHPXProject/hpx/issues/1668>

⁵⁹⁸⁶ <http://wg21.link/n4560>

⁵⁹⁸⁷ <http://wg21.link/p0075r1>

⁵⁹⁸⁸ <https://github.com/TheHPXProject/hpx/issues/2016>

⁵⁹⁸⁹ <https://github.com/TheHPXProject/hpx/issues/1141>

⁵⁹⁹⁰ <https://github.com/TheHPXProject/hpx/issues/559>

⁵⁹⁹¹ <https://github.com/TheHPXProject/hpx/pull/1966>

⁵⁹⁹² <https://github.com/TheHPXProject/hpx/issues/1265>

⁵⁹⁹³ <https://github.com/TheHPXProject/hpx/pull/1912>

- We have introduced a generic client type `hpx::components::client<>` and added support for using it with `hpx::async`. This removes the necessity to implement specific client types for every component type without losing type safety. This deemphasizes the need for using the low level `hpx::id_type` for referencing (possibly remote) component instances. The plan is to deprecate the direct use of `hpx::id_type` in user code in the future.
- We have added a special iterator which supports automatic prefetching of one or more arrays for speeding up loop-like code (see `hpx::parallel::util::make_prefetcher_context()`).
- We have extended the interfaces exposed from executors (as proposed by [N4406](http://wg21.link/n4406)⁵⁹⁹⁴) to accept an arbitrary number of arguments.

Breaking changes

- In order to move the dataflow facility to namespace `hpx` we added a definition of `hpx::dataflow` which might create ambiguities in existing codes. The previous definition of this facility (`hpx::lcos::local::dataflow`) has been deprecated and is available only if the constant `-DHPX_WITH_LOCAL_DATAFLOW_COMPATIBILITY=On` to `CMake`⁵⁹⁹⁵ is defined at configuration time. Please explicitly qualify all uses of the dataflow facility if you enable this compatibility setting and encounter ambiguities.
- The adaptation of the C++ Extensions for Ranges ([N4560](http://wg21.link/n4560)⁵⁹⁹⁶) proposal imposes some breaking changes related to the return types of some of the parallel algorithms. Please see [Issue #1668](https://github.com/TheHPXProject/hpx/issues/1668)⁵⁹⁹⁷ for a list of algorithms which have already been adapted.
- The facility `hpx::lcos::make_future_void()` has been replaced by `hpx::make_future<void>()`.
- We have removed support for Intel V13 and gcc 4.4.x.
- We have removed (default) support for the generic `hpx::parallel::execution_policy` because it was removed from the Parallelism TS (`__cpp11_n4104__`) while it was being added to the upcoming C++17 Standard. This facility can be still enabled at configure time by specifying `-DHPX_WITH_GENERIC_EXECUTION_POLICY=On` to `CMake`.
- Uses of `boost::shared_ptr` and related facilities have been replaced with `std::shared_ptr` and friends. Uses of `boost::unique_lock`, `boost::lock_guard` etc. have also been replaced by the equivalent (and equally named) tools available from the C++11 standard library.
- Facilities that used to expect an explicit `boost::unique_lock` now take an `std::unique_lock`. Additionally, `condition_variable` no longer aliases `condition_variable_any`; its interface now only works with `std::unique_lock<local::mutex>`.
- Uses of `boost::function`, `boost::bind`, `boost::tuple` have been replaced by the corresponding facilities in *HPX* (`hpx::util::function`, `hpx::util::bind`, and `hpx::util::tuple`, respectively).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [PR #2250⁵⁹⁹⁸](#) - change default chunker of parallel executor to static one
- [PR #2247⁵⁹⁹⁹](#) - HPX on ppc64le
- [PR #2244⁶⁰⁰⁰](#) - Fixing MSVC problems
- [PR #2238⁶⁰⁰¹](#) - Fixing small typos
- [PR #2237⁶⁰⁰²](#) - Fixing small typos
- [PR #2234⁶⁰⁰³](#) - Fix broken add test macro when extra args are passed in
- [PR #2231⁶⁰⁰⁴](#) - Fixing possible race during future awaiting in serialization
- [PR #2230⁶⁰⁰⁵](#) - Fix stream nvcc
- [PR #2229⁶⁰⁰⁶](#) - Fixed run_as_hpx_thread
- [PR #2228⁶⁰⁰⁷](#) - On prefetching_test branch : adding prefetching_iterator and related tests used for prefetching containers within lambda functions
- [PR #2227⁶⁰⁰⁸](#) - Support for HPXCL's opencl::event
- [PR #2226⁶⁰⁰⁹](#) - Preparing for release of V0.9.99
- [PR #2225⁶⁰¹⁰](#) - fix issue when compiling components with hpxcxx
- [PR #2224⁶⁰¹¹](#) - Compute alloc fix
- [PR #2223⁶⁰¹²](#) - Simplify promise
- [PR #2222⁶⁰¹³](#) - Replace last uses of boost::function by util::function_nonsr
- [PR #2221⁶⁰¹⁴](#) - Fix config tests
- [PR #2220⁶⁰¹⁵](#) - Fixing gcc 4.6 compilation issues
- [PR #2219⁶⁰¹⁶](#) - nullptr support for [unique_] function
- [PR #2218⁶⁰¹⁷](#) - Introducing clang tidy
- [PR #2216⁶⁰¹⁸](#) - Replace NULL with nullptr

HPX V0.9.11 (Nov 11, 2015)

Our main focus for this release was the design and development of a coherent set of higher-level APIs exposing various types of parallelism to the application programmer. We introduced the concepts of an `executor`, which can be used to customize the `where` and `when` of execution of tasks in the context of parallelizing codes. We extended all APIs related to managing parallel tasks to support executors which gives the user the choice of either using one of the predefined executor types or to provide its own, possibly application specific, executor. We paid very close attention to align all of these changes with the existing C++ Standards documents or with the ongoing proposals for standardization.

This release is the first after our change to a new development policy. We switched all development to be strictly performed on branches only, all direct commits to our main branch (`master`) are prohibited. Any change has to go through a peer review before it will be merged to `master`. As a result the overall stability of our code base has significantly increased, the development process itself has been simplified. This change manifests itself in a large number of pull-requests which have been merged (please see below for a full list of closed issues and pull-requests). All in all for this release, we closed almost 100 issues and merged over 290 pull-requests. There have been over 1600 commits to the master branch since the last release.

General changes

- We are moving into the direction of unifying managed and simple components. As such, the classes `hpx::components::component` and `hpx::components::component_base` have been added which currently just forward to the currently existing simple component facilities. The examples have been converted to only use those two classes.
- Added integration with the [CircleCI](#)⁶³⁹² hosted continuous integration service. This gives us constant and immediate feedback on the health of our master branch.
- The compiler configuration subsystem in the build system has been reimplemented. Instead of using `Boost.Config` we now use our own lightweight set of `cmake` scripts to determine the available language and library features supported by the used compiler.
- The API for creating instances of components has been consolidated. All component instances should be created using the `hpx::new_` only. It allows one to instantiate both, single component instances and multiple component instances. The placement of the created components can be controlled by special distribution policies. Please see the corresponding documentation outlining the use of `hpx::new_`.
- Introduced four new distribution policies which can be used with many API functions which traditionally expected to be used with a locality id. The new distribution policies are:
 - `hpx::components::default_distribution_policy` which tries to place multiple component instances as evenly as possible.

⁶³⁹¹ <https://github.com/TheHPXProject/hpx/issues/55>

⁶³⁹² <https://circleci.com/gh/TheHPXProject/hpx>

- `hpx::components::colocating_distribution_policy` which will refer to the locality where a given component instance is currently placed.
 - `hpx::components::binpacking_distribution_policy` which will place multiple component instances as evenly as possible based on any performance counter.
 - `hpx::components::target_distribution_policy` which allows one to represent a given locality in the context of a distribution policy.
- The new distribution policies can now be also used with `hpx::async`. This change also deprecates `hpx::async_colocated(id, ...)` which now is replaced by a distribution policy: `hpx::async(hpx::colocated(id), ...)`.
 - The `hpx::vector` and `hpx::unordered_map` data structures can now be used with the new distribution policies as well.
 - The parallel facility `hpx::parallel::task_region` has been renamed to `hpx::parallel::task_block` based on the changes in the corresponding standardization proposal [N4411](#)⁶³⁹³.
 - Added extensions to the parallel facility `hpx::parallel::task_block` allowing to combine a `task_block` with an execution policy. This implies a minor breaking change as the `hpx::parallel::task_block` is now a template.
 - Added new LCOs: `hpx::lcos::latch` and `hpx::lcos::local::latch` which semantically conform to the proposed `std::latch` (see [N4399](#)⁶³⁹⁴).
 - Added performance counters exposing data related to data transferred by input/output (filesystem) operations (thanks to Maciej Brodowicz).
 - Added performance counters allowing to track the number of action invocations (local and remote invocations).
 - Added new command line options `-hpx:print-counter-at` and `-hpx:reset-counters`.
 - The `hpx::vector` component has been renamed to `hpx::partitioned_vector` to make it explicit that the underlying memory is not contiguous.
 - Introduced a completely new and uniform higher-level parallelism API which is based on executors. All existing parallelism APIs have been adapted to this. We have added a large number of different executor types, such as a numa-aware executor, a this-thread executor, etc.
 - Added support for the MingW toolchain on Windows (thanks to Eric Lemanissier).
 - HPX now includes support for APEX, (Autonomic Performance Environment for eXascale). APEX is an instrumentation and software adaptation library that provides an interface to TAU profiling / tracing as well as runtime adaptation of HPX applications through policy definitions. For more information and documentation, please see <https://github.com/UO-OACISS/xpress-apex>. To enable APEX at configuration time, specify `-DHPX_WITH_APEX=On`. To also include support for TAU profiling, specify `-DHPX_WITH_TAU=On` and specify the `-DTAU_ROOT`, `-DTAU_ARCH` and `-DTAU_OPTIONS` cmake parameters.
 - We have implemented many more of the *Using parallel algorithms*. Please see [Issue #1141](#)⁶³⁹⁵ for the list of all available parallel algorithms (thanks to Daniel Bourgeois and John Biddiscombe for contributing their work).

⁶³⁹⁵ <https://github.com/TheHPXProject/hpx/issues/1141>

Breaking changes

- We are moving into the direction of unifying managed and simple components. In order to stop exposing the old facilities, all examples have been converted to use the new classes. The breaking change in this release is that performance counters are now a `hpx::components::component_base` instead of `hpx::components::managed_component_base`.
- We removed the support for stackless threads. It turned out that there was no performance benefit when using stackless threads. As such, we decided to clean up our codebase. This feature was not documented.
- The CMake project name has changed from 'hpx' to 'HPX' for consistency and compatibility with naming conventions and other CMake projects. Generated config files go into `<prefix>/lib/cmake/HPX` and not `<prefix>/lib/cmake/hpx`.
- The macro `HPX_REGISTER_MINIMAL_COMPONENT_FACTORY` has been deprecated. Please use `HPX_REGISTER_COMPONENT` instead. The old macro will be removed in the next release.
- The obsolete `distributing_factory` and `binpacking_factory` components have been removed. The corresponding functionality is now provided by the `hpx::new_` API function in conjunction with the `hpx::default_layout` and `hpx::binpacking` distribution policies (`hpx::components::default_distribution_policy` and `hpx::components::binpacking_distribution_policy`).
- The API function `hpx::new_colocated` has been deprecated. Please use the consolidated API `hpx::new_` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The API function `hpx::async_colocated` has been deprecated. Please use the consolidated API `hpx::async` in conjunction with the new `hpx::colocated` distribution policy (`hpx::components::colocating_distribution_policy`) instead. The old API function will still be available for at least one release of HPX if the configuration variable `HPX_WITH_COLOCATED_BACKWARDS_COMPATIBILITY` is enabled.
- The obsolete `remote_object` component has been removed.
- Replaced the use of Boost.Serialization with our own solution. While the new version is mostly compatible with Boost.Serialization, this change requires some minor code modifications in user code. For more information, please see the corresponding [announcement](#)⁶³⁹⁶ on the `hpx-users@stellar.cct.lsu.edu` mailing list.
- The names used by cmake to influence various configuration options have been unified. The new naming scheme relies on all configuration constants to start with `HPX_WITH_...`, while the preprocessor constant which is used at build time starts with `HPX_HAVE_...`. For instance, the former cmake command line `-DHPX_MALLOC=...` now has to be specified as `-DHPX_WITH_MALLOC=...` and will cause the preprocessor constant `HPX_HAVE_MALLOC` to be defined. The actual name of the constant (i.e. `MALLOC`) has not changed. Please see the corresponding documentation for more details (*CMake options*).
- The `get_gid()` functions exposed by the component base classes `hpx::components::server::simple_component_base`, `hpx::components::server::managed_component_base`, and `hpx::components::server::fixed_component_base` have been replaced by two new functions: `get_unmanaged_id()` and `get_id()`. To enable the old function name for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.
- All functions which were named `get_gid()` but were returning `hpx::id_type` have been renamed to `get_id()`. To enable the old function names for backwards compatibility, use the cmake configuration option `HPX_WITH_COMPONENT_GET_GID_COMPATIBILITY=On`.

⁶⁶⁷⁰ <https://github.com/TheHPXProject/hpx/pull/1556>

- [PR #1555](#)⁶⁶⁷¹ - Remove the necessity to specify archive flags on the receiving end
- [PR #1554](#)⁶⁶⁷² - Removing obsolete Boost.Serialization macros
- [PR #1553](#)⁶⁶⁷³ - Properly fix HPX_DEFINE_*_ACTION macros
- [PR #1552](#)⁶⁶⁷⁴ - Fixed algorithms relying on copy_if implementation
- [PR #1551](#)⁶⁶⁷⁵ - PxfS - Modifying FindOrangeFS.cmake based on OrangeFS 2.9.X
- [Issue #1550](#)⁶⁶⁷⁶ - Passing plain identifier inside HPX_DEFINE_PLAIN_ACTION_1
- [PR #1549](#)⁶⁶⁷⁷ - Fixing intel14/libstdc++4.4
- [PR #1548](#)⁶⁶⁷⁸ - Moving raw_ptr to detail namespace
- [PR #1547](#)⁶⁶⁷⁹ - Adding support for executors to future.then
- [PR #1546](#)⁶⁶⁸⁰ - Executor traits result types
- [PR #1545](#)⁶⁶⁸¹ - Integrate executors with dataflow
- [PR #1543](#)⁶⁶⁸² - Fix potential zero-copy for primarynamespace::bulk_service_async et.al.
- [PR #1542](#)⁶⁶⁸³ - Merging HPX0.9.10 into pxfs branch
- [PR #1541](#)⁶⁶⁸⁴ - Removed stale cmake tests, unused since the great cmake refactoring
- [PR #1540](#)⁶⁶⁸⁵ - Fix idle-rate on platforms without TSC
- [PR #1539](#)⁶⁶⁸⁶ - Reporting situation if zero-copy-serialization was performed by a parcel generated from a plain apply/async
- [PR #1538](#)⁶⁶⁸⁷ - Changed return type of bulk executors and added test
- [Issue #1537](#)⁶⁶⁸⁸ - Incorrect cpuid config tests
- [PR #1536](#)⁶⁶⁸⁹ - Changed return type of bulk executors and added test
- [PR #1535](#)⁶⁶⁹⁰ - Make sure promise::get_gid() can be called more than once
- [PR #1534](#)⁶⁶⁹¹ - Fixed async_callback with bound callback
- [PR #1533](#)⁶⁶⁹² - Updated the link in the documentation to a publically- accessible URL
- [PR #1532](#)⁶⁶⁹³ - Make sure sync primitives are not copyable nor movable

HPX V0.9.10 (Mar 24, 2015)

General changes

This is the 12th official release of *HPX*. It coincides with the 7th anniversary of the first commit to our source code repository. Since then, we have seen over 12300 commits amounting to more than 220000 lines of C++ code.

The major focus of this release was to improve the reliability of large scale runs. We believe to have achieved this goal as we now can reliably run *HPX* applications on up to ~24k cores. We have also shown that HPX can be used with success for symmetric runs (applications using both, host cores and Intel Xeon/Phi coprocessors). This is a huge step forward in terms of the usability of *HPX*. The main focus of this work involved isolating the causes of the segmentation faults at start up and shut down. Many of these issues were discovered to be the result of the suspension of threads which hold locks.

A very important improvement introduced with this release is the refactoring of the code representing our parcel-port implementation. Parcel- ports can now be implemented by 3rd parties as independent plugins which are dynamically loaded at runtime (static linking of parcel-ports is also supported). This refactoring also includes a massive improvement of the performance of our existing parcel-ports. We were able to significantly reduce the networking latencies

⁶⁸⁰⁰ <https://github.com/TheHPXProject/hpx/issues/524>

and to improve the available networking bandwidth. Please note that in this release we disabled the `ibverbs` and `ipc` parcel ports as those have not been ported to the new plugin system yet (see [Issue #839](#)⁶⁸⁰¹).

Another corner stone of this release is our work towards a complete implementation of `__cpp11_n4104__` (Working Draft, Technical Specification for C++ Extensions for Parallelism). This document defines a set of parallel algorithms to be added to the C++ standard library. We now have implemented about 75% of all specified parallel algorithms (see [[link hpx.manual.parallel.parallel_algorithms](#) Parallel Algorithms] for more details). We also implemented some extensions to `__cpp11_n4104__` allowing to invoke all of the algorithms asynchronously.

This release adds a first implementation of `hpx::vector` which is a distributed data structure closely aligned to the functionality of `std::vector`. The difference is that `hpx::vector` stores the data in partitions where the partitions can be distributed over different localities. We started to work on allowing to use the parallel algorithms with `hpx::vector`. At this point we have implemented only a few of the parallel algorithms to support distributed data structures (like `hpx::vector`) for testing purposes (see [Issue #1338](#)⁶⁸⁰² for a documentation of our progress).

Breaking changes

With this release we put a lot of effort into changing the code base to be more compatible to C++11. These changes have caused the following issues for backward compatibility:

- **Move to Variadics**- All of the API now uses variadic templates. However, this change required to modify the argument sequence for some of the exiting API functions ([hpx::async_continue](#), [hpx::apply_continue](#), [hpx::when_each](#), [hpx::wait_each](#), synchronous invocation of actions).
- **Changes to Macros**- We also removed the macros `HPX_STD_FUNCTION` and `HPX_STD_TUPLE`. This shouldn't affect any user code as we replaced `HPX_STD_FUNCTION` with `hpx::util::function_nonser` which was the default expansion used for this macro. All `HPX` API functions which expect a `hpx::util::function_nonser` (or a `hpx::util::unique_function_nonser`) can now be transparently called with a compatible `std::function` instead. Similarly, `HPX_STD_TUPLE` was replaced by its default expansion as well: `hpx::util::tuple`.
- **Changes to `hpx::unique_future`**- `hpx::unique_future`, which was deprecated in the previous release for [hpx::future](#) is now completely removed from `HPX`. This completes the transition to a completely standards conforming implementation of `hpx::future`.
- **Changes to Supported Compilers**. Finally, in order to utilize more C++11 semantics, we have officially dropped support for GCC 4.4 and MSVC 2012. Please see our [Prerequisites](#) page for more details.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1402](#)⁶⁸⁰³ - Internal `shared_future` serialization copies
- [Issue #1399](#)⁶⁸⁰⁴ - Build takes unusually long time...
- [Issue #1398](#)⁶⁸⁰⁵ - Tests using the scan partitioner are broken on at least gcc 4.7 and intel compiler
- [Issue #1397](#)⁶⁸⁰⁶ - Completely remove `hpx::unique_future`
- [Issue #1396](#)⁶⁸⁰⁷ - Parallel scan algorithms with different initial values

⁶⁸⁹⁸ <https://github.com/TheHPXProject/hpx/issues/1297>

- Issue #1294⁶⁸⁹⁹ - HDF5 build error
- Issue #1275⁶⁹⁰⁰ - The parcelport implementation is non-optimal
- Issue #1267⁶⁹⁰¹ - Added classes and unit tests for local_file, orangefs_file and pxfs_file
- Issue #1264⁶⁹⁰² - Error “assertion ‘!m_fun’ failed” randomly occurs when using TCP
- Issue #1254⁶⁹⁰³ - thread binding seems to not work properly
- Issue #1220⁶⁹⁰⁴ - parallel::copy_if is broken
- Issue #1217⁶⁹⁰⁵ - Find a better way of fixing the issue patched by #1216
- Issue #1168⁶⁹⁰⁶ - Starting HPX on Cray machines using aprun isn’t working correctly
- Issue #1085⁶⁹⁰⁷ - Replace startup and shutdown barriers with broadcasts
- Issue #981⁶⁹⁰⁸ - With SLURM, -hpx:threads=8 should not be necessary
- Issue #857⁶⁹⁰⁹ - hpx::naming::locality leaks parcelport specific information into the public interface
- Issue #850⁶⁹¹⁰ - “flush” not documented
- Issue #763⁶⁹¹¹ - Create buildbot instance that uses std::bind as HPX_STD_BIND
- Issue #680⁶⁹¹² - Convert parcel ports into a plugin system
- Issue #582⁶⁹¹³ - Make exception thrown from HPX threads available from hpx::init
- Issue #504⁶⁹¹⁴ - Refactor Dataflow LCO to work with futures
- Issue #196⁶⁹¹⁵ - Don’t store copies of the locality network metadata in the gva table

HPX V0.9.9 (Oct 31, 2014, codename Spooky)

General changes

We have had over 1500 commits since the last release and we have closed over 200 tickets (bugs, feature requests, pull requests, etc.). These are by far the largest numbers of commits and resolved issues for any of the *HPX* releases so far. We are especially happy about the large number of people who contributed for the first time to *HPX*.

- We completed the transition from the older (non-conforming) implementation of `hpx::future` to the new and fully conforming version by removing the old code and by renaming the type `hpx::unique_future` to `hpx::future`. In order to maintain backwards compatibility with existing code which uses the type `hpx::unique_future` we support the configuration variable `HPX_UNIQUE_FUTURE_ALIAS`. If this variable is set to ON while running cmake it will additionally define a template alias for this type.

⁶⁹¹⁴ <https://github.com/TheHPXProject/hpx/issues/504>

⁶⁹¹⁵ <https://github.com/TheHPXProject/hpx/issues/196>

- We rewrote and significantly changed our build system. Please have a look at the new (now generated) documentation here: [Building HPX](#). Please revisit your build scripts to adapt to the changes. The most notable changes are:
 - HPX_NO_INSTALL is no longer necessary.
 - For external builds, you need to set HPX_DIR instead of HPX_ROOT as described here: [Using HPX with CMake-based projects](#).
 - IDEs that support multiple configurations (Visual Studio and XCode) can now be used as intended. that means no build dir.
 - Building HPX statically (without dynamic libraries) is now supported (-DHPX_STATIC_LINKING=On).
 - Please note that many variables used to configure the build process have been renamed to unify the naming conventions (see the section [CMake options](#) for more information).
 - This also fixes a long list of issues, for more information see [Issue #1204](#)⁶⁹¹⁶.
- We started to implement various proposals to the C++ Standardization committee related to parallelism and concurrency, most notably [N4409](#)⁶⁹¹⁷ (Working Draft, Technical Specification for C++ Extensions for Parallelism), [N4411](#)⁶⁹¹⁸ (Task Region Rev. 3), and [N4313](#)⁶⁹¹⁹ (Working Draft, Technical Specification for C++ Extensions for Concurrency).
- We completely remodeled our automatic build system to run builds and unit tests on various systems and compilers. This allows us to find most bugs right as they were introduced and helps to maintain a high level of quality and compatibility. The newest build logs can be found at [HPX Buildbot Website](#)⁶⁹²⁰.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1296](#)⁶⁹²¹ - Rename make_error_future to make_exceptional_future, adjust to N4123
- [Issue #1295](#)⁶⁹²² - building issue
- [Issue #1293](#)⁶⁹²³ - Transpose example
- [Issue #1292](#)⁶⁹²⁴ - Wrong abs() function used in example
- [Issue #1291](#)⁶⁹²⁵ - non-synchronized shift operators have been removed
- [Issue #1290](#)⁶⁹²⁶ - RDTSCP is defined as true for Xeon Phi build
- [Issue #1289](#)⁶⁹²⁷ - Fixing 1288
- [Issue #1288](#)⁶⁹²⁸ - Add new performance counters
- [Issue #1287](#)⁶⁹²⁹ - Hierarchy scheduler broken performance counters

HPX V0.9.8 (Mar 24, 2014)

We have had over 800 commits since the last release and we have closed over 65 tickets (bugs, feature requests, etc.).

With the changes below, *HPX* is once again leading the charge of a whole new era of computation. By intrinsically breaking down and synchronizing the work to be done, *HPX* insures that application developers will no longer have to fret about where a segment of code executes. That allows coders to focus their time and energy to understanding the data dependencies of their algorithms and thereby the core obstacles to an efficient code. Here are some of the advantages of using *HPX*:

- *HPX* is solidly rooted in a sophisticated theoretical execution model – ParalleX
- *HPX* exposes an API fully conforming to the C++11 and the draft C++14 standards, extended and applied to distributed computing. Everything programmers know about the concurrency primitives of the standard C++ library is still valid in the context of *HPX*.
- It provides a competitive, high performance implementation of modern, future-proof ideas which gives an smooth migration path from today's mainstream techniques
- There is no need for the programmer to worry about lower level parallelization paradigms like threads or message passing; no need to understand pthreads, MPI, OpenMP, or Windows threads, etc.
- There is no need to think about different types of parallelism such as tasks, pipelines, or fork-join, task or data parallelism.
- The same source of your program compiles and runs on Linux, BlueGene/Q, Mac OS X, Windows, and Android.
- The same code runs on shared memory multi-core systems and supercomputers, on handheld devices and Intel® Xeon Phi™ accelerators, or a heterogeneous mix of those.

⁷¹⁴⁴ <https://github.com/TheHPXProject/hpx/issues/44>

General changes

- A major API breaking change for this release was introduced by implementing `hpx::future` and `hpx::shared_future` fully in conformance with the C++11 Standard⁷¹⁴⁵. While `hpx::shared_future` is new and will not create any compatibility problems, we revised the interface and implementation of the existing `hpx::future`. For more details please see the [mailing list archive](#)⁷¹⁴⁶. To avoid any incompatibilities for existing code we named the type which implements the `std::future` interface as `hpx::unique_future`. For the next release this will be renamed to `hpx::future`, making it full conforming to C++11 Standard⁷¹⁴⁷.
- A large part of the code base of *HPX* has been refactored and partially re-implemented. The main changes were related to
 - The threading subsystem: these changes significantly reduce the amount of overheads caused by the schedulers, improve the modularity of the code base, and extend the variety of available scheduling algorithms.
 - The parcel subsystem: these changes improve the performance of the *HPX* networking layer, modularize the structure of the parcelports, and simplify the creation of new parcelports for other underlying networking libraries.
 - The API subsystem: these changes improved the conformance of the API to C++11 Standard, extend and unify the available API functionality, and decrease the overheads created by various elements of the API.
 - The robustness of the component loading subsystem has been improved significantly, allowing to more portably and more reliably register the components needed by an application as startup. This additionally speeds up general application initialization.
- We added new API functionality like `hpx::migrate` and `hpx::copy_component` which are the basic building blocks necessary for implementing higher level abstractions for system-wide load balancing, runtime-adaptive resource management, and object-oriented checkpointing and state-management.
- We removed the use of C++11 move emulation (using `Boost.Move`), replacing it with C++11 rvalue references. This is the first step towards using more and more native C++11 facilities which we plan to introduce in the future.
- We improved the reference counting scheme used by *HPX* which helps managing distributed objects and memory. This improves the overall stability of *HPX* and further simplifies writing real world applications.
- The minimal Boost version required to use *HPX* is now V1.49.0.
- This release coincides with the first release of HPXPI (V0.1.0), the first implementation of the [XPI specification](#)⁷¹⁴⁸.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1086](#)⁷¹⁴⁹ - Expose internal `boost::shared_array` to allow user management of array lifetime
- [Issue #1083](#)⁷¹⁵⁰ - Make shell examples copyable in docs
- [Issue #1080](#)⁷¹⁵¹ - `/threads{locality#*/total}/count/cumulative` broken
- [Issue #1079](#)⁷¹⁵² - Build problems on OS X

HPX V0.9.7 (Nov 13, 2013)

We have had over 1000 commits since the last release and we have closed over 180 tickets (bugs, feature requests, etc.).

General changes

- Ported HPX to BlueGene/Q
- Improved HPX support for Xeon/Phi accelerators
- Reimplemented `hpx::bind`, `hpx::tuple`, and `hpx::function` for better performance and better compliance with the C++11 Standard. Added `hpx::mem_fn`.
- Reworked `hpx::when_all` and `hpx::when_any` for better compliance with the ongoing C++ standardization effort, added heterogeneous version for those functions. Added `hpx::when_any_swapped`.
- Added `hpx::copy` as a precursor for a migrate functionality
- Added `hpx::get_ptr` allowing to directly access the memory underlying a given component
- Added the `hpx::lcos::broadcast`, `hpx::lcos::reduce`, and `hpx::lcos::fold` collective operations
- Added `hpx::get_locality_name` allowing to retrieve the name of any of the localities for the application.
- Added support for more flexible thread affinity control from the HPX command line, such as new modes for `--hpx:bind` (balanced, scattered, compact), improved default settings when running multiple localities on the same node.
- Added experimental executors for simpler thread pooling and scheduling. This API may change in the future as it will stay aligned with the ongoing C++ standardization efforts.
- Massively improved the performance of the HPX serialization code. Added partial support for zero copy serialization of array and bitwise-copyable types.
- General performance improvements of the code related to threads and futures.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release.

- [Issue #1005⁷²²³](#) - Allow one to disable array optimizations and zero copy optimizations for each parcelport
- [Issue #1004⁷²²⁴](#) - Generate new HPX logo image for the docs
- [Issue #1002⁷²²⁵](#) - If MPI parcelport is not available, running HPX under mpirun should fail
- [Issue #1001⁷²²⁶](#) - Zero copy serialization raises assert
- [Issue #1000⁷²²⁷](#) - Can't connect to a HPX application running with the MPI parcelport from a non MPI parcelport locality
- [Issue #999⁷²²⁸](#) - Optimize `hpx::when_n`

- Issue #966⁷²⁵² - `--hpx:print-bind` physical core numbers are wrong
- Issue #965⁷²⁵³ - Deadlock when building in Release mode
- Issue #963⁷²⁵⁴ - Not all worker threads are working
- Issue #962⁷²⁵⁵ - Problem with SLURM integration
- Issue #961⁷²⁵⁶ - `--hpx:print-bind` outputs incorrect information
- Issue #960⁷²⁵⁷ - Fix cut and paste error in documentation of `get_thread_priority`
- Issue #959⁷²⁵⁸ - Change link to `boost.atomic` in documentation to point to `boost.org`
- Issue #958⁷²⁵⁹ - Undefined reference to `intrusive_ptr_release`
- Issue #957⁷²⁶⁰ - Make tuple standard compliant
- Issue #956⁷²⁶¹ - Segfault with `a3382fb`
- Issue #955⁷²⁶² - `--hpx:nodes` and `--hpx:nodefiles` do not work with foreign nodes
- Issue #954⁷²⁶³ - Make order of arguments for `hpx::async` and `hpx::broadcast` consistent
- Issue #953⁷²⁶⁴ - Cannot use MKL with HPX
- Issue #952⁷²⁶⁵ - `register_[pre_]shutdown_function` never throw
- Issue #951⁷²⁶⁶ - Assert when number of threads is greater than hardware concurrency
- Issue #948⁷²⁶⁷ - `HPX_HAVE_GENERIC_CONTEXT_COROUTINES` conflicts with `HPX_HAVE_FIBER_BASED_COROUTINES`
- Issue #947⁷²⁶⁸ - Need `MPI_THREAD_MULTIPLE` for backward compatibility
- Issue #946⁷²⁶⁹ - HPX does not call `MPI_Finalize`
- Issue #945⁷²⁷⁰ - Segfault with `hpx::lcos::broadcast`
- Issue #944⁷²⁷¹ - OS X: assertion `pu_offset_ < hardware_concurrency` failed
- Issue #943⁷²⁷² - `#include <hpx/hpx_main.hpp>` does not work
- Issue #942⁷²⁷³ - Make the BG/Q work with `-O3`
- Issue #940⁷²⁷⁴ - Use separator when concatenating locality name

- [Issue #939](#)⁷²⁷⁵ - Refactor MPI parcellport to use `MPI_Wait` instead of multiple `MPI_Test` calls
- [Issue #938](#)⁷²⁷⁶ - Want to officially access `client_base::gid_`
- [Issue #937](#)⁷²⁷⁷ - `client_base::gid_` should be private`
- [Issue #936](#)⁷²⁷⁸ - Want doxygen-like source code index
- [Issue #935](#)⁷²⁷⁹ - Build error with gcc 4.6 and Boost 1.54.0 on hpx trunk and 0.9.6
- [Issue #933](#)⁷²⁸⁰ - Cannot build HPX with Boost 1.54.0
- [Issue #932](#)⁷²⁸¹ - Components are destructed too early
- [Issue #931](#)⁷²⁸² - Make HPX work on BG/Q
- [Issue #930](#)⁷²⁸³ - make git-docs is broken
- [Issue #929](#)⁷²⁸⁴ - Generating index in docs broken
- [Issue #928](#)⁷²⁸⁵ - Optimize `hpx::util::static_` for C++11 compilers supporting magic statics
- [Issue #924](#)⁷²⁸⁶ - Make `kill_process_tree` (in `process.py`) more robust on Mac OSX
- [Issue #923](#)⁷²⁸⁷ - Correct BLAS and RNPL cmake tests
- [Issue #922](#)⁷²⁸⁸ - Cannot link against BLAS
- [Issue #921](#)⁷²⁸⁹ - Implement `hpx::mem_fn`
- [Issue #920](#)⁷²⁹⁰ - Output locality with `--hpx:print-bind`
- [Issue #919](#)⁷²⁹¹ - Correct grammar; simplify boolean expressions
- [Issue #918](#)⁷²⁹² - Link to `hello_world.cpp` is broken
- [Issue #917](#)⁷²⁹³ - adapt cmake file to new boostbook version
- [Issue #916](#)⁷²⁹⁴ - fix problem building documentation with `xsltproc` `>= 1.1.27`
- [Issue #915](#)⁷²⁹⁵ - Add another TBBMalloc library search path
- [Issue #914](#)⁷²⁹⁶ - Build problem with Intel compiler on Stampede (TACC)
- [Issue #913](#)⁷²⁹⁷ - fix error messages in fibonacci examples

- Issue #911⁷²⁹⁸ - Update OS X build instructions
- Issue #910⁷²⁹⁹ - Want like to specify MPI_ROOT instead of compiler wrapper script
- Issue #909⁷³⁰⁰ - Warning about void* arithmetic
- Issue #908⁷³⁰¹ - Buildbot for MIC is broken
- Issue #906⁷³⁰² - Can't use --hpx:bind=balanced with multiple MPI processes
- Issue #905⁷³⁰³ - --hpx:bind documentation should describe full grammar
- Issue #904⁷³⁰⁴ - Add hpx::lcos::fold and hpx::lcos::inverse_fold collective operation
- Issue #903⁷³⁰⁵ - Add hpx::when_any_swapped()
- Issue #902⁷³⁰⁶ - Add hpx::lcos::reduce collective operation
- Issue #901⁷³⁰⁷ - Web documentation is not searchable
- Issue #900⁷³⁰⁸ - Web documentation for trunk has no index
- Issue #898⁷³⁰⁹ - Some tests fail with GCC 4.8.1 and MPI parcel port
- Issue #897⁷³¹⁰ - HWLOC causes failures on Mac
- Issue #896⁷³¹¹ - pu-offset leads to startup error
- Issue #895⁷³¹² - hpx::get_locality_name not defined
- Issue #894⁷³¹³ - Race condition at shutdown
- Issue #893⁷³¹⁴ - --hpx:print-bind switches std::cout to hexadecimal mode
- Issue #892⁷³¹⁵ - hwloc_topology_load can be expensive – don't call multiple times
- Issue #891⁷³¹⁶ - The documentation for get_locality_name is wrong
- Issue #890⁷³¹⁷ - --hpx:print-bind should not exit
- Issue #889⁷³¹⁸ - --hpx:debug-hpx-log=FILE does not work
- Issue #888⁷³¹⁹ - MPI parcelport does not exit cleanly for --hpx:print-bind
- Issue #887⁷³²⁰ - Choose thread affinities more cleverly

- Issue #886⁷³²¹ - Logging documentation is confusing
- Issue #885⁷³²² - Two threads are slower than one
- Issue #884⁷³²³ - `is_callable` failing with member pointers in C++11
- Issue #883⁷³²⁴ - Need help with `is_callable_test`
- Issue #882⁷³²⁵ - `tests.regressions.lcos.future_hang_on_get` does not terminate
- Issue #881⁷³²⁶ - `tests.regressions/block_matrix/matrix.hh` won't compile with GCC 4.8.1
- Issue #880⁷³²⁷ - HPX does not work on OS X
- Issue #878⁷³²⁸ - `future::unwrap` triggers assertion
- Issue #877⁷³²⁹ - “make tests” has build errors on Ubuntu 12.10
- Issue #876⁷³³⁰ - `tcmalloc` is used by default, even if it is not present
- Issue #875⁷³³¹ - `global_fixture` is defined in a header file
- Issue #874⁷³³² - Some tests take very long
- Issue #873⁷³³³ - Add block-matrix code as regression test
- Issue #872⁷³³⁴ - HPX documentation does not say how to run tests with detailed output
- Issue #871⁷³³⁵ - All tests fail with “make test”
- Issue #870⁷³³⁶ - Please explicitly disable serialization in classes that don't support it
- Issue #868⁷³³⁷ - `boost_any` test failing
- Issue #867⁷³³⁸ - Reduce the number of copies of `hpx::function` arguments
- Issue #863⁷³³⁹ - Futures should not require a default constructor
- Issue #862⁷³⁴⁰ - `value_or_error` shall not default construct its result
- Issue #861⁷³⁴¹ - `HPX_UNUSED` macro
- Issue #860⁷³⁴² - Add functionality to copy construct a component
- Issue #859⁷³⁴³ - `hpx::endl` should flush

- Issue #858⁷³⁴⁴ - Create `hpx::get_ptr<>` allowing to access component implementation
- Issue #855⁷³⁴⁵ - Implement `hpx::INVOKE`
- Issue #854⁷³⁴⁶ - `hpx/hpx.hpp` does not include `hpx/include/iostreams.hpp`
- Issue #853⁷³⁴⁷ - Feature request: null future
- Issue #852⁷³⁴⁸ - Feature request: Locality names
- Issue #851⁷³⁴⁹ - `hpx::cout` output does not appear on screen
- Issue #849⁷³⁵⁰ - All tests fail on OS X after installing
- Issue #848⁷³⁵¹ - Update OS X build instructions
- Issue #846⁷³⁵² - Update `hpx_external_example`
- Issue #845⁷³⁵³ - Issues with having both debug and release modules in the same directory
- Issue #844⁷³⁵⁴ - Create configuration header
- Issue #843⁷³⁵⁵ - Tests should use CTest
- Issue #842⁷³⁵⁶ - Remove `buffer_pool` from MPI parcelport
- Issue #841⁷³⁵⁷ - Add possibility to broadcast an index with `hpx::lcos::broadcast`
- Issue #838⁷³⁵⁸ - Simplify `util::tuple`
- Issue #837⁷³⁵⁹ - Adopt `boost::tuple` tests for `util::tuple`
- Issue #836⁷³⁶⁰ - Adopt `boost::function` tests for `util::function`
- Issue #835⁷³⁶¹ - Tuple interface missing pieces
- Issue #833⁷³⁶² - Partially preprocessing files not working
- Issue #832⁷³⁶³ - Native papi counters do not work with wild cards
- Issue #831⁷³⁶⁴ - Arithmetics counter fails if only one parameter is given
- Issue #830⁷³⁶⁵ - Convert `hpx::util::function` to use new scheme for serializing its base pointer
- Issue #829⁷³⁶⁶ - Consistently use `decay<T>` instead of `remove_const< remove_reference<T>>`

HPX V0.9.6 (Jul 30, 2013)

We have had over 1200 commits since the last release and we have closed roughly 140 tickets (bugs, feature requests, etc.).

General changes

The major new features in this release are:

- We further consolidated the API exposed by *HPX*. We aligned our APIs as much as possible with the existing [C++11 Standard](http://www.open-std.org/jtc1/sc22/wg21)⁷⁴⁰⁹ and related proposals to the C++ standardization committee (such as [N3632](http://wg21.link/n3632)⁷⁴¹⁰ and [N3857](http://wg21.link/n3857)⁷⁴¹¹).
- We implemented a first version of a distributed AGAS service which essentially eliminates all explicit AGAS network traffic.
- We created a native *ibverbs* *parcelport* allowing to take advantage of the superior latency and bandwidth characteristics of *Infiniband* networks.
- We successfully ported *HPX* to the Xeon Phi platform.
- Support for the SLURM scheduling system was implemented.
- Major efforts have been dedicated to improving the performance counter framework, numerous new counters were implemented and new APIs were added.
- We added a modular *parcel compression* system allowing to improve bandwidth utilization (by reducing the overall size of the transferred data).
- We added a modular *parcel coalescing* system allowing to combine several *parcels* into larger messages. This reduces latencies introduced by the communication layer.
- Added an experimental *executors API* allowing to use different scheduling policies for different parts of the code. This API has been modelled after the Standards proposal [N3562](http://wg21.link/n3562)⁷⁴¹². This API is bound to change in the future, though.
- Added minimal security support for localities which is enforced on the *parcelport* level. This support is preliminary and experimental and might change in the future.
- We created a *parcelport* using low level *MPI* functions. This is in support of legacy applications which are to be gradually ported and to support platforms where *MPI* is the only available portable networking layer.
- We added a preliminary and experimental implementation of a *tuple-space object* which exposes an interface similar to such systems described in the literature (see for instance [The Linda Coordination Language](https://en.wikipedia.org/wiki/Linda_(coordination_language))⁷⁴¹³).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is again a very long list of newly implemented features and fixed issues.

- [Issue #806](#)⁷⁴¹⁴ - make (all) in examples folder does nothing
- [Issue #805](#)⁷⁴¹⁵ - Adding the introduction and fixing DOCTEST dependencies for Windows use
- [Issue #804](#)⁷⁴¹⁶ - Add stackless (non-suspendable) thread type
- [Issue #803](#)⁷⁴¹⁷ - Create proper serialization support functions for util::tuple
- [Issue #800](#)⁷⁴¹⁸ - Add possibility to disable array optimizations during serialization
- [Issue #798](#)⁷⁴¹⁹ - HPX_LIMIT does not work for local dataflow
- [Issue #797](#)⁷⁴²⁰ - Create a parcelport which uses MPI
- [Issue #796](#)⁷⁴²¹ - Problem with Large Numbers of Threads
- [Issue #793](#)⁷⁴²² - Changing dataflow test case to hang consistently
- [Issue #792](#)⁷⁴²³ - CMake Error
- [Issue #791](#)⁷⁴²⁴ - Problems with local::dataflow
- [Issue #790](#)⁷⁴²⁵ - wait_for() doesn't compile
- [Issue #789](#)⁷⁴²⁶ - HPX with Intel compiler segfaults
- [Issue #788](#)⁷⁴²⁷ - Intel compiler support
- [Issue #787](#)⁷⁴²⁸ - Fixed SFINAE specializations
- [Issue #786](#)⁷⁴²⁹ - Memory issues during benchmarking.
- [Issue #785](#)⁷⁴³⁰ - Create an API allowing to register external threads with HPX
- [Issue #784](#)⁷⁴³¹ - util::plugin is throwing an error when a symbol is not found
- [Issue #783](#)⁷⁴³² - How does hpx::bind work?
- [Issue #782](#)⁷⁴³³ - Added quotes around STRING REPLACE potentially empty arguments
- [Issue #781](#)⁷⁴³⁴ - Make sure no exceptions propagate into the thread manager

- [Issue #780⁷⁴³⁵](#) - Allow arithmetics performance counters to expand its parameters
- [Issue #779⁷⁴³⁶](#) - Test case for 778
- [Issue #778⁷⁴³⁷](#) - Swapping futures segfaults
- [Issue #777⁷⁴³⁸](#) - `hpx::lcos::details::when_XXX` don't restore completion handlers
- [Issue #776⁷⁴³⁹](#) - Compiler chokes on dataflow overload with launch policy
- [Issue #775⁷⁴⁴⁰](#) - Runtime error with local dataflow (copying futures?)
- [Issue #774⁷⁴⁴¹](#) - Using local dataflow without explicit namespace
- [Issue #773⁷⁴⁴²](#) - Local dataflow with `unwrap`: functor operators need to be `const`
- [Issue #772⁷⁴⁴³](#) - Allow (remote) actions to return a future
- [Issue #771⁷⁴⁴⁴](#) - Setting `HPX_LIMIT` gives huge boost MPL errors
- [Issue #770⁷⁴⁴⁵](#) - Add launch policy to (local) dataflow
- [Issue #769⁷⁴⁴⁶](#) - Make compile time configuration information available
- [Issue #768⁷⁴⁴⁷](#) - `const` correctness problem in local dataflow
- [Issue #767⁷⁴⁴⁸](#) - Add launch policies to `async`
- [Issue #766⁷⁴⁴⁹](#) - Mark data structures for optimized (array based) serialization
- [Issue #765⁷⁴⁵⁰](#) - Align `hpx::any` with N3508: Any Library Proposal (Revision 2)
- [Issue #764⁷⁴⁵¹](#) - Align `hpx::future` with newest N3558: A Standardized Representation of Asynchronous Operations
- [Issue #762⁷⁴⁵²](#) - added a human readable output for the ping pong example
- [Issue #761⁷⁴⁵³](#) - Ambiguous typename when constructing derived component
- [Issue #760⁷⁴⁵⁴](#) - Simple components can not be derived
- [Issue #759⁷⁴⁵⁵](#) - make install doesn't give a complete install
- [Issue #758⁷⁴⁵⁶](#) - Stack overflow when using `locking_hook<>`
- [Issue #757⁷⁴⁵⁷](#) - copy paste error; unsupported function overloading

- Issue #756⁷⁴⁵⁸ - GTCX runtime issue in Gordon
- Issue #755⁷⁴⁵⁹ - Papi counters don't work with reset and evaluate API's
- Issue #753⁷⁴⁶⁰ - cmake bugfix and improved component action docs
- Issue #752⁷⁴⁶¹ - hpx simple component docs
- Issue #750⁷⁴⁶² - Add hpx::util::any
- Issue #749⁷⁴⁶³ - Thread phase counter is not reset
- Issue #748⁷⁴⁶⁴ - Memory performance counter are not registered
- Issue #747⁷⁴⁶⁵ - Create performance counters exposing arithmetic operations
- Issue #745⁷⁴⁶⁶ - apply_callback needs to invoke callback when applied locally
- Issue #744⁷⁴⁶⁷ - CMake fixes
- Issue #743⁷⁴⁶⁸ - Problem Building github version of HPX
- Issue #742⁷⁴⁶⁹ - Remove HPX_STD_BIND
- Issue #741⁷⁴⁷⁰ - assertion 'px != 0' failed: HPX(assertion_failure) for low numbers of OS threads
- Issue #739⁷⁴⁷¹ - Performance counters do not count to the end of the program or evaluation
- Issue #738⁷⁴⁷² - Dedicated AGAS server runs don't work; console ignores -a option.
- Issue #737⁷⁴⁷³ - Missing bind overloads
- Issue #736⁷⁴⁷⁴ - Performance counter wildcards do not always work
- Issue #735⁷⁴⁷⁵ - Create native ibverbs parcelport based on rdma operations
- Issue #734⁷⁴⁷⁶ - Threads stolen performance counter total is incorrect
- Issue #733⁷⁴⁷⁷ - Test benchmarks need to be checked and fixed
- Issue #732⁷⁴⁷⁸ - Build fails with Mac, using mac ports clang-3.3 on latest git branch
- Issue #731⁷⁴⁷⁹ - Add global start/stop API for performance counters
- Issue #730⁷⁴⁸⁰ - Performance counter values are apparently incorrect

⁷⁴⁸⁰ <https://github.com/TheHPXProject/hpx/issues/730>

- Issue #729⁷⁴⁸¹ - Unhandled switch
- Issue #728⁷⁴⁸² - Serialization of `hpx::util::function` between two localities causes seg faults
- Issue #727⁷⁴⁸³ - Memory counters on Mac OS X
- Issue #725⁷⁴⁸⁴ - Restore original thread priority on resume
- Issue #724⁷⁴⁸⁵ - Performance benchmarks do not depend on main HPX libraries
- Issue #723⁷⁴⁸⁶ - `[teletype]-hpx:nodes=`cat $PBS_NODEFILE`` works; `-hpx:nodefile=$PBS_NODEFILE` does not.`[c++]`
- Issue #722⁷⁴⁸⁷ - Fix binding `const` member functions as actions
- Issue #719⁷⁴⁸⁸ - Create performance counter exposing compression ratio
- Issue #718⁷⁴⁸⁹ - Add possibility to compress parcel data
- Issue #717⁷⁴⁹⁰ - `strip_credit_from_gid` has misleading semantics
- Issue #716⁷⁴⁹¹ - Non-option arguments to programs run using `pbsdsh` must be before `--hpx:nodes`, contrary to directions
- Issue #715⁷⁴⁹² - Re-thrown exceptions should retain the original call site
- Issue #714⁷⁴⁹³ - failed assertion in debug mode
- Issue #713⁷⁴⁹⁴ - Add performance counters monitoring connection caches
- Issue #712⁷⁴⁹⁵ - Adjust parcel related performance counters to be connection type specific
- Issue #711⁷⁴⁹⁶ - configuration failure
- Issue #710⁷⁴⁹⁷ - Error “timed out while trying to find room in the connection cache” when trying to start multiple localities on a single computer
- Issue #709⁷⁴⁹⁸ - Add new thread state ‘staged’ referring to task descriptions
- Issue #708⁷⁴⁹⁹ - Detect/mitigate bad non-system installs of GCC on Redhat systems
- Issue #707⁷⁵⁰⁰ - Many examples do not link with Git HEAD version
- Issue #706⁷⁵⁰¹ - `hpx::init` removes portions of non-option command line arguments before last = sign
- Issue #705⁷⁵⁰² - Create rolling average and median aggregating performance counters

⁷⁵⁰² <https://github.com/TheHPXProject/hpx/issues/705>

- Issue #704⁷⁵⁰³ - Create performance counter to expose thread queue waiting time
- Issue #703⁷⁵⁰⁴ - Add support to HPX build system to find libcrctool.a and related headers
- Issue #699⁷⁵⁰⁵ - Generalize instrumentation support
- Issue #698⁷⁵⁰⁶ - compilation failure with hwloc absent
- Issue #697⁷⁵⁰⁷ - Performance counter counts should be zero indexed
- Issue #696⁷⁵⁰⁸ - Distributed problem
- Issue #695⁷⁵⁰⁹ - Bad perf counter time printed
- Issue #693⁷⁵¹⁰ - --help doesn't print component specific command line options
- Issue #692⁷⁵¹¹ - SLURM support broken
- Issue #691⁷⁵¹² - exception while executing any application linked with hwloc
- Issue #690⁷⁵¹³ - thread_id_test and thread_launcher_test failing
- Issue #689⁷⁵¹⁴ - Make the buildbots use hwloc
- Issue #687⁷⁵¹⁵ - compilation error fix (hwloc_topology)
- Issue #686⁷⁵¹⁶ - Linker Error for Applications
- Issue #684⁷⁵¹⁷ - Pinning of service thread fails when number of worker threads equals the number of cores
- Issue #682⁷⁵¹⁸ - Add performance counters exposing number of stolen threads
- Issue #681⁷⁵¹⁹ - Add apply_continue for asynchronous chaining of actions
- Issue #679⁷⁵²⁰ - Remove obsolete async_callback API functions
- Issue #678⁷⁵²¹ - Add new API for setting/triggering LCOs
- Issue #677⁷⁵²² - Add async_continue for true continuation style actions
- Issue #676⁷⁵²³ - Buildbot for gcc 4.4 broken
- Issue #675⁷⁵²⁴ - Partial preprocessing broken
- Issue #674⁷⁵²⁵ - HPX segfaults when built with gcc 4.7

HPX V0.9.5 (Jan 16, 2013)

We have had over 1000 commits since the last release and we have closed roughly 150 tickets (bugs, feature requests, etc.).

General changes

This release is continuing along the lines of code and API consolidation, and overall usability improvements. We dedicated much attention to performance and we were able to significantly improve the threading and networking subsystems.

We successfully ported *HPX* to the Android platform. *HPX* applications now not only can run on mobile devices, but we support heterogeneous applications running across architecture boundaries. At the Supercomputing Conference 2012 we demonstrated connecting Android tablets to simulations running on a Linux cluster. The Android tablet was used to query performance counters from the Linux simulation and to steer its parameters.

We successfully ported *HPX* to Mac OSX (using the Clang compiler). Thanks to Pyry Jähkölä for contributing the corresponding patches. Please see the section `macos_installation` for more details.

We made a special effort to make *HPX* usable in highly concurrent use cases. Many of the *HPX* API functions which possibly take longer than 100 microseconds to execute now can be invoked asynchronously. We added uniform support for composing futures which simplifies to write asynchronous code. *HPX* actions (function objects encapsulating possibly concurrent remote function invocations) are now well integrated with all other API facilities such like `hpx::bind`.

All of the API has been aligned as much as possible with established paradigms. *HPX* now mirrors many of the facilities as defined in the C++11 Standard, such as `hpx::thread`, `hpx::function`, `hpx::future`, etc.

A lot of work has been put into improving the documentation. Many of the API functions are documented now, concepts are explained in detail, and examples are better described than before. The new documentation index enables finding information with lesser effort.

This is the first release of *HPX* we perform after the move to [Github](#)⁷⁵⁵⁴. This step has enabled a wider participation from the community and further encourages us in our decision to release *HPX* as a true open source library (*HPX* is licensed under the very liberal [Boost Software License](#)⁷⁵⁵⁵).

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release. This is by far the longest list of newly implemented features and fixed issues for any of HPX' releases so far.

- [Issue #666](#)⁷⁵⁵⁶ - Segfault on calling `hpx::finalize` twice
- [Issue #665](#)⁷⁵⁵⁷ - Adding declaration `num_of_cores`
- [Issue #662](#)⁷⁵⁵⁸ - `pkgconfig` is building wrong
- [Issue #660](#)⁷⁵⁵⁹ - Need `uninterrupt` function
- [Issue #659](#)⁷⁵⁶⁰ - Move our logging library into a different namespace
- [Issue #658](#)⁷⁵⁶¹ - Dynamic performance counter types are broken
- [Issue #657](#)⁷⁵⁶² - HPX v0.9.5 (RC1) `hello_world` example segfaulting
- [Issue #656](#)⁷⁵⁶³ - Define the affinity of `parcel-pool`, `io-pool`, and `timer-pool` threads
- [Issue #654](#)⁷⁵⁶⁴ - Integrate the Boost `auto_index` tool with documentation
- [Issue #653](#)⁷⁵⁶⁵ - Make HPX build on OS X + Clang + `libc++`
- [Issue #651](#)⁷⁵⁶⁶ - Add fine-grained control for thread pinning
- [Issue #650](#)⁷⁵⁶⁷ - Command line no error message when using `-hpx:(anything)`
- [Issue #645](#)⁷⁵⁶⁸ - Command line aliases don't work in `[teletype]`@file`[c++]`
- [Issue #644](#)⁷⁵⁶⁹ - Terminated threads are not always properly cleaned up
- [Issue #640](#)⁷⁵⁷⁰ - `future_data<T>::set_on_completed_` used without locks
- [Issue #638](#)⁷⁵⁷¹ - `hpx` build with intel compilers fails on linux
- [Issue #637](#)⁷⁵⁷² - `-copy-dt-needed-entries` breaks with gold
- [Issue #635](#)⁷⁵⁷³ - Boost V1.53 will add `Boost.Lockfree` and `Boost.Atomic`
- [Issue #633](#)⁷⁵⁷⁴ - Re-add examples to final 0.9.5 release
- [Issue #632](#)⁷⁵⁷⁵ - Example `thread_aware_timer` is broken
- [Issue #631](#)⁷⁵⁷⁶ - FFT application throws error in `parcellayer`

- Issue #630⁷⁵⁷⁷ - Event synchronization example is broken
- Issue #629⁷⁵⁷⁸ - Waiting on futures hangs
- Issue #628⁷⁵⁷⁹ - Add an HPX_ALWAYS_ASSERT macro
- Issue #625⁷⁵⁸⁰ - Port coroutines context switch benchmark
- Issue #621⁷⁵⁸¹ - New INI section for stack sizes
- Issue #618⁷⁵⁸² - pkg_config support does not work with a HPX debug build
- Issue #617⁷⁵⁸³ - hpx/external/logging/boost/logging/detail/cache_before_init.hpp:139:67: error: 'get_thread_id' was not declared in this scope
- Issue #616⁷⁵⁸⁴ - Change wait_xxx not to use locking
- Issue #615⁷⁵⁸⁵ - Revert visibility 'fix' (fb0b6b8245dad1127b0c25ebafd9386b3945cca9)
- Issue #614⁷⁵⁸⁶ - Fix Dataflow linker error
- Issue #613⁷⁵⁸⁷ - find_here should throw an exception on failure
- Issue #612⁷⁵⁸⁸ - Thread phase doesn't show up in debug mode
- Issue #611⁷⁵⁸⁹ - Make stack guard pages configurable at runtime (initialization time)
- Issue #610⁷⁵⁹⁰ - Co-Locate Components
- Issue #609⁷⁵⁹¹ - future_overhead
- Issue #608⁷⁵⁹² - --hpx:list-counter-infos problem
- Issue #607⁷⁵⁹³ - Update Boost.Context based backend for coroutines
- Issue #606⁷⁵⁹⁴ - 1d_wave_equation is not working
- Issue #605⁷⁵⁹⁵ - Any C++ function that has serializable arguments and a serializable return type should be remotable
- Issue #604⁷⁵⁹⁶ - Connecting localities isn't working anymore
- Issue #603⁷⁵⁹⁷ - Do not verify any ini entries read from a file
- Issue #602⁷⁵⁹⁸ - Rename argument_size to type_size/ added implementation to get parcel size

- Issue #488⁷⁶⁶⁸ - Adding OpenCL and OCLM support to HPX for the MSVC platform
- Issue #487⁷⁶⁶⁹ - FindHPX.cmake problems
- Issue #485⁷⁶⁷⁰ - Change distributing_factory and binpacking_factory to use bulk creation
- Issue #484⁷⁶⁷¹ - Change HPX_DONT_USE_PREPROCESSED_FILES to HPX_USE_PREPROCESSED_FILES
- Issue #483⁷⁶⁷² - Memory counter for Windows
- Issue #479⁷⁶⁷³ - strange errors appear when requesting performance counters on multiple nodes
- Issue #477⁷⁶⁷⁴ - Create (global) timer for multi-threaded measurements
- Issue #472⁷⁶⁷⁵ - Add partial preprocessing using Wave
- Issue #471⁷⁶⁷⁶ - Segfault stack traces don't show up in release
- Issue #468⁷⁶⁷⁷ - External projects need to link with internal components
- Issue #462⁷⁶⁷⁸ - Startup/shutdown functions are called more than once
- Issue #458⁷⁶⁷⁹ - Consolidate hpx::util::high_resolution_timer and hpx::util::high_resolution_clock
- Issue #457⁷⁶⁸⁰ - index out of bounds in allgather_and_gate on 4 cores or more
- Issue #448⁷⁶⁸¹ - Make HPX compile with clang
- Issue #447⁷⁶⁸² - 'make tests' should execute tests on local installation
- Issue #446⁷⁶⁸³ - Remove SVN-related code from the codebase
- Issue #444⁷⁶⁸⁴ - race condition in smp
- Issue #441⁷⁶⁸⁵ - Patched Boost.Serialization headers should only be installed if needed
- Issue #439⁷⁶⁸⁶ - Components using HPX_REGISTER_STARTUP_MODULE fail to compile with MSVC
- Issue #436⁷⁶⁸⁷ - Verify that no locks are being held while threads are suspended
- Issue #435⁷⁶⁸⁸ - Installing HPX should not clobber existing Boost installation
- Issue #434⁷⁶⁸⁹ - Logging external component failed (Boost 1.50)
- Issue #433⁷⁶⁹⁰ - Runtime crash when building all examples

HPX V0.9.0 (Jul 5, 2012)

We have had roughly 800 commits since the last release and we have closed approximately 80 tickets (bugs, feature requests, etc.).

General changes

- Significant improvements made to the usability of *HPX* in large-scale, distributed environments.
- Renamed `hpx::lcos::packaged_task` to `hpx::lcos::packaged_action` to reflect the semantic differences to a `packaged_task` as defined by the C++11 Standard⁷⁷¹².
- *HPX* now exposes `hpx::thread` which is compliant to the C++11 `std::thread` type except that it (purely locally) represents an *HPX* thread. This new type does not expose any of the remote capabilities of the underlying *HPX*-thread implementation.
- The type `hpx::lcos::future` is now compliant to the C++11 `std::future<>` type. This type can be used to synchronize both, local and remote operations. In both cases the control flow will ‘return’ to the future in order to trigger any continuation.
- The types `hpx::lcos::local::promise` and `hpx::lcos::local::packaged_task` are now compliant to the C++11 `std::promise<>` and `std::packaged_task<>` types. These can be used to create a future representing local work only. Use the types `hpx::lcos::promise` and `hpx::lcos::packaged_action` to wrap any (possibly remote) action into a future.
- `hpx::thread` and `hpx::lcos::future` are now cancelable.
- Added support for sequential and logic composition of `hpx::lcos::futures`. The member function `hpx::lcos::future::when` permits futures to be sequentially composed. The helper functions `hpx::wait_all`, `hpx::wait_any`, and `hpx::wait_n` can be used to wait for more than one future at a time.
- *HPX* now exposes `hpx::apply` and `hpx::async` as the preferred way of creating (or invoking) any deferred work. These functions are usable with various types of functions, function objects, and actions and provide a uniform way to spawn deferred tasks.
- *HPX* now utilizes `hpx::util::bind` to (partially) bind local functions and function objects, and also actions. Remote bound actions can have placeholders as well.
- *HPX* continuations are now fully polymorphic. The class `hpx::actions::forwarding_continuation` is an example of how the user can write its own types of continuations. It can be used to execute any function as an continuation of a particular action.
- Reworked the action invocation API to be fully conformant to normal functions. Actions can now be invoked using `hpx::apply`, `hpx::async`, or using the `operator()` implemented on actions. Actions themselves can now be cheaply instantiated as they do not have any members anymore.
- Reworked the lazy action invocation API. Actions can now be directly bound using `hpx::util::bind` by passing an action instance as the first argument.
- A minimal *HPX* program now looks like this:

```
#include <hpx/hpx_init.hpp>

int hpx_main()
{
    return hpx::finalize();
}
```

(continues on next page)

⁷⁷¹² <http://www.open-std.org/jtc1/sc22/wg21>

(continued from previous page)

```
int main()
{
    return hpx::init();
}
```

This removes the immediate dependency on the `Boost.Program_options`⁷⁷¹³ library.

Note

This minimal version of an *HPX* program does not support any of the default command line arguments (such as `-help`, or command line options related to PBS). It is suggested to always pass `argc` and `argv` to *HPX* as shown in the example below.

- In order to support those, but still not to depend on `Boost.Program_options`⁷⁷¹⁴, the minimal program can be written as:

```
#include <hpx/hpx_init.hpp>

// The arguments for hpx_main can be left off, which very similar to the
// behavior of ``main()`` as defined by C++.
int hpx_main(int argc, char* argv[])
{
    return hpx::finalize();
}

int main(int argc, char* argv[])
{
    return hpx::init(argc, argv);
}
```

- Added performance counters exposing the number of component instances which are alive on a given locality.
- Added performance counters exposing then number of messages sent and received, the number of parcels sent and received, the number of bytes sent and received, the overall time required to send and receive data, and the overall time required to serialize and deserialize the data.
- Added a new component: `hpx::components::binpacking_factory` which is equivalent to the existing `hpx::components::distributing_factory` component, except that it equalizes the overall population of the components to create. It exposes two factory methods, one based on the number of existing instances of the component type to create, and one based on an arbitrary performance counter which will be queried for all relevant localities.
- Added API functions allowing to access elements of the diagnostic information embedded in the given exception: `hpx::get_locality_id`, `hpx::get_host_name`, `hpx::get_process_id`, `hpx::get_function_name`, `hpx::get_file_name`, `hpx::get_line_number`, `hpx::get_os_thread`, `hpx::get_thread_id`, and `hpx::get_thread_description`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- Issue #71⁷⁷¹⁵ - GIDs that are not serialized via `handle_gid<>` should raise an exception
- Issue #105⁷⁷¹⁶ - Allow for `hpx::util::functions` to be registered in the AGAS symbolic namespace
- Issue #107⁷⁷¹⁷ - Nasty threadmanger race condition (reproducible in `sheneos_test`)
- Issue #108⁷⁷¹⁸ - Add millisecond resolution to *HPX* logs on Linux
- Issue #110⁷⁷¹⁹ - Shutdown hang in distributed with release build
- Issue #116⁷⁷²⁰ - Don't use TSS for the applier and runtime pointers
- Issue #162⁷⁷²¹ - Move local synchronous execution shortcut from `hpx::function` to the applier
- Issue #172⁷⁷²² - Cache sources in CMake and check if they change manually
- Issue #178⁷⁷²³ - Add an INI option to turn off ranged-based AGAS caching
- Issue #187⁷⁷²⁴ - Support for disabling performance counter deployment
- Issue #202⁷⁷²⁵ - Support for sending performance counter data to a specific file
- Issue #218⁷⁷²⁶ - `boost.coroutines` allows different stack sizes, but stack pool is unaware of this
- Issue #231⁷⁷²⁷ - Implement movable `boost::bind`
- Issue #232⁷⁷²⁸ - Implement movable `boost::function`
- Issue #236⁷⁷²⁹ - Allow binding `hpx::util::function` to actions
- Issue #239⁷⁷³⁰ - Replace `hpx::function` with `hpx::util::function`
- Issue #240⁷⁷³¹ - Can't specify `RemoteResult` with `lcos::async`
- Issue #242⁷⁷³² - `REGISTER_TEMPLATE` support for plain actions
- Issue #243⁷⁷³³ - `handle_gid<>` support for `hpx::util::function`
- Issue #245⁷⁷³⁴ - `*_c_cache` code throws an exception if the queried GID is not in the local cache
- Issue #246⁷⁷³⁵ - Undefined references in `dataflow/adaptive1d` example

General changes

- *HPX* does not need to be installed anymore to be functional.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this point release:

- [Issue #295⁷⁷⁷⁷](https://github.com/TheHPXProject/hpx/issues/295) - Don't require install path to be known at compile time.
- [Issue #371⁷⁷⁷⁸](https://github.com/TheHPXProject/hpx/issues/371) - Add `hpx::iostreams` to standard build.
- [Issue #384⁷⁷⁷⁹](https://github.com/TheHPXProject/hpx/issues/384) - Fix compilation with GCC 4.7.
- [Issue #390⁷⁷⁸⁰](https://github.com/TheHPXProject/hpx/issues/390) - Remove `keep_factory_alive` startup call from ShenEOS; add shutdown call to `H5close`.
- [Issue #393⁷⁷⁸¹](https://github.com/TheHPXProject/hpx/issues/393) - Thread affinity control is broken.

Bug fixes (commits)

Here is a list of the important commits included in this point release:

- `r7642` - External: Fix backtrace memory violation.
- **`r7775` - Components: Fix symbol visibility bug with component startup providers.** This prevents one components providers from overriding another components.
- `r7778` - Components: Fix startup/shutdown provider shadowing issues.

HPX V0.8.0 (Mar 23, 2012)

We have had roughly 1000 commits since the last release and we have closed approximately 70 tickets (bugs, feature requests, etc.).

General changes

- Improved PBS support, allowing for arbitrary naming schemes of node-hostnames.
- Finished verification of the reference counting framework.
- Implemented decrement merging logic to optimize the distributed reference counting system.
- Restructured the LCO framework. Renamed `hpx::lcos::eager_future<>` and `hpx::lcos::lazy_future<>` into `hpx::lcos::packaged_task` and `hpx::lcos::deferred_packaged_task`. Split `hpx::lcos::promise` into `hpx::lcos::packaged_task` and `hpx::lcos::future`. Added 'local' futures (in namespace `hpx::lcos::local`).
- Improved the general performance of local and remote action invocations. This (under certain circumstances) drastically reduces the number of copies created for each of the parameters and return values.

⁷⁷⁷⁷ <https://github.com/TheHPXProject/hpx/issues/295>

⁷⁷⁷⁸ <https://github.com/TheHPXProject/hpx/issues/371>

⁷⁷⁷⁹ <https://github.com/TheHPXProject/hpx/issues/384>

⁷⁷⁸⁰ <https://github.com/TheHPXProject/hpx/issues/390>

⁷⁷⁸¹ <https://github.com/TheHPXProject/hpx/issues/393>

- Reworked the performance counter framework. Performance counters are now created only when needed, which reduces the overall resource requirements. The new framework allows for much more flexible creation and management of performance counters. The new sine example application demonstrates some of the capabilities of the new infrastructure.
- Added a buildbot-based continuous build system which gives instant, automated feedback on each commit to SVN.
- Added more automated tests to verify proper functioning of *HPX*.
- Started to create documentation for *HPX* and its API.
- Added documentation toolchain to the build system.
- Added dataflow LCO.
- Changed default *HPX* command line options to have `hpx:` prefix. For instance, the former option `--threads` is now `--hpx:threads`. This has been done to make ambiguities with possible application specific command line options as unlikely as possible. See the section *HPX Command Line Options* for a full list of available options.
- Added the possibility to define command line aliases. The former short (one-letter) command line options have been predefined as aliases for backwards compatibility. See the section *HPX Command Line Options* for a detailed description of command line option aliasing.
- Network connections are now cached based on the connected host. The number of simultaneous connections to a particular host is now limited. Parcels are buffered and bundled if all connections are in use.
- Added more refined thread affinity control. This is based on the external library Portable Hardware Locality (HWLOC).
- Improved support for Windows builds with CMake.
- Added support for components to register their own command line options.
- Added the possibility to register custom startup/shutdown functions for any component. These functions are guaranteed to be executed by an *HPX* thread.
- Added two new experimental thread schedulers: `hierarchy_scheduler` and `periodic_priority_scheduler`. These can be activated by using the command line options `--hpx:queuing=hierarchy` or `--hpx:queuing=periodic`.

Example applications

- [Graph500 performance benchmark](http://www.graph500.org/)⁷⁷⁸² (thanks to Matthew Anderson for contributing this application).
- [GTC \(Gyrokinetic Toroidal Code\)](http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/)⁷⁷⁸³: a skeleton for particle in cell type codes.
- Random Memory Access: an example demonstrating random memory accesses in a large array
- [ShenEOS example](http://stellarcollapse.org/equationofstate)⁷⁷⁸⁴, demonstrating partitioning of large read-only data structures and exposing an interpolation API.
- Sine performance counter demo.
- Accumulator examples demonstrating how to write and use *HPX* components.
- Quickstart examples (like `hello_world`, `fibonacci`, `quicksort`, `factorial`, etc.) demonstrating simple *HPX* concepts which introduce some of the concepts in *HPX*.
- Load balancing and work stealing demos.

⁷⁷⁸² <http://www.graph500.org/>

⁷⁷⁸³ <http://www.nersc.gov/research-and-development/benchmarking-and-workload-characterization/nersc-6-benchmarks/gtc/>

⁷⁷⁸⁴ <http://stellarcollapse.org/equationofstate>

API changes

- Moved all local LCOs into a separate namespace `hpx::lcos::local` (for instance, `hpx::lcos::local_mutex` is now `hpx::lcos::local::mutex`).
- Replaced `hpx::actions::function` with `hpx::util::function`. Cleaned up related code.
- Removed `hpx::traits::handle_gid` and moved handling of global reference counts into the corresponding serialization code.
- Changed terminology: `prefix` is now called `locality_id`, renamed the corresponding API functions (such as `hpx::get_prefix`, which is now called `hpx::get_locality_id`).
- Adding *`hpx::find_remote_localities`*, and *`hpx::get_num_localities`*.
- Changed performance counter naming scheme to make it more bash friendly. The new performance counter naming scheme is now

`/object{parentname#parentindex/instance#index}/counter#parameters`

- Added `hpx::get_worker_thread_num` replacing `hpx::threadmanager_base::get_thread_num`.
- Renamed `hpx::get_num_os_threads` to `hpx::get_os_threads_count`.
- Added `hpx::threads::get_thread_count`.
- Restructured the Futures sub-system, renaming types in accordance with the terminology used by the C++11 ISO standard.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #31](#)⁷⁷⁸⁵ - Specialize `handle_gid<>` for examples and tests
- [Issue #72](#)⁷⁷⁸⁶ - Fix AGAS reference counting
- [Issue #104](#)⁷⁷⁸⁷ - heartbeat throws an exception when decrefing the performance counter it's watching
- [Issue #111](#)⁷⁷⁸⁸ - throttle causes an exception on the target application
- [Issue #142](#)⁷⁷⁸⁹ - One failed component loading causes an unrelated component to fail
- [Issue #165](#)⁷⁷⁹⁰ - Remote exception propagation bug in AGAS reference counting test
- [Issue #186](#)⁷⁷⁹¹ - Test credit exhaustion/splitting (e.g. `prepare_gid` and symbol NS)
- [Issue #188](#)⁷⁷⁹² - Implement remaining AGAS reference counting test cases
- [Issue #258](#)⁷⁷⁹³ - No type checking of GIDs in stubs classes
- [Issue #271](#)⁷⁷⁹⁴ - Seg fault/shared pointer assertion in distributed code

⁷⁸³² <https://github.com/TheHPXProject/hpx/issues/361>

⁷⁸³³ <https://github.com/TheHPXProject/hpx/issues/364>

General changes

- Completely removed code related to deprecated AGAS V1, started to work on AGAS V2.1.
- Started to clean up and streamline the exposed APIs (see ‘API changes’ below for more details).
- Revamped and unified performance counter framework, added a lot of new performance counter instances for monitoring of a diverse set of internal *HPX* parameters (queue lengths, access statistics, etc.).
- Improved general error handling and logging support.
- Fixed several race conditions, improved overall stability, decreased memory footprint, improved overall performance (major optimizations include native TLS support and ranged-based AGAS caching).
- Added support for running *HPX* applications with PBS.
- Many updates to the build system, added support for gcc 4.5.x and 4.6.x, added C++11 support.
- Many updates to default command line options.
- Added many tests, set up buildbot for continuous integration testing.
- Better shutdown handling of distributed applications.

Example applications

- quickstart/factorial and quickstart/fibonacci, future-recursive parallel algorithms.
- quickstart/hello_world, distributed hello world example.
- quickstart/rma, simple remote memory access example
- quickstart/quicksort, parallel quicksort implementation.
- gtc, gyrokinetic torodial code.
- bfs, breadth-first-search, example code for a graph application.
- sheneos, partitioning of large data sets.
- accumulator, simple component example.
- balancing/os_thread_num, balancing/px_thread_phase, examples demonstrating load balancing and work stealing.

API changes

- Added `hpx::find_all_localities`.
- Added `hpx::terminate` for non-graceful termination of applications.
- Added `hpx::lcos::async` functions for simpler asynchronous programming.
- Added new AGAS interface for handling of symbolic namespace (`hpx::agas::*`).
- Renamed `hpx::components::wait` to `hpx::lcos::wait`.
- Renamed `hpx::lcos::future_value` to `hpx::lcos::promise`.
- Renamed `hpx::lcos::recursive_mutex` to `hpx::lcos::local_recursive_mutex`, `hpx::lcos::mutex` to `hpx::lcos::local_mutex`
- Removed support for Boost versions older than V1.38, recommended Boost version is now V1.47 and newer.

- Removed `hpx::process` (this will be replaced by a real process implementation in the future).
- Removed non-functional LCO code (`hpx::lcos::dataflow`, `hpx::lcos::thunk`, `hpx::lcos::dataflow_variable`).
- Removed deprecated `hpx::naming::full_address`.

Bug fixes (closed tickets)

Here is a list of the important tickets we closed for this release:

- [Issue #28](#)⁷⁸³⁴ - Integrate Windows/Linux CMake code for *HPX* core
- [Issue #32](#)⁷⁸³⁵ - `hpx::cout()` should be `hpx::cout`
- [Issue #33](#)⁷⁸³⁶ - AGAS V2 legacy client does not properly handle `error_code`
- [Issue #60](#)⁷⁸³⁷ - AGAS: allow for `registerid` to optionally take ownership of the `gid`
- [Issue #62](#)⁷⁸³⁸ - `adaptive1d` compilation failure in Fusion
- [Issue #64](#)⁷⁸³⁹ - Parcel subsystem doesn't resolve domain names
- [Issue #83](#)⁷⁸⁴⁰ - No error handling if no console is available
- [Issue #84](#)⁷⁸⁴¹ - No error handling if a hosted locality is treated as the bootstrap server
- [Issue #90](#)⁷⁸⁴² - Add general commandline option `-N`
- [Issue #91](#)⁷⁸⁴³ - Add possibility to read command line arguments from file
- [Issue #92](#)⁷⁸⁴⁴ - Always log exceptions/errors to the log file
- [Issue #93](#)⁷⁸⁴⁵ - Log the command line/program name
- [Issue #95](#)⁷⁸⁴⁶ - Support for distributed launches
- [Issue #97](#)⁷⁸⁴⁷ - Attempt to create a bad component type in AMR examples
- [Issue #100](#)⁷⁸⁴⁸ - `factorial` and `factorial_get` examples trigger AGAS component type assertions
- [Issue #101](#)⁷⁸⁴⁹ - Segfault when `hpx::process::here()` is called in `fibonacci2`
- [Issue #102](#)⁷⁸⁵⁰ - `unknown_component_address` in `int_object_semaphore_client`
- [Issue #114](#)⁷⁸⁵¹ - `marduk` raises assertion with default parameters

2.11.3 Namespace changes

HPX V1.9.0 Namespace changes

The latest release includes amongst others changes in the namespaces so that *HPX* facilities correspond to the C++ Standard Library. The old namespaces are deprecated. Below is a comprehensive list of the namespace changes.

Table 2.194: Namespace changes in V1.9.0

Old namespace	New namespace
<code>hpx::util::mem_fn</code>	<code>hpx::mem_fn</code>
<code>hpx::util::invoke</code>	<code>hpx::invoke</code>
<code>hpx::util::invoke_r</code>	<code>hpx::invoke_r</code>
<code>hpx::util::invoke_fused</code>	<code>hpx::invoke_fused</code>
<code>hpx::util::invoke_fused_r</code>	<code>hpx::invoke_fused_r</code>
<code>hpx::util::unlock_guard</code>	<code>hpx::unlock_guard</code>
<code>hpx::parallel::v1::reduce_by_key</code>	<code>hpx::experimental::reduce_by_key</code>
<code>hpx::parallel::v1::sort_by_key</code>	<code>hpx::experimental::sort_by_key</code>
<code>hpx::parallel::task_canceled_exception</code>	<code>hpx::experimental::task_canceled_exception</code>
<code>hpx::parallel::task_block</code>	<code>hpx::experimental::task_block</code>
<code>hpx::parallel::define_task_block</code>	<code>hpx::experimental::define_task_block </code>
<code>hpx::parallel::define_task_block_restore_thread</code>	<code>hpx::experimental::define_task_block_restore_thread</code>
<code>hpx::execution::experimental::task_group</code>	<code>hpx::experimental::task_group</code>

2.14 About *HPX*

2.14.1 History

The development of High Performance ParalleX (*HPX*) began in 2007. At that time, Hartmut Kaiser became interested in the work done by the ParalleX group at the [Center for Computation and Technology \(CCT\)](#)⁷⁹¹³, a multi-disciplinary research institute at [Louisiana State University \(LSU\)](#)⁷⁹¹⁴. The ParalleX group was working to develop a new and experimental execution model for future high performance computing architectures. This model was christened ParalleX. The first implementations of ParalleX were crude, and many of those designs had to be discarded entirely. However, over time the team learned quite a bit about how to design a parallel, distributed runtime system which implements the concepts of ParalleX.

From the very beginning, this endeavour has been a group effort. In addition to a handful of interested researchers, there have always been graduate and undergraduate students participating in the discussions, design, and implementation of *HPX*. In 2011 we decided to formalize our collective research efforts by creating the [STE||AR](#)⁷⁹¹⁵ group (Systems Technology, Emergent Parallelism, and Algorithm Research). Over time, the team grew to include researchers around the country and the world. In 2014, the [STE||AR](#)⁷⁹¹⁶ Group was reorganized to become the international community it is today. This consortium of researchers aims to develop stable, sustainable, and scalable tools which will enable application developers to exploit the parallelism latent in the machines of today and tomorrow. Our goal of the *HPX* project is to create a high quality, freely available, open source implementation of ParalleX concepts for conventional and future systems by building a modular and standards conforming runtime system for SMP and distributed application environments. The API exposed by *HPX* is conformant to the interfaces defined by the C++ ISO Standard and adheres to the programming guidelines used by the [Boost](#)⁷⁹¹⁷ collection of C++ libraries. We steer the development of *HPX* with real world applications and aim to provide a smooth migration path for domain scientists.

To learn more about [STE||AR](#)⁷⁹¹⁸ and ParalleX, see [People](#) and [Why HPX?](#).

2.14.2 People

The [STE||AR](https://stellar-group.org)⁷⁹¹⁹ Group (pronounced as stellar) stands for “Systems Technology, Emergent Parallelism, and Algorithm Research”. We are an international group of faculty, researchers, and students working at various institutions around the world. The goal of the [STE||AR](https://stellar-group.org)⁷⁹²⁰ Group is to promote the development of scalable parallel applications by providing a community for ideas, a framework for collaboration, and a platform for communicating these concepts to the broader community.

Our work is focused on building technologies for scalable parallel applications. *HPX*, our general purpose C++ runtime system for parallel and distributed applications, is no exception. We use *HPX* for a broad range of scientific applications, helping scientists and developers to write code which scales better and shows better performance compared to more conventional programming models such as MPI.

HPX is based on *ParalleX* which is a new (and still experimental) parallel execution model aiming to overcome the limitations imposed by the current hardware and the techniques we use to write applications today. Our group focuses on two types of applications - those requiring excellent strong scaling, allowing for a dramatic reduction of execution time for fixed workloads and those needing highest level of sustained performance through massive parallelism. These applications are presently unable (through conventional practices) to effectively exploit a relatively small number of cores in a multi-core system. By extension, these application will not be able to exploit high-end exascale computing systems which are likely to employ hundreds of millions of such cores by the end of this decade.

Critical bottlenecks to the effective use of new generation high performance computing (HPC) systems include:

- *Starvation*: due to lack of usable application parallelism and means of managing it,
- *Overhead*: reduction to permit strong scalability, improve efficiency, and enable dynamic resource management,
- *Latency*: from remote access across system or to local memories,
- *Contention*: due to multicore chip I/O pins, memory banks, and system interconnects.

The *ParalleX* model has been devised to address these challenges by enabling a new computing dynamic through the application of message-driven computation in a global address space context with lightweight synchronization. The work on *HPX* is centered around implementing the concepts as defined by the *ParalleX* model. *HPX* is currently targeted at conventional machines, such as classical Linux based Beowulf clusters and SMP nodes.

We fully understand that the success of *HPX* (and *ParalleX*) is very much the result of the work of many people. To see a list of who is contributing see our tables below.

Acknowledgements

Thanks also to the following people who contributed directly or indirectly to the project through discussions, pull requests, documentation patches, etc.

- Panos Syskakis for benchmarking and optimizing our parallel algorithms.
- Shreyas Atre, for contributing fixes to our implementation of senders/receivers and extending our coroutines integration with senders/receivers.
- Alexander Neumann, for contributing fixes to the cmake build system.
- Dimitra Karatza, for her work on refactoring the documentation and providing a new user-friendly environment during and after Google Season of Docs 2021.
- Srinivas Yadav, for his work on SIMD support in algorithms before and during Google Summer of Code 2021.
- Akhil Nair, for his work on adapting algorithms to C++20 before and during Google Summer of Code 2021.
- Alexander Toktarev, for updating the parallel algorithm customization points to use `tag_fallback_invoke` for the default implementations.
- Brice Goglin, for reporting and helping fix issues related to the integration of hwloc in *HPX*.
- Giannis Gonidelis, for his work on the ranges adaptation during the Google Summer of Code 2020.
- Auriane Reverdell ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹⁵⁰), for her tireless work on refactoring our CMake setup and modularizing *HPX*.
- Christopher Hinz, for his work on refactoring our CMake setup.
- Weile Wei, for fixing *HPX* builds with CUDA on Summit.
- Severin Strobl, for fixing our CMake setup related to linking and adding new entry points to the *HPX* runtime.
- Rebecca Stobaugh, for her major documentation review and contributions during and after the 2019 Google Season of Documentation.
- Jan Melech, for adding automatic serialization of simple structs.
- Austin McCartney, for adding concept emulation of the Ranges TS bidirectional and random access iterator concepts.
- Marco Diers, reporting and fixing issues related PMIx.
- Maximilian Bremer, for reporting multiple issues and extending the component migration tests.
- Piotr Mikolajczyk, for his improvements and fixes to the set and count algorithms.
- Grant Rostig, for reporting several deficiencies on our web pages.
- Jakub Golinowski, for implementing an *HPX* backend for OpenCV and in the process improving documentation and reporting issues.

- Mikael Simberg ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹⁵¹), for his tireless help cleaning up and maintaining *HPX*.
- Tianyi Zhang, for his work on HPXMP.
- Shahrzad Shirzad, for her contributions related to Phylanx.
- Christopher Ogle, for his contributions to the parallel algorithms.
- Surya Priy, for his work with statistic performance counters.
- Anushi Maheshwari, for her work on random number generation.
- Bruno Pitrus, for his work with parallel algorithms.
- Nikunj Gupta, for rewriting the implementation of `hpx_main.hpp` and for his fixes for tests.
- Christopher Taylor, for his interest in *HPX* and the fixes he provided. Chris also contributed support for RISC-V architectures.
- Shoshana Jakobovits, for her work on the resource partitioner.
- Denis Blank, who re-wrote our unwrapped function to accept plain values arbitrary containers, and properly deal with nested futures.
- Ajai V. George, who implemented several of the parallel algorithms.
- Taeguk Kwon, who worked on implementing parallel algorithms as well as adapting the parallel algorithms to the Ranges TS.
- Zach Byerly ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁵²), who in his work developing applications on top of *HPX* opened tickets and contributed to the *HPX* examples.
- Daniel Estermann, for his work porting *HPX* to the Raspberry Pi.
- Alireza Kheirkhahan ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁵³), who built and administered our local cluster as well as his work in distributed IO.
- Abhimanyu Rawat, who worked on stack overflow detection.
- David Pfander, who improved signal handling in *HPX*, provided his optimization expertise, and worked on incorporating the Vc vectorization into *HPX*.
- Denis Demidov, who contributed his insights with VexCL.
- Khalid Hasanov, who contributed changes which allowed to run *HPX* on 64Bit power-pc architectures.
- Zahra Khatami ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁵⁴), who contributed the prefetching iterators and the persistent auto chunking executor parameters implementation.
- Marcin Copik, who worked on implementing GPU support for C++AMP and HCC. He also worked on implementing a HCC backend for *HPX.Compute*.
- Minh-Khanh Do, who contributed the implementation of several segmented algorithms.
- Bibek Wagle ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁵⁵), who worked on fixing and analyzing the performance of the *parcel* coalescing plugin in *HPX*.
- Lukas Troska, who reported several problems and contributed various test cases allowing to reproduce the corresponding issues.

⁷⁹⁵³ <https://www.lsu.edu>

⁷⁹⁵⁴ <https://www.lsu.edu>

⁷⁹⁵⁵ <https://www.lsu.edu>

- Andreas Schaefer, who worked on integrating his library ([LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁹⁵⁶) with *HPX*. He reported various problems and submitted several patches to fix issues allowing for a better integration with [LibGeoDecomp](https://www.libgeodecomp.org/)⁷⁹⁵⁷.
- Satyaki Upadhyay, who contributed several examples to *HPX*.
- Brandon Cordes, who contributed several improvements to the inspect tool.
- Harris Brakmic, who contributed an extensive build system description for building *HPX* with Visual Studio.
- Parsa Amini ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁵⁸), who refactored and simplified the implementation of *AGAS* in *HPX* and who works on its implementation and optimization.
- Luis Martinez de Bartolome who implemented a build system extension for *HPX* integrating it with the [Conan](https://www.conan.io/)⁷⁹⁵⁹ C/C++ package manager.
- Vinay C Amatya ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁶⁰), who contributed to the documentation and provided some of the *HPX* examples.
- Kevin Huck and Nick Chaimov ([University of Oregon](https://uoregon.edu)⁷⁹⁶¹), who contributed the integration of APEX (Autonomic Performance Environment for eXascale) with *HPX*.
- Francisco Jose Tapia, who helped with implementing the parallel sort algorithm for *HPX*.
- Patrick Diehl, who worked on implementing CUDA support for our companion library targeting GPGPUs ([HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹⁶²).
- Eric Lemanissier contributed fixes to allow compilation using the MingW toolchain.
- Nidhi Makhijani who helped cleaning up some enum consistencies in *HPX* and contributed to the resource manager used in the thread scheduling subsystem. She also worked on *HPX* in the context of the Google Summer of Code 2015.
- Larry Xiao, Devang Bacharwar, Marcin Copik, and Konstantin Kronfeldner who worked on *HPX* in the context of the Google Summer of Code program 2015.
- Daniel Bourgeois ([Center for Computation and Technology \(CCT\)](https://www.cct.lsu.edu)⁷⁹⁶³) who contributed to *HPX* the implementation of several parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁹⁶⁴).
- Anuj Sharma and Christopher Bross ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁹⁶⁵), who worked on *HPX* in the context of the [Google Summer of Code](https://developers.google.com/open-source/soc/)⁷⁹⁶⁶ program 2014.
- Martin Stumpf ([Department of Computer Science 3 - Computer Architecture](https://www3.cs.fau.de)⁷⁹⁶⁷), who rebuilt our contiguous testing infrastructure (see the [HPX Buildbot Website](http://roostam.cct.lsu.edu/)⁷⁹⁶⁸). Martin is also working on [HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹⁶⁹ (mainly all work related to [OpenCL](https://www.khronos.org/opencv/)⁷⁹⁷⁰) and implementing an *HPX* backend for [POCL](https://portablecl.org/)⁷⁹⁷¹, a portable computing language solution based on [OpenCL](https://www.khronos.org/opencv/)⁷⁹⁷².

⁷⁹⁷¹ <https://portablecl.org/>

⁷⁹⁷² <https://www.khronos.org/opencv/>

- Grant Mercer ([University of Nevada, Las Vegas](https://www.unlv.edu)⁷⁹⁷³), who helped creating many of the parallel algorithms (as proposed by [N4313](http://wg21.link/n4313)⁷⁹⁷⁴).
- Damond Howard ([Louisiana State University \(LSU\)](https://www.lsu.edu)⁷⁹⁷⁵), who works on [HPXCL](https://github.com/STELLAR-GROUP/hpxcl/)⁷⁹⁷⁶ (mainly all work related to [CUDA](https://www.nvidia.com/object/cuda_home_new.html)⁷⁹⁷⁷).
- Christoph Junghans (Los Alamos National Lab), who helped making our buildsystem more portable.
- Antoine Tran Tan (Laboratoire de Recherche en Informatique, Paris), who worked on integrating *HPX* as a backend for [NT2](https://www.numscale.com/nt2/)⁷⁹⁷⁸. He also contributed an implementation of an API similar to Fortran co-arrays on top of *HPX*.
- John Biddiscombe ([Swiss National Supercomputing Centre](https://www.cscs.ch)⁷⁹⁷⁹), who helped with the BlueGene/Q port of *HPX*, implemented the parallel sort algorithm, and made several other contributions.
- Erik Schnetter (Perimeter Institute for Theoretical Physics), who greatly helped to make *HPX* more robust by submitting a large amount of problem reports, feature requests, and made several direct contributions.
- Mathias Gaunard (Metascale), who contributed several patches to reduce compile time warnings generated while compiling *HPX*.
- Andreas Buhr, who helped with improving our documentation, especially by suggesting some fixes for inconsistencies.
- Patricia Grubel ([New Mexico State University](https://www.nmsu.edu)⁷⁹⁸⁰), who contributed the description of the different *HPX* thread scheduler policies and is working on the performance analysis of our thread scheduling subsystem.
- Lars Viklund, whose wit, passion for testing, and love of odd architectures has been an amazing contribution to our team. He has also contributed platform specific patches for FreeBSD and MSVC12.
- Agustin Berge, who contributed patches fixing some very nasty hidden template meta-programming issues. He rewrote large parts of the API elements ensuring strict conformance with the C++ ISO Standard.
- Anton Bikineev for contributing changes to make using `boost::lexical_cast` safer, he also contributed a thread safety fix to the `iostreams` module. He also contributed a complete rewrite of the serialization infrastructure replacing `Boost.Serialization` inside *HPX*.
- Pyry Jähkölä, who contributed the Mac OS build system and build documentation on how to build *HPX* using Clang and `libc++`.
- Mario Mulansky, who created an *HPX* backend for his `Boost.Odeint` library, and who submitted several test cases allowing us to reproduce and fix problems in *HPX*.
- Rekha Raj, who contributed changes to the description of the Windows build instructions.
- Jeremy Kemp how worked on an *HPX* OpenMP backend and added regression tests.
- Alex Nagelberg for his work on implementing a C wrapper API for *HPX*.
- Chen Guo, helvihartmann, Nicholas Pezolano, and John West who added and improved examples in *HPX*.
- Joseph Kleinhenz, Markus Elfring, Kirill Kropivnyansky, Alexander Neundorf, Bryant Lam, and Alex Hirsch who improved our CMake.
- Tapasweni Pathak, Praveen Velliengiri, Jean-Loup Tastet, Michael Levine, Aalekh Nigam, HadrienG2, Prayag Verma, Islada, Alex Myczko, and Avyav Kumar who improved the documentation.
